

H. S. Congress

Appendix

Tribute to Ben H. Wooten, of Dallas, Tex.

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. JOHNSON of Texas. Mr. President, it is always pleasant to note successful achievement in any line of endeavor. This is particularly true when the achievement concerns a friend—in this case, Ben H. Wooten, president of the First National Bank in Dallas, and member of the board of directors of the Gulf, Colorado & Santa Fe Railway.

This outstanding citizen was recently named the first Texan to ever receive the Horatio Alger Award, an honor recognizing business and professional leadership resulting from determination and hard work.

I ask unanimous consent, Mr. President, that an article on Mr. Wooten's achievements, as carried in the July 1959 issue of the Santa Fe magazine, be reprinted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOARD MEMBER B. H. WOOTEN WINS HORATIO ALGER AWARD

The community of Timpson in east Texas is only 192 railroad miles from Dallas, but each of those miles represents a challenge met and won by Ben H. Wooten, president of the First National Bank in Dallas, and member of the board of directors of Gulf, Colorado & Santa Fe Railroad.

Wooten recently was named winner of one of nine Horatio Alger Awards, the first Texan ever to receive this distinction. The awards are presented annually to successful American business and professional leaders who began life as poor boys and climbed to the top of their professions by determination and hard work.

As a youngster, Ben Wooten helped his family scratch a living from a small farm near Timpson in Shelby County. His clothes were homemade and his first pair of trousers made of new cloth were hard earned by the boy picking and selling peanuts. To get suspenders to hold up those treasured pants, young Wooten trudged 3 miles to town and sold a rooster for 15 cents.

The future civic leader chopped cotton, worked as a chairman on a pipeline surveying crew and put in long hours working his way through North Texas State College at Denton. In 1949, Wooten was named board chairman of the school's regents, a position he still holds.

After graduation from NTSC in 1917, Wooten served in the U.S. Army, was a school teacher for a brief period, then entered the banking profession as a teller of an east Texas bank. He became president of the First National Bank in Dallas in 1950.

In commenting on the 1959 Horatio Alger Award to Wooten, the Dallas Morning News wrote, "The career of Ben Wooten is not

merely one of rags to riches but is one of increasing public service."

For aspiring young people everywhere, Wooten has this comment: "There still are unlimited opportunities for success in our modern Nation."

United States Gives Lipservice to Captive Nations

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. VANIK. Mr. Speaker, the monotony of repetitive declarations by America on the plight of the captive nations of Europe imply objectives which our Nation seems unable to promote. They create false hope which can fester only into bitterness in the hearts of people who have been friendly to America in these captive lands and who have expected an American policy which could in some way release them from hopeless enchainment.

The following article by Henry N. Taylor, of Scripps-Howard newspapers, aptly summarizes the futility of American policy, entitled "We Preach; Do Nothing—United States Gives Lipservice." This article appeared in the Scripps-Howard newspapers on Monday, July 27, 1959:

WE PREACH; DO NOTHING—UNITED STATES GIVES LIPSERVICE

(By Henry N. Taylor)

WASHINGTON.—Captive Nations Week is over now, observed by Americans, reviled by Russia's boss, Nikita Khrushchev; but the episode reiterates an old, embarrassing futility of U.S. foreign policy.

Namely, that we preach freedom for the millions caught behind communism's Iron Curtain, but we have done nothing, can do nothing, and will do nothing to help them get free. Loud, sincere sympathy is the best we can offer.

The Congress version of this controversial resolution was tougher than the President's proclamation. It blamed "imperialist and aggressive policies of Russian communism" for subjugating 22 specified nations "and others."

There was almost no congressional discussion. No one questioned the list of "subjugated nations," which included at least five areas (Ukraine, Azerbaijan, Georgia, Cossakia, Turkestan) taken over in Czarist times, some as far back as 75 years before Nikolai Lenin.

JUST ANOTHER PROCLAMATION

No one asked how "U.S. leadership in liberation" could be claimed after our nonperformance during Hungary's freedom fight. The resolution wasn't even sent for approval to the Senate Foreign Relations Committee. The Judiciary Committee churned it out,

along with other casual holiday proclamations, such as National Hot Dog Month.

Could any Congressman be expected to vote against an anti-Communist resolution? Could any State Department official visibly impede it, even though it was foreseen that this might embarrass Vice President RICHARD NIXON in Moscow? There was, of course, no opposition.

But at State Department suggestion, President Eisenhower's version of the proclamation was toned down. It did not specify what nations wanted to be liberated, nor promise any U.S. role in liberating them. It merely declared "support for just aspirations for freedom."

Captive Nations Week caused little stir in America. But NIXON was warned before departure that he might hear more about it in Moscow. Even some Congressmen now concede the timing was poor.

This doesn't suggest any faltering sympathy for people who live at bayonet point under communism. But it symbolizes the policy dilemma of Washington, which can think of no way to nudge the Soviet Union back behind its own frontiers, yet doesn't want to legitimize the fruits of Russian aggression or cause its victims to give up hope.

TOO MUCH ZEAL FEARED

As for inciting real revolt behind the Iron Curtain, there is no evidence that the United States has any such ideas. Propaganda is kept deliberately unflinny. (One U.S. Ambassador, Jacob Beam in Warsaw, recently complained against excessive zeal in Western broadcasts to Poland.)

Any new, brave, futile uprisings would almost certainly prove what Hungary proved: That Russia will be ruthless—but also that America reacts to such events with nothing more substantial than kind words for the dead and blankets for the survivors.

One sentence in recent history seems to haunt American policy planning on Iron Curtain liberation, echoing back to make Captive Nations Week melancholy mockery. It is the next to last sentence on the last teletype message out of Budapest, that day in November 1956, when Russian tanks crushed the freedom fight.

"We have just heard a rumor," a Hungarian typed, "that American troops will be here in an hour or two."

Silence. The troops did not come. They could not come. They will not come the next time. This is one reason Nikita Khrushchev talks so tough to NIXON—and to the world.

Tribute to George Washington Carver

EXTENSION OF REMARKS

OF

HON. STUART SYMINGTON

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. SYMINGTON. Mr. President, on July 12 the very able Representative from the Seventh District of Missouri, the Honorable CHARLES H. BROWN, was the principal speaker at the annual Carver Day observance, held at the

A6641

George Washington Carver National Monument, at his birthplace near Joplin, Mo.

Representative Brown reviewed the story of George Washington Carver's life from its humble beginnings as the son of a slave to the heights of success that can only be achieved through service to humanity.

The life and work of this good man, Dr. Carver, is one of the great stories of America, and should be known throughout the world.

I commend Representative Brown's address to the attention of my colleagues, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY CONGRESSMAN CHARLES H. BROWN AT THE ANNUAL CARVER DAY OBSERVANCE AT GEORGE WASHINGTON CARVER NATIONAL MONUMENT, JULY 12, 1959

I thank each and everyone of you for inviting me here today. I have looked forward to this occasion for reasons that many of you may not realize. Back in the thirties, when I worked in Washington, I heard Dr. George Washington Carver testify before a congressional committee. They said they were going to give him 3 or 4 minutes, but they wound up giving him almost an hour. And, listening to him, I thought to myself—this man has taught them more in these 60 minutes than they have learned in the last 60 days.

He was, perhaps, the greatest Missourian who has lived to date, when you measure greatness by one's lasting contributions to humanity.

The facts about George Washington Carver's life are very brief. He started from the humblest of beginnings. He never knew exactly when he was born. He always said that it was about 1864. But, recent research into the census records indicate that it might have been, and probably was, around 1860. He never knew his father; but he knew his mother and he remembered her until he died. She was a slave.

And, Carver always knew where he was born. He was born on the Moses Carver farm near Diamond Grove, Mo. But in his early childhood, probably when he was 3 or 4 years old, border guerrillas captured his mother and George Carver and carried them off to Arkansas. In time, George was turned over to a man who offered a \$300 horse for his release. His mother was never heard of again.

George came back to southwest Missouri and, with the help of friends, grew to be a gangling boy who wanted an education so badly that he would do any chore or odd job to get one. He attended the public schools in two or three towns in Kansas. He wanted to go to college, so he worked his way through Simpson College and then on through Iowa State and got a bachelor's degree in 1894. He got a master's degree in 1896. He was a good student, one of the best they had; and, they offered him a professorship in botany.

But, he became interested in what Booker T. Washington was doing at Tuskegee Institute in Tuskegee, Ala. So, he went there and became the head of their research and experiment department.

At Tuskegee, his thirst for knowledge was so great that it was unquenchable. He sought and found new uses for such commonplace things as cornstalks, sweetpotatoes, soybeans, peanuts, trees, and that red clay

of Alabama. He turned ordinary materials into extraordinary products. He found ways to make plastics, paints, paper, plywood, cosmetics, and even imitation marble out of commonplace materials.

Whole new industries grew out of his discoveries, but George Carver never participated in the profits. Many of his formula he gave to humanity without royalty; and, most of his personal income he gave to young, eager students who wanted a college education. George Carver's students remember him as a threadbare professor who couldn't have cared less about money. He was also a great artist. One of his paintings hangs in the Luxembourg Gallery. Many of his paintings you will see at Tuskegee.

In his later years he won worldwide recognition for his talents and his work. He is one of the few Americans who ever became a member of the British Royal Society of Art. He won the Spingarn Medal in 1923. He won the Roosevelt Medal for achievements in science in 1939. He was Director of Research for the U.S. Department of Agriculture. And, he served on numerous boards and panels where research scientists were needed.

But his first love and his last love was his classroom, his students, and his laboratory at Tuskegee. There he remained as chief of research and experiment until he died in 1943 at the age of 80—or was it 83?

These are the bare facts of his life; but they don't begin to tell the whole story.

George Washington Carver was one of God's chosen children, richly endowed by the Creator with a rare and priceless talent, placed by the Creator in an environment where the only way to achieve was to struggle. No one could have faced more hardships. But, no hardship could deter him and no amount of suffering could break his indomitable spirit. Difficulties inspired him, and the suffering he endured taught him to understand, to appreciate, and have compassion for the suffering and the trials and hardships of others.

He learned how to work early in life and he never forgot it. He worked until he fell on the ice and was put in bed.

He was a man who had no fear of the unknown. He loved to experiment with new ideas. He loved to blaze new trails, find new methods and new ways of doing old jobs and scale new summits that no one had ever attempted to scale before.

Above all he never lost his sense of values. To him a better world, a happier people, the Golden Rule meant more than all the comforts and luxuries that a man could possess.

George Washington Carver was a success in the true meaning of the word; and his achievements are immortal because he left disciples—students who today are telling their students, who in turn will tell their students about George Washington Carver, what he stood for, what he thought, and what he did for mankind in his fourscore years on earth.

Jesus of Nazareth did more in less than 40 years than George Washington Carver did in 80. Moses contributed more to mankind than George Carver. Perhaps some scientists in the history of the world left a legacy equally as valuable—men like De Vinci, Galileo, Newton, and others—Einstein, perhaps; but, few men in the history of the world have done as much for mankind as did this man. For, he was one of God's chosen children, born with that keen mind and that big heart. A man whom God sent us for a purpose; and he walked with God every day of his life to fulfill that purpose nobly.

The least we can do is learn a lesson from this man's life. I feel that was a part of the purpose for which he was sent. I would

like to mention very briefly just three lessons that we sorely need to learn today.

First, George Carver proved that all things are possible if you are determined enough to do it. Why, you couldn't face any more hardships than this man faced. He didn't start from scratch. He started from behind scratch. Everywhere he turned, he met prejudice, doubt, and suspicion. But they didn't deter this man. He said he was going to do something worthwhile, and he did.

Today, the world is divided into two armed camps and the means for destroying mankind is at hand. There are those who say that war is inevitable, that nothing we can do will prevent an Armageddon.

I just don't believe that. I think we can lead this world to a new era of permanent peace—a golden era more golden than we have ever known, if we have the courage and determination that George Carver had.

Some people say mankind will never be able to cope with its population explosion, that we will be overwhelmed by our own numbers, that we can't possibly provide the highways, the schools, the homes, the necessities of life for these teeming millions. I don't believe that. I think we Americans can do anything we want to do, if we have the guts to do it. Complicated problems are hard to solve. Wise men may differ on how to solve them. But we must never stop striving for better solutions. We must never be defeated by a sense of futility.

The second lesson that George Carver, in my opinion, taught is that he proved that good men—not money or machines—make the only genuine progress in the world. He didn't have a multimillion-dollar laboratory. He didn't say you must give me this and give me that or I can't discover these things. He worked with the simplest of tools.

Sometimes, I think we get so enamored with bigness and giantism that we overlook the true value of just a good man. It wasn't a big laboratory that built the first Ford automobile. It was Henry Ford in a little lean-to garage. It wasn't the XYZ laboratory that discovered the radio. It was a man named Marconi, working in his home. It wasn't the ABC holding company that discovered the incandescent lamp. It was Thomas Edison. A man with a great mind who worked. Good men solve big problems and do big things. Money and machines are only the tools that good men use to achieve.

A third lesson that I think George Carver's life taught is that the truly successful man is one who adds something of lasting benefit to humanity. Oh, there have been a lot of men who accumulated more wealth than George Washington Carver. Thousands who have gathered unto themselves a bigger-than-average share of the world's material goods and titles. Men who have been honored and praised as successful men, big men, even called great men. But the successful man is the one who deals in true human values, the Golden Rule, the lasting benefits.

The world little notes nor remembers what we leave behind in material goods. But as we pass this way on earth, if we could help someone in his time of trouble, we will have achieved some small measure of immortality.

The rest of us were not given that great mind that George Carver had; but each of us has a heart, if we'll use it. We can all have the compassion for our fellow man that George Carver had.

George Washington Carver was a great man in the true sense of greatness. It is only right that we should do him honor on these days. And, as the years go by, I hope that this shrine will grow not only in its physical appearance, but in the number of people who will come here and learn about this man who walked with God every day of his life and fulfilled God's purpose nobly.

Dr. Dudley Jackson, Dedicated Man of Science

EXTENSION OF REMARKS OF

HON. PAUL J. KILDAY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. KILDAY. Mr. Speaker, on July 25, 1959, the city of San Antonio, the State of Texas and the world of science sustained a severe loss in the death of Dr. Dudley Jackson of San Antonio.

Long recognized as a leader in the medical profession and in the field of medical research, Dr. Jackson rendered outstanding pioneer service in cancer research. He is mourned by all who knew him.

The following from the San Antonio Express well outlines the career and service of Dr. Jackson:

Funeral services for Dr. Dudley Jackson, Sr., 68, who died Saturday at Nix Memorial Hospital, will be at 10 a.m. Tuesday at Porter Loring Funeral Home.

The Reverend George Mauze will officiate. Jackson was recognized for many contributions to medical science. He was the holder of a Walter Reed Society award for experiments in cancer wherein he transplanted living cancer cells into his own body and removed them after study.

A graduate from the Kansas City Veterinarian College in 1913, he entered the University of Texas Medical School at Galveston at the insistence of an uncle, Dr. T. T. Jackson, a pioneer San Antonio physician.

Jackson graduated from medical school in 1917, and served as a medical corps officer with the Army Air Force in World War I. He engaged in practice with his uncle upon his return.

He engaged in extensive research at Robert B. Green Hospital in the treatment of rattlesnake bites, and evolved the suction method of treatment. This method was adopted by the Armed Forces as the best.

A former president of the Bexar County Medical Society, he served many years as chief of surgical services at the Green.

Jackson became interested in the diagnosis and treatment of cancer and allied diseases and continued as a specialist in this field. He and the late Maury Maverick, Sr., helped found the National Cancer Institute of Institute at Bethesda, Md.

He was largely instrumental in getting legislation for a hospital and tumor clinic in Texas. This was eventually located at Houston, and now operates as the M. D. Anderson Hospital and Tumor Institute.

Two years ago the American Cancer Society, Texas division, presented him a bronze plaque in recognition of his services to the organization.

He helped organize the Pan American Cancer Foundation several years ago. The group is dedicated to care of cancer patients in the Southwest and Mexico who can't afford treatment.

He was a fellow of the American College of Surgeons, International College of Surgeons and Texas Surgical Society. Jackson formerly served as consultant in surgery at Brooke Army Hospital.

Survivors include: his wife, Mrs. Martha Beal Jackson, M.D.; a son, Dr. Dudley Jackson, Jr.; a daughter, Mrs. John H. Hickman, Wichita, Kans.; and three sisters, Mrs. Joe

Lawless, Leakey; Mrs. Mable Hodges, Waco; and Mrs. Edna McClendon, Brownwood.

Burial will be by cremation.

As evidence of the esteem in which Dr. Jackson was held in his community, I include an editorial from the San Antonio Express of July 28, 1959:

OUTSTANDING RECORD LEFT BY DR. JACKSON

The death of Dr. Dudley Jackson of San Antonio, removed one of the Nation's most ardent students of cancer.

Holder of a Walter Reed Society Award for experiments in which he transplanted living cancer cells into his own body and removed them after study, Dr. Jackson ceaselessly sought answers to the most baffling disease still afflicting mankind.

He had hoped for a cancer hospital in San Antonio, but the needs for general hospital services had to come first. Perhaps some day after a State Medical School branch with a teaching hospital is established here, Dr. Jackson's dream might come true.

Dr. Jackson's medical interests were great. He sought to uncover other scientific facts which would increase man's desire to overcome disease.

His absence from this community will be greatly felt, but the ideas he left will stay as a reminder of his outstanding services.

Also attesting to Dr. Jackson's life and service is the following editorial from the San Antonio News of July 29, 1959:

DR. JACKSON'S EFFORTS WILL BE REMEMBERED

When a doctor transplants living cancer cells into his own body in order to perform more thorough study—removing them afterward—there can be no doubt he is doing his utmost to serve humanity.

In a field where dedication to a life of arduous work and great mental effort is almost taken for granted, San Antonio's Dr. Dudley Jackson excelled.

First a veterinarian, he became a physician and served in Air Corps medicine in World War I. For many years he was chief of surgical services at Robert B. Green Hospital where his research in the treatment of snake bites resulted in the suction method, adopted by the Armed Forces as the best.

When some day San Antonio builds a cancer hospital—as was Dr. Jackson's dream—his selfless efforts to find a cure for this disease will doubtless be recalled. He is dead, but he lived not in vain.

Welcome for Mexicans

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. MANSFIELD. Mr. President, Mr. Virgil Pinkley, the editor and publisher of the Associated Desert Newspapers of California, and a national radio commentator of renown, has written an editorial entitled "Welcome for Mexicans," which was published in the *Indio News of Indio, Calif.*, July 13, 1959. I think this is one of the best editorials I have seen relative to the increasingly close relationship between the Mexicans and Americans along the Mexican border, and I therefore ask unanimous consent that it be printed in the Appendix of the RECORD. I commend it for reading by

my colleagues in the Senate. I am sure that all Senators will find much can be accomplished in the way of bettering relations between these two close and friendly nations and the people who comprise them.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WELCOME FOR MEXICANS

(In view of the close ties with Mexico, and the large number of Mexican visitors to the Coachella Valley, we are reprinting the following editorial, which appeared in the *El Centro Post-Press*.)

(By Virgil Pinkley)

The Calexico Chamber of Commerce and the service clubs of the border city have a rare opportunity to further the good relations and understanding between Mexico and the United States.

This can be done by posting various signs in Spanish and English on the California side of the border. There should be welcome signs and greetings in Spanish, too.

In Mexicali there are signs in English and the distances to San Louis and San Felipe are posted in kilometers and miles as a courtesy to visiting Americans. Filling stations and motels post the words "All credit cards are good here," and "Vacancy" in English. Certainly we can and should do as well for our most welcome visitors from Mexico.

Calexico and the Imperial Valley enjoy considerable commercial exchange with Mexico. In Calexico there should be a center where Mexican citizens could secure information and assistance quickly and easily. This center should be staffed by Spanish speaking personnel who stress courtesy and helpfulness.

Certainly these are worthwhile objectives for Calexico civic groups. Such relations only carry out the theme of service clubs whose creeds include fellowship and good will. Here is a fine movement which ought to be supported by churches, too. Here is a fine opportunity to carry out missionary work "right in their front yards."

There is a growing need for even better relations between this country and our fine neighbor to the south. The best place to start such an exchange is right here at home. All this can be done without any government regulations or redtape and with little or no expense.

Much of the romance and atmosphere of our area had its origin in Mexico. We are indebted, too, to thousands of Mexican workers who come here to help harvest our rich crops.

The number of Mexicans crossing the border at Calexico grows each year. For the fiscal year just closed, 9,507,088 persons came into California through Calexico. This was an alltime high and exceeded the previous record year by 842,663. The arrivals came by automobiles and trucks, motorcycles, and airplanes, and on foot. Robert B. Poley, deputy in charge of the Calexico customs, said the count included 3,593,492 pedestrians.

An increase of \$317,752 in revenue was reported by Poley for the port of entry. Duties collected totaled \$1,549,262, representing an estimated valuation of \$50 million in imports, a total estimated about equal to exports.

So there is much to recommend a fine welcome to Mexicans coming into Calexico. In addition to the trade and business aspects, it is pleasant to be polite and helpful to visitors. We should greet them in their own language.

Before fall there should be a huge "welcome mat" prepared in Spanish by Calexico.

Direct Payments for Farmers?

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. McGOVERN. Mr. Speaker, one of the suggestions currently being considered in answer to our farm problem is the direct payment plan. Mr. Julius Junod, writing in the Carolina Farmer, has offered a good discussion of the direct payment possibility.

I include Mr. Junod's article at this point in the RECORD:

WILL FARMERS GET DIRECT PAYMENTS?

(By Julius Junod)

Farm policy planning in Washington is now being stretched into what can be described as farmer-and-consumer policy. That is the meaning behind all the talk you hear about a broad new agricultural proposal known as direct payments.

Whether you farm or not, a direct-payment plan would directly affect you, and your family.

Such payments, in fact, might benefit the consumer just as much as the farmer. The idea is that farm products, whether or not they are surplus, would move right onto the market, instead of into Government storage.

Dairy products, for example, would be sold to consumers for the natural or open market price. When supplies were in excess of ready demand, market prices would go down, giving the consumer a better deal and also increasing consumption of the product.

IDEA IS POISON TO BENSON

When the market price was not high enough to give the farmer a fair return he would get a direct Government payment, a check drawn on the U.S. Treasury. Consumers would benefit from lower retail prices. The Government would save money, because it would not need to pay out billions of dollars as it does now to warehousemen and traders for handling surpluses.

That is how advocates of the plan say it would work.

The idea is supposed to be poison to U.S. Department of Agriculture Boss Benson and officials of the American Farm Bureau, but they backed a direct payment plan for wool that has been in operation some 5 years.

AN HONEST SUBSIDY

Many Democrats and some Republicans are now pushing hard for direct payments to cover practically all farm crops. It is an honest subsidy that would go to everybody, they argue, not like the present price support program where practically all the money winds up in the hands of corporate farmers and middlemen.

Payment plans vary by commodity, depending on need and circumstances. Wheat and cotton guarantees, for example might be based on two-level pricing—a world price for what is exported and a higher price for what's consumed at home.

Several direct payment bills are in the legislative hopper and have the backing of lawmakers from both farm and city areas.

Action on the legislation has been delayed thus far mainly by two things. One is the problem of working out agreement between the North and South on provisions that would result in equal treatment of crops grown in both regions of the country.

IKE SURE TO VETO

Another problem is that President Eisenhower is sure to use his veto club on a di-

rect payments bill, just as he did on the recent Humphrey price legislation that would have forced Benson to keep his hands off REA co-op loan requests.

The fact that the House failed to override the President on the REA loan issue is being taken as evidence he can make the veto stick on any bill that comes along.

For this reason the supporters of direct payments do not now plan to try and move their legislation to the White House this year. They want to conduct hearings and perhaps try for passage in the Senate, but delay a final congressional vote until about a year from now.

PUBLIC FED UP

Public dismay with the present farm program is probably the big reason the direct payment plan has gained such momentum. The idea is not really new.

It was proposed 10 years ago by former Agriculture Secretary Charles Brannan and it wasn't original with him. (The plan was rejected a decade ago because Brannan proposed skyhigh payment levels for just about everything that is edible.)

As for the farm program the Nation has now, Secretary Benson himself has condemned it incessantly. We must get rid of it, he has told thousands of audiences in the city and country.

In the process, until recently at least, Benson seemed to have much of the non-rural public convinced that he not only means well, but does well.

But the fact is that while he has trumpeted for sound substitutes to replace the present program, the Secretary has not devised a single new major program in all the 6½ years he has held office. Nor has he offered to try untried proposals that have been suggested by others.

About all Benson has asked of Congress is lower price supports, and these the lawmakers have granted. The lower price guarantees, the Secretary argued, would prompt farmers to produce less, cause surpluses to go away, and everybody would be happy.

The very opposite is what has happened, and USDA's budget is now several times the size of that in any previous administration.

Madison Capital Times Fights for Consideration for America's Aged

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. PROXMIRE. Mr. President, the Senate will soon have another opportunity to act on a vital omnibus housing bill. One of the most controversial issues before the Senate in that bill will be the proposal for a program of direct Government loans to provide low-cost housing for the elderly. Many Senators have enthusiastically favored this proposal. On the other hand, the President cited it as an example of unnecessary spending in vetoing the bill. Senator PAT McNAMARA, chairman of the Subcommittee on Problems of the Aged, and others, testified before the Housing subcommittee in hearings last week on the bill, on the vital necessity for this aged program.

The Capital Times of Madison recently carried a characteristically humane, fighting editorial, calling attention to the

woeful needs of our aged, and I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Madison (Wis.) Capital Times]
WHAT DICKENS COULD DO WITH THE PLIGHT OF OUR AGED

It has been said that if Charles Dickens were alive today he could create another masterpiece by describing the wretched conditions in some of the nursing homes for older Americans.

And the situation for old people generally is hardly any better. It constitutes one of the most shameful social problems confronting this Nation.

There are approximately 16 million Americans over the age of 65 and it is expected to reach about 20 million by 1970.

Arbitrary retirement laws and policies are forcing them out of work that they are equipped to do and that provide a living at minimum standards of decency. Medical progress has made it possible for people to live longer, but social stagnation makes that life a thing to be deplored.

Sixty percent of these unfortunate people received less than \$1,000 in the year 1958. Their meager pensions and social security benefits would be woeful even if inflation hadn't cut into them deeply.

They are outcasts, deprived of performing any meaningful function in their communities and denied the basic necessities of life, including adequate health care. The result is that these older people have no feeling of identification with the communities in which they live. Understandably bitter, they form a formidable voting bloc against needed community improvements.

Because they receive no encouragement to participate in the life of their communities, they go wearily off to the hospitals and mental institutions, where, if present policies are not changed, they will become an insupportable burden.

But the primary problem, as Senator McNAMARA of Michigan has pointed out, is the health problem. There can be no pride for the American people in the fact that Congress, under pressure of the American Medical Association, has killed a bill that would have broadened social security to provide for the financing of health services.

American Art Exhibit in Moscow

EXTENSION OF REMARKS

OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. McGOVERN. Mr. Speaker, I think the Members of Congress will be interested in the following article by Mr. Aubrey H. Sherwood, editor of the De Smet News, relative to the American art exhibit in Moscow. The article appeared in the July 30 issue of the De Smet, S. Dak., paper, and includes some interesting editorial comment by Fred Christopherson, editor of the Sioux Falls Argus-Leader:

HISTORICAL PAINTINGS OF PIONEERING PROPOSED FOR EXHIBIT IN MOSCOW

The attention drawn to the exhibit of American art to be made at Moscow that has resulted from criticism by President Eisen-

hower and the substitution of some canvasses more to his liking has brought the further suggestion that these might well include some paintings with a South Dakota origin.

GEORGE MCGOVERN, Representative in Congress, came forth with the suggestion that a painting by Oscar Howe, celebrated Indian artist, be included, saying there is one hanging in his office in Washington he would gladly loan for the purpose.

Approving this, the editor of the Argus-Leader further suggests some of the paintings by Harvey Dunn hanging at State College should be shown in Russia.

REAL AMERICAN PAINTINGS

"The paintings are typically American and present refreshingly the early American pioneer scene," writes the Argus-Leader editor, Fred Christopherson.

He continues: "Critics have said that only experts on art should pass judgment on matters, such as this and have suggested, in effect, that we, not being an art expert, should keep our big mouth shut. Well, come what may, we have no intention of doing so. We've seen reproductions of some of the paintings selected for exhibition in Moscow and included among them are some fantastic productions that belong only in the 'beatnik' school. They are reminiscent of those being currently depicted in the Winnie Winkle comic strip. The Howe and Dunn paintings are something else. They, too, are lauded by art experts. They also are of the type that provides satisfaction for the average American viewer, and, we have a hunch, would be attractive to the average Russian viewer."

The suggestions of the Congressman and the Sioux Falls editor are worthy of consideration, if it is not too late to have paintings added to the showing for Moscow. Mr. Christopherson stated he felt sure the authorities at State College could be induced to loan one or more of the paintings for that purpose. If time and distance are a factor there are other canvasses by Harvey Dunn in the New York area that quite likely could be borrowed for the Russian exhibit.

FOLKS KNOW WHAT THEY LIKE

The editor of the Argus-Leader is to be commended for his insistence that he and other Americans with no claim to being art experts have the right to judge paintings. It was the writer's privilege to watch several thousand persons in attendance at the exhibit of Dunn paintings now at State College, when they hung here at De Smet for a summer. He overheard many comments, visited with many of them about the paintings. From a comparatively few who apparently were familiar with art and exhibits and from many who were not he heard praise for them, often beautifully and appreciatively stated.

Again, a few months ago, when the Sherwoods exhibited a few Dunn canvasses and showed slides of many more at a gathering at Madison, there was heard praise that was common that summer of 1950: "These I can understand; these mean something to me." This came from men who often had already indicated no particular interest in an exhibit of paintings.

PRaise FROM THE PEOPLE

The portrait of Fred Wright as the country printer he was, painted in a few hours by Harvey Dunn, depicting a man he had long known and admired has had the greatest praise any portrait could have as local persons, not interested in the art of the painting, have said: "Yes, that's Fred—just as natural as can be." They see on canvas the rugged, straightforward man they have known and admired.

Shown in Russia, where there are vast spaces, the records Harvey Dunn has made of breaking of the prairies of America's front-

iers of two generations ago would surely find many appreciative viewers. They can be understood without explanation—without translation.

Major Slum Clearance Program for San Antonio, Tex.

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. JOHNSON of Texas. Mr. President, the city of San Antonio, Tex., has completed plans for a major slum-clearance program, to begin in 1960. I want to take this opportunity to note the achievement of those distinguished citizens of San Antonio who have made their city's urban-renewal program the fine example of intelligent, farsighted local planning that it is.

Mr. President, I ask unanimous consent that an article from the San Antonio News of July 28, 1959, entitled, "At Last, Slum Clearance," appear in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

AT LAST, SLUM CLEARANCE—CITY MOVES TO START DEMOLITION—URBAN RENEWAL SURVEY FILED

(By Ed Ray)

Early in 1960 the 1,541 people residing in the 66½-acre area surrounding the site for the new city-county jail will be moved to new homes paying the way for San Antonio's first urban renewal project.

By mid-1960 demolition of homes and old buildings in the area will be under way so that a new business and industrial area can rise to add value to the city's downtown in 1961.

This is the timetable of the urban renewal agency of San Antonio, directed by M. Winston Martin, who this week filed with the Fort Worth office of the Federal Housing and Home Finance Administration an eligibility and relocation survey for the project.

Bounded on the north by Dolorosa, the east by San Pedro Creek and the MKT Railroad, the south by the Federal Arsenal and the west by the Central Expressway, the urban renewal area was approved by the Federal Government last January 2.

It earmarked \$1,997,135 for the total work and sent the urban renewal agency, a part of city government \$99,014 for preliminary planning.

Since then Martin's staff has checked every residence and building in the area, for it is mandatory that people living in an urban renewal area must have places for relocation before demolition can begin.

There are 758 dwelling units in the area, 755 substandard. There are 170 vacancies there now. A total of 380 families live there, not including single persons living alone who, if added as family units, would bring the total to 547. Of the 380 families, 340 are tenants while 40 own their homes. People actually living in the area total 1,541.

The survey shows that of the families, 106 are eligible for private rental, 103 for private home ownership under FHA, and 171 for relocation in public housing units.

The Urban Renewal Agency now will make plans for the hiring of a planning firm to draw final specifications for use of the property when finally cleared.

Cost to the city theoretically is one-third of the project. But any improvements the city makes to the area, such as streets, lights, sewage disposal—and, in this particular case the building of the new police headquarters and part of the county jail—goes toward its share of the cost.

FOR INDUSTRY

"I doubt if this project will cost the taxpayers anything more than the normal improvement charges to which they are already obligated," said Martin.

Since slum and blighted homes represent more than half of the property involved, the city is free, under Federal requirements, to turn the project into an industrial and business area.

The Urban Renewal Agency hopes its second project, adjacent to the first, can be for the development of private homes.

Although housing is involved in urban renewal, it is not public housing. All redevelopment under the program is done through private enterprise—once the city clears the land and makes it available to bidders for orderly and well-planned building.

The Cure Begins at Home

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. ROBISON. Mr. Speaker, continuing my series of editorials and articles pointing up some of the very basic problems involved in the Federal Government's effort to help our cities solve their blight conditions, and which are so far still unsolved, I include the following thoughtful letter to the editor appearing in the Wall Street Journal of July 30, 1959:

SLUM HOUSING

EDITOR, THE WALL STREET JOURNAL:

Your editorial, "Up From the Slums" (July 21), deals with a principle that needs continuing emphasis and one which even Presidential Candidate KENNEDY seems not to understand—namely, that slums are created by people. Senator KENNEDY says that the whole urbanized East may become a gigantic slum unless the Federal Government rebuilds the blighted areas.

The Senator should know that the habits of people, wherever and whoever they are, are merely the outward physical manifestation of what is in the inside of the people themselves, just as the outbreaks on the skin of a person afflicted with measles are not the disease itself but only the evidence of it.

If the whole urbanized East becomes a gigantic slum, it will not be because Eisenhower, or any President, vetoes a housing bill now or in the future. It will come about because the whole urbanized East will be infested with slum-minded people. That being so, no amount of money or effort spent by the politicians in Washington, or elsewhere, can change the outcome one whit. If the people in these slums, or any slums, want to better their lot, they are all free to do so by practicing those virtues which have brought better housing to the rest of the Nation. The remedy for slums lies within the breast of every slum dweller and nowhere else. The liberal, socialistic philosophy which teaches that you can deslum the slum dwellers by building new houses for them to live in at the expense of the rest

of the population is morally wrong and intellectually phony. A farmer can't change the character and habits of his livestock by putting pink ribbons on their necks and housing them in his parlor. Slums will clean themselves up when each individual in them says to himself: "I will be a different and a better person" and act accordingly.

Incidentally, it might be remembered that each one of these slum dwellers who, presumably, would like to live in new houses built with your tax money have the same vote of the same weight at the polls as any reader of this letter. If you ever wonder whether our form of government can survive, don't forget to consider that fact.

W. R. YOUNGQUIST.

MINNEAPOLIS, MINN.

Farm Subsidies

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. MANSFIELD. Mr. President, every time Congress considers a new farm program an immediate attack is made on the price-support program which guarantees our small farmers at least a minimum income. The cry goes up "It costs too much money" and "It favors only one segment of our society."

I have felt for some time, as I know some of my colleagues have, that this is erroneous reasoning. The price-support program does cost money, but it does not cost nearly what people are led to believe. In addition, there are many other segments of our society which are subsidized and to a larger extent. The opponents of the price-support program neglect to mention the Federal subsidies to airlines, maritime organizations, business reconversion, and postal services. I will not say that these are unjustified, but I do not think the small farmers of this country should be the "whipping boys" for Federal subsidization.

A recent issue of the Montana Farmer-Stockman carried an excellent editorial refuting many of the statements made about the cost of the farm subsidy program, and it was reprinted in the July 28 issue of the Lewistown Daily News. Mr. President, I ask unanimous consent to have this editorial, entitled "What Farm Price Supports Cost," printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT FARM PRICE SUPPORTS COST

No one can deny that it costs money to maintain the farm price support program. But the actual cost is far lower than the general public has been given to understand.

Misleading information continuously issued by eastern newspapers, national magazines, and radio and television commentators has convinced the average citizen that these farm programs cost billions more than is actually the case.

Typical of countless similar comments is the following from a recent issue of the Chicago Tribune:

"What industry enjoys an annual subsidy from the Federal Government of \$7 billion? * * * The answer is obvious—American agriculture."

In its regular monthly letter the First National City Bank of New York refers to a farm budget of \$5 billion and remarks "there are about 4.8 million farms in the United States, so this budget averages more than \$1,000 per farm. When divided among the approximately 2 million commercial farms * * * the proposed budget averages \$2,500."

The Senate Agriculture Committee in an effort to publicize the actual facts of the situation asked USDA for a breakdown showing how much of the 1959 budget of the Department goes to farmers and how much to the general public. In response to the committee request, USDA summarized the programs having multiple benefits and not directly chargeable to the farmer, as follows:

Programs related to foreign aid \$1,264 million; food distribution programs, school, lunch, and so forth, \$334 million; investment in REA and FHA loans to be repaid, \$555 million; programs for improvement of resources, including meat inspection, education, forest and public land management, etc., \$598 million, or a grand total of \$2,751 million.

Programs predominantly for the benefit of farmers were listed as follows:

Agricultural conservation program, \$227 million; soil bank programs, \$756 million; CCC price support and related programs, \$1,172 million; Sugar Act programs, \$75 million, or a total of \$2,230 million.

Even the total of \$2,230 million for programs for the direct benefit of farmers is much greater than the actual cost because the item covering CCC supports includes the full value of all loans made. Actually, a substantial part of this total is recovered through the sale of the surplus crops. The actual net cost to the Government for programs specifically for the benefit of farmers boils down to perhaps \$1,800 million.

This is a big sum—but it isn't \$5 billion or \$7 billion.

Alaska and National Defense

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. RIVERS of Alaska. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story originating at Anchorage, Alaska, as reported in the Fairbanks News-Miner of July 30, 1959. This timely article focuses attention upon the serious defense situation existing in Alaska today, with regard to which I hope the Department of Defense will soon take corrective action:

COMMANDER OF ALL ALASKA FORCES TELLS OF ATTACK DANGERS, DETAILS U.S. NEED FOR INTERMEDIATE MISSILES IN STATE

ANCHORAGE, July 30.—Two enemy bombers could put Alaskan bases out of action and leave Alaska and the west coast of the United States defenseless, Lt. Gen. Frank A. Armstrong warned last night.

"It would take only two enemy bombers to put Alaskan bases out of action and if the attack were followed up by paratroops, Alaska would be out of action," the commander of military forces in Alaska said as

he spoke informally at a banquet of the Association of Local Transport Airlines.

The banquet was the final session of ALTA's quarterly meeting in Anchorage. The group is now in Fairbanks.

"With Russians in the Fairbanks and Anchorage areas, President Eisenhower would have to decide quickly whether to bomb Alaska to save Chicago or leave the country open to close-range attack," the general added.

Alaska needs intermediate range ballistic missiles, he said. "Unless Alaska gets IRBM soon, we are going to be in one h— of a fix."

PRESENT PROTECTION

"At present, the Strategic Air Command can count on putting out of action only 8 of the 26 bases in Siberia that threaten Alaska. Alaska has two main areas which could quickly succumb to atomic attack and leave Alaska wide open to invasion."

Armstrong said Alaska doesn't need intercontinental ballistic missiles but intermediate missiles "that will allow us to nullify those 26 Red bases in Siberia."

"The Nation's thinking is northeast-oriented but the obvious and practical attack route to the United States is through Alaska. If Alaska does not get the missiles they need soon, Alaska and the west coast are through; Seattle, Portland, San Francisco, and down the coast are done," Armstrong stated.

"The Air Force in Alaska is depended on only to warn the United States of attack. Air Force fighters are expected to be able to knock down only one out of every four invading enemy aircraft."

"Alaska was built up through a series of crash programs and the next one will be when the Russians move up two squadrons of Badgers (prop-jet bombers) across the Bering Straits from Alaska," General Armstrong said.

The Value of the Federal Grant Program for Sewage Treatment Plants

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. HILL. Mr. President, Mr. Hugh Patterson, mayor of Gadsden, Ala., and an official of the Alabama League of Municipalities, on Monday of this week submitted to the Flood Control, Rivers, and Harbors Subcommittee of the Senate Public Works Committee a statement entitled "The Value of the Federal Grant Program for Sewage Treatment Plants." In this statement Mayor Patterson endorses the Blatnik bill (H.R. 3610) to enlarge this Federal assistance program.

Mr. President, I ask unanimous consent that this splendid statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE VALUE OF THE FEDERAL GRANT PROGRAM FOR SEWAGE TREATMENT PLANTS

(Statement by Hugh Patterson, mayor of Gadsden, Ala., submitted to the Kerr subcommittee of the Senate Public Works Committee)

It is my very happy privilege to present to you this statement on behalf of my own home city as well as for the Alabama League

of Municipalities, of which I am an official. The league is composed of 255 towns and cities of our State, representing 98.7 percent of the total municipal population of Alabama.

Alabama's municipal officials deeply appreciate the unflinching support that the Congress has given to Public Law 660 for assistance from the Federal Government to the local communities for construction of sewage treatment plants. We appreciate also the fact that appropriations have been voted by Congress to make the program workable. I submit this statement today in support of the Blatnik bill (H.R. 3610), which proposes to enlarge and improve the already vital program being carried out by the cities and towns with Federal financial assistance. I hope the committee will recommend the improved legislation (H.R. 3610) and that you will send it to the floor of the Senate without delay so that it may be acted upon this year.

Each and every community has the responsibility for providing adequate sewage collection and disposal systems to protect the health of its citizens and of those residing in adjoining areas that may be affected by the discharge of improperly treated sewage from the community. Community sewage must also be treated and disposed of in a manner that will be least objectionable, will protect property values, and will permit reasonable use of waters into which it is discharged.

A community's growth and prosperity depends upon its facilities and services. There are Alabama communities in which residential expansion has been restricted by the lack of adequate sewage collection and treatment works. I also feel sure that some municipalities have been bypassed by industries seeking a location because of inadequate sewerage facilities.

COST OF MUNICIPAL GOVERNMENT CONTINUALLY RISING

The cost of municipal government continues to rise, and municipal governing officials are repeatedly requested to expand services and utilities. Revenues have not kept pace with costs, and we have been forced to impose higher tax burdens or increase the utility cost to our citizens. The Federal grant program for municipal sewage works construction has made it easier for many communities to undertake improvements in sewage disposal. Many communities cannot finance construction of these improvements without help from this or other sources. These grants have also stimulated interest in providing for adequate sewage treatment works and are a definite incentive to a community.

Since July 1956, allotments of grant funds to Alabama from appropriations under Public Law 660 have been made to 21 municipalities—an average of 7 new projects per fiscal year. The total construction cost of these 21 projects is approximately \$23,700,000 of which \$3,272,000 will be from Federal grants. The high proportion of this cost borne by local government—86.2 percent—has led one of Alabama's leading daily newspapers to editorially praise the Federal grant program to municipalities. It should be recognized that the Federal Government now participates only to the extent of 30 percent of the cost of sewage treatment works with the maximum of any one grant set at \$250,000. The municipality must bear the total cost of collecting sewers, which are ineligible for Federal participation.

WILL SERVE 700,000 PERSONS

The sewage treatment facilities made available by these 21 projects will have a capacity for 700,000 persons. During the 2-year period the grant program has been in effect, 12 projects with a capacity for 42,000 persons and involving construction costs

totaling \$1,970,000 has been started without grant aid. As a comparison, 15 projects having a capacity for 230,000 persons and costing \$3,300,000 were begun during the 3 years prior to the effective date of Public Law 660. It is apparent that municipal sewage disposal problems of long standing are being corrected and public health hazards eliminated through financial assistance from the Federal Government.

While accomplishments during the first 2½ years of the aid program provided by Public Law 660 have been outstanding, we have only scratched the surface in our efforts to correct problems created by unsatisfactory sewage disposal. I am told that 105 communities in Alabama are in need of sewage disposal improvements. These 105 projects would represent an estimated expenditure of \$29 million for sewage treatment works alone and, under the present method of grant allocations, will require \$5,600,000 in Federal funds. According to the Alabama State Department of Health and the State Water Improvement Commission, these figures do not include replacement and expansion of systems that may become inadequate within the next 5 years. Replacement and expansion costs are estimated to run as high as \$2 million annually.

SMALLER COMMUNITIES SERIOUSLY AFFECTED

Among the 105 communities with pressing problems of sewage disposal are Alabama's smaller municipalities which find it more difficult—if not impossible—to finance the cost of necessary improvements without aid. In my own city of Gadsden, we are faced with the necessity for expanding our sewage collection system and replacement of overloaded and inadequate sewage treatment facilities. Our problem has been discussed with representatives of Alabama's health agencies and we have been promised financial assistance if, and when, Federal funds are available for this purpose. We know that Alabama's annual allotment for the Federal grants to municipalities has been slightly over \$1,100,000 and recognize that this amount will help only a few and must be distributed on a priority basis. Our city is not alone as I am informed that 23 other communities have requested grant aid to the extent of over \$2 million.

Although accomplishments under the grant program have been most encouraging, we are far from attaining the level of sewage works construction necessary to eliminate the many situations of sewage pollution. We must bear in mind that municipal improvements delayed during the war years left our communities with a tremendous financial burden. While the present grant program is most helpful, it is obvious that it must be expanded if we are to meet our responsibilities.

NEED FOR SUPPORT OF BROADER PROGRAM

I am confident that you recognize the importance of adequate sewage disposal and the urgent need for continuing and expanding the grant program authorized by Public Law 660. Three bills introduced in the 85th Congress, H.R. 11472 by Mr. PRICE, of Illinois; H.R. 11714 by Mr. BLATNIK, of Minnesota; and S. 3576 by Senator CHAVEZ, of New Mexico, sought to increase Federal aid to municipalities for sewage treatment works construction. These bills were supported by municipal government. Alabama's municipal officials join me in asking you to continue your support of appropriations authorized by Public Law 660 and to exercise your influence in securing passage of legislation to expand this program. The present Blatnik bill—H.R. 3610—would increase grants to the local communities and otherwise improve our present law—Public Law 660.

ABOLISHMENT OF PROGRAM IS INCONCEIVABLE

President Eisenhower earlier this year asked the Congress to bring to an end the Federal grant-in-aid program for sewage treatment facilities. This is a shocking attitude for a man considered by a majority of the Nation's voters to be capable enough to preside over the governmental affairs of the world's greatest Nation. In that connection I would like to quote from an item appearing in a recent issue of the American Municipal News, indicating that even the President's advisers differ with his viewpoint on this great program:

"Presidential advisers on water-pollution problems again have taken issue with the administration's proposal to end Federal grants to local communities for construction of sewage treatment plants.

"The nine-member Water Pollution Control Advisory Board at its December 16 meeting by unanimous vote urged that the present grants-in-aid be continued.

"Milton P. Adams, Vice Chairman of the Board, is reported to have stated, 'the President could have been better advised,' when he recommended that the Federal Government turn the program over to the States. 'He didn't ask us,' Adams told a press conference.

"Adams, who like the other members of the Board is appointed by the President, described the proposal as 'a hot potato' and pointed out that the telephone companies are lobbying for repeal of the tax which was a wartime measure.

"Board members approved a resolution stating that the budget that will be presented to Congress next month should contain at least the \$45 million that was appropriated for the program during the current year. Consideration should be given to increasing the amount available for construction, they said.

"The Federal Government now makes the grants under a 1956 law providing an incentive for communities to build sewage treatment facilities by contributing up to 30 percent of the cost. The law calls for a 10-year program and authorizes up to \$50 million a year.

"Board members estimated a need of \$70 to \$75 million each year in Federal grants to bring community participation up to a satisfactory level."

I hope you gentlemen will act favorably on the Blatnik bill—H.R. 3610—sent to you some weeks ago by the U.S. House of Representatives. It is definitely in the national interest and our Nation's people need this broadened and improved legislation which touches a subject and a problem so vital to all citizens of the towns and cities of the several States.

State Department Trades Principles for Arab Oil

EXTENSION OF REMARKS OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the Record, I am pleased to submit an article from the Minneapolis Star quoting from the American Jewish World, published by L. H. Frisch, in Minneapolis, which commends the New York State Supreme Court on a recent decision affecting em-

ployment practices of Aramco—Arabian-American Oil Co.

It is well to know that there is evidence of such widespread approval of this decision. Let us hope that we can look forward to the time when such litigation will no longer be necessary.

The article follows:

STATE DEPARTMENT TRADES PRINCIPLES FOR ARAB OIL

The American Jewish World, published by L. H. Frisch, commented editorially this week on the Aramco court decision:

The New York State Supreme Court decision in the case of Aramco (Arabian-American Oil Co.) will, we trust, be but a first step in a long overdue process of taking stock to determine the moral price the American people have paid for the private profits of Aramco.

The court held that Aramco could not be exempted from obeying the law of the State of New York which bans asking job applicants about their religion, a practice which the Aramco officers followed in order to comply with Saudi Arabian barriers against Jews.

"Aramco," the New York Supreme Court ruled, "cannot defy the declared public policy of New York State and violate its statute within the State, no matter what the King of Saudi Arabia says. . . . The Constitution and laws of New York State cannot be cast aside to protect the oil profits of Aramco."

The full moral tragedy of the situation is that our own State Department has tried to bring pressure on the chairman of the New York State Commission Against Discrimination to exempt Aramco from obeying the New York law. For has not the State Department paid with the American conscience and historic principles for Arabian oil? Why should not the State of New York pay a similar price?

One has but to read the record of the U.S. Congress and of the resolutions of both major political parties in 1912 and 1913 in connection with the United States-Russian treaty, to realize what a demoralizing sellout of American principles the present State Department policy represents. At that time, urged by resolutions in both Houses of Congress, the United States abrogated its treaty with Russia because of Czarist religious discrimination against Jewish citizens of the United States visiting that country.

What price must the American people pay ultimately for the private pockets of Aramco? Has this sacrifice of American principles enhanced respect for our Government abroad? Has it inspired any peoples to greater trust in us?

It is time indeed that a congressional committee begin a study of the activities of Aramco and its ramifications in the formation of our policy in the Middle East.

Rightabout-Face

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. ENGLE. Mr. President, Mr. William R. Conlin, editor of the Sacramento Union, has emphasized a point which I think merits the attention of the Members of the Congress. In an editorial of Thursday, July 30, Mr. Conlin points out that the selection of Miss Japan as

Miss Universe has a significance which may be overlooked. He recalls the anti-Japanese sentiment during World War II days and comments on the great strides that have been made since the conclusion of the war in the interest of true democracy. As he says, "this reversal of feeling is but proof of the ultimate sanity that underlies most of the world's irrational conduct."

This action comes at a time when we have the honor of welcoming to the Congress of the United States the first Congressman of Japanese ancestry, DANIEL INOUE, the new Member of the House of Representatives from the State of Hawaii.

I ask unanimous consent that the editorial may be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHTABOUT-FACE

The selection of Miss Japan as Miss Universe, plus the selection being made in California, where the anti-Japanese fever of World War II days reached something of fever heat, is an object lesson in the fallaciousness of fever heat judgments.

Nobody could have told a Californian during the war that this State, in 1959, would see such a complete reversal of feeling toward anybody who had anything to do with Japan.

Yet this reversal of feeling is but proof of the ultimate sanity that underlies most of the world's irrational conduct. It is this foundation of sanity that has kept the world going in spite of its insane moments.

By the same token, few in America would have predicted, during the course of our fight with Japan, that Japan today would be our principal ally in the Pacific. Yet this is so.

We salute Miss Universe of 1959. She is a beautiful and gracious lady.

My True Security

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks, I want to insert in the RECORD one of the winning scripts in the My True Security contest annually sponsored by the National Junior Chamber of Commerce among the high school students.

I attended the dinner at which the awards were made to the winners in this contest, and I was particularly impressed with the thoughtfulness of these young people's talks. I offer that made by John R. Williams of Central High School, Fargo, N. Dak.:

To me, security is a dirty word. I do not seek it and would not accept it were it offered me. Unlike so many of my fellows, I am searching for something better than what I presently have. Unlike many young people today, I wish to be the master of my own fate, the captain of my own soul. I cannot and will not blindly follow the herd plodding blissfully toward an uncertain goal in the comfortable rut of mediocrity which so typifies security.

Today Americans are eagerly searching for security. If and when they find it, man will be able to count the remaining days of our civilization on the fingers of his two hands. This great Nation and the way of life it has come to represent were not created by men seeking security. They were hammered and chopped and carved and dug and plowed out of the wilderness by steelhearted men who sought but one thing—opportunity.

For 7,000 years mankind groped in the darkness; then in 1776 a new nation was born, and the people of the earth knew that at last they had found the promised land. There was no security here, and everyone knew it—yet from all corners of the earth they streamed to America—the land of opportunity.

When America's early pioneers first set their eyes to the west they had only their two hands and the soil. There was no TVA out there, no social security, no minimum wage—there was only freedom, but that was enough. Some failed again and yet again to succeed, so there was poverty, too. But every man was free to rise just as high as his own feet could carry him, and because his success or failure was determined solely by his own abilities and willingness to work, he realized the only true security possible in a government of, by, and for the people. Our forefathers knew that there is no short cut to the promised land, and it is time their descendants were becoming aware of the fact also.

There is, to my way of thinking, but one hope for the preservation of civilization as we know it—that mankind learn once more the beauty and dignity of honest labor. Business men, farmers, and laborers alike must learn to solve their own economic problems instead of running, hat in hand, to Uncle Sam. They must realize that the mad merry-go-round of bread and circuses—all in the name of security—will destroy this Republic just as surely as it destroyed ancient Rome. There is very little security in a grave. It is time for Americans to realize that the best kind of security is insecurity, and that hard work is not only the best thing for them, but is in fact the hope of the world.

East Texas Editor Man of Month

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. JOHNSON of Texas. Mr. President, outstanding ability as a newspaper editor, coupled with a deep devotion to civic, education, and religious responsibilities have brought many honors to Ellie Hopkins, vice president of the Longview News Co., and editor in chief of all Carl L. Estes publications.

The most recent of these honors was designation of this outstanding Texan and American as August Man of the Month by the East Texas Chamber of Commerce.

In recognition of this commendation, I ask unanimous consent that an article from a recent issue of the Marshall (Tex.) News-Messenger, relating to Mr. Hopkins' many achievements, be reprinted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EAST TEXAS EDITOR MAN OF THE MONTH

LONGVIEW.—"It has been my observation that a newspaper can either sleep with a town or spur it to progress by an alert and aggressive editorial policy."

This philosophy, coupled with a devotion for civic, educational and church responsibilities, has made the name of Ellie Hopkins outstanding, locally and nationally.

As vice president of Longview News Co., and editor in chief of all Carl L. Estes publications, the August Man of the Month has brought renown to himself and to the newspapers he edits.

FIVE-TIME WINNER

Five times in the past 7 years his editorial writing has won the George Washington Honor Medal of the Freedoms Foundation in national competition for distinguished contribution to better understanding of the American way of life. His editorials have won four first place Texas Press Association plaques. In 1957 he received the annual press award of the Baptist General Convention of Texas for his contribution to religious and church news writing.

REARED AT HALLSVILLE

Born in Meridian, Miss., Ellie Hopkins moved to Hallsville, at the age of 5, and was brought up there. After graduation from East Texas Baptist College at Marshall, he started his newspaper career in 1928 with the Marshall News Messenger. After a year with the Jefferson Daily Journal, he joined the Longview News-Journal in 1930. He served as general reporter, agricultural editor, oil editor, city and telegraph editor, and managing editor. He was named editor in chief in 1945 and became vice president 2 years ago.

A member of State and national press groups, Mr. Hopkins is also on the board of directors of Lone Star Steel Co. He is a member of the President's Committee on Physically Handicapped, past president of the Longview Rotary Club, charter member and two-term director of the Association of Petroleum Writers and formerly served on the Citizens Advisory Committee of Longview's City Plan Commission.

ON CHURCH BOARD

A member of the First Baptist Church's board of deacons for 12 years, he has been general superintendent of the Sunday school for 11 years. Mr. Hopkins has been a training union officer for 15 years and has sung in the choir 30 years.

Mr. and Mrs. Hopkins are the parents of two children—Mrs. James Quillen of Tulsa and Jack Hall, age 6.

Educational Television Legislation:
Alabama Points the Way

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. UDALL. Mr. Speaker, of all the States in the Union, Alabama has pointed the way in taking advantage of the fresh opportunities to improve the quality of American education afforded by a statewide educational television network. Indeed, Alabama's success in this field is perhaps the best argument for the enactment of the Magnuson educational television bill, S. 12, which has already passed the other body and is now

awaiting action before the House Committee on Interstate and Foreign Commerce.

A recent UPI dispatch from Birmingham which appeared in the New York Times told the Alabama educational television story in graphic terms. I am placing this report in the RECORD today to underscore the great challenge and opportunity afforded the Congress by this legislation:

ALABAMA EXTOLLS EDUCATION BY TV—2-YEAR SYSTEM IS ALSO HELD SUCCESSFUL IN OVERCOMING SHORTAGE OF TEACHERS

BIRMINGHAM, ALA.—For less than the cost of one network spectacular, Alabama is instructing about 61,000 of its boys and girls through the medium of television.

The end of the 1958-59 school term marks the completion of 2 years of a full-schedule curriculum beamed into classrooms under authorization of the State board of education.

Supporters of the system assert that it is the best answer at present to the critical shortage of teachers.

"One person teaching via television can instruct 5,000 classrooms," said Raymond D. Hurlburt, general manager of the Alabama educational TV network, the only such statewide system in the Nation.

Educational television in Alabama was launched little more than 5 years ago with a \$500,000 grant from the State legislature. The first telecasts came a year and a half later.

Since the establishment of channel 7 as an educational TV outlet, two other channels, 2 and 10, have been added with the result that 70 percent of the State receives TV school programs.

There are three studios: in Birmingham, at the University of Alabama in Tuscaloosa and at the Alabama Polytechnic Institute in Auburn. The State has invested \$1,500,000 in capital outlay, including eight towers and relays.

The network has about seven cameras and transmits 65 hours of programming a week during the school year, 80 percent of it live.

Equipment valued at \$200,000 was donated by Storer Broadcasting. In addition, Mr. Hurlburt said, "We receive about \$100,000 a year from the Ford Foundation and \$80-\$85,000 each for programming out of Alabama and A.P.I. from the State. The ETV commission also receives \$200,000 a year.

That adds up to about \$460,000 annually—a cheap price, Mr. Hurlburt believes, for helping to alleviate the shortage of trained instructors. He would like to see the network expanded so that it could serve the entire State.

Besides partly relieving the teacher's shortage, Mr. Hurlburt said, educational television helps to meet another critical shortcoming of Alabama's schools.

"Many of our schools are unaccredited. Often this is due to the fact that such subjects as physics and chemistry are not being taught by adequately prepared teachers," he said. Educational television overcomes that lack.

A sample of a day's schedule this spring included Spanish, physics, chemistry, civics, Latin, and biology during the daytime and three college credit courses at night—advanced physics, French, and psychology.

Other subjects offered for the home viewer included farm programs, sculpture, flower arranging, public speaking, a review of Russian literature, and classical music. There was also an in-school science refresher for junior high school teachers.

REVOLUTION IN TEACHING SEEN

Mr. Hurlburt foresees a revolution in the method of school instruction by means of television.

"Almost universally, our formal education has been based on the theory that we must furnish a student's mind with a wide variety and a great number of facts on the off-chance that he may need them in later life," he said.

"Educational television can enable the student to work independently. It can widen his educational opportunities by providing courses when he feels the need for them—whether the need be to increase his efficiency, understanding or just his enjoyment of life."

The TV instruction is the best available in the State. The faculty includes:

Dr. Robert Brown, dean of chemistry at the University of Alabama, and Prof. Charlotte Ward of Alabama Polytechnic Institute, who teaches 12,000 children weekly in upper elementary science.

The network has drawn favorable comment from educators throughout Alabama and has been described as a model for other States interested in adopting television as a means of teaching their booming school populations.

The Triumph of TVA

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. KEFAUVER. Mr. President, the August 1, 1959, issue of the Nation carried an editorial and a news article pertaining to the Tennessee Valley Authority. The editorial pointed out that the success of the TVA experiment is incontestable and has become one of the rare unarguable facts of American politics.

The news article was written by the distinguished newspaperman, Lloyd Armour, of the Nashville Tennessean, and deserves the attention of all Members of the Congress and, indeed, the American public. I ask unanimous consent that the editorial and article be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

THE SUCCESS WE DON'T REPEAT

Is the TVA yardstick principle obsolete? The moment TVA challenged the identical bids of American manufacturers of electrical equipment by making awards to European low bidders, the industry miraculously ordered a 15-percent reduction in the prices of large turbine generators. And in other respects as well TVA has more than fulfilled its brilliant initial promise. Today the success of the TVA "experiment" is incontestable—one of the rare unarguable facts of American politics. From every quarter of the world, engineers and social planners flock to the Tennessee Valley to marvel and, ultimately, to imitate. Why, then are we so reluctant to repeat a success of this magnitude? Why has TVA remained the sole river valley authority?

To be sure, a nagging Republican opposition persists and the private power lobby is still vocal; for the last 4 years TVA has been unable to expand facilities to meet new demands. But a giant can afford to be magnanimous and a new bill offers substantial concessions to the critics of TVA. It would regularize TVA's finances by making it possible for the agency to finance new power installations by the issuance of revenue

bonds which would not be tax-exempt. No longer would Congress appropriate funds for new generating facilities. It would also limit the area to be served by the project. But even if the President signs the bill—there has been talk of a veto—it will not mean that we have at last learned the lesson of TVA. The TVA idea may be copied in Egypt but not in Oregon and Washington; TVA has spawned progeny on the Nile, the Euphrates and the Zambezi but not on the Rio Grande, the Missouri, the Colorado, or the Columbia. And for this the old-line operating agencies in Washington, such as the Corps of Engineers and the Bureau of Reclamation, rather than the power lobby, are primarily responsible.

Under Democratic administrations as under Republican, under liberal as under conservative leadership in the Department of the Interior and other departments directly concerned, the empire builders of the old-line agencies, with their fears and vested interests and powerful connections have continued to block the river valley proposals. TVA itself cannot be handcuffed; the giant continues to work night and day and will now be permitted to expand to meet its area's new demands for power, which increase at a rate of about 12 percent each year. But those servants of the people, the bureaucrats of the old-line agencies, will not permit the same idea to be applied elsewhere. In a democracy the ultimate power is the bureaucratic.

TVA: THE UNLEARNED LESSON (By Lloyd Armour)

NASHVILLE, TENN.—Twenty-six years separate the historic legislation creating the Tennessee Valley Authority from the latest important TVA measure: a new method of financing the continuing work of the agency. In that time, a new generation has grown up without knowing what it was like in the days before TVA. And an older generation has had time to forget.

This is a fitting time, then, for a new look at the reality of a dream, at an experiment that has become a \$2 billion going concern. How does it justify its costs to its owners, the people of the United States? What has it done for the people of the Tennessee Valley? Is it creeping socialism, as some have claimed, or is it democracy on the march, as others describe it? Does the valley use the agency as a lure to uproot industry elsewhere? Does TVA steal pennies from the pockets of taxpayers elsewhere to subsidize cheap power? Does it build steamplants as an excuse for continuing its work, now that the task or developing a river is all but complete?

These are some of the questions raised by a continuing barrage of criticism against TVA. For the answers, it is necessary first to go back, briefly, beyond the TVA era to some farsighted statesmen such as Theodore Roosevelt, Gifford Pinchot and Senator George Norris. These were men who pondered long about ways of conserving and developing the nation's resources. From their thinking, and that of others, emerged the concept of total development of river valleys. In the depression years, a small band of men in Congress began a long fight for such an experiment in the Tennessee Valley.

From almost any standpoint, the choice was an excellent one. The South as a whole was underdeveloped, and it was labeled by some as the Nation's No. 1 economic problem; and in the South, no region presented a greater problem than did that valley washed by the deceptively passive Tennessee River. For each spring, this sleeping tiger awoke and became a roaring, rampaging flood. Residents fled in terror to the high ground as the water swept away crops, homes and land. Millions upon millions of

tons of topsoil vanished in hours. Businesses were wiped out, and with them sources of taxation.

The region depended upon a one-crop economy. Balance in agriculture was a phrase of the professors. There was little industry and much poverty. Malaria, tuberculosis and malnutrition left their marks upon the people and the burial places.

But the sickness that sapped the region most was one for which no doctor could prescribe. It was the sickness of fear. There was fear of the river, fear of the land that produced less and less. There was fear of the future. And in the beginning there was fear of TVA.

But the building of dams meant jobs and a flow of money. As the mighty dams took shape, hope rose. There was a new look about the land. Ears began to listen to what the experts of the fledgling TVA had to say. Eyes began to see help, as in mosquito control. There were specialists looking at the land, testing it and finding the need for fertilizers of a particular type. Since the type wasn't being produced, TVA began to make it.

Quickly, the valley learned something about the TVA: It would help, but there had to be cooperation. Soon the valley farmers, guided by their extension services and county agents, began to apply lime and phosphates to jaded land in the first of many, many thousands of farm-test demonstrations. They began to learn about soil needs, about contour plowing, about the importance of trees as windbreaks and erosion curbs. In a few seasons, the barren, soil-scaped hillsides were green, the valleys below them lush.

As research and production details were worked out and TVA-born fertilizers developed fully, the agency turned over its data and its processes to private industry—free of charge. In addition, industry got another gift—a ready-made market. Since research, introduction and promotion of any new fertilizer is costly, the industry moved slowly. But here TVA was doing the whole job with its research, demonstration plots, fertilizer schools and educational programs for the farmer.

Today, the farmer in Wyoming or New York, as well as in Tennessee, benefits by the TVA fertilizer program (which is paid for by appropriations from Congress). Minnesota farmers saved almost \$750,000 from 1949 to 1954 by using TVA-developed and promoted "4-16-16" and "5-20-20" fertilizers.

It may be noted here that a chemical paradox—the fact that nitrogen is both a life-giving plant food and an ingredient of powerful explosives—makes it possible to turn the TVA fertilizer development center from peacetime to wartime use in a day.

As TVA was helping to promote a new and more productive farm economy, it was also having an effect on commerce and navigation. The series of high dams which canalize the Tennessee created a long, deep waterway over which freight traffic moved in increasing tonnage. Tows hauled automobiles from the industrial North to the Alabama plains, saving more than \$10 a car. Ferro-alloys moved from Muscle Shoals, Ala., to Pittsburgh \$5 a ton cheaper.

What does this mean to shippers? On 12.1 million tons of traffic in 1958, they saved more than \$24 million. Deducting the annual cost of the waterway—\$4.2 million—there was a net transportation benefit of \$19.8 million. This is a 14.5 percent return on the \$136 million net investment in a navigation system which contributes to inter-regional commerce and strengthens the whole Nation.

It is axiomatic that navigation development and industrial growth go hand in hand. Since 1933, private industry has invested nearly a billion dollars in more than

130 terminals and plants along the river. All in all, more than 3,000 new industries have come to the TVA region.

This growth has promoted many critics of the agency to raise cries of "industry piracy" on the part of the valley. But the vast majority of new plants represent branches and subsidiary operations of industry which still have their headquarters elsewhere. In a recent survey by TVA, it was found that during a 19-year period only 25 plants pulled up roots elsewhere and relocated in the TVA area. During this time, nine such larger plants left the region. The 25 incoming plants represented 3,800 jobs, the 9 outgoing, 2,000: net gain for the valley, 1,800 jobs.

The truth is that while industrialization in the valley has been rapid, it has lagged behind the Nation as a whole, and the cry of "industrial piracy" is absurd.

Originally, cheap electric power was considered among the less-important objectives of TVA. It was viewed merely as a byproduct of river control that would allow for increased rural electrification and encourage a moderate expansion of industry. But with the coming of World War II, the picture changed. A secret installation known as Oak Ridge needed power in enormous quantities. Opportunities for increasing hydro-power were limited: new dams might justify their costs in power terms, but not, at the time, in other ways. Besides, a huge dam is not an overnight project. In 1940, TVA turned to a much quicker method of adding to generating capacity: the steam plant. First to be built was the Watts Bar plant, with a capacity of 240,000 kilowatts.

After World War II, and with the beginning of the Korean conflict, it became increasingly clear that more sources of quick power were needed. Not only were farms, homes, and factories demanding more current, but entirely new energy-devouring installations were entering the area: atomic-energy plants, the Arnold Engineering Development Center and the Redstone Arsenal, where the Army was building missiles.

By fiscal 1958, the atomic-energy plants and other Federal defense agencies in the area were using 51 percent of all TVA power—more than 29 billion kilowatt-hours. This is more power than was sold last year in any of the States outside the valley except four.

So TVA became a defense weapon. But it had an extra meaning for taxpayers in that it provided very large savings on the Government's electric bill. Perhaps this will show how much:

From 1953 to 1958, TVA delivered 129.8 billion kilowatt-hours of power to Oak Ridge and Paducah, Ky., atomic facilities. This cost the Government \$590 million. If there had been a 1-mill-per-kilowatt-hour increase in this cost, the bill would have been \$130 million more—the cost of the U.S. share of the St. Lawrence Seaway.

Now compare the average cost of producing and marketing electric power by TVA with that of privately owned utilities. Last year, the operating cost for TVA was 5.21 mills per kilowatt-hour; the corresponding cost of privately owned utilities was about 10.09 mills. At that rate, the Government's \$590 million electric bill would have been almost doubled.

But, say the private utilities, TVA doesn't pay taxes. It's a subsidized operation. True, TVA doesn't pay taxes in name, but it makes payments to State and local governments in lieu of taxes. In 1958, these payments (from TVA and its distributors) totaled \$13,751,000. Excluding Federal agencies, about 6.3 percent of the electric bill of all TVA consumers was paid to State and local governments. Corresponding taxes of private utilities in neighboring areas ranged from 5.1 percent to 11.8 percent.

In addition, the law requires TVA to repay to the Treasury, from its power revenues, the entire investment in each power facility within 40 years. To date, payments of \$250 million put the agency well ahead of schedule. The payments exceed the entire Federal investment in the first 13 dams TVA built.

There are other money savings involved. Millions of electricity users in other parts of the Nation are paying lower electric bills because of TVA's rate policies—the so-called yardstick of power. Electric rates, according to Federal Power Commission data, are lowest in the TVA and Bonneville areas, and grow progressively higher as the distance from these public-power facilities increases. Before TVA, rates in a semicircle through parts of Texas, Oklahoma, Iowa, Michigan, and New York were \$10.08 for each 250 kilowatt-hours. In 1958, rates for the same area averaged \$7.10.

The power companies nearest the Tennessee Valley have made the greatest reductions in retail rates. Nevertheless, their earnings have increased at a rate substantially greater than the average of all the large utilities in the Nation. From 1937 to 1957, according to published Federal Power Commission figures, earnings available to the common stockholders of the larger privately owned utilities multiplied three and one-quarter times; similar earnings of companies bordering the TVA increased eight times.

So much for power. To many people, a more important objective of TVA is flood control. The Valley is now protected by ten major multiple-purpose dams providing 6 million acre-feet of storage for floodwaters.

Were there no TVA dams, a flood stage of 57.9 feet in the Tennessee River today would cause \$100 million in damage to low-lying Chattanooga. The total estimated annual average value of flood regulation by the reservoir system is \$11 million. Over 26 years, this annual sum more than equals the annual cost and total investment combined of the system's flood-control facilities.

TVA's extensive experience in mapping, advising and aiding in engineering studies of flood control is being put to work in many sections of the country. One of the agency's special interests now is the tributary watershed program—away from the rivers, back among the creeks and branches where flooding is also destructive, though less so than on the rivers. This program seeks to establish ways by which, under State leadership, communities can organize themselves, study their problems and apply solutions through their own agencies and their own resources.

Critics charge that the citizens of the valley are the helpless victims of an autocratic project. How well have these helpless victims done with the help of the TVA? In 1933, only 3.4 percent of the total Federal income tax collections came from the seven States of the TVA region. By 1958, the percentage had more than doubled. From 1933 to 1956, total collections amounted to \$21,900 million. If we assume a rate of gain based on the 1933 percentage, TVA has meant an extra \$10 billion in Federal tax revenues—almost five times the entire cost of the project.

At the same time, the valley has become a vast market for goods produced outside. From 1934 to 1958, TVA alone purchased \$1.1 billion worth of outside goods. Users of TVA power spent \$1.8 billion for electrical appliances. Still another billion has been spent on automobiles, boats, motors and other products.

These figures should not lead anyone to envision the valley as more prosperous than any other section of the Nation. It is far from that. It lags the national averages in almost all economic measurements.

Twenty-five years ago the per capita income was only 45 percent of the national average; despite a sizable gain, it is only 63 percent today.

There is a great deal yet unaccomplished. The balance between agriculture and industry is short on the industry side. Too great a portion of the region's youth leaves each year because there are not enough jobs. Farms are too small and too many. An estimated 2.7 million acres need to be reforested.

The demand for electricity is growing at a rate of 800,000 kilowatts a year. People are just naturally using more power—the air conditioner, for example, is a big sales item where it once was a rarity. Business expansions, new industry, demand more—and the valley must have these if it is to continue to progress.

So TVA must have new funds merely to keep abreast of demand. That is why its supporters have fought for a self-financing measure (a method, incidentally, first suggested by the Eisenhower administration). TVA will be lucky if the \$750 million made available by the latest TVA legislation can adequately provide for needed facilities in the Valley. The pattern of progress has been set, and there can be no slackening off without harm to the region.

The great irony of TVA is that its value is given more recognition abroad than in the United States. It is the one great American project that draws a steady stream of potentates, students, engineers, and politicians from every corner of the globe. It is the one great idea we have exported with success. Eight foreign countries now have big projects based on TVA—countries ranging from India to tiny Lebanon.

Efforts have been made to establish TVA-type authorities in the valleys of other American rivers: the Missouri, Rio Grande, Colorado. A new Columbia Valley Authority bill—the Neuberger bill—is before Congress. None of these efforts has thus far succeeded.

The TVA was an experiment at a time of national economic distress when the public was receptive to daring innovations. The electric utility interests, natural enemies of such an enterprise, were themselves in trouble. These interests, reviving, have since fought the spread of the TVA idea with a rising fear. While keeping TVA under carping attack, they have sown widely and nurtured well a confusion that restrains the people of other sections from emulating a valley program that is, nevertheless, the outstanding example of a people's ability to make the most of a natural environment.

In Support of the Taxpayers' Right To Know

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. HARRISON. Mr. Speaker, during its recent consideration of the mutual security appropriation bill, this House took notice of the frequent resistance of the executive branch to compliance with requests of the committees of Congress, and of the Comptroller General, as agent of the Congress, for information necessary to a proper appraisal of the operations of programs authorized and appropriated for by the people's representatives in the Congress.

In providing funds for foreign aid operations during the current fiscal year, the House properly required that agencies and departments disbursing these funds comply within 20 days with the Comptroller General's legitimate requests for data, or suffer suspension of the appropriation provided. Action came on the amendment offered by my distinguished Virginia colleague, the Honorable PORTER HARDY, who has been performing an outstanding service to the taxpayers through his diligent and revealing work as chairman of the Subcommittee on Foreign Operations and Monetary Affairs of the House Committee on Government Operations.

Mr. Speaker, under leave to extend my remarks in the Appendix, I include editorial comment on the Hardy amendment which appeared in the Wall Street Journal on July 30, 1959:

ACCOUNTING TO THE PUBLIC

In passing the foreign aid bill, the House adopted an antiseptic amendment that strikes us as very much in the public interest. The amendment will not cure, by any means, all that is wrong with the foreign aid program, but it certainly will make the sort of secrecy that has plagued aid spending unpopular even among the spenders.

The amendment accomplishes that by the simple device of saying, "speak up, or else." Where Congress or the General Accounting Office calls for records or reports on what is going on with American taxpayers' funds in Laos, say, the International Cooperation Administration will either comply or that particular aid program will cease until ICA does comply.

The amendment will be fought quite bitterly, and the battle lines are drawn; already it is being called a stumbling block to our mutual security program. That argument, it seems to us, is easily disposed of, for if there is any mutual security in the spending of dollars, itself a debatable point, certainly our security will be benefited more by seeing that there is as little waste and inefficiency as possible in the spending. And that is the aim and purpose of the amendment.

But another argument is being advanced against it, too, and that one is that the amendment is an attack on executive privilege—an asserted power of the executive branch to withhold papers from the Congress, but a power, be it noted, that has never been constitutionally tested in the Federal courts.

But whether the privilege is a constitutional right or an assumed right based on no more than the hesitancy of Congress to test the claims is beside the point; the point is that the International Cooperation Administration is a creature of the Congress, the money it spends is appropriated from the public purse by Congress, and when Congress demands an accounting from its stewards of how the money is spent, Congress has a right to that accounting.

The administrators of foreign aid have refused in the past to cooperate with Congress when it seeks information on various projects. One reason is pretty plain; nobody in ICA wants Congress or the public to know how some of the foolish projects ICA engages in turn out—such as the sawmill that couldn't be used overseas and remained parked on the beach because nobody could get it to the timber because the bridges weren't strong enough to hold it. Nobody had thought to check on the bridges before sending the sawmill out.

That is the sort of serio-comic aid that the amendment lifting the lid on foreign aid secrecy might well discourage. Indeed, to argue against the right of Congress to check

on ICA—or any of the other bureaus it has created and supports—is quite likely to become, in the public mind, an argument in support of waste and inefficiency which the secrecy hides.

It would be well, we think, for the Senators to realize that, too, when the bill comes before them. For no matter how one cares to argue, in the end the argument comes down to this: Why should anybody object to an accounting to the public where the public purse is concerned?

Texas Newspapers Expand To Handle Surge in Business

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. JOHNSON of Texas. Mr. President, it is no secret that my State of Texas possesses many resources of great value. Among the most valuable is the daily press.

The value of this asset is unique in that it is truly worth more to the people of Texas than it is to the owners of the newspapers. The chief benefits of a good newspaper extend to society as a whole.

Texas newspapers are growing bigger and better. They are spending this year more than \$10 million for new and expanded plants and machinery, according to Phil North of Fort Worth, president of the Texas Daily Newspaper Association.

Details of this expansion were carried in a recent Associated Press story. I ask unanimous consent that this story be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS NEWSPAPERS EXPAND TO HANDLE SURGE IN BUSINESS

FORT WORTH, TEX.—Texas newspapers are pouring more than \$10 million into new and expanded plants and machinery in 1959, to handle their biggest year's business and prepare for a still larger year in 1960.

This was reported Sunday by Phil North, president of the Texas Daily Newspaper Association as the TDNA prepared to hold its annual summer convention in Fort Worth, August 2-4.

"Growth of Texas population and business, accelerated sales campaigns on both the advertising and circulation fronts and the vastly increased use of newspaper color are the factors behind the surge in current newspaper growth," North, vice president of the Fort Worth Star-Telegram said.

He added:

"To ready themselves for the quality and quantity demands of the 1960s, the daily press, through the TDNA as well as individually, have expanded their research and educational programs.

"Within the past month, newspapers and Texas job printers have created a \$75,000 scholarship trust fund for the Southwest School of Printing at Sam Houston State Teachers College at Huntsville and started a program to make it one of the three top printing schools in the Nation and the finest west of the Mississippi."

The summer conference of the TDNA at the Western Hills Hotel in August will cover all phases of the newspaper industry.

A feature of the program on August 3 will be a panel discussion of the "New Editorial Mission of Newspapers." Men on the panel will include Tommie Call of the Corpus Christi Caller-Times; Tom Simmons of the Dallas Morning News; Jack Butler of the Fort Worth Star-Telegram, and Walter Humphrey of the Fort Worth Press.

On August 4, James B. Barnett of the Wichita Falls Record-News and Times will preside at a general session at which several subjects will be discussed.

Dr. Irby B. Carruth, superintendent of Austin public schools will make a report on the "Newspaper in the Classroom" program which is sponsored by the TDNA. In this program, daily newspapers are used as a regular and continuing classroom aid in the education of schoolchildren.

Dr. Albert Frey, professor of marketing at the Tuck School of Business Administration, Hanover, N.H., a consultant to General Motors and Procter & Gamble and a nationally recognized authority on advertiser agency media relationships, will make a special report.

Another report will be given by Steve Mahoney, president of Burke, Kuiper & Mahoney, national newspaper representatives in New York City.

John Murphy, executive secretary of the TDNA, said a large attendance is expected at the Fort Worth meeting, due to the importance of the program.

Murphy said "the stability and vigor of the Texas daily newspaper industry and the importance of the daily newspaper as the No. 1 news and advertising medium for Texans is evident in the fact that since 1950 the circulation of the State's dailies has increased from 2,277,000 to 2,800,000.

"This means there are 1,192,000 more Texans reading a daily newspaper today than in 1950," Murphy said.

He pointed out that new plants for newspapers were opened this year at Lubbock, Midland, and Lufkin.

Murphy added:

"Few Texans realize the daily newspaper industry is one of the State's major employers with 10,860 men and women employees whose average annual wages are the second highest of any industry.

"Though the recently established Institute of Public Affairs Reporting at the University of Texas School of Journalism, to which Texas daily newspaper publishers have granted \$100,000, the field of writing and reporting the news and matters of government will get new attention. Through the work of the Institute, newspaper writers will have an opportunity to do research, to study government and improve their analysis and reporting of public affairs to the Texas daily newspaper audience."

Murphy said that through the Texas Daily Newspaper Association, publishers are carrying on a vigorous program of work to improve the news and advertising functions of the daily newspaper.

A continuing program of news seminars is held at the University of Texas, he said. These seminars are sponsored by the TDNA and directed by Humphrey. The TDNA also sponsors advertising sales seminars.

"The Texas-Louisiana markets and media research program, sponsored by 24 newspapers in 16 markets, now is in its 4th year," Murphy said. "Through its research, newspapers keep constant check on the size and characteristics of newspaper audiences and their motivations.

"Through this research, TDNA members feel they have convincing facts, independently researched, to prove the daily newspaper audience is the largest, the most constant and the highest quality of any mass medium."

Labor Legislation

EXTENSION OF REMARKS OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert into the body of the RECORD two papers prepared at the Library of Congress by the distinguished specialist in industrial relations, Sar A. Levitan.

Both papers are of importance to the debate on the labor which which, hopefully will come to the floor this week. They deal with "Restrictions on Organizational and Recognition Picketing" and "Hot Cargo Provisions."

The papers follow:

RESTRICTIONS ON ORGANIZATIONAL AND RECOGNITION PICKETING (S. 1555 (SEC. 708) AND H.R. 8342 (SEC. 705(a)))

(By Sar A. Levitan, specialist in industrial relations, Economics Division, July 24, 1959)

PROVISIONS OF AMENDMENT

S. 1555, as approved by the Senate, and H.R. 8342, as reported by the House Committee on Education and Labor, provide that some aspects of organizational and recognition picketing be made an unfair labor practice under the Taft-Hartley Act (sec. 8(b)).

The proposed new unfair labor practice would prohibit a union from picketing or threatening to picket an establishment for the purpose of requiring an employer to recognize or bargain with the union or requiring the employees to select the union as their representative in collective bargaining under the following conditions:

(1) The employer has already recognized another union and National Labor Relations Board regulations ban (sec. 9(c)) a new union from challenging the rights of the recognized union to represent the employees; or

(2) A valid election has been held within the preceding 9 months and the union has been rejected by the majority of the employees in the bargaining unit.

This provision puts a limited ban on organizational and recognition picketing. Organizational picketing refers, generally, to attempts by a union to persuade employees of the desirability of union representation. Recognition picketing is aimed at gaining union recognition by exercising economic pressure upon the employer without regard to the wishes of the employees. In actual practice, the line of demarcation between the two types of picketing is frequently not too clear. In most cases it is quite apparent in either type of picketing that the union does not have the support of the majority of the employees in the establishment.

PRESENT LAW

The Taft-Hartley Act requires an employer to bargain with a union representing a majority of the employees, even if the union has not been certified by the NLRB. Under present law, this does not prevent a stranger union from picketing the premises of the employer. The proposed amendment would eliminate this practice.

Employers may also be harassed by union picketing even if the union loses a representative election. The NLRB has held that picketing by a union after it had lost an election constitutes an unfair labor practice. It reasoned that continued picketing in such a case by the union was an unlawful attempt to force the employer to recognize a union

rejected by the majority of the employees. In addition, the Board also ruled that the picketing in this instance constituted an unlawful coercion of the employees who would be affected by the union action.

The Board concluded:

There can be no more direct deprivation of the employees' freedom of choice than to impose upon them a collective bargaining agent they have not chosen or have expressly rejected. (*Curtis Brothers*, 119 NLRB, No. 33 (1957)).

The U.S. Court of Appeals for the District of Columbia rejected the NLRB decision. The court held that a minority union cannot be held in violation of Taft-Hartley by engaging in peaceful picketing when no majority union has been certified by the Board (43 LRRM 2156 (1958)).

Pro and con arguments

Those who favor these proposals argue that the picketing ban contained in S. 1555 would protect employers and employees from continuous coercion by unions which do not represent the majority of the employees. They point out that this ban on picketing is a reasonable recognition of the employees' desire and does not represent an abridgement of freedom of speech by the union to persuade the employees to join the picketing union.

The law, this argument goes on, provides an orderly procedure under which unions can gain recognition. The prohibition on picketing would still permit the union to distribute hand bills, and directly approach employees to persuade them to join the union. If the union organizational efforts are successful, it can petition an election within 9 months or attempt to replace the recognized union in accordance with NLRB regulations when the recognized union can be challenged. Moreover, under the Taft-Hartley Act 30 percent of the employees in a collective bargaining unit may petition the Board to decertify the union recognized by the employer.

Criticism of the limited restrictions on organizational and recognition picketing contained in section 708(c) of S. 1555 and 705(a) of H.R. 8342 comes from two diverse sources. Advocates of a stronger and more inclusive ban assert that the proposed provisions do not meet the problem of blackmail picketing, a term popularized by Secretary of Labor Mitchell in his testimony before the Senate Subcommittee on Labor (Feb. 4, 1959, hearings on labor-management reform legislation, pp. 267-269).

The administrator has proposed (S. 748, sec. 504) that minimum effective legislation must ban organizational and recognition picketing in the following situations:

- (1) The employer has recognized any labor organization in accordance with the act and a question concerning representation may not be raised under section 9(c) of the act.
- (2) Within the last preceding 12 months a valid election has been conducted.
- (3) The union cannot establish the existence of sufficient interest on the part of the employees in having it represent them; or
- (4) Picketing has been engaged in for a reasonable period of time and an election under 9(c) has not been conducted.

The Secretary asserted that his proposals are the minimum needed to combat the evil of picketing which has forced employees to join unions contrary to their wish and without receiving any benefits from the union. He cited cases, publicized by the McClellan committee, where unions have exacted what is tantamount to a tribute from employers and employees in the form of dues check-off. Secretary Mitchell said that the "blackmail picketing" ban which he proposed is essential to eliminate the evil practices disclosed by the McClellan committee.

Union spokesmen, on the other hand, have opposed infringements on peaceful picketing. They argue, quoting Supreme Court decisions, that peaceful picketing is "the workman's means of communication" (*Milk Wagon Drivers' Union v. Meadowmoor Dairies*, 312 U.S. 287, 293) and "an exercise of the right of free speech guaranteed by the Federal Constitution" (*Building Service Union v. Gazzam*, 339 U.S. 532, 536). Union spokesmen insist that the nonunion status of any firms is a threat to the welfare of organized labor and the unionization of such a firm is legitimate end of trade union activity.

The unions claim that the incidence of "blackmail picketing" is exaggerated. The real impact of the administration provisions to ban so-called "blackmail picketing" would make it illegal for a union to engage in peaceful picketing to persuade workers to join a union and to reap the benefits that collective bargaining brings to employees.

Specifically, the AFL-CIO has offered the following criticism to the ban on picketing proposed in S. 1555 and H.R. 8342.

(1) The language is too stringent. The mere threat to picket is classified as an unfair labor practice. In practice, the language used in labor-management relations is not always couched in precise legal terms, and categorizing a "threat" as an unfair labor practice leaves union representatives open to charges of committing unfair labor practices which may be contrary to their intentions.

(2) A union may be forced into an election before it has persuaded a majority of the employees to join the union. A loss of the election would break up a union-organizing drive by preventing picketing for 9 months.

HOT CARGO PROVISIONS (S. 1555, SEC. 707, AND H.R. 8342, SEC. 705(A))

(By Sar A. Levitan, specialist in industrial relations, Economics Division, July 27, 1959)

SECONDARY BOYCOTT CONTROVERSY

Section 8(b)(4) (a) of the Taft-Hartley Act contains a broad prohibition against secondary boycotts. The section makes it an unfair labor practice for a labor union to induce or encourage a strike or a concerted refusal * * * to perform any services, where an object thereof is * * * forcing or requiring any employer * * * to cease doing business with any other person.

The meaning of this section has been a source of controversy during the past 12 years since the enactment of Taft-Hartley. Some have claimed that the intent of Congress has been to outlaw all types of secondary boycotts—attempts to influence an employer by exerting economic or other pressures against persons who deal with the employer. Few object to the right of unions representing the majority of employees, to boycott employers with whom the union is engaged in economic conflicts. The objection is raised when a union attempts to cause economic damage to an employer, and indirectly to his employees, with whom the union is not engaged in a direct conflict.

In applying the broad prohibitions of secondary boycott contained in 8(b)(4) (a), the Supreme Court has adopted the position that this prohibition must be interpreted to harmonize "the dual congressional objectives of preserving the right of labor organizations to bring pressure to bear on offending employers in primary labor disputes and of shielding unoffending employers and others from pressure in controversies not their own" (NLRB v. *Denver Trades Council*, 341 U.S. 675, 1951).

ADMINISTRATION PROPOSALS

Advocates of a more stringent ban on secondary boycotts have argued that the present application governing secondary boycotts are inadequate because intolerable economic pressures can be applied by unions without

violating the act. Secretary of Labor James P. Mitchell has asserted that the present ban on secondary boycotts is inadequate. He stated that the present law, as enforced, requires that two factors must exist in order for a secondary boycott to be illegal: (1) An objective of the union must be to compel one person to cease doing business with another. (2) The means employed to achieve this objective must be through a strike or inducement of employees to concertedly refuse to perform services.

The bill sponsored by the administration (S. 748, sec. 503) proposed the banning of secondary boycotts in the following situations:

(1) Direct coercion of employers to cease, or agree to cease, doing business with another.

(2) Inducement or encouragement of employees individually to refuse to perform services, and

(3) To include within the scope of the provisions secondary employers who do not come within the act's definition of "employer," such as railroads and municipalities. The section makes clear that those prohibitions do not extend to activities directed at secondary employers performing for a primary employer "farmed out" struck work or those engaged at a common construction site with another employer with whom a lawful labor dispute exists with respect to wages, hours, or other working conditions of employees working at that site.

In defending the proposed secondary boycott provisions before the Senate Subcommittee on Labor, Secretary Mitchell argued that they are necessary in order to curb the power of the Teamsters to coerce employers and employees and to prevent unions from forcing unreasonable demands upon employers not through the ordinary process of collective bargaining but through the use of excessive power.

The Secretary of Labor concluded:

"The effect of this type of secondary activity is no less damaging upon employers and employees and no less contrary to the public interest than is the type of secondary activity presently prohibited by the act." (Senate Subcommittee on Labor-Management Reform Legislation, Feb. 9, 1959, p. 286.)

LABOR OPPOSITION

Naturally the labor spokesmen have objected to further restrictions on secondary boycotts. The union spokesmen have argued that there is a thin line between persuasion and threat and that the administration's proposal would limit the legitimate area of union organization and collective bargaining.

"The refusal to recognize the legitimate purpose of * * * [persuasion] is based on the fiction that there is no distinction between 'good secondary boycott and bad secondary boycott.'" (Senate Subcommittee on Labor, Hearings on Labor-Management Reform Legislation 1959, p. 588.)

The unions assert that the wages and working conditions of union workers in one plant are dependent on conditions in other plants. They, therefore, justify the use of boycott against any employer who jeopardizes established union conditions. A refusal by union employees to work on goods coming from another employer because that employer has sought to avoid union wage scales and working conditions by moving to a new location or simply because he pays "substandard" wages is as legitimate as a refusal to handle struck work. They play down the argument that employers who have no dispute with their own employees should not be victimized by actions of a union with which they have no collective bargaining relations.

PRESENT LAW ON HOT CARGO

S. 1555 (sec. 707) and H.R. 8342 (sec. 705 (a) (1) and (2)) deal with one type of sec-

ondary boycotts—the hot cargo agreements practiced mostly by the Teamsters. A hot-cargo clause in a collective bargaining agreement normally provides that employees will not be required to handle material from or destined for plants where a union is conducting a strike.

National Labor Relations Board application of the Taft-Hartley ban on secondary boycott to hot-cargo clauses has undergone a radical change. A decade ago the Board held that the hot-cargo clause does not constitute a violation of 8(b)(4)(a) and, consequently, action which otherwise would be a violation of 8(b)(4)(a) is made legal by a hot-cargo clause (*Conway Express*, 87 NLRB 972 (1949)).

After a number of modifications, the NLRB in 1957 reversed the earlier decision by declaring that hot-cargo clauses cannot be used by a union as a defense to conduct which would otherwise be a violation of 8(b)(4)(a). In other words, the clause may not be used to induce employees of motor carriers to refuse to handle freight from a struck employer. (*Genuine Parts Company*, 119 NLRB 399 (1957)).

At the same time, the Interstate Commerce Commission held that a common carrier is obligated to accept and transport shipments from a struck company; the common carrier is not relieved of this obligation to provide service to a struck employer by signing a hot-cargo clause in a collective bargaining agreement (*Galveston Truck Line*, 1957, 41 LRRM 139).

The Supreme Court upheld the NLRB decision by ruling that Taft-Hartley Act does not prevent an employer and a union from entering into a hot-cargo agreement. The Court held that the union may not persuade employees to abide by the agreement, though the employer may choose voluntarily to instruct its employees not to handle struck goods. In doing so, a common carrier may be in violation of ICC requirements, but this does not constitute an unfair labor practice under the Taft-Hartley Act. (*Sand Door and Plywood*, 1958, 35 U.S. 93.)

HOT-CARGO PROVISION IN H.R. 8342 AND S. 1555

Both S. 1555 (sec. 707) and H.R. 8342 (sec. 705(a)) ban hot-cargo agreements between a common carrier, covered by the Interstate Commerce Act, and a union. But the House bill adds that this provision does not deny an employee the right to refuse to cross a picket line where an employer is engaged in a primary labor dispute and permits the common carrier and a union to agree that the refusal by the employee to cross a picket line may not cause the discharge of the employee. The application of the present law to this subject has not been sufficiently tested and the current status of the law is unclear. (*Auto Parts Co.*, 107 NLRB 242 (1952) and *Rockaway News*, 345 U.S. 71 (1953)).

Proponents of this provision aver that it will eliminate a major weakness in the present law on secondary boycotts. As long as the retaining of hot-cargo agreements remains legal, common carriers continue to abide by it, even if the unions cannot force the carrier to do so.

To allay fears that the banning of hot-cargo clauses in agreements between carriers and unions would force union members to violate picket lines and act as strikebreakers, the House provision repeats the Taft-Hartley Act provision that employees may not be required to cross picket lines. H.R. 8342 further protects workers who refuse to cross picket lines by providing that a collective bargaining agreement may require a common carrier not to discharge an employee for refusing to cross the picket line.

The U.S. Chamber of Commerce has charged that the House changes nullify any effect that the Senate ban on hot-cargo provisions may have had.

The Teamsters, on the other hand, have

attacked the ban as violating established union practices of protecting union standards. For example, it would prevent a union from bargaining with a common carrier that only union-made trucks and supplies shall be used or that only union contractors would build or repair terminals where they work. The hot-cargo ban, it was charged, would also preclude a union from bargaining to prevent the subcontracting of work to non-union shops. Whether these charges are correct will, of course, depend on the courts, if the ban on hot cargo becomes law.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. HECHLER. Mr. Speaker, Sar A. Levitan, specialist in labor in the economics division at the Library of Congress, has prepared what I think is an outstanding paper on the background and provisions of the House labor bill, which I commend to the attention of all Members of Congress.

The paper follows:

DIFFERENCES BETWEEN S. 1555 AND H.R. 8342 LABOR-MANAGEMENT REPORTING AND DISCLOSURES BILLS

(By Sar A. Levitan, specialist in labor economics, July 25, 1959)

The House Committee on Education and Labor adopted 102 amendments to the Senate approved bill. Only part of the proposed changes are of a substantive nature. These deal with penalties provided for violation of the bill, powers of the Secretary of Labor in connection with enforcement, reporting requirements by employers and small unions, and amendments to the Taft-Hartley Act, including provisions dealing with secondary boycotts in the construction industry, filing of non-Communist affidavits, NLRB jurisdiction, economic strikers, definition of supervisors and ban on hot cargo.

MEMBERS' RIGHTS (TITLE I)

Both the Senate and House Committee on Education and Labor versions of the bill guarantee members' rights vis-a-vis their unions. These rights include: freedom of speech and assembly; protection against arbitrary dues, initiation fees and assessments; rights to sue a union or its officers for alleged violation of rights; and safeguards against improper disciplinary action. However, the Senate version makes violation of those rights punishable by 2 years, imprisonment and \$10,000 fine, or both (sec. 607, S. 1555). The House committee bill relies upon internal union remedies for 6 months. If remedy is not secured within the 6 months, the aggrieved member may bring a civil action suit in a district court to prevent and restrain the violation of the members' rights. No penalty is provided under the House bill for the violation of the rights guaranteed to members.

Freedom of speech and assembly (sec. 101 (a) (3))

The Senate bill makes these rights subject to the union's "established and reasonable rules." The House committee bill eliminates this limitation.

Dues, initiation fees and assessments (sec. 101 (a) (3))

The Senate bill provides that dues and initiation fees may be changed only by (1)

a majority secret vote at a general meeting; (2) majority vote in a referendum; or (3) in case of a national union by a majority vote at a convention.

The House Committee retains the above two methods as far as local unions are concerned. But in case of a labor organization other than a local union or a federation of unions, the following means for raising dues or initiation fees is provided: (1) majority vote of delegates at a convention, (2) majority vote in a referendum, (3) majority vote of the union's executive committee, if authorized by the constitution and bylaws. Dues raised by this method remains in effect until the next convention of the union.

Safeguards against improper disciplinary action (sec. 101 (a) (5))

The Senate bill provides that a union member may not be suspended, fined, or expelled unless the member has been served with specific written charges and given an opportunity to defend himself at a hearing. The House Committee bill requires only a fair hearing on written charges in accordance with the union constitution.

REPORTING (TITLE II)

Verification of reports by members (sec. 201 (c))

The Senate approved bill requires unions to make available to members copies of reports which they file under the bill and to permit members to examine the records kept to verify the reports. The bill also directs the Secretary of Labor to prescribe forms and conditions under which unions would be required to disclose financial records to members. The House Committee on Education and Labor also requires union officials to make available to members reports required under title II. This requirement is enforceable through court actions, which may also award the union member(s) attorney fees and other costs involved in filing action against the union.

Exemptions from reporting (sec. 201 (d))

The Senate bill authorized the Secretary of Labor to exempt local unions with less than 200 members or gross receipts of less than \$20,000 a year from filing annual financial reports. The House Committee version exempts such unions from filing reports, but authorizes the Secretary of Labor to withdraw the exemption after determining that the members of a union have been denied information about their local's finances.

Reports on transactions with employers (sec. 202 (a))

The Senate approved bill requires that union employees whose compensation and allowances are in excess of \$5,000 annually must report business and financial transactions with employers bargaining with the union. The House bill makes the reports mandatory of all union officers regardless of their compensation.

Employer reports (sec. 203)

The Senate bill requires employers to report to the Secretary of Labor expenditures made in connection with persuading employees to organize or bargain collectively. The House version limits employer reports to expenditures involving interference or coercion in connection with union activities.

Publication of reports (sec. 204 (a), S. 1555; 205 (a), H.R. 8342)

The Senate bill authorizes the Secretary of Labor to publish any information and data submitted by unions or employers under title II. The Secretary is also authorized to publish reports and studies based upon the data. The House bill strikes out this authorization.

Record keeping (sec. 205, S. 1555; and 206, H.R. 8342)

The Senate bill authorizes the Secretary of Labor to prescribe the information which

unions and employers must keep in order to verify the financial reports filed under the provisions of the bill. The House version requires that the needed information be kept by those who filed the information for 5 years. It does not grant the Secretary of Labor any authority in the matter.

Secretary of Labor powers to investigate violations (sec. 206(c))

The Senate bill authorizes the Secretary to report his findings to interested parties. The House committee bill does not contain this authorization.

Loans by unions (sec. 207(a), S. 1555; 503(a), H.R. 8342)

The Senate bill limits union loans to members or officers to a total of \$1,500; the House version raises the limit to \$2,500.

Paying fines or litigation costs (sec. 207(b), S. 1555; 503(b), H.R. 8342)

The Senate bill prohibits unions or companies to pay in advance fines or litigation costs of a person indicted for the violation of any provisions of the bill, though upon acquittal the expenses incurred by the official in his defense may be reimbursed by the union. The House version prohibits the payments of fines of a convicted person but not the payment of defense costs.

Criminal provisions (sec. 208(a) and (b), S. 1555; sec. 209, H.R. 8342)

The Senate bill makes the violation of regulations issued by the Secretary of Labor with reference to title II or failure to comply with the provisions of the title punishable by 1-year imprisonment or a fine of \$10,000, the same punishment as for willful violation of the provision of the title. The House version provides for punishment of willful violation only.

Commissioner of Labor reports (sec. 210, S. 1555)

The Senate version establishes the position of Commissioner of Labor and authorizes the Secretary to employ a staff to administer the provisions of the bill. The House committee bill makes no provision for these positions.

Non-Communist affidavits (sec. 212; S. 1555, sec. 201(c) H.R. 8342)

The Senate version requires union officers and employers filing petitions or complaints under NLRB to file non-Communist affidavits; the House Committee bill repeals this requirement.

TRUSTEESHIP (TITLE III)

Duration of trusteeships (sec. 304(c))

The Senate bill limits trusteeships to 12 months unless clear and convincing reasons exist for its continuance. The House Committee extends the initial time limitation upon trusteeships to 18 months.

Suits to restrain violation of trusteeships (sec. 306(a); sec. 304(a) H.R. 8342)

The Senate bill grants only the Secretary of Labor to enter suits in Federal districts courts to restrain violation of the trustee provisions. The House Committee grants the same right to union members.

ELECTIONS (TITLE IV)

Membership lists (sec. 401(b) S. 1555; sec. 401(d) H.R. 8342)

The Senate bill requires unions to distribute campaign literature of a bona fide candidate for union office—at the candidate's expense—and also guarantees candidates equal access to membership lists. The House Education and Labor Committee guarantees bona fide candidates the right to inspect and copy membership lists, when union security provisions are part of a collective bargaining agreement.

Removal of officer guilty of misconduct (sec. 401(g))

The Senate bill authorizes the Secretary of Labor to promulgate rules and regulations governing the removal of a union officer guilty of serious misconduct. Union members may remove the officer by secret ballot under the Secretary's regulations. The House Committee bill grants the power to district courts, upon a member's petition, to order a recall election.

Election irregularities (sec. 402)

Under the Senate bill a union member alleging irregularities in elections can take his complaint to the Secretary of Labor after exhausting remedies available under the union constitution. The Secretary is empowered, under the Senate bill to secure an injunction and to supervise a new election. The House version authorizes the members, after exhausting remedies under union procedures, to secure an injunction in a Federal Court. The Secretary of Labor is authorized to supervise a new election, if ordered by the court.

Persons barred from holding union office (sec. 405(a) S. 1555; 504(a) H.R. 8342)

Persons convicted of committing specified crimes including violation of Titles II or III of the bill are barred by the Senate bill from holding union office (except clerical or custodial jobs) for a period of 5 years after serving any part of a prison term. The House version would extend the prohibition to labor relations consultants or employer associations dealing with labor organizations. However, this prohibition is not applicable in cases where citizenship rights have been restored or when a U.S. Board of Parole determines that the person's holding office would not be contrary to the purposes of the bill. The House version applies the 5-year prohibition of holding office to former members of the Communist party.

CODES OF ETHICAL PRACTICES (TITLE V)

This title in the Senate bill—dropped in the House version—is an exhortation to unions and employer associations to adopt codes of ethical practices which would safeguard the rights of members.

MISCELLANEOUS (TITLE VI)

Punishment for interference with rights of members (sec. 607)

The Senate-approved bill provides the punishment of 2-years' imprisonment or a fine of \$10,000 for interfering with the rights of union members guaranteed by the bill. This provision is deleted in the House committee bill.

Fiduciary responsibility (secs. 610, S. 1555; 501(a), H.R. 8342)

The Senate bill makes union officers responsible in a fiduciary capacity for union money or other property in their trust. The House version adds that officers may expend union funds in accordance with the provisions of the union constitution and resolutions of the union governing bodies.

TAFT-HARTLEY AMENDMENT (TITLE VII)

NLRB jurisdiction and administration (sec. 701)

The Senate bill authorizes State agencies to exercise jurisdiction in labor relations cases when the NLRB has refused to act. The State agencies are required to apply Federal law in handling these cases. The House committee bill requires the NLRB to assert jurisdiction on all labor-management disputes affecting interstate commerce referred to the Board.

In addition the House committee adds the following amendments relating to the NLRB not found in the Senate bill:

1. Increases NLRB membership from 5 to 7 (sec. 701(c)).

2. Delegates determination of representation disputes to regional offices, but reserves the NLRB the authority to review the regional decisions (sec. 701(d)(1)).

3. Delegates many of the Board functions to the General Counsel (sec. 701(d)(2)).

Construction industry—Secondary boycott (sec. 702(c))

The House committee adds an amendment to the Taft-Hartley Act which declares that it is not an unfair labor practice to boycott a "secondary employer who is engaged as a joint venturer, price contractor, subcontractor, or cocontractor, together with the primary employer in a labor dispute, in a construction project. * * *

Economic strikers (sec. 703)

The Senate bill permits economic strikers to vote in accordance with regulations promulgated by the NLRB. The House bill strikes out the Taft-Hartley provisions denying economic strikers the right to vote.

Definition of supervisor (sec. 704)

The Senate bill provides that service assistants in the communications industry do not qualify as supervisors under the Taft-Hartley definition of the term. The House committee eliminates this provision.

Hot cargo agreement (sec. 707, S. 1555; 705(a), H.R. 8342)

Both the Senate and House committee bills ban hot cargo agreements. But the House version adds that this provision does not deny an employee the right to refuse to cross a picket line when the employer is engaged in a primary dispute nor is a collective bargaining contract to be invalidated because it "provides that such refusal shall not be cause for the discharge of such employee."

Labor Legislation

EXTENSION OF REMARKS OF

HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. KING of Utah. Mr. Speaker, Mr. Sar A. Levitan, specialist in Labor in the Economics Division at the Library of Congress, has prepared what I think is an outstanding paper on the background and provisions of the House labor bill.

I regard Mr. Levitan as one of the Nation's most distinguished and accomplished authorities in the field of labor law. As the House debates this labor bill, its members should find the information in Mr. Levitan's paper very useful, and I commend it to their attention. Its chief value lies in the fact that it is both scholarly and impartial.

The paper follows:

BACKGROUND AND PROVISIONS, LABOR-MANAGEMENT REPORTING AND DISCLOSURE BILL OF 1959 (H.R. 8342, 80TH CONG.)

(By Sar A. Levitan, specialist in Labor Economics Division, July 28, 1959)

BACKGROUND OF H.R. 8342

During the past decade several congressional investigations disclosed union abuses which added impetus to long-standing proposals for Federal regulation of internal union affairs. In the 81st Congress, a sub-

committee of the House Committee on Education and Labor concentrated its investigation on violations of basic democratic procedures in the United Mine Workers Union. In the 83d and 84th Congresses, a subcommittee of the Senate Committee on Labor and Public Welfare disclosed abuses in the administration of union health and welfare funds. Its investigations showed that leaders of the Laundry Workers, Distillery Workers and Allied Industrial Workers (formerly Auto Workers Union, A. F. of L.) had diverted health and welfare funds for personal aggrandizement. Finally, the most thorough and publicized congressional investigation into internal union affairs was conducted by the Senate Select Committee on Improper Activities in the Labor or Management Field (popularly known as the McClellan committee) since the beginning of 1957.

The investigations of this committee disclosed that some officials used union funds for personal gains or for questionable purposes without knowledge or consent of the members. The financial reports of these unions gave no inkling of the misuse of these funds since the expenditures incurred by the officials were recorded as part of legitimate union business or as gifts. Several officials made loans from union treasuries which did not require any formal reporting. In some cases national officers exercised prolonged trusteeships over locals, diverted union funds for their personal use and denied members their democratic rights. In several instances union members did not have the opportunity freely to elect their officials.

In March 1958, the McClellan committee recommended legislation to curb abuses uncovered by the committee investigation. These recommendations covered the following areas:

- (1) Pension and welfare funds;
- (2) Union funds;
- (3) Union democracy;
- (4) Middlemen in labor-management relations; and
- (5) "No man's land" in labor-management relations.

With reference to union funds, the committee proposed legislation requiring disclosure of union receipts and disbursements and making willful filing of false or incomplete financial statements a Federal crime punishable by imprisonment and fines. The committee also proposed that restrictions be imposed upon the use of union funds to prevent abuse of expenditures contrary to the desires of the members.

With reference to union democracy, the committee recommended the periodic secret election of union officers and the restriction of the right of unions to impose trusteeships or receiverships.

These recommendations served as the basis for hearings conducted by the Senate Subcommittee on Labor under the chairmanship of Senator JOHN F. KENNEDY. During the month of May 1958, the subcommittee held extensive hearings on union financial and administrative practices and procedures. S. 3974 (85th Cong.) was one result of these hearings. The Senate approved this bill by an 88 to 1 vote on June 17, 1958.

Despite the one-sided vote in favor of the bill, many of its provisions were highly controversial. Senator JOHN F. KENNEDY charged that employer organizations—he singled out the National Association of Manufacturers, the U.S. Chamber of Commerce and the American Retail Federation—spread false and misleading information about the bill, and that this campaign of misrepresentation killed any chance for the passage of S. 3974 in the 85th Congress. Others have suggested that the opposition of some union leaders to some provisions of the bill had also contributed to the defeat of the bill in the House.

Senator BARRY GOLDWATER blamed the Democratic leadership in the House for failure to bring the bill up for a vote. He denied that the NAM and other employer organizations had the power to kill a bill. Secretary James P. Mitchell blamed the Democratic House leadership for refusing to present the House with an opportunity to act on S. 3974.

Speaker SAM RAYBURN accused the Secretary of playing politics with the bill. He explained that he withheld S. 3974 from the committee because the committee was occupied with other bills, and he awaited the discharge of the proposed welfare and pension disclosure legislation before he sent S. 3974 to the committee.

The bill was referred on July 31, 1958, to the House Subcommittee on Labor-Management Relations. But, the subcommittee failed to report out the bill and an attempt to have the Committee on Education and Labor assume jurisdiction over the bill was defeated by a 22 to 7 vote.

On August 18, Speaker RAYBURN called up S. 3974 for House consideration under suspension of rules. The procedure requires a two-thirds affirmative vote to approve the bill with debate limited to 40 minutes. The motion failed even to get a majority and was rejected by a 198 to 190 vote. Sixty-one Democrats and 137 Republicans voted to reject the bill, while 149 Democrats and 41 Republicans voted for the passage of S. 3974.

The Senate Subcommittee on Labor held again extensive hearings on labor reform legislation during January-March 1959. The result was S. 1555, which the Senate approved after a prolonged debate by a 90-1 vote on April 25, 1959. The Senate considered 52 amendments to the bill reported out by the Committee on Labor and Public Welfare; it passed 35 amendments, rejected 15, and 2 were withdrawn.

A joint subcommittee of the House Education and Labor Committee held hearings on labor reform legislation in March, April, and May of 1959. The full committee considered S. 1555, as approved by the Senate, and other bills for 5 weeks. On July 23, 1959, the committee reported out H.R. 8342 by a 16-14 bipartisan vote.

PROVISIONS OF H.R. 8342

The labor-management reporting and disclosure bill (H.R. 8342) is an attempt on the part of Congress to legislate comprehensive Federal regulation of internal union affairs. It includes provisions encouraging union democracy and financial integrity in union affairs and regulations guaranteeing rights of members in relation to their union. The bill contemplates that these aims can be achieved by guaranteeing members freedom of speech and assembly and safeguarding them from arbitrary payments and improper disciplinary action by requiring disclosure of union finances and conflicts of economic interests between union officers and members, periodic secret elections of union officers; and by imposing restrictions upon the practice of union receiverships.

The bill also requires that management and its agents disclose expenditures involving interference or coercion with the rights of employees to join a union and to engage in collective bargaining with their employees.

Finally, the bill contains several amendments to the Taft-Hartley Act. The most important of these prohibit the NLRB from restricting its jurisdiction, permit strikers to vote in representation elections if no unfair practices are involved, liberalize union-shop agreements in the construction industry, impose restrictions on organizational and recognition picketing and hot-cargo agreements.

The specific provisions of H.R. 8342 can be divided into three groups:

1. Rules affecting the regulation and administration of internal union affairs;

2. Rules affecting management interference with the rights of their employees to join unions and to engage in collective bargaining; and

3. Amendments to the Labor-Management Relations Act.

I. Internal union affairs

Most of the bill deals with this subject. It includes provisions regarding the rights of union members, the disclosure of union finances, trusteeships, elections, and fiduciary responsibilities of officers.

A. Members' Rights (Title I)

1. The following rights of union members are guaranteed: Freedom of speech and assembly, protection against arbitrary dues, initiation fees and assessments, rights to sue a union or its officers for alleged violation of rights, and safeguards against improper disciplinary action. (Sec. 101, p. 10.)

2. An aggrieved member must first exhaust the remedies available under the provisions of the union constitution and bylaws. If redress is not secured within 6 months, the aggrieved member may bring a civil action in a district court to prevent and restrain the violation of his rights. No penalty is provided for the violation of the rights guaranteed to members. (Sec. 102, p. 14.)

B. Union Reports and Disclosure of Finance (Title II)

1. Every union must adopt a constitution and bylaws and file a copy with the Secretary of Labor including specific information detailing its major internal operations. (Sec. 201, p. 16.)

2. Every union, except those having less than 200 members or gross annual receipts of less than \$20,000, must file annually a comprehensive report of its financial transactions. But the Secretary of Labor is authorized to withdraw the exemption of a union not required to file financial reports after determining that the members of the union have been denied information about their local's finances. (Sec. 201(b), (c), (d), p. 18.)

3. Union officers are required to make available to members reports required under Title II. This requirement is enforceable through court actions, which may also award the union member(s) attorney fees and other costs involved in filing action against the union. (Sec. 201(c), p. 18.)

4. Union officials must report to the Secretary of Labor any activities which might involve a conflict of interest between their obligations as representatives of unions and their engagement in transactions which might be a source of personal gain contrary to the interests of the union members whom they represent. The bill lists specific activities which might constitute a conflict of interest. (Sec. 202(a), p. 21.)

5. Union officers are required to keep for a period of 5 years detailed information which may be needed to verify the financial reports filed under the provisions of Title II. (Sec. 206, p. 29.)

6. The reports filed under this title are public information. (Sec. 205(a), p. 28.)

7. The Secretary of Labor is authorized to prescribe the forms, publish the reports filed under title II and to bring action before district courts to restrain suspected violations of title II. (Secs. 208 and 210, pp. 30 and 31.)

8. Willful violation of title II, including the filing of false reports or failing to disclose information, is punishable by 1-year imprisonment and for \$10,000 fine, or both. (Sec. 209, p. 31.)

C. Trusteeships (Title III)

1. A union assuming receivership or trusteeship authority over a subordinate body must report the action within 30 days to the Secretary of Labor. The report must contain detailed information describing rea-

sons why the trusteeship was established. (Sec. 301, p. 32.)

2. During the period the trusteeship is in effect, any voting for delegates to the national convention by the trustee union must be in secret and no funds of the subordinate body, except regular per capita dues and assessment payable by nontrustered unions, may be transferred to the body exercising the trusteeship. The maximum period of a trusteeship is 18 months, unless the parent body can show good reason for its extension. (Sec. 303(a) and 304(c), p. 34 and 36.)

3. Willful violation of the above is punishable by imprisonment for 1 year, a \$10,000 fine, or both. (Sec. 303(b), p. 35.)

4. The Secretary of Labor is required to investigate complaints by members of a trustee union alleging violations of the trusteeship. If the complaint appears meritorious, the Secretary must bring civil action in a district court without disclosing the name of the complainant to secure appropriate relief. (Sec. 304(a), p. 35.) After a period of 3 years, the Secretary of Labor is required to report to Congress concerning activities under Title III. (Sec. 305, p. 37.)

D. Elections (Title IV)

1. National officers are to be elected at least every 5 years, either by secret ballot among the members or by delegates elected by secret ballot. (Sec. 401(a), p. 37.)

2. Officers of local unions are to be elected at least every 3 years by secret ballot among the members. (Sec. 401(b), p. 38.)

3. Officers of intermediate bodies are to be elected at least every 4 years, either by secret ballot among the members or by officer representatives elected by secret ballot. (Sec. 401(c), p. 38.)

4. Union funds may not be used to promote individual candidates. (Sec. 401(p), p. 40.)

5. A district court may order a recall election upon the petition of a member, if the constitution does not provide adequate procedure for the removal of an officer guilty of serious misconduct. (Sec. 401(g), p. 40.)

6. An aggrieved member alleging irregularities in elections may secure an injunction in a district court to prevent or restrain the violation, provided the member has exhausted remedies under the union constitution for a period of at least 6 months. The Secretary of Labor is authorized to supervise a new election, if ordered by the court. (Sec. 402, p. 41.)

E. Safeguards for Labor Organizations (Title V)

1. Officers and other representatives of unions are responsible in a fiduciary capacity for union money or other property in their trust. They may expend union funds only in accordance with the provisions of the union constitution, bylaws and the resolutions of the appropriate governing bodies. (Sec. 501(a), p. 44.)

2. A union member may sue a union officer or other representative to recover damages or to secure an accounting for the benefit of the union. This right is granted, if the union or its governing body fails to act. (Sec. 501(b), p. 45.)

3. An embezzlement of union funds or assets is made a felony punishable by imprisonment for 5 years or by a \$10,000 fine, or both. (Sec. 501(c), p. 46.)

4. Officers or other representatives of unions whose property and annual financial receipts exceed \$5,000 must be bonded. (Sec. 502(a), p. 47.)

5. Unions are forbidden to make loans to any officer or union employee in excess of \$2,500. (Sec. 503(a), p. 48.)

6. Unions may not pay the fine of any officer or employee convicted for any willful violation of this bill. (Sec. 503(b), p. 48.)

7. Persons convicted of committing specified crimes, including violation of titles II or

III of the bill, are barred from holding union office (except clerical or custodial jobs) for a period of 5 years after serving any part of a prison term. However, this prohibition is not applicable in cases where citizenship rights have been restored or when a U.S. Board of Parole determines that the person's holding office would not be contrary to the purposes of the bill. The same provision applies to former members of the Communist Party. (Sec. 504(a), p. 49.)

8. Willful violation of 4, 5, 6, and 7 above is punishable by 1-year imprisonment or a fine of \$16,000, or both. (Sec. 502(b), 503(c), and 504(b), pp. 47-49.)

II. Employer reports

A. Every employer must report any payment made to employees or their collective officer or any other union representative. (Sec. 203(a)(1), p. 24.)

B. Every employer must report any payments made to employees or their collective bargaining representatives for the purpose of interfering with union activities protected by the Labor Management Relations Act. The reporting requirements apply also to payments made to labor relation consultants for the same purpose. (Sec. 203(a)(2) and (3) (4) and (b), pp. 24-26.)

C. Provisions 5-8 listed under title II are also applicable to employers or their agents required to file reports.

III. Miscellaneous (title VI)

A. Powers of the Secretary of Labor

The Secretary of Labor is empowered to investigate suspected violations of the bill (except title I) and is granted a subpoena power in connection with these investigations. (Sec. 601, p. 56.)

B. "Shakedown" Picketing

Unions are prohibited from picketing for the purpose of extortion. Violation is made punishable by 20-year imprisonment or a fine of \$10,000, or both. (Sec. 602, p. 56.)

IV. Amendments to Taft-Hartley Act (title VII)

A. Jurisdiction of NLRB

National Labor Relations Board is directed to assume full jurisdiction granted to it under the Taft-Hartley Act. (Sec. 701(a), p. 60.)

B. National Labor Relations Board

The membership of the NLRB is increased to 7 (from present 5) and their term of office is extended to a period of 7 years (from present 4 years). (Sec. 701(c), p. 60.)

C. Union Shop in Building Trades

Employers and unions in the construction industry are permitted to enter into agreements before the union majority status is established. Also, such agreements may require employees to join the union 7 days after hiring, instead of the usual 30 days. (Sec. 702(a), p. 64.)

D. Construction Site Picketing

A union is permitted to picket a secondary employer who is engaged as a joint venturer with a primary employer in a labor dispute on a construction site. (Sec. 702(c), p. 65.)

E. Economic Strikers

Economic strikers are entitled to vote in a representation election. (Sec. 703, p. 67.)

F. Prehearing Election

NLRB is authorized to hold a representation election 30 days following the filing of a petition, when no substantial issues exist between the parties. (Sec. 704, p. 68.)

G. "Hot-Cargo" Agreement

"Hot-cargo" agreements between common carriers and unions are banned. However, the bill specifies that this provision does not deny an employee of a common carrier the right to refuse to cross a picket line where the employer is engaged in a primary

dispute nor is a collective bargaining contract to be invalidated because it prohibits the carrier from firing an employee refusing to cross the picket line. (Sec. 705(a), p. 68.)

H. Recognition and Organizational Picketing

A union is prohibited from picketing or threatening to picket an establishment for the purpose of requiring an employer to recognize or bargain with the union or requiring the employees to select the union as their representative in collective bargaining under the following conditions: (1) The employer has already recognized another union and National Labor Relations Board regulations ban (sec. 9(c)) a new union from challenging the rights of the recognized union to represent the employees; or (2) a valid election has been held within the preceding 9 months and the union has been rejected by the majority of the employees in the bargaining unit. (Sec. 705(a), p. 70.)

I. Bribing Employee Representatives

The Taft-Hartley Act prohibits an employer to pay or deliver anything of value to representatives of his employees. This prohibition is made applicable to agents of the employer or employer associations. (Sec. 505(a), p. 51.)

J. Improper Unloading Fees

The Taft-Hartley Act prohibits a union officer to demand or accept improper unloading fees from interstate truckers. This prohibition is extended to agents of the union representative. (Sec. 505(b), p. 52.)

K. Non-Communist Affidavits

The Taft-Hartley requirement that officers of unions that petition the Board must file non-Communist affidavits is repealed. (Sec. 201(e), p. 20.)

Labor Legislation

EXTENSION OF REMARKS OF

HON. CLEM MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. CLEM MILLER. Mr. Speaker, Mr. Sar A. Levitan, specialist in labor in the Economics Division at the Library of Congress, has prepared what I think is an outstanding paper on the background and provisions of the House labor bill, which I commend to the attention of all Members of Congress.

The paper follows:

CONTROVERSIAL ISSUES

(By Sar A. Levitan)

The close vote (16 to 14) by which H.R. 8342 has been reported out of the House Committee on Education and Labor indicates the controversial nature of its provisions. The bill has been attacked by diverse groups.

The U.S. Chamber of Commerce has referred to the bill as a "watered-down farce." The AFL-CIO has pronounced the bill as unacceptable and punitive: "under the guise of labor reform [it] does grievous harm to legitimate unions."

Two members of the committee who voted to report out the bill have since introduced a tougher measure of their own. Administration spokesmen have also found H.R. 8342 inadequate.

On the other hand, supporters of the bill on the House Committee on Education and

Labor characterized it as "a fair and effective instrument of labor-management reform."

Space permits to analyze only the major controversial issues raised by the bill. These will be divided as follows:

A. ISSUES DEALING WITH INTERNAL UNION AFFAIRS

1. Is there need for Federal legislation?
2. Members' rights.
3. Disclosure of finances.
4. Trusteeships.
5. Voting rights.
6. Non-Communist affidavits.

B. ISSUES PERTAINING TO LABOR-MANAGEMENT RELATION

1. The power of unions.
2. No man's land.
3. Construction industry.
4. Right of strikers to vote.
5. Recognition and organizational picketing.
6. Hot cargo.

1. A need for Federal legislation to regulate internal union affairs

Traditionally, unions have been regarded as voluntary associations and have been treated before the law in the same manner as other voluntary organizations. This means that the administration of union internal affairs has not been considered a proper subject for legislative or judicial interference. Unions were left free to determine qualifications for admission of potential members, rules controlling expulsion and discipline, the selection of officers, and other facets of internal affairs incidental to the administration of labor organizations.

This attitude toward unions has undergone radical change with the growing pervasiveness and economic power of unions in our society over the last two decades. Under existing law, millions of workers are now required to become or remain union members as a condition of employment. According to a U.S. Bureau of Labor Statistics report, two-thirds of 1,716 contracts studied in 1954, covering more than 7.4 million employees, contained union-shop provisions. "Maintenance of union membership" provisions accounted for another 14 percent of the agreements. In addition, about 4 percent of the agreements stipulated some degree of preference in hiring union members. Based on these data, it would appear that union security provisions currently apply to more than 13 million workers in the United States.

In 1957 the National Industrial Conference Board estimated that the minimum annual income of American unions from dues is approximately \$620 million, or \$33.74 per member. The study indicates that the actual amount of money which unions collect from members is appreciably higher.

Public interest in union activity, it has been suggested, is justified, not only because union membership is required as a condition of employment, but also because union activity today affects the lives of the 17 million members belonging to some 200 national unions. Under present law, union negotiations, because they extend to such matters as pensions and insurance, affect not only employees but also the lives of persons who are retired or disabled and, in some cases, their dependents as well. Through grievance procedures, provided in most collective bargaining contracts, unions are free to choose the cases in which they will initiate grievance machinery or apply union pressures.

In bargaining for their members, unions are protected by Federal law. With the aid of quasi-governmental powers, unions influence broad social and economic policies as well as the livelihood of their members.

These labor union developments since the 1930's have led many observers to question the appropriateness of continuing to treat labor unions as voluntary associations. Regardless of whether members join unions out

of free choice or because of compulsion sanctioned by Federal law, it has been argued that the power which unions wield calls for governmental regulation to assure that unions are properly administered and that the interests of union members are adequately protected. The claim that granting special privileges to unions to act as quasi-governmental agents is in the public interest in no way diminishes Federal responsibility in this area; on the contrary, it increases Federal responsibility.

Contemporary American unions, it is further argued, cannot rightfully claim the privileges and immunities that private associations have before the law. This does not necessarily indicate an indictment of the labor movement in the United States. Granted that most unions fully recognize their obligations to the memberships, the law must protect the basic economic rights of all workers. As long as even a few unions are run by corrupt leadership, it is the duty of Congress to protect the employees' interests, provided it does not hamper the legitimate activities of unions.

Ever since the passage of the Taft-Hartley Act many students of union activities have called for more stringent regulation of internal union affairs. The disclosures of the McClellan committee have added strength and impetus to the demand that "there ought to be a law" to guarantee the democratic rights of union leaders. The law, this argument runs, having guaranteed workers the right to be represented in collective bargaining by "unions of their own choosing," must also assure them the right to determine that the spokesmen of these unions are also "of their own choosing."

It has also been noted that legislation is necessary not only to safeguard the rights of union members, but also to promote the interests of society which has entrusted unions with special rights and immunities in bargaining for workers.

There has been, however, little agreement on the means that should be used to achieve this end. The basic dilemma is how to guarantee the rights of union members with a minimum of governmental interference, which will not weaken the collective bargaining functions of unions. Some suggest that the desired goal cannot be achieved achieved without paying too high a cost in terms of disrupting union activities. They note that some legislative proposals would impose burdens on a great many unions in an effort to prevent undesirable activity in relatively few, and that on balance, in terms of the interests of union membership and the public as a whole, such action is unwarranted.

Still other union spokesmen are concerned that certain legislation would inject the Government into union affairs and would sow the seeds of potential Government control of unions.

A few have found governmental interference repugnant because it would further extend Federal powers to activities which are basically local in nature and it has been suggested that the Federal Government should cede the internal regulation of unions to the States. This solution is opposed on the basis that action by the several States would impose an intolerable burden upon the activities of national unions which would then have to conform to the regulations of the 50 States and other jurisdictions. Furthermore, since the regulation of collective bargaining has already been preempted by the Federal Government, it cannot justifiably avoid the responsibility of assuring workers the right to a democratic choice of their representatives.

Union spokesmen have argued that the publicity given to the findings of the McClellan committee during the past 2½ years was out of proportion to the wrongdoings actually present in unions. They

assert that there has been less sin in unions than in other voluntary associations or in private industry. According to this view, the opponents of unionism have tried to use the McClellan disclosures to arouse antiunion sentiment and to stimulate a demand for legislation which would harass unions and would do injury to the legitimate ends of the union movement.

The AFL-CIO has officially classified H.R. 8342 in this category, though it finds the bill less objectionable than the Senate approved S. 1555. George Meany, president of the AFL-CIO, has expressed particular objection to title I ("Rights of Union Members") of the bill. He indicated, however, that the AFL-CIO urges legislation which would require thorough financial disclosure, making embezzlement of union funds a Federal crime and appropriate provisions dealing with trusteeships, and election of union officials. The Federation has recognized that it cannot adequately deal with the abuses disclosed by the McClellan committee through self-regulation.

2. Members' rights

An examination of union activities shows that most unions function in a democratic manner. They have been alert in guaranteeing the rights of members and have in most cases established the necessary machinery to effectuate these rights. But in some instances, the membership has not had a free opportunity to select or replace union leaders, because entrenched officers have prevented any opportunity to develop. This union leaders usually accomplish through the control and manipulation of the union channels of communication, through patronage and by outright suppression of opposition.

In some cases unions have fallen prey to racketeering elements, who have taken over labor organizations, and in the words of Senator McClellan, then so-called labor leaders "run the union and do what they please with it." The McClellan committee has supplied a sample picture of a racketeer-dominated local:

"The operations of Local 985 of the Teamsters Union . . . represents a most disgraceful type of unionism. As it now operates it is a leech preying upon workmen and women to provide personal aggrandizement for [the leader] and his friends. Nowhere in this hearing is there to be found one scintilla of evidence that local 985 has done anything to help the wages and working conditions of its members in these industries. To the contrary, we have had testimony that members . . . had their wages drastically reduced after they became union members and their employers signed contracts with local 985." (U.S. Senate, Select Committee on Improper Activities in the Labor or Management Field. Release April 15, 1959.)

To protect the rights of members in relations to their unions, H.R. 8342 requires that unions guarantee the following rights to members: freedom of speech and assembly; protection against arbitrary dues, initiation fees and assessments; rights to sue a union or its officers for alleged violation of rights; and safeguards against improper disciplinary action.

The AFL-CIO has charged that these provisions are unnecessary and unworkable. Union practices and democratic traditions are too diverse to adjust to a uniformly designed set of regulations and rules. The major function of unions is to improve the wages and working conditions of members through collective bargaining. The harsh struggle of the market place would make it frequently impossible for unions to act effectively and to conduct its business under the restrictions imposed by the bill, which purports to guarantee members' rights. President George Meany stated:

"A detailed, legally enforceable code of internal procedures for all unions . . . must

inevitably end up either in general terms as to be susceptible of almost any interpretation (and hence a breeding ground for litigation) or as a strait jacket which would inhibit obviously reasonable and proper union practices." (Testimony before the Joint Subcommittee of the House Committee on Education and Labor, June 3, 1959.)

3. Disclosure of finance

Little opposition has been expressed in principle to the provision requiring union reporting and disclosure of financial information. Union spokesmen, however, have expressed objection to requiring all unions, regardless of size, to file reports. It was suggested that smaller unions should be relieved of this burden because of the limited amount of finances they handle and because most smaller local unions do not have the technical personnel capable of filing the necessary reports. H.R. 8342 accordingly exempts all unions with less than 200 members or with gross annual income of less than \$20,000.

A similar provision in the Kennedy-Ives bill (S. 3974, 85th Cong.) was attacked by the Secretary of Labor on the ground that it would exempt the majority of unions from disclosing their financial transactions. It was claimed that all union members, regardless of the size of their local, are entitled to information on how their contributions to the union are being used. Apparently, to overcome this objection H.R. 8342 grants the Secretary of Labor the authority to withdraw the exemption of smaller unions from filing financial reports if the members are denied information about their local's finances.

4. Trusteeships

This is one of the least studied areas of union administration. Information about the practice of receivership in unions is extremely fragmentary. There is no single authoritative study available on this subject. Nevertheless, the McClellan committee investigations have shown that at least three international unions which the committee investigated—the Teamsters, the Operating Engineers, and the Bakers—have effectively suppressed local democracy and members' rights with resulting personal gain to officials who placed the unions under trusteeships.

Objection to the regulation of receiverships is based on the concern that legislation limiting the period of trusteeship may hamper effective union administration. Union spokesmen suggested that there is not sufficient information about the practice to justify legislation. They proposed that legislation be limited to require incidents of trusteeships be reported to the Department of Labor. The Secretary of Labor would then report to Congress whether or not further legislation was needed. Specifically, the AFL-CIO has objected to subjective trustee regulation to both Federal and State courts. They favor exclusive Federal remedies.

5. Voting rights

The justification for regulating union elections and the requirement of a secret ballot is based on the fact that many union constitutions do not require secret elections of officers. The McClellan investigations showed that occasionally individual members may have reason to refrain from voting openly against incumbent officials.

Those who advocate legislation for union democracy point to the fact that our institutions are based upon democratic ideals. They believe that the Government would be justified, therefore, in demanding democracy in unions, if the unions are to act as representatives of the members under the law.

Those opposing the election provisions question whether efforts to force democracy upon unions through legislation can function desirably and effectively. They suggest that democracy is not an appropriate subject for legislative compulsion and that one

set of standards may not be equally appropriate for the many types of unions. Also, enforcement of democracy through legislation would tend to be self-defeating since it would reduce the area of self-determination. Moreover, some union spokesmen have asserted, if the right of the Government to legislate democracy is conceded, then application of such legislation should be equally appropriate to associations in business, profession and churches.

On the other hand, some have objected to the provision of H.R. 8342 which limits voting requirements to the election of officers. It has been suggested that this provision is inadequate to achieve genuine union democracy and to assure procedures which would give the members effective control over the affairs of their unions. According to this view, members also deserve a right to express their views in secret election over other vital matters which affect the lives of members. Basic among these is the right of members to express their opinions with regard to the union calling a strike and with regard to nonstrike clauses in collective bargaining agreements. Opponents of this type of legislation argue that secret strike balloting, while it might superficially strengthen the rights of members over the destinies of their unions, does not actually work out in practice. In most cases union members authorize their leaders to strike. That at least has been the experience during World War II when such a vote was required. Moreover, a strike vote may involve labor and management in a campaign for the vote of the employees and would, therefore, distract the parties from the difficult task of achieving harmonious labor-management relations.

Another attempt to strengthen union democracy is represented by the proposal which would require that union constitutions provide for initiative and referendum. Backers of this proposal have asserted that this kind of legislation is practiced in many States and strengthens democracy by encouraging the rights of minorities. Opponents argue that legislation which would require union initiative and referendum procedures would involve too much Government regulation of union affairs and that such procedures may not be suitable for union organization. It might aid employers opposing the union to encourage dissension in union ranks and thus split the union and dissipate its energies upon internal conflict rather than allowing it to work for the achievement of better wages and working conditions, which are the major purposes of the union.

6. Non-Communist affidavits

H.R. 8342 repeals the Taft-Hartley requirement (sec. 9(h)) that union officers reporting to the National Labor Relations Board must sign a non-Communist affidavit. Proponents of this amendment argue that it offers a gratuitous insult to labor leaders to compel them to sign affidavits which impugn their loyalty. They also assert that the signing of the affidavits has accomplished little in the past.

Those who would retain the non-Communist affidavit suggest that the threat of subversive influences in the United States remains, and any measure that might help ferret out Communist should not be stricken. In order to eliminate the objection that labor leaders are singled out for suspicion of loyalty, they would also require affidavits by employers.

C. ISSUES PERTAINING TO LABOR-MANAGEMENT RELATIONS

7. Limitation of union power

So far the discussion has centered about the means to achieve union democracy. It has been suggested, however, that legislation which would merely assure union democracy, and guarantee the right of union members while desirable in itself, begs the question of

Government responsibility in the regulation of unions. Underlying this line of thought is the belief that union strength represents a danger to the operations of a free economy, and that union coercive tactics rob employers and employees of their basic freedoms.

According to this view, an effective labor reform bill should include the following measures:

1. Ban on all forms of blackmail picketing.
 2. Closing secondary boycott loopholes.
 3. Resolving the no man's land problem by ceding NLRB jurisdiction to the States.
 4. Bringing unions under antitrust laws.
 5. Adopting a national right-to-work law.
- The problem, according to the supporters of this type of legislation, is not that the rights of union members are properly guaranteed, but whether the institution of unionism as practiced today offers a major threat to national well-being. They conclude that the limitation of the power of unions is the primary need.

Opponents of this view assert that the assumption upon which this type of proposals are based, namely, that unions possess overwhelming power, is exaggerated. They argue that the contrary is true and that union power is generally used not only to benefit the members, but also to improve the total economic wellbeing of all groups in society.

8. No man's land

The National Labor Relations Board has the authority to remedy unfair labor practices in establishments where operations affect commerce. The Board has, however, chosen not to exercise fully the powers granted to it by Congress under the Taft-Hartley Act, as interpreted by the Supreme Court. In 1950 the Board published a series of standards, which presumably excluded essentially local business from Board jurisdiction.

Four years later the Board further reduced its jurisdiction, excluding many more employers and employees from the protection afforded by Congress under the Labor-Management Relations Act. When the NLRB restricted its jurisdiction, the Board believed that the States would be able to step into the areas which were vacated by the Board limiting its jurisdiction.

But in a series of decisions culminating in *Guss v. Utah* (353 U.S. 1, 1957), the Supreme Court declared that the States cannot exercise authority in cases affecting commerce even though the National Labor Relations Board refused to assume jurisdiction. This has created a "no-man's land" where employers and employees are left outside the jurisdiction of both State laws and the Federal agency when the latter, charged with regulation, refuses to assume the authority which it was granted by Congress.

New Hope for the Mentally Ill

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. WILLIAMS of New Jersey. Mr. President, we live in an age where our great salvation is hope: Hope and faith in a better and more peaceful world. But hope as we understand it—belief and trust based on the expectation of attainment—has been denied to 17 million Americans currently suffering from mental disorders; it will be denied to

300,000 new patients who will enter mental hospitals this year; one out of every 10 children being born this year will likely enter a mental hospital for treatment before concluding his life. They have lost the precious gift of hope and feel themselves abandoned by mankind.

Surely these are startling facts to which America must be alert. We must urge our wisest minds to ferret out causes and seek cures. We cannot abandon them. We must provide hope—the hope born of understanding and love by those of us who have not known this tragedy.

I would like to commend to the earnest attention of the Members of this distinguished body, a story of what it means to work and live in a mental institution. This inspiring and hope-giving article was written by a man of God who has dedicated his life's work to providing such love and understanding; who has indeed lived by the maxim: "As long as you did it for one of these, the least of My brethren, you did it for Me."

I ask unanimous consent to have printed in the Appendix of the Record, an article by Rev. Paul Revere, published in the Sign magazine of May 1959.

There being no objection, the article was ordered to be printed in the Record, as follows:

NEW HOPE FOR THE MENTALLY ILL
(By Rev. Paul Revere)

I am a chaplain at a mental hospital. It is a large hospital, with 2,000 beds. It is conducted by the Veterans' Administration.

Because I am a priest, people often ask me where I am stationed. When I tell them I get ready to duck. The questions come faster than Bob Turley's speedballs: How do you stand it? Isn't it depressing? Have a lot of violent cases, don't you? Hopeless, aren't they?

Now this annoys me. It annoys me because so many people have the wrong slant on the mentally ill. Far too many people today look upon the state of the mentally ill as depressing and hopeless. This defeatist attitude, based on ignorance, is most unfortunate. It is unfortunate because it keeps the mentally sick from getting the care and attention so sorely needed to help them back to normal health.

When we visit an ordinary hospital we naturally feel sorry for our sick friend. But our sorrow is sustained by hope. We seek to communicate that hope to our friend, whether he has heart trouble, tuberculosis, or any other serious affliction. This kindly optimism is a positive help to the sick in their battle for recovery.

Yet when people think of the mentally ill, there are just far too many who consider them hopeless. This lack of hope tends to dry up the fountains of love and sympathy. You cannot love for long when you abandon hope for someone. Yet, anyone working with the mentally ill will tell you that mentally sick patients positively need to know that someone cares about them. Love is something that the sickest patient easily recognizes and responds to. Hope, then, provides a ground for love and sympathy. Experienced workers, having seen so many cures, have such hope. Friends and relatives frequently need to be educated to it.

The National Association for Mental Health runs its annual campaign to alert the Nation to the seriousness of the problem of mental health. The association bombards the country, through posters, through radio, TV, and motion pictures, through lecture halls and the press, with the disturbing facts

and figures: 17 million Americans currently suffering from mental disorders; half the hospital beds in the country occupied by mental patients; this year, 300,000 new patients will enter mental hospitals; 1 out of every 10 children being born this year will likely enter a mental institution for treatment before concluding his life.

The facts are presented to begot action—to alert America to an imminent grave problem; to urge our wisest minds to ferret out causes and seek cures.

Certainly a great deal has already been accomplished and many are the patients who annually return to normal living. But while waiting for more expert knowledge of mental disease, there are some things that can be done and should be done immediately.

A major thing to be done immediately is for many people to change their attitude toward the mentally ill. The public at large still needs to be educated to the fact that a person suffering from a nervous or mental disorder is just as much a victim of sickness as a person who has a heart ailment, a kidney disease, or any other malady. Everyone should realize that many of the mentally ill are affected only in certain areas of their mental activity while remaining quite normal in all other phases of their thinking and acting. Normal communication is possible in many areas of conversation.

Above all, people should recognize the basic dignity of a mentally ill patient. He's not an animal to be stashed away in isolated confinement. He is a human being. He is made in God's image and likeness. Above all, Christians should realize that he has been purchased by the blood of Jesus Christ and is actually or potentially a member of the mystical body of Christ. "As long as you did it for one of these, the least of My brethren, you did it for Me."

Because of the staggering spread of mental disease today, each of us should be concerned about its nature, its causes and cures. It strikes indiscriminately; it is apt to pop up in any family. We all have a big stake in the cure of mental disease. And we all are, even now, able to be very helpful to those unfortunately afflicted. We can all offer sympathy, hope, and, according to our circumstances, loving care.

Inasmuch as I live on the hospital grounds, administer the sacraments of the Catholic Church, offer consolation and advice to the patients and their relatives, my interest in this disease is much more than clinical. I know with certainty that it isn't depressing nor hopeless if everyone concerned is sincerely interested and motivated by a spirit of love.

As I perform my daily duties, I am constantly amazed at the rational answers I get from patients said to be "out in left field"—from faceless men who live their lives behind locked doors. These amazing responses are often enthusiastically recognized by Catholic chaplains when called upon to administer the last rites—the sacrament of extreme unction—to critically ill patients. About a week ago, for instance, I was called to the bedside of a long-term patient who was dying from a kidney infection. He was a middle-aged man and had been catatonic (a psychotic manifestation which keeps a person from talking or communicating with anyone) for years. The first thing a priest does when administering this sacrament is to determine if the patient is conscious and able to communicate his thoughts. Even though I knew this man was catatonic, I questioned him. "Do you know who I am?" I asked.

"The priest," he answered.

"Would you like to make your confession?" I asked. "You are very sick and may not live."

He said he would like to make a good confession. He also told me he loved Almighty God and asked Jesus, Mary, and Joseph to pray for him. His confession was very rational. Two days later he died. This is definitely not depressing nor hopeless work when we consider man's eternal destiny.

I'll never forget my first day at the hospital. It was a Sunday—my real working day. I was truly a layman in disposition because the popular conception of the mentally ill haunted me as I prepared for my ministrations. I asked myself if I had been thinking rationally when I volunteered for this work. No matter how I reasoned with myself, I could not stamp out the false idea that these people were different. Very consciously I adverted to the many bizarre stories attributed to mental patients.

As I approached the altar to offer the holy sacrifice of the Mass, I had many misgivings about my ability to help these unfortunate men. To be perfectly frank, I was scared. For heaven's sake, I thought, they may come up and pull at my vestments, light a cigarette from the Mass candle, or God forbid, upset the chalice of the precious blood. My mind was active with possibilities. Soon it was time to read the Sunday Gospel and deliver the sermon. As I walked over to the pulpit, I felt limp and horribly inadequate. When I gazed out at my congregation, I did not have the slightest recollection of the sermon I had prepared. But the Holy Ghost, I now realize, was on my side because I was able to introduce myself. That settled me.

"I'm Father Paul Revere, your new chaplain," I said.

From somewhere in the depths of my new congregation a voice welcomed me: "You're in the right place, Father."

I smiled to myself. I could have kissed him. Such a welcome allayed all my fears and I shall never be frightened again. His welcome taught me that the mentally ill have a sense of humor. Good, wholesome humor helps resolve any problem.

From that day on, I have almost daily been given samples of such uninhibited behavior; for example, on Christmas and New Year's mornings, when I stood in the pulpit and wished my flock a blessed Christmas and a happy New Year, I had many responses. Some might think this is a manifestation of mental illness. I believe it is their desire to belong, to participate, to return friendship and love that has been lacking in their lives for a long time. It is a manifestation of their sincerity and childlike honesty which I so often notice. It is definitely a quality that can be worked with effectively and fruitfully.

The relationship between a priest and a Catholic layman is unique. Everyone calls us father. Because of this spiritual fatherhood, Catholics have no qualms or misgivings about approaching us without any hesitation to talk about their most perplexing and intimate problems. Patients are constantly seeking me out for all sorts of advice and help and, very often, merely to sit down for a friendly chat.

One afternoon a patient dropped into my office for some light talk as he called it. There really isn't any light talk in this business—it all adds up at the end of the day on the black side of the ledger—for talk is the device that helps, more than we know, any emotional problem. By talking to an understanding and sympathetic listener, the sick person brings to the surface things that have been suppressed and are unconsciously disturbing him.

Johnny finally got around to the sermon I preached at mass that morning. In it I spoke of the Blessed Virgin as the "hope of the hopeless." This title was not invented by me—it was given to her centuries ago. Apparently Johnny had not heard it before.

"Father," he said, "when you spoke of the hope of the hopeless this morning, I listened for the first time in 10 years—that is, really listened. I've considered myself hopeless for years. Boy, us guys really need hope. And, as you said, to whom shall we turn if not to the Mother of God?"

We are living in an age that experiences little hope. Surely, we have made great material progress. Millions of cars travel our highways, television antennas top every home, jet planes zoom across the continent in 4 hours and we are sending man-made moons streaking through the heavens. But have these wonders canceled out the miseries? We know they have not. Our daily papers give us the answer—broken homes, divorce, juvenile delinquency, alcoholism, sex offenses, and all other sorts of crime are at an unprecedented high. The middle-aged person of today has witnessed two great wars and again is hearing serious threats of another. These sores on our culture cause many souls to lose hope. Never for a moment should we forget that loss of hope breeds fear and deep-seated traumatic experiences and despair. We chaplains in mental hospitals have this spelled out every day.

The mentally sick realize they are not well and that they need help. They are looking for help. Why doesn't everyone realize it? An occasional visit from a relative or friend who comes with an encouraging smile, a pleasant word, a prayer of hope, does wonders in helping the sick person back to tranquillity.

Two years ago Pope Pius XII changed the fasting regulations for the reception of holy communion. Before the change a person wishing to go to communion had to fast from all food and drink from midnight. Since the change, one has only to fast 1 hour from liquid and 3 hours from solid foods. Here a certain middle-aged patient receives holy communion every Sunday. One Sunday morning it was obvious he had eaten eggs for breakfast—some of them were still on his white shirt. Before he began his confession I said to him, "You have already eaten, you cannot go to communion."

"Only 3 hours fast now, Father," he quickly replied.

This man has been a patient for a number of years. Because of exceptionally poor hearing he is retiring and a little shaky in his walk. One might get the impression that he is "way out in left field" but in reality this sick man is aware of much. He is aware of the requirements for receiving holy communion. With the present advance in medicine and his great confidence in the Lord, there is much hope for him.

What is this advance in medicine that offers such great hope for the mentally sick? In recent years many new drugs have been discovered. They are called tranquilizers. By themselves they do not bring about any permanent cures, but they do have a soothing effect on agitated, depressed, and anxious persons. Patients who are in states that prevent approach or reasonable conversation with their doctors can now be reached with the use of the tranquilizer. These drugs render their temperament and manner conducive to therapy.

Perhaps, someday, medication will cure a good portion of mental illness. However, an illness that is associated with the whole person must, in my opinion, have the entire person treated. The causes of mental disease often go to the depths of a man's soul, to his basic outlook upon life, his sense of right and wrong, his relation to his Creator and to his fellow men. So, regardless of what progress is made in medicine, two other things are absolutely vital in bringing about permanent cures. Our Lord taught us both—love and patience. The need for love and patience in this area of social relations was very succinctly stated by Pope Pius XII

when speaking to an international gathering of psychiatric nurses. He said, "It is not so much the external medicines that heal them (mentally ill) as it is the company of healthy, harmonious spirits, who are able to give them back a calm and friendly outlook on the world and life."

People working in the field of mental health often see manifested the antithesis of Pius' formula. I have a classical illustration of this lack of love and patience. The daughter of an elderly patient on one of her very infrequent visits asked to see me. Her father has a number of eccentricities, I'll admit, but I am fond of him. He is a pleasant little man whose appearance reminds me of Clifton Webb, the actor. He dresses neatly, is immaculately clean, and is able to carry on a brisk conversation. His daily routine is a visit to our little chapel, coffee in the canteen, a leisurely walk around the hospital grounds, and an enthusiastic reading of the New York Times. He will, on occasion, look at a television show if it promises to be above the grammar school level of entertainment.

It was immediately obvious that the daughter was bitter and perturbed over my interest in her father. After I had listened to her complaints for some time, I asked, "You do not want me to be nice to your father?"

"You understand correctly," she replied. I informed her that this request was impossible and inconsistent with my vocation in life; and, furthermore, I planned on taking her father out to dinner in the near future.

"I suppose you'll send me a bill," she snorted.

I took my friend to dinner at the rectory of a priest whom I had once assisted. This priest is pastor of a new church and school that is modern in design and severely different from the church architecture my elderly friend was used to when hospitalized some 30 years ago. During the dinner the lonely layman showed himself to be a brilliant conversationalist, able to adapt himself to the table talk of priests and intelligently discuss church design and the skyrocketing cost of production with the flare of a modern business man. His first venture into society outside the walls of a stigmatized institution was highly successful. When I dropped him off at his ward that evening, he cried as he told me how very much he enjoyed being out with me.

I was in the hospital a short time when another gentleman made himself known to me. He was a committed patient. This means he was declared legally incompetent by a judge. Such a person is given a legal guardian who administers all of his worldly possessions. Two and a half years in a mental institution had not dampened the spirit and determination that brought him up the ranks from seaman to commander, U.S. Navy, retired. The salt still bubbled in his veins and he stood with the squared deliberateness of a sailor on a bridge in a raging squall. He still walked with a swagger. At 74 years of age and with a serious bout with mental illness behind him, his mind was clear and full of a lifetime of memories and hopes.

When we met, his case was dormant. His wife was reluctant to sign him out of the hospital and it appeared as though the commander was irrevocably beached, even though he had the courage, stamina, and ability to return to duty as a useful member of society outside an institution. For some reason the social work department at the hospital was not active on the case. When I persuaded them to take up the case, they got to work immediately—searching out all the possibilities for salvaging a soul of 74. After some months they unearthed a delightful family, living in country surroundings, who were happy to have the commander live with them.

The placing of patients in private homes is called family care. This program has been used for many years, with fine results, in placing orphaned and dependent children in happy surroundings. It is new in the field of mental health, but it is proving to be an excellent help in rehabilitation. (Anyone interested might contact the social service department of any mental hospital.) After the patient has been in a situation of this kind for a period of 6 to 12 months, without any serious setbacks, his case is reviewed by a board of doctors and usually he is officially discharged from the hospital. My friend has been with the hospital for almost a year. It is only a matter of time before he will be discharged as medically and legally competent. I feel the salvation of this good soul, rich mind, and grand personality was wrought through the presence of a priest to whom a man of faith felt free to turn.

When I came to the hospital Dr. Trollinger, the manager, and Dr. Weitz, the director of professional services, told me, "We must all work as a team in order to be successful." I had heard and read much about the friction and differences of opinion that exist between religion and psychiatry. I am happy to say my skepticism is resolved. Of course there are many people here who do not hold to the principles and dogmas of the Catholic faith, but I feel safe in saying that the great majority recognizes a spiritual element in man's makeup. This spiritual element is respected and the chaplain is used to great advantage. I am free to hear confessions and administer the sacrament of penance as I see fit. I am a welcome participant in many initial and diagnostic staff meetings. I am free to question the patients, air my observations, offer my opinions.

For ages the mentally ill were considered lost and hopeless. More often than not they were shunned as one might shun the plague. Fortunately, we are overcoming such erroneous attitudes. More and more people realize that, in reality, mental patients are merely sick people with sensitive souls who know they need help. But if they are cast off by those who can help, they become immersed in the mire of despair and seldom emerge. We all must suffer to some degree. But mental suffering is by far the most intense. Our Lord demonstrated this when He sweat beads of blood the night before he was crucified. When you are privileged to come in contact with the mentally ill give them the best gift you can—show them your love.

Certainly, in many cases, mental illness remains baffling. We have only begun to scratch the surface. Many as yet are never cured. There are many relapses. Experience, however, has clearly shown that the mentally ill respond favorably to love and kindness and patience. If we are determined to continue the fight, with all of our individual resources, one day "we who inhabit the world of the healthy will learn to what great extent we are in debt to those who inhabit the world of the sick." (Pius XII.) While waiting for the perfect cure, give them your love. Only in heaven will you know how much hope you then gave to the hopeless.

The Mind and Faith of Eugene Meyer

EXTENSION OF REMARKS OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. UDALL. Mr. Speaker, the life and work of the late Eugene Meyer, public servant and publisher of the Washing-

ton Post and Times Herald, in many ways typifies America at its best. At the memorial services held for Mr. Meyer a few days ago Chief Justice Earl Warren delivered an eloquent eulogy. I believe this profound and moving memorial address deserves a wide audience as it reveals the hidden well springs of the mind and faith of Eugene Meyer—and perhaps those of Chief Justice Warren as well. The eulogy follows:

[From the Washington Post, July 22, 1959]
CHIEF JUSTICE WARREN GIVES EUGENE MEYER SERVICE EULOGY

(This is the text of the eulogy delivered yesterday by Chief Justice Earl Warren at memorial services for Eugene Meyer, chairman of the board of the Washington Post Co.)

This assembly of the family and friends of Eugene Meyer, who until last Friday was not only of us but with us, is to enable us to conjure with his eventful life and the circumstances that brought him into such happy associations with us during his stay here. We do this because he has departed from this world and is now on his journey to that undiscovered country from which no traveler returns.

We shall miss him greatly. But we are grateful that He who guides the steps of each of us allotted him such a long and purposeful sojourn here. We are grateful that his life touched ours in such intimate fashion. And we can have confidence, as did Abraham Lincoln when he departed on an uncharted journey, that He who can go with me and remain with you and be everywhere for good will continue to guide our friend and that all will be well.

A PIONEER BY NATURE

Eugene Meyer plowed new ground in every field he entered. He was a pioneer by nature, and he came by that spirit logically. Born of pioneering parents, who had braved the rigors of the long trek to California in the Roaring Fifties, he grew to manhood there in kaleidoscopic surroundings and imbibed the atmosphere of optimism and determination to do exciting things.

Although he reversed the admonition of Horace Greeley to "Go West, young man" by going to New York, he never relaxed the spirit of optimism, his desire to make things grow, and his determination to get things done in spite of obstacles.

His life cannot be summed up in a handful of words. His spacious spirit, the paths he walked, and what he did along the way, need much more than this memorial moment if they are to be given their true worth.

Yet we cannot be silent in the manner of our farewell. There is joyful gratitude to be voiced that he lived in our midst for so long. And along with this, there is a reason to be stated why his passing brings us into the community assembly, to be of one heart and mind with his own family.

We rejoice in the memory of Eugene Meyer as much for the manner of his life, as for the legacy of solid things he leaves to us.

He was, as all of us here know, a man of many interests; many talents, and many deeds. Yet overall, he had a special cast of person which set him off from most men for a life on a plane of his own. It was, at first glance, a cast of person which united contraries; a rigorous self-discipline on the one side, and an outward flowing, radiant vitality on the other.

HIS EXACTING STANDARDS

To his self-discipline, we owe the visible form of a man who was a lonely walker, who majestically rejected all license, who ruled himself at every turn by a self-critical intelligence. In this light, he seemed to stand a bit outside himself to see if his acts con-

formed not to what the public scrolls of honor said of him, but whether they conformed to the more exacting standards he set for himself.

Here was a morally and intellectually brave man—a man born to give himself no peace, to engage in an open-end debate with himself, to accept even his own life as a provisional project shot through with doubt.

When one approached him, he seemed to breathe the conviction that the living alone is not all that exists; that good fortune never stands in one place for very long; that those who have a measure of it must fight every day to deserve it. And beyond this, he seemed to breathe the conviction that there are visions of truth which transcend time itself; that he would strive to draw near to them for a close embrace, even though he knew their elusiveness to the human grasp.

GREATEST ACCOMPLISHMENT

He put the whole of his conviction into a single sentence at the time of his 80th birthday. When he was then asked to state what he felt was the greatest accomplishment of his life, he might have followed the fashion of the world and chosen among an assortment of things for which he had often been publicly honored. He might have chosen among the great industries he helped build, the key governmental posts he held, the newspaper he recreated, the benefactions that helped many institutions to do their work of cultivating the arts and the sciences. Yet he chose none of these. Color blind, and at times a bit deaf, he was a man who made his own fashions when it came to human values.

"The greatest accomplishment," he said in answer to the question put to him, "was in the form of a discovery—the discovery early in life of the power and the glory of the truth."

This was the heart within the heart of the man speaking. And it kept speaking that way to the very last days when his consciousness was fast ebbing. Even then, there was something more he wanted to know, something more he wanted to think and talk about—the reality or the illusions of the human senses, the relationship between the one and the many, the difference between a good life and the good society.

"Keep asking questions," he whispered from his bed as he talked of these things with a friend. And to a member of his family, he added as if to complete the idea: "The important thing is to know how to listen to the truth with your heart as well as hear it with your ears."

POWER FOR COMPASSION

Now what of his outward flowing, radiant vitality? What of this vitality in which a power for strenuous combat was entwined with an equal power for compassion?

This aspect of his person, far from being at odds with his self-discipline, was an extension of it. For no man can truly give of himself to others unless he first exists in complete self-possession; unless he is first the master of his own will and passions; unless he has a clear interior vision which tells him beforehand what to give and when and how to give of himself.

What Eugene Meyer was, he gave to others—freely, generously, bravely, and with a gaiety that shone most brightly when the background was dark with the air of crisis.

In such moments, stretching from the First World War to the recent present, where others faltered we saw Eugene Meyer move to the center of hectic counsels. We saw him bite off the end of a fresh cigar—his very personal signal that he was clearing the emotional decks for action. We saw him bear himself as one who had long foreseen the gathering crisis, was not overturned by its impact, but was ready for it with a plan of action. Indeed, his very bearing seemed to say that in his view of things, the mere

emotion of shocked surprise was unworthy of the human intelligence.

His presence in any such company of men meant that many things were certain to follow. It means that hard truths others had left unspoken would be spoken by him. It meant the presence of a will to decide what should be done and an eagerness to do it. It meant a readiness to assume the responsibility for the consequence of the decision that was reached and put in motion. It meant not a piecemeal approach to the needs of the hour, but a view of those needs as a single problem.

Above all, his presence meant a source of wit and laughter that eased the prevailing tension of nerves, and then aroused the company of distracted men to shake their fists in the very face of any adverse fortune. Thus there was caught from Eugene Meyer as if by contagion, a sense that whatever the ultimate issue, men in positions of trust would be a little better and brighter if they battled adversity instead of stoically resigning themselves to it.

"All that we value in civilization," Eugene Meyer once told a Senate committee in an hour of crisis, "has come about through the agency of men who refused to allow nature to take its course—men of heroic hope who used the sovereignty of their spirit and the light of their reason to force the proof that the human person can make his own purposes prevail in the face of blind fortune."

Here I come to the transcendent object of Eugene Meyer's life—to the point where his rigorous self-discipline and his radiant vitality found their perfect unity.

In his view, merely to be an American was in itself a moral state and a full-time career. Thus he would have his country inhabited by a race of choosing people—by people who voluntarily assumed the yoke and the glory of advancing mankind's best hopes. On this account, also, the transcendent aim of his life was to help elevate the whole tone of the public mind—to help cultivate excellence in the style of public discourse.

For he believed with all his heart that the beginning is the word; that in a democracy such as American is, public discourse should be conducted in ways where words are used to draw everyone closer to the realities they are meant to express. It was his fixed aim, therefore, to uphold the integrity of words so that the public itself could make a better choice between proper and improper objects of trust or jealous suspicion, between proper and improper objects of praise or censure.

One thing was certain to bring him roaring out in full armor, ready for battle. It was the taunting spectacle of public men practicing the small arts of flattery in order to win public trusts, though the public interest might thereby be betrayed. To him by contrast, men who held the trusts of office, along with those whose station in life makes them the natural leaders of public opinion, were dutybound to honor the quality of the public mind by always appealing to its power of right, reason and to the best motives of its free will.

Where did this ruling conviction come from?

He himself gave us the answer.

As a young man, graduated from Yale and in Europe for further education at the end of the last century, he had seen the Dreyfus case unfold in France. Of the formative things in his life, few things impressed him more deeply. Here was a whole state apparatus, geared to ratify an injustice by appealing to the lowest of human passions.

Yet this, to him, was but one aspect of the event.

There was another and happier aspect of the Dreyfus case which left an equally deep mark on his thoughts. As time wore on, he saw how a handful of men in France—

no more than four to start with—armed with nothing except appeals to reason, beat down and slowly leveled the walls of a state-supported falsehood. In the end, they won freedom not only for an officer who was falsely convicted of a crime, but also won freedom for the mind of a whole nation that it might know where justice lay.

The force of this experience from another time and age, formed the point of departure and the point of return for Eugene Meyer's lifelong attitude toward the conduct proper to men in their political natures.

A NOTE OF TRIUMPH

And now Eugene Meyer has passed from among us. In accomplishments and in honors, few things were denied him. If he never allowed himself to believe it, we on our part, dare say that his life ended on a note of triumph. And saying this, we foreclose our right to wish that for his own sake he had been granted added years beyond the 83 he lived.

Yet if there is a cause for public mourning at his passing, it is mourning for ourselves and not for him; mourning that we have lost in him a distinguished mind, an artist in many matters, a rare friend, a giver of good counsel, a patriotic spirit, a source of humor, and a graphic model for how a citizen of our democracy ought to bear himself if he means to bear himself well.

If we solace ourselves, it is with the thought that his wife, his children and the grandchildren of his seed are, as we know them, worthy carriers into the limitless future of those qualities which Eugene Meyer—a great patriarch—brought to all of us for the enrichment of our lives.

Narrow Gage Train to Yesterday

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. ASPINALL. Mr. Speaker, one of the last narrow gage passenger trains still in operation in the United States makes a spectacular 47-mile trip from Durango, Colo., north to Silverton—one of the famed mining towns of western Colorado. The train makes its daily trip in the summer and early fall through some of the most spectacularly rugged mountain country in North America. Mr. Speaker, Colorado's poet laureate, the Honorable Milford E. Shields, of Durango, has written a poem commemorating this "Narrow Gage Train to Yesterday," which I should like to insert in the Record. Mr. Shields' fine poem catches the spirit of the high mountain country of southwestern Colorado in a manner that is rarely done in prose or poetry. Mr. Speaker, I should like to suggest to my colleagues, particularly those from the eastern part of the United States, that when the session adjourns they go out to the mountains of Colorado for just a little while before continuing on their hurried way. I can guarantee them they would find it a most refreshing and rewarding experience. Mr. Shields' poem follows:

NARROW GAGE TRAIN TO YESTERDAY: DURANGO TO SILVERTON

(By Milford E. Shields)

Come, board the train to yesterday
That rides the rusting, narrow rails;
It puffs and chugs upon its way
Along the misty mountain trails.

It bends into the canyon deep
And skreals to get around the rim
Where eagles nest and shadows sleep
And skies at noon grow cool and dim.

It crawls beside the river swift,
Creeps 'round the foots of mountains high
Where present problems fade and lift,
Then like the clouds go flitting by.

Into the land of dreams it goes,
The dreams of men who searched for gold,
The world of yesterday of those
Prospectors of the mountains bold.

Behold these heights of granite vast
Where rugged life was wild and free,
Where sparkling Silverton was cast,
And men mined wealth for worlds to see.

Pass in this land of yesterday,
Here breathe the first and purest air,
Become renewed in God's high way,
Then face today with courage rare.

Alabama Legislature Appeals for Aid for Textile Industry

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. ROBERTS. Mr. Speaker, the Alabama Legislature showed its keen awareness of the problems facing the southern textile industry recently when it adopted a joint resolution appealing to the Secretary of Agriculture and the President for action.

I hope every Member of Congress will read this resolution, which I have received consent to insert in the Record at this point.

The resolution referred to follows:

HOUSE JOINT RESOLUTION 18

Whereas the cotton textile industry is a major Alabama industry in the employment of people, in the use of capital, and in consuming a major Alabama farm product, cotton; and

Whereas the textile industry is of immense concern to farmers, bankers, merchants, and many others not directly connected with the textile industry; and

Whereas the textile industry is now in an untenable position due to foreign advantages in the form of much cheaper cotton and also much lower wages, with the average hourly wage in foreign textile mills being about one-tenth of American wages; and

Whereas the U.S. export subsidy on American cotton will be increased to 8 cents a pound effective August 1, 1959, thereby placing American mills at a still greater disadvantage; and

Whereas section 22 of the Agricultural Adjustment Act of 1933, as amended, authorizes and directs the Secretary of the U.S. Department of Agriculture and the President of the United States to act when it becomes

known that any industry is placed at an unfair and destructive disadvantage; and

Whereas the manufacturers of cotton textiles are now not only at an unfair and destructive disadvantage but in a position that is both unreasonable and intolerable: Now, therefore, be it

Resolved by the House of Representatives of the Legislature of Alabama (with the concurrence of the Senate of said body), That we respectfully request the Secretary of Agriculture and the President of the United States to act immediately in assembling essential facts and then use them in proper action in behalf of the textile industry under existing laws. Unless this is done immediately untold harm and irreparable losses are inevitable in addition to severe losses already suffered. If existing laws are not adequate (we believe that they are adequate) new laws should be enacted promptly.

Resolved further, That one copy of this resolution be sent at once to the President of the United States, one to the Secretary of the U.S. Department of Agriculture, and one to each Member of the Alabama delegation in Congress with an urgent request that they take immediate steps to cause its activation in behalf of an industry that is of tremendous importance to the welfare and the total economy of Alabama and many other States.

Adopted by the house of representatives, July 7, 1959.

Adopted and concurred in by the senate, July 10, 1959.

Approved by the Governor, July 10, 1959.

Successful Federal School Aid

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. UDALL. Mr. Speaker, Public Law 874 has been an extremely useful and equitable program of Federal assistance to public schools.

A recent reevaluation of the merits and workings of this program has been made by the University of Alabama's College of Education by use of a questionnaire which was submitted to a cross section of school superintendents in the more than 3,000 school districts receiving funds under Public Law 874. The survey dealt with such significant questions as the threat to State control of school policy, the amount of red tape involved, the equity of the formula, the adequacy of the assistance, and administration of the program under the Office of Education.

Results of the survey were consolidated in an article published in the July 1959 issue of the American School Board Journal, and I recommend it as worthwhile reading for all of our colleagues interested in the issue of Federal assistance for schools. The article follows:

SHALL WE EXTEND PUBLIC LAW 874?

(By J. V. Davis and L. R. Davis, College of Education, University of Alabama)

One of the significant Federal assistance programs for public schools has been that

provided by Public Law 874. This program has made Federal funds available for current operating expenses to school districts impacted by the national defense effort. Some idea of the scope of the program can be seen in the fact that during the past year over 3,000 school districts received Federal appropriations amounting to approximately \$90 million.

The nature of the Federal impact on school districts has been primarily of two types: (1) reduction of the local tax base due to the acquisition of property by the Federal Government; and (2) the sudden influx of population into a school district because of the establishment or expansion of defense installations. Enacted by Congress in 1950, Public Law 874 has been amended a number of times, but the Federal aid policy has remained essentially unaltered.

Since the assistance program to federally affected schools is being reconsidered by Congress currently, it would seem of interest to examine the current attitude of school superintendents toward Public Law 874. The writers recently prepared a series of questions dealing with the administration of Public Law 874 and submitted these questions to 100 school superintendents in federally affected districts. These districts were selected at random from throughout the Nation. Replies were received from 89 percent of the officials to whom questionnaires were submitted.

THREAT TO STATE CONTROL

By tradition, a major consideration of school officials in any Federal aid program is the assurance that educational control will remain at the State and local levels. In answer to the question, "To what extent do you think Public Law 874 has constituted a threat to State control of education?" slightly over 93 percent of the respondents replied "None." A small number of officials, 5 percent, termed the threat "little," while 2 percent indicated that they were "undecided." It would seem significant that in no case did a school official express the belief that Public Law 874 has "greatly weakened State and local control of education."

REDAPE OF PROCEDURES

There was a somewhat greater difference of opinion among school officials regarding the procedures involved in securing Federal assistance. Twenty-one percent of the respondents described the procedures as being very complicated, and 5 percent of this group termed the procedures unnecessarily complicated. On the other hand, 15 percent of the officials thought the procedures for obtaining financial aid were easily followed, and 64 percent of the respondents considered them not too difficult.

A number of officials commented regarding the application forms required of school districts in establishing financial entitlement. These forms, many officials stated, could be simplified without impairing their value and effectiveness. Typical of the complaints was the following: Too much data required, much of which is irrelevant. The term "redtape" appeared repeatedly in the comments. A few officials, however, observed that the complexity of the procedures was probably necessary to protect Federal funds from misuse.

EQUITY OF FORMULA

Because of the many types of financial burdens imposed on school districts by Federal projects, it has been a challenging problem for Congress to devise a formula which would provide fair and equitable payments to affected schools. Judging from the replies to the questionnaire, however, it would appear that the majority of school officials are satisfied with the present formula. Of the school officials replying 91 percent expressed the opinion that the present basis for determining entitlements is reasonably fair and equitable. Seven percent considered the formula very generous, and only 2

percent of the respondents declared it unfair and inequitable.

In commenting on this question, several officials expressed the opinion that Federal funds could be more equitably distributed if the local contribution rate were not a factor. Schools in the South, according to a few of the respondents, were penalized by the formula. One official noted that in 1956 Federal payments ranged from \$154.01 per pupil in Illinois to \$67.77 per pupil in Alabama. There was, also, some criticism of the absorption clause under which communities are required to assume part of the Federal impact.

ADEQUACY OF ASSISTANCE

The majority of respondents indicated that they consider the financial aid given under Public Law 874 to be "adequate." A smaller percent of the officials found the assistance to be "more than needed"; but there were 30 percent of the respondents who thought the aid "inadequate" and 9 percent who considered it "much less than needed." The chief criticism seemed to be that Congress could not be counted upon to appropriate adequate funds to meet full school entitlements each year.

CONTINUANCE OF FEDERAL AID

Since Public Law 874 is set to expire next year, a fundamental question is whether or not there will be a continuing need for Federal assistance to schools in defense areas. Over 75 percent of the officials replying to the questionnaire stated that the assistance program should be put on a permanent basis. Many of the respondents declared that their schools could not operate without Federal aid of some kind. The following comments would seem to reflect the prevailing opinion of school officials in impacted areas:

"We would like to see it perpetuated on its present basis. We could not possibly provide the educational program now offered without the assistance provided through Public Law 874."

"Congress would do a real service to the schools if it would insist upon getting a satisfactory bill and establishing the aid on a permanent basis."

"The program should be longer than a 2-year period. This would make for more efficient planning."

OFFICE OF EDUCATION ADMINISTRATION

Despite complaints regarding application procedures and the distribution of funds, school officials would seem to be satisfied with the overall administration of Public Law 874 by the U.S. Office of Education. Sixty-six of the school officials, or 74 percent, thought the Office of Education was administering the assistance program in an "efficient" manner, and 23 percent considered the work of the Office of Education "very efficient." Only 3 percent of the respondents described the performance as "inefficient."

The comments of school officials were mostly complimentary. Typical of the remarks was this: "The representatives of the U.S. Office have been very helpful . . . (they) are experienced men who seem to know their business."

The Highway Program

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. BUSH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial

entitled "The Highway Program," which was published in the New York Times of July 30. I also ask unanimous consent to have published in the Appendix, in connection with the editorial, an article on the same question, written by C. P. Trussell, and also published in the New York Times.

There being no objection, the editorial and the article were ordered to be printed in the RECORD, as follows:

[From the New York Times, July 30, 1959]

THE HIGHWAY PROGRAM

Reluctance of Congress to match highway construction needs with responsible financing had its logical sequel yesterday in the gravely unsatisfactory program voted out by the House Ways and Means Committee.

The 41,000-mile plan of interstate highway building will be delayed, with a stretch-out over a longer period of years. Immediate allocations to the State will be sharply cut and continue so for several years, throwing State schedules into utter confusion. A billion dollar bond issue will be authorized, breaking with the sound policy of pay as we go inaugurated when the highway plan was formulated in 1956.

All this regrettable compromise stems from Congress' refusal to accept President Eisenhower's recommendation, first made months ago and steadily reiterated that the gasoline tax be increased 1½ cents a gallon. The results will be serious, immediate, and go beyond the adverse effect on highway building.

Just a week after the President put the case for a balanced budget next year so well, and the desirability of beginning to reduce the vast public debt, and emphasized the astronomical cost of interest payments in a budget missing balance by more than \$12 billion in the most recent fiscal year, the House committee departs on this new adventure in deficit financing and inflationary spending policy. It ignores the fact that, in this most prosperous of all times, Congress has failed thus far to put the Government on a current cash basis.

An instant protest can be expected from the States, which in many cases have already been spending future money on the assurance of long-term commitments from the Government, which was one of the valuable principles established by the 1956 law, enabling the State to know what to expect year after year instead of waiting to see in each congressional session what money would be available. The new highways are needed. In fact we need today the highways of tomorrow that the Federal program promised.

It is only fair that all users of the highways should pay their way on the new roads. To use the revenues of taxes other than that on gasoline to amortize the proposed billion-dollar bond issue to the detriment of a balanced budget and a further delay in the reduction of the Federal debt is to rob Peter to pay Paul. The interest charges on the bond issue will increase the cost of the highway program, a disservice to all taxpayers including motorists.

The Ways and Means Committee has taken an unwise course damaging to the highway construction program and the Nation's economy as well. Its plan must be rejected and an ample gasoline tax increase substituted.

BILLION IN BONDS URGED FOR ROADS—HOUSE UNIT FAVORS 5-YEAR ISSUE OVER GAS TAX RISE

(By C. P. Trussell)

WASHINGTON, July 29.—The House Ways and Means Committee recommended today that the interstate highway building program be financed with a \$1 billion revenue bond issue.

It rejected President Eisenhower's call for taxing motorists 1½ cents more for a gallon of gasoline. It also called for a drastic slowing of the \$41 billion program, perhaps for

several years, until available cash could cover the operations.

The bonds, drawn against the assets of the highway trust fund, would be paid off within 5 years.

Alternatives to the White House request for increasing the Federal gasoline tax from 3 cents to 4½ cents won a vote of 15-10 at a closed session of the tax-writing panel. It was emphasized by committee spokesmen that Republicans had joined Democrats in opposing taxes on gasoline, and also on diesel fuel, tires, tubes, trucks and buses, as the President had requested.

The committee also recommended that one-fifth of the revenues from the excise levies on new automobiles, running more than \$1 billion a year, be transferred to the highway building account.

The transfer also was opposed at the White House because it would reduce funds going into the general Treasury accounts and possibly require other bond-financing programs to cover the losses.

The pattern followed by the ways and means panel was one that President Eisenhower had pronounced as being "not satisfactory." Supporters of the alternatives recommended today asserted that President Eisenhower had recommended a similar bond issue in 1955 that was rejected by the Democrats.

The administration looks upon the bond program as conflicting with the marketing of other Government securities and having an inflationary result.

As explained by Ways and Means Committee spokesmen, the 40,000-mile interstate highway program would be stretched out from completion in 1972 to completion in 1976. With this slowing of pace, the allocations of funds to States, with the Federal Government paying 90 percent of the costs, would drop drastically.

The program for the current year would continue as nearly as possible at full volume. But the allocations to States for the fiscal year starting next July 1 would be reduced from \$2,500 million to about \$600 million. The apportionment to States would fall from a planned \$2,200 million to \$1,400 million for 1962.

For 1963, allocations would be reduced from \$2,200 million to about \$1,500 million. Future allocations would be cut to conform to the postponed completion period.

Representative RICHARD M. SIMPSON, Republican, of Pennsylvania, the ranking minority member, held that the proposed interest-bearing bonds would put a further squeeze on consumers and small businesses.

The Labor Bill

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. CANNON. Mr. Speaker, under leave to extend my remarks, I include an editorial from the issue of July 30, 1959, of the Washington Missourian, published at Washington, Mo. This paper has repeatedly received from the State press association awards of merit designating it as one of the outstanding newspapers of the State:

GIVES OBJECTIONS TO PROPOSED LABOR BILL
There is no doubt that every union member in town, as well as most of the rest of

us, are interested in the proposed labor legislation now before Congress.

Many of us, except perhaps the union members, actually do not know too much about this proposed legislation. We have heard that the unions object to it strongly, and many of us have taken the position that labor simply doesn't want to be regulated.

The fact, however, is that the unions appear to have a legitimate grip. Labor's side of the bill was fully explained last week by John McDermott at the National Conference of Weekly Newspaper Editors at Southern Illinois University at Carbondale. Mr. McDermott is a former union member, a former business agent for his union, who has since become thoroughly familiar with the labor movement, and is now on the university's staff. Some of his work is devoted to mediation between labor and management.

The man strikes you as a very sincere and fairminded individual. He readily admits some of the abuses on the part of big labor leaders, as well as those of management. After listening to him and asking him questions for several hours we were convinced that he was honest and sincere in his convictions, and, as we have just stated, he saw the wrong in labor, just as he did in management.

He didn't think the present session of Congress would enact any kind of labor bill, but he did think that in the years ahead a workable labor bill would be worked out.

Also, he didn't think that the present proposed bill would do a thing to correct the abuses that several of the nationally known labor leaders have been accused of.

Here are the objections to the proposed bill now before Congress as outlined by Mr. McDermott:

1. The burdensome and detailed financial accounting couldn't be carried out by the small locals.
2. It gives the Secretary of Labor such powers that he could break any union he wanted to.
3. No union funds could be used to defend a union official accused of wrongdoing.
4. It would encourage defeated candidates for union office to have the election set aside.
5. It would provide broad powers to remove union officers from office who are accused of misconduct.
6. It would provide extreme penalties for violations, including a \$10,000 fine and 2 years in jail.
7. It would bar convicted union officers from serving their unions in any capacity for 5 years.
8. The bonding required by union officers would be prohibitive for the average union officers.
9. It would prohibit certain types of peaceful picketing.
10. It would ban the hot cargo clause in some union contracts.
11. It would prohibit what is known as "racket union" picketing.
12. It would give a rowdy union member power to control union meetings.

The biggest objection Mr. McDermott had to the proposed bill was that it would not eliminate a single union abuse, and make it next to impossible for some of the smaller unions, at least, to operate because of the burdensome financial reports required by all of them, and by giving the Secretary of Labor such dictatorial powers that unions would be at his mercy.

The unions have some good arguments in their favor, and, besides, a bill that won't eliminate the abuses at the top is no good anyway. These abuses don't come from the rank and file of the union members, but from the brass at the top, at least some of whom are more interested in their own gain, than they are in the gain of the people they represent.

Donation of Thomas A. Edison Home to Federal Government

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. WILLIAMS of New Jersey. Mr. President, brief ceremonies on August 3, 1959, will mark the formal transfer of Glenmont, the home of Thomas A. Edison, in West Orange, N.J., to the Federal Government.

The donation of this historic landmark by McGraw-Edison Co., will mark the final addition to what will eventually be known as the Edison National Monument. The laboratory group of buildings are already a part of the national park system.

Glenmont, where Thomas A. Edison spent 45 years of his life and where many of his 1,000-plus inventions were thought out, contains numerous mementos of appreciation presented to Thomas Edison for his many contributions to modern civilization.

As soon as administrative details are worked out, it will be open to the public.

I ask unanimous consent to have printed in the Appendix of the Record a release from the Department of the Interior on this subject.

There being no objection, the release was ordered to be printed in the Record, as follows:

THOMAS A. EDISON HOME TO BE DONATED TO FEDERAL GOVERNMENT

Glenmont, the home where Thomas A. Edison lived for 45 years, and where many of his 1,000-plus inventions were thought out, will become the property of the Federal Government on Monday, August 3, it was announced today by the Department of the Interior.

The multigabled house, in West Orange, N.J., is being donated by the McGraw-Edison Co., his corporate heir, as an addition to Edison Laboratory National Monument, according to Conrad L. Wirth, Director of the National Park Service, which administers the monument. The laboratory group of buildings, often referred to as Edison's work bench, have been a part of the national park system since 1956. With the addition of the home, the area will eventually be renamed Edison National Monument.

Brief ceremonies at the home will mark the formal transfer of title to Glenmont. Former New Jersey Gov. Charles Edison, a son of the inventor and chairman of the board of directors, and Max McGraw, president, will be the principal representatives of the McGraw-Edison Co. Assistant Secretary Roger C. Ernst will represent the Department of the Interior and Director Wirth the National Park Service. Also attending will be other members of the Edison family and the donor company.

Situated in a beautifully landscaped 13.5-acre tract on a hill overlooking the laboratory buildings, Glenmont contains numerous mementos of appreciation presented to Thomas Edison for his many contributions to modern civilization. Adding to the historical interest of the 23-room house are tribal souvenirs presented by American Indians, primitive hunting weapons sent by Eskimos, a Russian czar's gift of statuettes

of Cossacks astride their military steeds, and many others. These and the household furnishings have been left virtually undisturbed since Mr. Edison's death in 1931.

The famous landmark was the home of his widow, Mina Miller Edison, during the 16 years she survived her husband. Since 1947, it has been maintained as a limited-use museum by the McGraw-Edison Co. and its predecessor company, Thomas A. Edison, Inc.

When the laboratory buildings were presented to the Federal Government several years ago by Thomas A. Edison, Inc., Glenmont was designated a national historic site by the Secretary of the Interior. President Eisenhower, on February 17, 1959, authorized Secretary Seaton to accept the tender-of-gift of the Edison home.

Park Service Director Wirth said that Glenmont will not be open to the public until administrative details of conditions and hours of opening are worked out with the trustees of Llewellyn Park, a semiprivate residential area surrounding the property.

What Should Trade Missions Mean to You?

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article by Fred Wittner, president of Fred Wittner Co., of New York, which appeared in the July issue of *Industrial Marketing*:

WHAT SHOULD TRADE MISSIONS MEAN TO YOU?

(By Fred Wittner, president, Fred Wittner Co., New York)

Right at this moment in a number of far-flung places of the world small teams of American industrialists are spreading good will of inestimable value to their country. In concentrated 6-week periods, they are working long hours, covering vast distances, and undergoing countless travel inconveniences—all without monetary remuneration. In return they receive personal experiences, knowledge, and satisfactions which cannot be measured in money.

These private businessmen are part of a relatively unsung but tremendously significant program instituted a few years ago by President Eisenhower to encourage two-way trade between the United States and the rest of the world. The program: Trade Missions of the U.S. Department of Commerce.

The author of this article was the first industrial advertising agency man to go on such a mission (last fall, to Yugoslavia). It was a rich, unforgettable experience, during which time I was never more proud to be a part of industrial advertising. This spring Charles L. Rumrill, president, the Rumrill Co., Rochester, N.Y., was a member of the trade mission team which went to West Germany, and Robert N. D. Arndt, vice president, Arndt, Preston, Chapin, Lamb & Keen, Philadelphia, was with the team that went to Poland.

Because of the great need for industrial marketing specialists to man the teams, this article will describe the objectives of the program, its accomplishments to date, and the reasons why industry—yes, you who

read this—should support it by making men available for the purpose.

However, before I take you behind the scenes, let me say at the outset that I can conceive of no more valuable contribution by private enterprise to better long-term international relations. This partnership of industry and government in achieving person-to-person contacts between American and foreign businessmen widens our understanding of the expanding world of commerce and, even more important, corrects the existing image of America which prevails in other countries.

ILL-WILL AMBASSADORS

If you have traveled abroad at all, you know that the image of the United States needs correcting. Every year hundreds of thousands of our fellow Americans go overseas as tourists; but unfortunately, they accomplish little in building goodwill for their country. Often, for the most part unintentionally, they hinder it.

Better dressed, better fed, spending more money during their holidays than many natives acquire in their lifetimes, they create hostility instead of understanding. Welcomed for the dollars they bring, they leave little of lasting impact except envy. (Foreign aid in dollars only creates the same unwholesome impression. Nobody really likes a rich uncle. He could always give more if he really wanted to.)

Envy is the closest emotion to hate; so we as a nation must do more than merely impress other peoples with our wealth and high living standards. We must give of ourselves, share our knowledge and point the way to self-sufficiency, which peoples everywhere, regardless of their birthright, yearn to achieve.

This trade missions program is accomplishing—at an expense to taxpayers so small that it can scarcely be found in the budget report.

MISSION DESCRIBED

The best way to describe the program is to quote from the U.S. Department of Commerce's "What is a Trade Mission?" (from its "Questions and Answers for Prospective Trade Mission Members"—which you can get by writing to the Trade Missions Division, Bureau of Foreign Commerce, Washington 25, D.C.):

"The Department of Commerce considers the trade mission as the spearhead of its activities in the international field, carrying out at the grassroots level—directly with the foreign businessman—its functions to foster, promote and develop the foreign commerce of the United States: trade, investment, tourism, and general commercial relations.

"A trade mission is a group of commercial men (usually three to five private businessmen accompanied by a Department of Commerce leader) sent abroad to further the interests of the United States. For 6 or more weeks they visit the various cities in the country concerned and meet business and government executives in group meetings and individual consultations on how business is done with and in the United States. If timed to coincide with an important international trade fair, they maintain a U.S. Trade Information Center in the U.S. exhibit at the fair, where their consultation services are available to all.

"In the course of this period, and depending on the size of the business community in the country visited, they meet personally from 1,000 to 5,000 or more businessmen, including the leaders of the country."

By the end of December 1958, the Department of Commerce had organized and sponsored 63 trade missions along these lines. These missions have carried the American business story and concrete evidence of unselfish American cooperation to 38 countries

and more than 470 cities since the program began in January 1955.

DOES IT WORK?

Has the program been successful? In answer, I will draw on my own and the experiences and reactions of my associates of the 1958 Yugoslavia trade mission team. Also I want to quote Samuel P. Hull, sales manager and director, Worcester Stamped Metal Co., Worcester, Mass., who was a member of one of the first teams sent out from Washington (in 1955, to Italy):

"Our objective as a group was selling, selling on many levels. We were selling our Government's sincerity and interest in promoting two-way trade, selling our President's overall interest and sincerity of purpose in bringing a closer rapprochement between countries; selling the American way of life and the democratic philosophy of our Government.

"A terrific impression was made on the people with whom we came in contact by the fact that we were there . . . that we were willing to take several weeks away from our business, in some cases at considerable personal sacrifice, in order to discuss and attempt to solve business problems with them. It was a matter of no little importance in their minds that we were there to try to assist them. Certainly, our Government has displayed and is displaying this same interest in helping them; but governments are, of necessity, somewhat impersonal, at times very remote from the individual and his particular current problem.

"But here was an individual, better yet, five individuals—in person—keenly interested in hearing them out, in discussing all the innumerable details, and in giving direct, concrete help. It was new and wonderful. One of the first questions asked us wherever we went was, 'Is your Government going to continue this next year and the year after? Are you coming back again?'"

That was also the biggest single reaction we experienced in Yugoslavia: surprise and pleasure over our being there. In our case the United States was there for the third successive year, covering new areas of the country, meeting many businessmen who hadn't been exposed to the previous trade missions, inspecting new factories, visiting tourist resorts, answering more advanced questions.

WHAT AND WHY

Other countries, particularly those where all industry is state controlled, send out trade missions which are empowered to negotiate concrete trade agreements and to buy and sell products. U.S. trade missions, on the other hand, bring only information—information about American markets and how to reach them, American tastes and how to satisfy them, American sources of equipment and raw materials and information on how to attract more American tourists.

Why should the United States send a trade mission, at taxpayers' expense, to a Communist-controlled country such as Yugoslavia?

Here's why: Tito and his "markedly brave, tenacious, kindly and perennially hopeful people" (as the Christian Science Monitor recently described them) are noncommitted Communists. They broke with Stalin in 1948 and again with Khrushchev in 1955.

Here communism is not a monolithic structure attempting to shape all people in the same mold. The U.S. Government recognizes this difference. We have equipped the Yugoslav Army, have helped to offset their deficiencies in wheat and are helping construct hydroelectric dams and fertilizer plants.

As a result, Yugoslavia is not behind the Iron Curtain; we have an important window there from which to watch the satellite bloc; our U.S. Information Service and Voice of

America operate without restrictions; and our embassy enjoys free intercourse with Tito's government.

In other words, we are being realistic. Sending trade missions of private businessmen to Yugoslavia is an extension of this realism. It is for this same reason that we have sent trade missions to Poland during the last 2 years, why we encourage the importation of Yugoslav and Polish products into America, and why we look with favor on Americans visiting a country such as Yugoslavia—which, by the way, is one of the most beautiful in Europe, offering much to the American tourist.

TRADE MISSION AT WORK

Now let's take a look at an actual U.S. trade mission—the one the author was on—in action. Yugoslavia had suggested three areas of assistance for the 1959 U.S. trade mission:

1. Assisting Yugoslavia in its important lead, zinc, and copper industries—which constitute a substantial portion of its exports to the United States—and providing information for its growing machinery and metal fabrication industries. The businessman assigned to this phase of the mission was John D. Dewhurst, president of Arrow Tool Co., Wethersfield, Conn.

2. Helping to increase American tourism to Yugoslavia. Over 550,000 Americans visited Europe and the Mediterranean in 1957. They spent, exclusive of travel fares, \$483 million. Less than one-half of 1 percent of this money was spent in Yugoslavia. The businessman assigned was Robert C. Gordon, advertising sales manager of Time.

3. Explaining American marketing methods and techniques. Since Yugoslavia's exports to the United States have risen slowly to \$33 million annually, a greater understanding by Yugoslavia's businessmen and tourism officials of the important place of sales promotion, advertising, and public relations would enable them to communicate more effectively about their products, services and facilities. The author of this article was the businessman assigned.

Accompanying this trio were Wendell Moore of the Trade Missions Division, as team leader; Harold E. Allen of the Department of Commerce, as assistant team leader; Ross Titus of the economic section of the American Embassy; Aleksandar Ozerovic of U.S. Information Service, Belgrade, as translator; and Stefan Zec of the Yugoslavia Federal Chamber of Commerce.

The team was briefed for 4 days in Washington by Commerce and State Department officials in Washington, and for several days on arrival in Belgrade by Foreign Service and USIS officials at the American Embassy.

TOUGH SCHEDULE

Then we started crisscrossing the Yugoslav mountains with Bronka and Luka, the Ambassador's and Chargé d'Affaires' chauffeurs, in a Chevrolet limousine and a Ford station wagon.

During the succeeding 6 weeks we spent several days in each of the trade information centers of the American pavilions at the Belgrade and Zagreb Fairs, held group meetings in 10 cities of the country's 6 Republics, and visited 11 tourist resorts and 16 industrial plants.

When we returned to Belgrade at the end of September we had put 4,000 miles on the speedometers of the embassy's cars, 75 percent of this mileage being over steep mountain roads. In addition, we had flown from Belgrade to Skopje, from Lake Ohred to Belgrade, from Belgrade to Titograd and from Split to Belgrade—not to mention an overnight rail trip on the famous Orient Express from Sarajevo to Zagreb, and a cruise down the Adriatic by motorship from Rijeka to Split.

In these 6 weeks we didn't have a day off. Most mornings we were up at 5 or 6 a.m. to push on to the next meeting over

hazardous, winding roads, stopping en route to visit factories, exchange Slivovic (plum brandy, the Yugoslav's vodka) toasts with officials; partake of seven-course official luncheons and dinners; and answer innumerable questions about American industry, American markets, American tastes, American attitudes. Questions like:

"What are the major metal-fabricating markets in the United States?" At Yugoslavia's largest steel mill (Zenica, in the Republic of Bosnia—Herzegovina) we gave the managing director and commercial director a copy of Steel's marketing map of the metalworking industries. You would think we had included them in the Marshall plan.

"Where in the United States can we buy steel plate for ships—and equipment for machining it?" In the shipbuilding city of Rijeka (the former Italian city of Fiume) we left a copy of Iron Age's 1958 "Annual Review" issue. The expressions of gratitude were embarrassing.

"Which American advertising agencies, specializing in export, would like an affiliation with the leading Yugoslav advertising agency?" (Believe it or not, there are 18 American-type advertising agencies in that small country—the size of Oregon.)

BUSINESS PAPERS

How can a small team of specialists answer all these questions? The answer is the availability of American business magazines. With every trade mission, the Department of Commerce sends a commercial library, consisting of 1,000 business publications and directories, covering every category of American private industry.

This is the research department of the trade mission. The library is set up in the U.S. pavilion at the country's international trade fair. The publications enable members of the mission to answer questions quickly about conditions in a particular industry or market: where specific products can be purchased, marketing techniques, price trends, tariffs, convention dates, etc.

I said at the outset that I was never more proud of being a part of industrial marketing. When I watched Yugoslav business and government officials stand in amazement before row after row of American business, trade, and technical magazines, I knew, if I never did before, how vital our business press is.

UNFORGETTABLE

If I have stirred your interest in the trade missions programs and you feel that either you or one of the executives of your company would participate, you can get all of the details by writing to: E. Paul Hawk, Director, Trade Missions Division, Office of Trade Promotion, Bureau of Foreign Commerce, U.S. Department of Commerce, Washington 25, D.C.

If you go on a trade mission, you'll never regret or forget the experience. In the words of one trade mission alumnus:

"It is the cheapest investment ever made for the best results. I personally feel that in the 7 weeks I was in that country, I contributed more to the service of my country than in the entire 4 years I was in the U.S. Army.

Milwaukee Journal Challenges Khrushchev

EXTENSION OF REMARKS OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. PROXMIRE. Mr. President, the country forgot with deep interest the

exchange between Premier Khrushchev and Vice President Nixon; and many Americans must have been struck by the assertion of Khrushchev that "the Communist regime is not afraid of ideas, that it has broken free from such a situation." Recently the Milwaukee Journal delivered a slambang reply to this Khrushchev assertion and I ask unanimous consent that this editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

NOT AFRAID OF IDEAS, EH?

In their famous "kitchen debate," Vice President Nixon said to Nikita Khrushchev: "You must not be afraid of ideas." The Soviet Premier replied: "We tell you not to be afraid of ideas. We have no reason to be afraid. We have already broken free of such a situation."

So? Perhaps Khrushchev was not aware that almost simultaneously his people had demanded removal of more than 100 books from the American library in an adjoining section of the American exhibition. They were books of history and travel and anthologies of Russian literature. None were for sale; they were evidence of the kind of books available in libraries in this country.

There was no question about the Soviet's right to demand removal of the books. Agreements providing for the exchange exhibitions in Moscow and New York State that host governments have a veto on exhibits. As far as is known, the United States vetoed no Russian exhibit in New York. To have vetoed any books would have been ridiculous; Russian books, magazines and newspapers are freely available in this country to those who want them.

"We have no reason to be afraid," said Khrushchev. Maybe not, but someone in Moscow was afraid of a few books on display shelves. Khrushchev's words were being disproved as he said them.

If further evidence of Khrushchev's error, or dishonesty, is needed, it was provided at Geneva last week. A committee of the United Nations Economic and Social Council, after months of work, completed a declaration on freedom of information. It stated these principles, among others:

(1) Everyone has the right to seek and convey information and ideas. (2) All governments have the responsibility to pursue policies under which the free flow of information will be protected. (3) No government or public or private agency should have a monopoly on all means of disseminating news and ideas. (4) All media of information should report honestly and in good faith.

The vote for adoption was 13 to 3. Those voting "no"—Soviet Russia and its Communist stooges, Bulgaria and Poland.

Not afraid of ideas, Mr. Khrushchev?

Spending Marathon

EXTENSION OF REMARKS

OF

HON. VICTOR A. KNOX

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. KNOX. Mr. Speaker, there has been much conversation recently regarding the fact that fiscal year 1959 ended with a deficit of \$12.5 billion. I offer the following editorial from the Chicago Tribune of July 22, 1959, the contents of which I consider very worthy of your

serious attention. When considering the foreign aid appropriation measure last week the Congress had the courage to require a particular foreign country to strictly limit its spending and indebtedness. Why do not we, and why cannot we, practice what we preach? The editorial follows:

SPENDING MARATHON

No one was very surprised Monday when the Treasury announced that the fiscal year 1959 had ended with a deficit of \$12.5 billion. Some had expected it to be even greater. The deficit was the gap between receipts of \$68.2 billion and expenses of \$80.7 billion.

When in January 1953, President Eisenhower drew up the budget for the year ending July 1, 1959, he counted on income of \$74.4 billion and expenses of \$73.9 billion. Chairman Byrd of the Senate Finance Committee called the income estimate unduly optimistic in view of business conditions, and others of both parties were equally skeptical.

Democrats emphasize the decline in tax revenue caused by the recession. Revenue was, indeed, \$6.2 billion less than anticipated, but expenses, which are under the control of the Democratic Congress, were \$6.8 billion higher.

A glance at the accompanying chart should prove the absurdity of blaming our fiscal troubles solely or largely on declining income. In 43 years since 1913, the cost of running our Government has multiplied more than 100 times; yet in the same period our population has not even doubled.

The 40 years between 1874 and 1913 likewise saw our population double, and they were years of tremendous economic growth. Yet the cost of Government rose at about the same rate as population—from \$302 million in 1874 to \$724 million in 1913.

The spenders try to place the blame on defense spending and interest on the debt, which was incurred principally to pay for wars. These two items account for \$47 billion of our \$80 billion budget. But even assuming that our wars have been unavoidable and worthwhile, the argument is invalid.

In 1913, defense spending and interest amounted to \$370 million of our \$724 million budget, or only slightly less, proportionally, than now. In 1874 the two accounted for \$179 million out of total spending of \$302 million, or well above today's proportion. The truth is that nonmilitary spending has risen faster than military spending and interest combined.

The spenders blame our troubles also on inflation. But even allowing for inflation, the Government spends 30 times more for each one of us now than it did in 1913. And, what is more, it is the spenders themselves who are largely responsible for creating this inflation through their deficits. No matter how they sidestep and doubletalk, the spenders cannot escape the blame.

It is ironic that a foreign aid program for Spain was also announced on Monday, and that one of the requirements was that Spain impose strict limits on its spending and its indebtedness. It is distressing to see the good sense we preach to others but cannot seem to practice ourselves.

Lee Alexander Auchincloss

EXTENSION OF REMARKS OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the passing of Mrs. James C.

Auchincloss, who for so many years served as an assistant to her husband, Representative JAMES C. AUCHINCLOSS, has been noted with sorrow by all of us who knew her so well. Keenly interested in the problems of New Jersey's Third Congressional District, she was well-known for the sympathetic assistance she rendered to all who sought a helping hand.

I wish to extend a note of personal sympathy to Congressman AUCHINCLOSS and his family at the great loss they have sustained and I ask unanimous consent to have printed in the Appendix of the RECORD, a tribute to this gracious lady published in the Asbury Park Evening Press of Saturday, August 1.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

LEE ALEXANDER AUCHINCLOSS

Monmouth County has lost a distinguished woman in the passing of Mrs. James C. Auchincloss.

From the date of her entrance into public life in 1942 as congressional secretary to her husband she displayed a keen and competent interest in the problems of the constituents of Representative JAMES C. AUCHINCLOSS.

During 17 years amid the busy routine of the Nation's capital she won the admiration of many who had personal as well as public problems. As a result many citizens have developed a closer relationship with Government and the Third Congressional District profited because its representative in Washington had the assistance of a gracious lady.

It is no wonder that some observers on Capitol Hill favorably compared the administration of legislative matters by Mr. and Mrs. Auchincloss with that of Vice President John Nance Garner who in his many years in the Congress relied on the confidential assistance of Mrs. Garner as his secretary.

Mrs. Auchincloss' interests were not confined to Government. During her active life she was concerned with the needs of the New York Infirmary, the United Hospital Fund, the Garden Club of America of which she was a director, and in World War II with the Monmouth County USO. These activities reflected the broad view she held of the public welfare and the responsibilities which women can fulfill. The loss experienced by Representative AUCHINCLOSS and his family is shared by thousands of his constituents.

Our Incomparable Vice President

EXTENSION OF REMARKS OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. DEROUNIAN. Mr. Speaker, I include for printing in the Appendix of the RECORD an editorial on the superlative manner in which the Vice President handled an enormously difficult assignment during the first hours of his visit to the U.S.S.R. This editorial, which appeared in the Philadelphia Inquirer some days ago—on July 27—is all the more interesting because the visit is now over and Vice President Nixon has left Russia. Right up to his farewell to the Russian people, to his very last words, he showed himself to be a statesman of

great stature. The Vice President has done our Nation a great service.

The editorial follows:

NIXON RISES TO THE CHALLENGE

Vice President Nixon, in the first few days of his Soviet tour, has shown great fortitude under fire and a remarkable ability to be simultaneously firm, forthright and friendly. Confronted with the most difficult assignment in his long experience as goodwill emissary, Mr. Nixon has conducted himself thus far in a most exemplary manner.

He has answered every challenge. He has evaded nothing. He has defended the honor, prestige, and principles of the United States against hostile criticism and disparaging innuendo.

The Vice President hardly had begun his tour of the U.S. exhibition in Moscow with Mr. Khrushchev when the Soviet Premier launched a tirade of derogatory remarks and thinly veiled threats.

If Mr. Nixon had lost his temper, as perhaps the wily Khrushchev hoped, the goodwill tour would have been foredoomed to failure.

If the Vice President had taken the abuse in silence or offered only feeble response, he and the Nation he represents would have been discredited in the eyes of the entire world.

Nixon handled the situation magnificently. He neither raged nor retreated. He gave Khrushchev some poignant lessons of life in America that the Soviet boss will not soon forget.

The Vice President—speaking to newsmen Sunday night after hours of private talk with Khrushchev in a secluded villa—stated a profound truth. "Mr. Khrushchev and I," Nixon said, "both have a practice of speaking directly and not beating around the bush."

It is precisely this trait that has won Mr. Nixon deep respect among the Russian hierarchy. Here, the Soviets found, is an American who talks back, who can take it and dish it out, who refuses to absorb abuse lying down but stands up and defends himself.

The Russians had become so accustomed to kicking Americans around verbally—with only mild response from official quarters—that Mr. Nixon's fighting stance caught them quite by surprise. They haven't fully recovered yet.

Political friends and foes of Mr. Nixon will weight carefully the effects of his Soviet tour in terms of the Vice President's popularity in this country. Already there is speculation that Nixon's sharp answers to Khrushchev at the U.S. exhibition hall will be either helpful or harmful to the Vice President's political future, depending on one's point of view.

The inescapable fact of the matter is that Nixon went to Russia as an official representative of the U.S. Government, not as a politician.

In giving extemporaneous replies to Khrushchev's biting remarks, Mr. Nixon did not have time to weigh the effects of his answers on his own political future. He would not have done so in any event. The Vice President is first and foremost a statesman of the highest caliber, and he is proving himself in Moscow to be exactly that.

Mr. Nixon's plan to visit Poland, at the end of his tour of Russia and Siberia that was severely limited in scope by order of the Kremlin, is an excellent idea. Nowhere in the Soviet satellite empire is the heartbeat of freedom stronger than among the Polish people.

Vice President Nixon's historymaking tour is off to an auspicious start despite Soviet efforts to sabotage it. He no doubt will encounter many new difficulties in the days ahead. The American people wish him well, confident that he has the personal courage and the diplomatic skill to meet any situation.

Montana: Sportsmen's Paradise

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. MURRAY. Mr. President, the August 1959 issue of *Field & Stream* contains an excellent, comprehensive article on big-game hunting entitled "Trophyland, U.S.A." by Erwin A. Bauer.

The author not only describes hunting but gives interesting information on the wilderness country that makes Montana famous for outdoor recreation.

I ask unanimous consent that this article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

TROPHYLAND, U.S.A.

(By Erwin A. Bauer)

Softly and silently the first snow of September fell in the night. By morning our tents sagged dangerously under its weight, but this early snowfall was a blessing nevertheless. Now Danaher Meadow and the slopes all around were covered with a crust of white. Maybe the game would move, making tracking possible.

We were standing in the cook tent, backed up around Chauncey Mosslander's iron stove, where bacon fried and coffee brewed. I think it was the only warm, completely dry spot in the whole vast Bob Marshall Wilderness of Montana. We were listening to the wranglers swearing and the jangling bells of their horses. Suddenly we heard another sound faintly in the distance. It was the clear, flutelike, rising-and-falling bugle of a bull elk. There's no other sound like it.

For a minute no one spoke. Then Chauncey said, "That one isn't far away. On that first high ridge just behind us, I'd judge."

"Snow must have driven him down," Pete suggested.

"Or he found those five cows you saw yesterday," Chauncey turned the bacon and added, "Other bulls will be finding them too."

"Then why are we wasting time in camp?" Pete wondered.

Four hunters and their guides never bolted breakfast any faster than we did that raw and snowy morning. It seemed that the last note of the bull elk's bugling had hardly died away when we were saddled up. Soon Pete, guide Bill Rumble and I were following a faint blazed trail toward the timbered ridge behind camp.

For 30 minutes we pushed the horses up a steep switchback slope until they were blowing hard. Then we stopped to rest, but soon we pushed on again. Perhaps an hour later the trail leveled off, emerged from a heavy stand of lodgepole pine, and turned to follow the edge of the ridge.

When we reached a point where we could scan the lonely real estate around us, we dismounted and tied the horses. From inside his poncho Bill produced a footlong length of plastic garden hose and with it blew a shrill challenge to every male elk for miles around. For several minutes nothing stirred. There was no sound to suggest that anything alive even existed in that alpine country.

Then, directly below us, an elk answered. No sound in all the wild, not even of wolves hunting or of geese in flight, is half so

stirring as the bugle of a hot bull elk. This one was hot and close and spilling for trouble. It whistled, coughed, snorted, and barked almost like a big dog. Then silence.

"That fellow's ready," Bill whispered. "He just might come here to us. So let's try waiting him out."

It seemed an eternity, but it was only 10 minutes by watch before Bill challenged again. This time the elk answered immediately. It was closer—sounded only a stone's throw away—but we couldn't see the brute anywhere. The bristles were standing on the back of my neck. We continued to watch and wait. I saw Pete open, close, and open again the safety on his .30-06. Then Bill whispered, "Watch that patch of brush at 2 o'clock."

Suddenly the bull was standing in the open, head high, testing his wind in our direction. Immediately it sensed that something was wrong, and turned away. That's when things began to happen. Pete's rifle cracked and the elk stumbled, but somehow it vanished into the timber and we could hear it crashing away. It had been hit, and Pete was on his feet, ready to follow it.

"Take it easy," Bill said. "He won't go far."

We easily located the spot where the elk had been hit, and just a hundred yards farther on we found the bull itself. It had smashed head on into a deadfall. Pete was certainly the happiest man in Montana with his magnificent 6-points-per-side bull.

Every day through the various big game seasons in Montana there are hundreds of "happiest" men, for here is a promised land for those with trophies on their minds. It's a promised land because this picturesque State on the top of America is still relatively undeveloped, a region with wide-open spaces and an amazing wealth of wildlife—the biggest herds of big game, in fact, that still remain south of the Canadian border. It's a place where virtually any sportsman can still have a crack at big targets, with good odds in his favor and without mortgaging the old homestead.

Every American is a landowner in Montana, and he owes it to himself to check on his holdings at least once in a lifetime. These holdings include more than 16 million acres in 11 national forests, plus Glacier National Park and part of Yellowstone National Park. That amounts to 54,000 square miles, more than a third of the State. Of course, there's no hunting in the parks, but almost every square foot of national forest land is open to any outdoorsman with a State hunting license in his pocket.

In addition there are several State game-management areas and thousands of square miles of privately owned land where a visiting hunter is equally welcome. But no doubt the finest hunting country of all, as well as the most magnificent scenery, exists in nine wilderness areas established by the U.S. Forest Service. Completely primitive conditions have been preserved forever in all of them.

The 990,900-acre Bob Marshall Wilderness Area is the largest and best-known in Montana. It's a matchless region of high peaks and alpine meadows along the Continental Divide, lying just south of Glacier National Park. In it is the heart of the summer ranges of three major elk herds—the Pentagon, Sun River and South Fork of Flathead herds. Mule deer, black bear and moose are abundant too. Mountain goats and several bands of bighorn sheep live in the highest sections.

Grizzlies are vanishing critters in America nowadays, and there are few places where they can be hunted with any success. But the Bob Marshall is one of them. A hunter's chances are slim, though, since the total population in the country is little more than a thousand animals, about half of them in Montana.

The Selway-Bitterroot is the largest wilderness area in America. Although most of it is in Idaho, about 291,000 acres extend into Montana, and it's in the rugged alpine formations of this portion that goats are especially numerous. But sheer cliffs and canyons make them hard to reach. Elk, which drift in and out of the State over the mountain passes, are also abundant hereabout.

The 230,000-acre Beartooth wilderness is the most lofty parcel of real estate in Montana. Just northeast of Yellowstone Park, it features Granite Peak (highest point in the State) and famous Grasshopper Glacier. It also has all the native species of big game. So does the Anaconda-Pintlar wilderness (145,000 acres), which is located on the Continental Divide along the headwaters of Rock Creek and branches of the Bitterroot and Big Hole Rivers.

One of the most completely trackless, trailless places in western Montana is the Cabinet Mountains Wild Area (90,000 acres), which lies between the Kootenai and Clarks Fork Rivers. To bag elk, which are plentiful, or a bear in these mountains is a feat that any hunter will always remember. Other wilderness areas include Spanish Peaks (50,000 acres) on the Gallatin-Madison Divide; Mission Mountains (75,000 acres) on the east slope of the Mission Range, especially good for goats and bears; Gates of the Mountains (30,000 acres), just north of Helena; and Absaroka (64,000 acres), just north of Yellowstone Park.

Several seasons ago, in mid-September, Lon and Dale Swanson and I took Lon's 1½-ton truck, left the pavements far behind, and followed a trail that would have tripped up even mountain-reared mules. We finally parked in a lonely, forgotten glade on the edge of the Absaroka Wilderness Area. We had clear running water in a spring nearby, plenty of firewood, and a vast, high-altitude hunting country all to ourselves. We were going to live in the back of the truck deep in elk country and there hunt elk until all of us scored, no matter how long it required. It seemed like a good idea at the time, and it seems better than ever today, except for one thing. We had no sooner set up camp completely than a heavy wet snow fell. What's more, the mercury hit rockbottom and prevented the snow from melting. We were marooned.

For 4 whole days all three of us hunted hard. But trudging through the deep snow was more ordeal than pleasure. We found sign aplenty, but no one even saw a bull elk within shooting distance. The fifth day Dale decided to stay in camp to do all the cooking and try to thaw himself out.

Dale, finishing the breakfast dishes, happened to glance out through a hole in the tarpaulin truck flap. He saw a big elk standing broadside about 70 feet away. Dale simply reached for his .308 and—bam!—bagged it as easy as that. An hour or so later the animal had been field dressed, and its liver was soaking in a pan of ice-cold water.

But Dale's day was just beginning. Around noon a fine, fat mule deer came along, and he bagged that, too. When the rest of us returned that evening, skunked again, Dale had his rifle handy. "Now I'm waiting for a bear," he said.

It sounds like fiction, but it really happened. Just another reason why I say this is a promised land for hunters.

The Absaroka and the region all around it is especially good bear country—for blacks, that is. They're big and abundant enough to make things interesting. On this same hunt, the snows eventually melted, and we finally bagged a second bull at the point where the timber dead-ended into a steep rock escarpment. Two days later Lon and I were passing the site of the kill. From the looks of things, a bear had been there just before us and

gorged on the entrails. We decided to watch the spot.

It wasn't a long wait. When we arrived early the next morning, a whopping big blackie was on the kill. It turned and ran the second it saw us, but Lon managed a fast shot that looked like a bull's-eye at first. The bear rolled far downhill but somehow recovered and started off. Then there began a terrible chase that neither of us will ever forget. That bear headed straight for the most formidable cover in all Montana.

First it crossed an old burned-out area in which tall pines were stacked and crisscrossed to form an almost impassable barrier. Alternately we climbed over them and crawled under them, always figuring to meet the bruin face to face. But on the far side of the burn the bear's faint blood trail crossed a crumbling rockslide, then turned downhill until it reached a soggy, spongy creek bottom. It's hard to imagine how a wounded bear could negotiate this cover, but we followed it the best part of the day. It was almost dusk when we found the blackie as dead as last year's daisies. No trophy in Lon's big trophy room is as respected as that Absaroka black bear.

Any hunter in the land can live experiences like this in Montana's unspoiled country. So far we've covered only the western half of the State, but eastern Montana is big-game territory too. It's premium mule-deer country, for example, and, next to Wyoming, a sportsman's best bet for antelope, year in and year out. A wise hunter, therefore, engages a packer or an outfitter in this country—both to get the most out of his trip and to take advantage of a bargain. Nowhere else in North America can he get so much for his money.

Outfitters—either full-time or part-time ranchers—are found in every corner of the State, and they're bound by law and license to go a good job. A typical packer into back country furnishes everything except gun, sleeping bag and personal items. He provides horses, food, tents, guides (usually one for each two hunters), cook, wrangler, and a reasonably exclusive hunting country for about \$25 a day. Some are cheaper, some more expensive. But it's a rare one who doesn't at least show a hunter enough game to fill a license.

Licenses are reasonably priced in Montana too. A nonresident big-game license costs \$100 and includes elk, deer, bear, game birds, and fishing (which is often sensational in pack-trip country). Extra charges are made if a hunter can win a permit for sheep, moose or goats in the special annual drawings. In eastern Montana there are often special antelope and two-deer hunts at only \$25 per nonresident.

You simply can't lose in this country that's made to order for big-game hunting and big-game hunters. It's your promised land—and the performance is as good as the promise.

Textile Import Problem

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. ROBERTS. Mr. Speaker, another serious facet of the import problem faced by the American textile industry is pointed out in an editorial which recently appeared in the Sylacauga Advance.

Under leave to extend my remarks, I wish to include this editorial from this

outstanding Fourth Alabama District newspaper.

A SUBSIDY FOR OUR ENEMY

J. Craig Smith, president Avondale Mills, continues his fight for the textile industry with respect to the import problem it faces.

A facet of this problem which has received no public emphasis has been clearly spelled out by Mr. Smith in the following article which deserves careful perusal:

"Hong Kong, an island off the coast of China, is a British crown colony. During 1958, Red China shipped to Hong Kong 114 million yards of cotton cloth. During the first 3 months of 1959, Hong Kong shipped to the United States over 1,400,000 yards of cotton cloth and, in addition, garments valued in Hong Kong at over \$8 million. If this rate of shipment into this country from Hong Kong is continued for the other 9 months of this year, the 114 million yards Hong Kong purchased from Red China will be accounted for.

"The United States has never recognized Red China and the two countries do no business together. Nevertheless, we permit Hong Kong to buy 114 million yards of cloth in Red China and then ship a large part of it into this country as cloth and garments. Hong Kong tells our State Department that it doesn't do this. The figures I have just quoted speak for themselves. Even if the identical cloth that Hong Kong buys in Red China doesn't reach this country, what possible difference does that make? The end result is the same on Red China, Hong Kong, and this country. The wage rates in Hong Kong are so low that even the Japanese complain that the competition is unfair. In Red China there is no wage rate at all. The coolie slaves live in compounds and get rice for their labor, performed under the whips of the Red commissars.

"On and after August 1, 1959, every foreign country will buy American cotton at a price 25 percent under the price we must pay, and those of us who look to the textile industry for a livelihood will be taxed to provide this tremendous subsidy to our competitors.

"Great Britain has been the traditional free trade country of the world. She now limits this free trade policy to her colonies and dominions. Just recently, the British placed a quota on how much Hong Kong could ship Britain. It is certainly ironic that 10 Downing Street is willing to protect the folks in Lancashire from their own colony and our State Department is unwilling to protect our industry from Hong Kong and our mortal enemy, Red China."

Senator Morse Applauds Eisenhower-Khrushchev Exchange of Visits

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I made today to the press, in regard to the proposed visit of Premier Khrushchev to the United States.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MORSE APPLAUDS EISENHOWER-KHRUSHCHEV EXCHANGE OF VISITS

Senator WAYNE MORSE, Democrat of Oregon, today issued the following statement on the Eisenhower-Khrushchev exchange of visits:

"The announcement by the White House that Premier Khrushchev will visit the United States this September and President Eisenhower will visit Russia at a later date makes a lot of sense. Khrushchev needs to learn through his own eyes and ears that the people of the United States are as much opposed to a nuclear war as are the people of Russia.

"I am sure that President Eisenhower has hopes that he will be able to make great progress in helping Khrushchev recognize, before it is too late, that both Russian and the United States have everything to lose and nothing to gain by a continuation of a nuclear armaments race.

"It is my hope that Khrushchev's visit to the United States will precede by a few days a summit conference with the heads of all other states at the United Nations' Headquarters in New York. Now is the time for the nations of the world to agree to take whatever disarmament steps are necessary jointly and through the procedures of the United Nations. Following such a summit meeting, President Eisenhower's visit to Russia will symbolize not only to the Russian people but to all humanity that world peace is attainable in our time."

A Refresher Course on Marx and Lenin a Must for Today

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. WOLF. Mr. Speaker, in Saturday's issue of the Pittsburgh Sun-Telegraph, a significant editorial appeared, discussing Khrushchev's possible visit to the United States.

This editorial suggested that the politicians in Washington and elsewhere bone up thoroughly on Marx and Lenin prior to Khrushchev's arrival, in order to understand the absolute intent of communism to destroy us one way or another, and the absolute dedication of Khrushchev to that purpose.

This editorial deserves much consideration, and awakens latent questions. I recommend it for the serious consideration of my fellow colleagues.

[From the Pittsburgh Sun-Telegraph, Aug. 1, 1959]

KHRUSHCHEV VISIT

A story by Bob Considine from Siberia reports that Vice President Nixon, after weighing the pros and cons, favors a visit of Premier Khrushchev here.

It is a sticky subject.

President Eisenhower, according to Washington dispatches, feels that a Khrushchev visit would be a good idea—under the right conditions. That is the key phrase.

Dr. Eisenhower, the Washington report says, believes American opinion would have to be prepared for such a visit as a precaution against demonstrations and incidents.

We don't care much for that word "prepared." A better way of putting it is that

the American people would have to be convinced that a Khrushchev visit would have potential merit for our side.

The President also feels the timing would be of paramount importance, and that the effects on our allies and the Soviet captive nations would have to be considered.

Perhaps our allies would need the assurance there would be no bilateral deal from the visit, although we are not aware the British displayed such sensitivity toward us when Khrushchev and Bulganin visited England in 1956, where, by the way, they were very coolly received.

But the captive nations definitely would need the assurance that the welcome to Khrushchev would not mean our endorsement of their captivity.

While discussing these reservations we add one of our own.

It is that our politicians in Washington and elsewhere bone up thoroughly on Marx and Lenin prior to Khrushchev's arrival, in order to understand the absolute intent of communism to destroy us one way or another, and the absolute dedication of Khrushchev to that purpose.

In fact, a refresher course in Marxism would be a good idea for some of our industrialists and big businessmen who displayed a dismal naïveté toward communism on the occasion of the recent tours of Khrushchev's deputies.

In contrast, our labor leaders have shown a harder sense of its realities.

On the other hand, if a visit here would rid Khrushchev of some of his delusions about our country and our people and make him realize that while we may quarrel and differ among ourselves, we are joined against any force that threatens freedom and security, it would be indeed a big step toward real understanding.

These are some of the considerations involved in the President's remark that a visit by Khrushchev would be a good idea—under the right conditions.

Where Help Is Needed

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. WILLIAMS of New Jersey. Mr. President, the measure adopted to provide for the creation of a billion-dollar bank to help the development of 20 Latin American nations is, in the words of the President, "a most significant step in the history of our economic relations with our Latin American neighbors."

It is sad to relate, I think, that while we have spent countless billions of dollars aiding foreign countries throughout the far corners of the earth, we have tended to overlook our closest neighbors. I am pleased to see we are now providing a remedy to this situation.

I ask unanimous consent to have printed in the Appendix of the Record an editorial from the Trentonian of August 1, 1959, dealing with this subject.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

WHERE HELP IS NEEDED

At long last Congress has come to the conclusion that we should stop discriminating against our next-door neighbors. Ac-

cordingly it adopted a measure this week providing for the creation of a billion-dollar bank to help the development of 20 Latin American nations.

President Eisenhower had requested that the program be inaugurated, hence his signature on the proposal is regarded as a certainty. As a matter of fact, the President is on record as having said that enactment of the program would be "a most significant step in the history of our economic relations with our Latin American neighbors."

Sad to relate, we have not in past years been very considerate of the interests of our neighbors to the south. We have threatened and cajoled them on many occasions, and have resorted to ill-advised armed intervention on others.

We have meddled in their internal affairs and have frequently put our official stamp of approval on the most ruthless kind of dictatorships.

We have spent countless billions of dollars aiding foreign countries throughout the far corners of the earth, all the while our Latin American neighbors were perhaps in greater need than many of the faraway nations we have been so generously trying to help.

Now that Congress and the President have decided to take cognizance of the situation, it is to be hoped that we haven't waited too long to mend our ways.

Fiscal Trouble

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. ALGER. Mr. Speaker, too often the technical nature of our complex economic system prevents the average citizen, and for that matter the Congressmen, from fully understanding the impact of government law on free enterprise.

Many economists write on this subject and are stout defenders of opposite viewpoints and amply support their position with a great abundance of facts and figures. We in Texas, particularly Dallas, have always admired greatly the careful thought and ability of self-expression of Dr. Arthur A. Smith who now is associated with the First National Bank in Dallas as vice president and economist.

As a sample of Dr. Smith's penetrating analysis of today's economic situation, I would like to call the attention of those interested, both in and out of Congress, to Dr. Smith's letter of July 15 which speaks for itself:

FISCAL TROUBLE

Fiscal problems at the State and local government levels are increasing noticeably—and in some instances, alarmingly. Michigan's fiscal condition has attracted most Nation-wide publicity, but attention in the Southwest has been focused on the efforts of the Texas Legislature to find enough sources of revenue to meet the State's \$2.4 billion budget (biennial).

There are many facets to the fiscal problems which confront our Federal, State, and local governments; hence there is no one clear-cut answer to all of them. Existence of dual sovereignty in this country complicates greatly the entire fiscal situation.

The Federal Government and each State hold sovereign power to tax, borrow, and spend; and the States have created thousands and thousands of political subdivisions (counties, cities, towns, school districts, road districts, drainage districts, etc.) and endowed them with similar authority to tax, borrow, and spend. (There are over 102,000 governmental units in the United States.)

Because we have been demanding more and better services of these governmental units and because inflation has increased prices to the highest level in our history, the costs of government have gone skyward.

The following figures reveal the extent of the spending increase (in billions):

	1938	1958	Increase
			Percent
Federal.....	\$7.2	\$84.0	1,065
State.....	3.9	22.0	464
Local.....	5.3	25.0	373
Total.....	16.4	131.0	699

And the tax take of the different levels of government has increased as follows (in billions):

	1938	1958	Increase
			Percent
Federal.....	\$5.9	\$76.8	1,292
State.....	3.8	16.4	332
Local.....	4.5	15.6	246
Totals.....	14.2	108.8	695

Balanced budgets have been exceptional in the past 20 years; hence the public debt has grown too (in billions):

	1938	1958	Increase
			Percent
Federal.....	\$37.2	\$276.3	643
State.....	3.3	14.7	345
Local.....	10.1	41.5	157
Total.....	50.6	332.5	488

Where and when this fiscal expansion will end, no one knows. At present there seems little prospect the trend will slacken. So firmly fixed is the trend that, when you talk with a Congressman or a legislator (some exceptions) about a balanced budget, he immediately thinks in terms of higher taxes—rarely, if ever, in terms of less spending. (And you better be careful about too much emphasis upon a balanced budget, or you will be marked as a "budget balancer," which has come to be an opprobrium to most politicians who have become masterful in the art of spending to get votes.)

One does not have to delve very far into the tax system in this country to realize that there is not much system to it. Ours is more of a tax-jungle than a tax-system. It is badly in need of overhauling—and certainly in the process of overhauling, much of the present overlapping and double-dipping should be removed. Serious thought ought to be given to confining certain taxes to the sole use of particular levels of government.

Take, for example, the income tax. At least two solid and sound reasons support the proposition that only the Federal Government should use the income tax: (1) The Federal Government can administer it far more efficiently than the States or local units. (2) Income varies directly with the level of the Nation's economic or business activity. When the economy is booming income is high; hence the income tax yield is high. When the economy is depressed income is also down; and the income tax yield is lower. Now, since we have charged the Federal Government with the overall responsibility of

stabilizing the Nation's economy (within reasonable limits), the income tax affords a strong stabilizing force. On the other hand, State and local governments with less financial strength (on the whole) than the Federal Government should rely upon taxes whose yield is less variable (less susceptible to cyclical influence) than the yield from the income tax.

So it would be highly desirable for the States and their subdivisions to forgo the use of the income tax, leaving it solely to the Federal Government. But, by the same token, the Federal Government should not use excise and sales taxes, except when there is some nationwide nonfiscal purpose to be attained by so doing.

States have proved that they can administer sales taxes effectively, and such taxes provide a reasonably steady source of revenue to support State functions.

The general property tax (sometimes called ad valorem tax, as in Texas) should not be used by the States, but should be left entirely to local units. (The Federal Government under the Constitution cannot use a property tax).

The case for restricting property taxation to local government use is a strong one, and rests primarily upon the following point: At least two functions must be kept close to the people as safeguards to our democracy. These are education and police protection. But in financing support for these, local governments must be left with a source of revenue which is dependable and will yield enough to maintain the functions without dependence upon either the State or the Federal Government, but more especially without Federal support.

While it does not have to be so, Federal support of education very probably would mean Federal control of our schools. At least, the risk of such is too great, and if we can avoid the risk we should. The same holds true of the police function. As much as possible we should avoid a Federal police. Should the Federal Government control these two functions, there would be danger that some day an American Hitler would destroy our democracy.

Much more can be said on the proposition that we need badly in this country a complete overhauling of our tax structure. The above examples relating to jurisdictional alignment of taxes are incomplete—they are only to make the point that serious consideration must be given to the appropriate use of taxes by proper jurisdictions to bring some order out of the present chaos.

We admit that the chances of such are dim, indeed. We have allowed politics to dominate fiscal policies in America—at all three levels of government—to such an extent that sound principles have little chance of being followed.

Also we have formed the habit of judging each tax as if it were the only tax in existence, instead of appraising it as a part of the whole tax system. Take, for example, the sales tax. As it stands alone, it is regressive—falls too heavily upon people of low incomes in relation to what it takes from upper income groups. On the other hand, the income tax (with steeply progressive rates) falls very heavily upon those with high incomes and relatively much less upon low income groups. Either tax alone is subject to criticism, but when both are used they together achieve a rough kind of justice not realized by either alone.

The fiscal situation in this country promises to become much worse at all levels. We have had a bad situation in Washington for many years. Now it is becoming evident that a large number of States and local governments are facing critical times.

Cause: Government is spending too much for things we don't need with money we don't have. Our tax problems would not look so bad, if we could only stop unnecessary and wasteful spending. One out of every eight persons employed in this country is on a government payroll (Federal, State, or local)—and, when you add the people who are receiving government checks for one reason or another but are not employees, the total number drawing public money becomes fantastic.

Who will lead us out of the fiscal wilderness? We can hope and pray for a Moses, but in the meantime we can give increasing support and courage to the few public officials who are fighting boldly for economic sanity in government, and against terrific odds.

HIGH INTEREST RATES INFLATIONARY?

Out of the current tight money situation has emerged the question: Are high interest rates inflationary? Since they add to costs like wage increases, they appear to be. But the question is highly debatable—and the weight of the argument supports the negative side.

Certainly we know that the record shows that most of our inflation came in a period of very low interest rates. If we are to stop inflation, or even slow it down, we must pay a price. Part of the price is higher cost of money.

Even if we could concede that higher interest is inflationary, we would have to admit that under present circumstances the creation of a supply of money sufficient to make interest rates low again would most assuredly be many times as inflationary.

Sometimes, however, economic behavior seems stranger than fiction. If, for instance, the Federal Reserve should be compelled to create a supply of money (say by again pegging Government bond prices, as before 1951) in order to force lower interest rates, and the process became obvious to an already-inflation-conscious public, the fear of cheaper money might cause the market to accept fixed-dollar obligations only at still higher yields.

ARTHUR A. SMITH.

Thaw Toward China

EXTENSION OF REMARKS OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES
Monday, August 3, 1959

Mr. ENGLE. Mr. President, I have just read an excellent article in the July 25 issue of the London Economist reporting on the speech I made in the Senate on May 21 on the need for a revision of the China policy.

I regret the slight error in the first sentence of the article referring to Senator Knowland as the candidate I defeated last November whereas my opponent was the incumbent Governor, Goodwin J. Knight.

The Economist is one of the most distinguished journals in the English-speaking world and I was, of course, delighted with its objective analysis of my speech on China and with its report on the growing interest among Members of Congress in a more flexible China policy. I commend the article to the atten-

tion of my colleagues, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Economist, July 25, 1959]

THAW TOWARD CHINA

When Mr. CLAIR ENGLE defeated Senator Knowland, of California, last November, the main issue in the campaign was whether the powers of trade unions should be limited, but the principal result was to remove the most influential congressional champion of Generalissimo Chiang Kai-shek. In May Senator ENGLE completed the process by a speech which may mark the beginning of the end for that masterpiece of diplomatic immobility, the policy of the United States toward Communist China. His careful plea for gradual revision went unmentioned in the New York Times; he was even relegated to page 7 of the San Francisco Chronicle; but on the desks of informed people copies of his address were soon in evidence and, significantly, Mr. Knowland's newspaper, the Oakland Tribune, attacked his successor's dubious circumlocutions in its leader columns.

Yet Mr. ENGLE was careful not to leap from one extreme to the other; he did not advocate recognition of Communist China or its admission forthwith to the United Nations. He merely asked that American policy should cease to be completely negative, and begin to seek ways of making contact with the government of the Chinese mainland in hopes of preventing the total marriage of China and the Soviet Union . . . on the basis of Chinese necessity. He saw no easy path to friendship with China. But a less forbidding American posture "would wear off the sharp edges. It would reduce our differences, ruling out the specious, artificial, unrealistic images which many Americans hold of China and which the Chinese now hold of the United States."

Mr. ENGLE's is not the first such voice from the west coast. His colleague from the State of Washington, Senator MAGNUSON, has long advocated dropping the present total embargo on American trade with the Chinese mainland. All five members of the House of Representatives from Oregon are on record in favor of trade with China; the irrepressible Senator MORSE, also of Oregon, was one of the half dozen colleagues who rose to congratulate Mr. ENGLE on his address in the Senate. The San Francisco Chamber of Commerce has passed no formal resolution on the matter but, through its world trade department, it has taken an active part in bringing what has been described as subtle pressure to bear on Washington to explore the possibilities of trade and of opening channels of information to the Chinese mainland. The Pacific Shipper, a trade publication, has campaigned for several years on the issue, its initial interest having been sharpened by the discovery that the U.S. Government itself seemed to know very little about developments in China, and was unwilling to divulge what it did know.

Public opinion polls conducted a year ago by the Portland Oregonian and the San Francisco Chronicle showed a surprising amount of discontent with the present policy on China, even after allowances were made for their unscientific sampling methods. Only 2 percent of those who replied to the Chronicle favored retention of the present embargo. Such sentiments are no doubt strengthened by news stories of the embargo's ineffectiveness; a recent account on the front page of a local newspaper quoted the assistant collector of customs in San Francisco as admitting the difficulty of

detecting falsifications under country of origin on customs declarations.

The obvious interest of the west coast is economic. In the Northwest, particularly, prewar Chinese purchases of American lumber and flour are remembered. Mr. Harry Bridge's International Longshoremen's and Warehousemen's Union is perhaps the loudest voice demanding a resumption of trade; bulk cargoes such as lumber or grain require much manpower, and would help to offset increasing mechanization on the docks. Yet neither the ILWU, the businessmen, nor experienced observers expect any very dramatic gains to accrue in the short run from a change of policy. Between 1935 and 1941, China's share of U.S. imports never reached 2 percent; exports to China ranged between 2.1 and 3.4 percent of the United States total. Japan and the Philippines did more trade than did China with west coast ports.

Recently Representative CHARLES PORTER, a Democrat from Oregon, called for an economic factfinding mission to China and tried hard to draw up an appetizing list of things which the United States might import, but he had to admit that in most cases the pickings were unlikely to be great. Merely to mention such things as "edible apricot kernels" is to suggest limited possibilities. Several of the mainstays of prewar Chinese trade would probably not return to prominence; shortage and embargo have produced their usual results, the discovery of substitutes and the development of domestic output. Hog bristles have yielded very largely to synthetics; tung oil is now produced in the southern United States. Canadian trade with China, through Vancouver, has not been such as to excite Seattle or Coos Bay unduly; last year Canada's leading import from China, by a wide margin, was walnuts; in 11 months her exports to China amounted to less than \$8 million, nine-tenths of this from wheat. Given the long lapse in contact, and the great changes in China, prediction is difficult; but in the short run, at least, China would probably not provide more than a useful supplement to the west coast's already thriving foreign trade.

But the short run is not the main concern of Americans who are troubled about the seemingly endless stonewalling of their Government on the question of China. West coast businessmen, watching Britain's exports to mainland China doubling in 1958 while West Germany's nearly quadrupled, fear that they will find the Chinese market preempted by the time they get there. They are increasingly impatient with official arguments against ending the embargo that consist mainly of minimizing the trading potential of China; they point out how illogical it is to permit trade, at least a limited amount of it, with the Soviet Union, which is powerful enough to constitute a military threat to the United States, while prohibiting all commercial contact with China, which is still in the early stages of industrialization.

In some cases, the real concern about China may not be so much economic as political and strategic. But people are still greatly afraid of being tarred with the pro-Communist brush if they speak up for revision of policy toward China; and the dead of Korea are not forgotten. It is convenient, therefore, to have a hardheaded economic reason for venturing to criticize the existing state of affairs. It is perhaps because this economic argument carries more conviction on the west coast than elsewhere in the country that congressional figures from the Far West are leading the way toward a more flexible policy. Although California sent three times as many tourists to the Far East in 1958 as any other State, there is little evidence of a distinctive attitude toward China on the Pacific coast. Any typical

audience of the World Affairs Council, whether in New York, St. Louis, or San Francisco, will contain substantial numbers of people, probably a majority, who want at least exploratory efforts to be made to end the Chinese impasse.

The clearest indication that a change will come with the next administration in Washington, if not before, is perhaps the care that some politicians are taking not to be caught with the old China policy in an epoch when not only Senator Knowland, but also Mr. Dulles and Mr. Walter Robertson, the former Assistant Secretary of State for the Far East, have departed from the Washington scene. The next major opportunity may arise early in the autumn, when Conlon Associates, a San Francisco firm of economic consultants, submits the Far Eastern portion of the Senate Foreign Relations Committee's massive study of U.S. foreign policy. Meanwhile both Senator ENGLE and Governor Brown, of California, are planning trips to the Far East. Neither is a political neophyte, nor yet a Don Quixote.

Battle of Kings Mountain

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gaffney Ledger, Gaffney, S.C., of July 28, 1959:

ACCOUNT OF BATTLE OF KINGS MOUNTAIN

(EDITOR'S NOTE.—The following is an account of the Battle of Kings Mountain by an anonymous writer which appeared in the June 14, 1858, issue of the Spartanburg Express, a newspaper found in 1954 among the items in the old cornerstone of the South Carolina School for the Deaf and the Blind at Cedar Spring. The Major Borders referred to in the article was the grandfather of William Borders, of Blacksburg.)

We have laid before our readers several interesting articles from the Newberry Conservative, written by someone who has been visiting the battlegrounds in this part of our State. In the last article we left the writer at the iron works, in Dearlittle Valley, admiring the beauties of nature around him. We now lay before our readers an account of his visit from that place to Kings Mountain.

For a description of the iron works, I refer the reader to the report of the State mineralogical surveyor:

"Bring forth the horse!"—such was the poetic command given when it was announced that I wished to visit the battleground of Kings Mountain. "The horse was brought," and although he was not of the Ukraine breed he looked as though the speed of thought were in his limbs.

Yet, under the rule, that the same catastrophe can result from opposite conditions or causes, I think I ran the same risk of having my neck broken, through the clumsiness of my steed as Maseppa did from the activity of his, in the famous ride to Tarry. Mine was a portly roan, with much benignity of countenance, and meekness of demeanor. Indeed, his head was bowed with such an air of resignation that I felt reluctant to mount him; the more so when I detected a trembling in his knees and found them covered with scars, as if he had

suffered from some inhuman treatment. He was bridled with a mild snaffle, and so little was the probability of his tossing his head that martingales were deemed an encumbrance. Upon his back was an old-fashioned saddle with a vast area of skirt fitting snugly against his side, and an elevated pommel, upon which the rider could rest himself when overtaken by a fit of laziness or meditation. The stirrups were of a pattern now entirely extinct. They were once very costly, and regarded as a triumph in invention. They opened with a joint and, by releasing the foot, prevented the rider from being dragged when he fell from his horse—the inventor, no doubt, proceeding upon the supposition that it would be less revolting to a jury of inquest for a man to have his brains dashed out upon the ground than to have them kicked out by an infuriated beast.

"Does this horse stumble?"

"No, sah, he don't 'ciscly stumble; he's only a moderate tippler."

Provided with a passport, which Mr. Montgomery, the obliging superintendent of the Dearlittle Iron Works, gave me, directed to Major Borders of the King's Creek Foundry, representing me as a person above suspicion, and requiring the major to procure me an intelligent guide, I mounted the roan at 9 o'clock. I had scarcely passed the gate before I was struck with the parallel between moderate drinking and moderate tipping. If the one results in confirmed drunkenness, as temperance reformers assert, the other surely ends in downright stumbling. Roan candidly displayed his gaits to me and, as his trot was too abrupt and labored, and his amble an awkward affectation, I selected his walk. He bowed his head in acknowledgement of my excellent judgment and, throwing the reins upon his back, I prepared myself for the scenery around me.

The road gradually ascended until I attained a height that commanded an extensive view on either side. Looking over the black jacks, which have taken the place of the pines converted into coal for the reduction of iron ore, I noticed, on my right, the usual broken country common to the upper districts. But the prospect, on my left, was eminently picturesque; for at a distance of 40 miles from me, the Blue Ridge swept along like a line of tossing cavalry, and penetrated a phalanx of clouds arrayed upon the northwestern horizon. Besides this blue mountain range, nothing interested me, except a round knob, some 15 miles ahead of me, appearing now and then through the vacancies in the forest. It was, however, not King's Mountain. After two hours' ride, I began to descend from the ridge and the abundance of slag with which the roadside was strewn, convinced me that I was approaching the foundry, which Major Borders supervised. Emerging from a pine thicket, I suddenly came in full view of the King's Mountain crag. I clapped my hands in ecstasy, and had got well into a train of poetic reflections, when Roan plunged into a stumble, the most prolonged and complicated that ever unsettled a rider. I was pitched over the pommel of the saddle, and caught with my hands and knees upon his neck where I sustained myself, in the posture of a crouching Indian, until the old horse righted himself, which he did with a grunt, coming so evidently from the bottom of his heart, that I forgave him, although he has undoubtedly occasioned a gap of I do not know how many pages in these recollections of my excursion to King's Mountain.

Presenting my credentials to Major Borders, whom I found a plain-spoken, kind-hearted gentleman, he said, after reading the part of my passport requiring him to provide me with "an intelligent guide."

"I don't know what I can do any better than to go with you myself."

"Nothing will delight me more, Major. I have no doubt you can tell me about the battle of King's Mountain."

"Why, sir," he said, "I was born and raised near the place, and I have many a time listened to many an old man telling about the battle—men who were in it and who settled down and died in this neighborhood after the war. I think I can give you all the information you want."

"Then Major, mount your horse and let us be going."

In a few minutes Major Borders and I were clattering over the bridge across King's Creek—he upon a freckled gray, and I—

"I see they have given you the roan to ride," said the major.

"Yes," I replied. "Are you acquainted with him?"

"Oh, very well. You see these two horses are continually passing from one forge to the other. I hope he hasn't stumbled with you."

"Why, Major, I do not know whether the word 'stumble' is exactly significant of the—a—"

"Ah, bless my soul," interrupted the major, "they should have cautioned you. Roan does very well going up a slope, but it requires some management to get him down one without accident; so while we have an ascending road, I think we had better proceed somewhat briskly."

"I am entirely at your disposal, Major."

We dashed off at the utmost speed, the freckled gray maintaining a steady sure-footed trot, while Roan made a potpourri of his gaits without any modulation between them. For 2 miles we passed through a poor, uninteresting country, my recompense for the dreary ride being the progress I made in the acquaintance of Major Borders to whom I long for an opportunity of repaying his kind attentions to me. At length, we came to an opening in the forest, and the scene suddenly changed from blackjacks and dwarf pines to a cultivated valley across which at a distance of three-fourths of a mile, stood a prominent mountain, with a spur of half its altitude setting off toward the east. Some distance to the right I saw the round knob which had several times before attracted my attention; its clear blue, when I first saw it, being now tinged with purple, from my nearer proximity to it.

"What eminence is that over yonder, Major?"

"That is Henry's Knob."

"And that down there, to the left, is King's Mountain?"

"Oh, no, sir," replied the major, "that's Browns Mountain."

"I thought we could not be so near to King's Mountain; for, from the glimpses I have caught of it, I suppose it must be 10 miles from here and I fear I will not be able to get back to Mr. Montgomery's to-night."

"Oh, that's the King's Mountain crag in North Carolina. But the battle wasn't fought there."

"On a little knob a mile the other side of Browns Mountain."

"Oh, Major, you have destroyed all the romance I have been getting up. I thought surely—"

"Well, now," continued the major, "I've heard of Napoleon Bonaparte crossing the Alps with 60,000 men, but I know he couldn't have got with as many as 500 men up to the top of what you've been catching sight of along the road. Why, there hasn't been an Injun up there yet."

"Well, Major, lead on."

The road, after passing through the valley turned to the right, in order to wind around the spur of Browns Mountain. In the rear of this eminence (that is to the north of it) we again entered the forest. Major Borders then struck into an indistinct road, leading

up an ascending ridge. This road, he said, had been called Ferguson's road, as far back as he could recollect. "One thing is certain," he continued, "it leads right to the battleground and no farther."

The ridge became every step more elevated, and the ravines on either side deeper. A half mile beyond the point where this road was gained, we found a cross ridge stretching over to Browns Mountain.

"Now," said the major, "I have shown you the route which Ferguson and his army took; we will follow this ridge to the left and take a near way to the spot we are in search of. The high ridge we are leaving runs toward the north for a quarter of a mile and then, bending around toward the west, terminates in the knob known as King's Mountain. Besides, we will approach the place in the same direction Campbell did."

Riding on, over hills and through valleys, we soon lost sight of the elevation along which Ferguson moved. Coming into a road, the major directed me to precede him, no doubt with the design of surprising me. Along the road 150 yards brought me to a small creek. I had my eyes fixed steadily ahead of me, upon a projection of rocks, and did not observe that a very steep hill was within a stone's throw of me on the right. Urging my horse forward, I was about to cross the ford of the creek when an object on the opposite bank, not 10 paces from me, met my gaze and caused me to start back as if I had seen a specter. It was a rough slab of mica slate, tottering over, after the almost mysterious manner of old grave-stones. I tied my horse to a tree, and approached the stone to examine it. There is an inscription upon both sides of it, and I am not ashamed to confess that I dropped a tear upon it, as I copied the words:

"Sacred to the memory of Maj. William Chronicle, Capt. John Mattocks, William Rabb, and John Boyde, who were killed here, fighting in defense of America on the 7th of October 1780."

And on the west side: "Colonel Ferguson, an officer belonging to his Britannic Majesty, here was defeated and killed."

"And this, then, is King's Mountain," I exclaimed.

"Yes, sir," replied Major Borders, "up there is where they fought."

I stood, for some time, regarding the hill with a feeling of awe, not from any grandeur of scenery, but from the absolute dreariness of the place. No sound, nor sight of human activity was perceptible, except, through the space in the foliage, the haziness given to the atmosphere by the coal-kilns in the surrounding valleys, or, perhaps a fancied clank at the distant iron-Forge. At Musgrove's Mill and the Cowpens, the roaring of the water, the dusty highways, and the various noises of the neighboring farms rehearse for the imagination the shout and shriek of the deadly fray; but here, at King's Mountain, where not a pine tree sighs in the breeze, the mind gathers up those still small sounds, which, though usually drowned in the din of battle, are yet the most appalling; the blow of the clubbed rifle crushing the skull, the thump of the musket's muzzle against the breastbone, announcing the home thrust of the bayonet; the dull tumble of the human body down the mountain side; the trickling of blood upon the autumn leaf, where the dying soldier has raised himself upon his elbow and with his clumsy hand has clasped his giddy brow.

There is a very incorrect notion entertained of King's Mountain. It is not a mountain or hill; but rather the abrupt termination of a lengthy and lofty ridge. I will give a sketch from nature. Standing at the ford of the creek and looking eastward, the visitor sees before him a steep eminence of, perhaps, 150 feet elevation, the rise in the ground beginning a few paces in front

of him. On his right, the southside, starting up from the bank of the creek, is steep and difficult to ascend. The front or western face is narrow and rounded. It is far from being so precipitous as the south side, and permits a footman to ascend it at a smart run. From the north face, a rolling ridge sets off, and, bending round towards the west, comes down with an easy slope to the rocks I have mentioned, where the road crosses it. A horse can be ridden at full gallop up the slope. Colonel Williams was shot upon his horse, on the top of the height, and could not have gained it any other way than by charging along this ridge. Beyond it the declivity is again steep. Between it and the prominent knob there is necessarily a small ravine. It was near the head of this that Major Chronicle and Captain Mattocks, with their companions Rabb and Boyde, fell all at the same time. They were from the same neighborhood on the south fork of the Catawba, from which circumstance they were called the Fork Boys. In the heart of the battle, during the repulse down the mountain, Major Chronicle, with defiance blazing in his eyes, cried out, "Never let it be said that a Fork Boy runs." They stood their ground and were consequently overpowered and slain.

Major Chronicle was brave to a fault. At the same time, so generous was he, so agreeable in his manners, that to know him was to love him. After the battle, a man by the name of Caldwell, undertook to lead the major's horse home to old Mr. Chronicle. But so affected was he, when he came in sight of the old gentleman's house that—although throughout the fight he had exposed his life with heroic fearlessness—he waited until night, and, in the cowardice of grief, left the dumb brute, alone, to tell of his master's fate.

John Mattocks was a hero of the noblest mold. It is the traditional impression of the people around King's Mountain, that he planned the battle in which he lost his life. It was just such a plan as a turkey hunter would propose, and John Mattocks was a hunter and knew every square yard of the wilds of King's Mountain. Certain it is, he did some service, for which he was promoted to the grade of Captain, a few hours before the battle was begun. His reply to the compliment was as noble as ever came from a Spartan hero. "I do not know," he said, "how to handle a sword, but, with my rifle, I will go ahead of as many men as will follow me." Ah, I fancy, that I can see him striding along before his men up the mountain side, tall, muscular, with the sinews of his swarthy neck strained to the utmost in his eagerness to discharge his duty. And when enveloped in the return tide of battle, and Major Chronicle's clear voice was heard forbidding the Fork Boys to run, then did John Mattocks grasp his rifle near the muzzle, and describe around his brawny shoulders a death-circle of 10 feet radius. But he fell. They dragged him to the spring, the traces of which can be seen at the foot of the ravine, and, with their powder-blackened hands, dipped up the water to his parched lips. He revived sufficiently to see his companions rushing up the mountain. As they faded away before his glazing eyes, the hiccough ceased for a moment, and he shouted "Once more—and the hill—is yours."

Honor to John Mattocks.

Hour after hour I sat upon the summit of King's Mountain listening to Major Borders. He pointed out to me the different positions of the combatants and the maneuvering of Ferguson's forces. He showed me the spot where Williams fell, and where Ferguson's tent was pitched. But the sun began to sink, and we were compelled to take to our horses. We passed along the crest of the mountain about 400 yards, when we had to ascend a somewhat abrupt elevation, upon the top of which, commenced the old

road, which I have already mentioned—known as Ferguson's road. We followed it, gradually inclining southward, until we arrived at the ridge running over to Brown's Mountain, to the top of which we ventured, and obtained a fine view of the valley of Broad River and Gilkey's Mountain. Returning to the foundry, I bade Major Borders adieu, and took my solitary way back to the iron works, where I arrived some time in the night, having walked the 3 last miles of my journey, out of compassion for the infirmities of Roan, and not, as it might be mischievously conjectured, through fear of his stumbling.

Constructive Proposals for Meeting
Challenge of Foreign Imports

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, August 3, 1959

Mr. PROXMIRE. Mr. President, for anyone with eyes to see, American industry and labor are in for the strongest kind of competition from the onrushing challenge of resurgent foreign economies. One of the most constructive reactions to this challenge was that of Sylvia Porter, the financial commentator, in a recent newspaper column, and I ask unanimous consent that this column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THREAT OF IMPORTS
(By Sylvia Porter)

Recently I went to a stimulating but disquieting dinner party. My partner was Cyrus Ching, head of the Federal Mediation Service under President Truman. We discussed not only the threat of the steel strike but also the threat of steel imports to the economy.

"The long-range problem is the rising importation of steel," said Mr. Ching. "Competition to our steel industry and to steelworkers from lower-cost foreign producers is what we must face up to. * * * It is in this sphere that U.S. industry will get a climactic test. * * *

When I got home I had a midnight snack. On the kitchen table I put a plate, a glass pitcher, a glass, and an ashtray—all purchased since June. Before I sat down, I moved from the chair a laundry basket in which there was a cap my husband had picked up a few days ago, my new bathing suit, and a silk robe. And suddenly my eyes saw something I hadn't seen before.

EVERY ITEM IMPORTED

Every product I had touched in those few minutes in the kitchen had been an import—the plate, glass and pitcher from England, the ashtray from Denmark, the basket and cap from Japan, the bathing suit from France, the robe from Italy.

After I had finished a check on what we had bought in the past 6 months, I got an even greater shock.

Over 60 percent of our recent purchases had been imported. I, living in a typically American home and buying with a typical American's attention to quality and price, had gradually become a buyer of foreign products on a scale I hadn't dreamed of.

Then Mr. Ching's warnings about steel imports came into focus.

Imports are pouring into the country. This year, the National Foreign Trade Council has estimated, imports will total a record \$15 billion, upon \$1.8 billion from 1958. And the imports are not just the obvious cars, cameras, radios, etc. Stores and factories from coast to coast are loaded with foreign goods which are well-designed, well-made, attractively priced compared with similar U.S. products.

We created this competition for ourselves in the most grandiose gesture of generosity any nation ever made. For, when World War II ended we began pouring billions into the rebuilding of the ruined or obsolete factories of Europe and Japan. With the aid of our dollars and know-how, many countries have now come back and are operating with modern factories, materials, and machines and at much lower wage scales.

"OK," I thought to myself. "What do we do about it?"

Raise tariffs and slap on quotas until we force out the competition? Hardly a satisfactory answer.

Freeze wages? Also hardly an imaginative answer.

SUGGESTIONS OFFERED

What then? In all humility, I suggest the answers must be:

(1) A much sharper, faster and a sustained rise in modernization and efficiency of production. With increased efficiency, we'll be able to turn out goods competitively priced and still raise wages.

(2) A powerful drive for new inventions and improved products—meaning greater emphasis on research. With new inventions and superior productive capacity, we can keep and expand our markets.

(3) A realization by all of us that we are into an economic war for the markets of the world—including our own. I'm not proposing an aggressive "Buy American" program, but I readily admit there'll be no more of that 80-40 ratio in purchases I make.

We won't meet the import competition by flinching from it, ignoring it, or putting up walls against it. We will meet it when we vow to lead the world in inventing, modernizing, selling. We'll meet it when we wake up.

Beyond the Headlines: A Labor Practitioner Looks at Union Democracy

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, August 3, 1959

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Segal which reflects the thinking of many intelligent, sincere and hard-working trade unionists.

Mr. Speaker, behind the stories which are published about organized labor by the newspapers and magazines are the day-to-day activities carried on by dedicated trade unionists and their organizations. One such dedicated man is Ben Segal, education director of the IUE, AFL-CIO.

BEYOND THE HEADLINES: A LABOR PRACTITIONER LOOKS AT UNION DEMOCRACY
(By Ben Segal, education director, International Union of Electrical, Radio and Machine Workers, AFL-CIO)

"Labor monopoly endangers economy."
"Corruption permeates labor movement."

"Financial and political power of unions threatens democracy."—And on and on the barrage of essays, reviews, speeches, newspaper and magazine articles continues. As one who has worked in the trade union movement for many years, I find that much of what I read about unions bears little relationship to what I have observed on a day-to-day basis in local unions throughout the country.

In a recent New York Times book review, entitled "Friendship Gone Sour," labor reporter Abe Raskin discusses "The Public Stake in Union Power," a new series of academic essays on labor. Raskin comments:

"In the last few years a discernible shift in academic sentiment has set in. The sordid revelations of the McClellan committee on racket penetration into unions and on the abuses committed by union autocrats have been a major factor in this shift. Professors who rallied to labor's standard when they felt unions were underdogs are finding it hard to applaud the tactics of some unions in their emergent role as overdogs.

"The ideas expressed in Congress by such union foes as Senator BARRY GOLDWATER, the Arizona Republican who considers Walter Reuther a greater menace than Jimmy Hoffa, have found enthusiastic endorsement in certain sections of the Ivy League as well as in the National Association of Manufacturers."

This shift in the academic image of organized labor reflects a more general public change of attitude. Both the academic and public images result from the tendency to generalize from a few sensationalized cases; both are based on assumptions which require careful reappraisal.

On the basis of my years of work in the trade union movement, I would like to challenge some of these underlying assumptions. I do this not to challenge the need for labor legislation—such legislation as the original Kennedy-Ervin bill. Neither do I question the need to intensify efforts to achieve greater internal union democracy.

I do not subscribe to the argument that because we can cite many instances of corruption in management this changes in any way the fact that racketeering and corruption exists in some unions and that the trade union movement has the obligation to do all it can to clean house.

Perhaps the assumption that demands the greatest scrutiny is the glib assertion that unions have come of age; that labor-management relations have reached maturity; that industrial warfare is a thing of the past.

Having worked in the South for many years with the Textile Workers Union, with the national CIO, and now with the IUE, I'd like to start by citing some examples from the southern textile industry. Of 550,000 workers in southern mills, the unions claim about 70,000 members, and even this low figure is constantly being reduced because of the determined efforts of the industry to eliminate free unions from their mills.

At least five cases come to mind immediately to illustrate this point. Within this past year four beatings of union representatives have occurred in the South. The most recent was that of Frank Barker and Frank Chupka, field representatives of the Textile Workers Union. They were dragged from their motel room, knifed and severely beaten by a mob of thugs in Fitzgerald, Ga. This took place when a strike of 350 TWUA members against the Fitzgerald Mills Corp. was 3 weeks old.

The union walkout began after a deadlock over the terms of a new contract. The union had been asking a 10 cent hourly wage increase. The company offered 5 cents but insisted on eliminating the present arbitration clause and the checkoff of union dues.

The demands of the Fitzgerald Mills Corp. were strikingly similar to those made by John D. Cooper, president of Harriet-Henderson Cotton Mills, in Henderson, N.C., strikebound since November 1958.

The Harriet-Henderson Mills had been under union contract since 1944. When the contract expired in 1957, the company wouldn't budge on a renewal and for a year, the employees worked without a contract. Finally in November 1958, the TWUA local announced that it was willing to renew the old contract without wage increases or other improvements. The company, however, demanded a no-strike clause and the elimination of a standard arbitration clause which had been in the contract for 14 years.

The removal of arbitration provisions in the contract would give the company the complete freedom to handle job classifications, grievances, hire and fire, with the union virtually powerless to protect the workers.

The company shut down for 3 months and then began importing strikebreakers from Virginia and elsewhere. It was during this strike, on February 24, 1959, that Boyd Payton, TWUA vice president and regional director, was attacked and beaten by company hoodlums in Henderson.

As this is being written, 400 bayonet-armed North Carolina National Guardsmen still surround the mill to insure safe entry for the scabs. The outcome is likely to be eventual decertification of the union when a new election is held in which only the scabs will be allowed to work and vote—thanks to Taft-Hartley.

Most readers are undoubtedly familiar with the 3-year O'Sullivan heel strike in Winchester, Va., which was lost by way of Taft-Hartley and the decertification route. The International Union of Electrical, Radio, and Machine Workers (IUE), lost a local union the same way in Baltimore, Md., when the Proctor Electric Co. decided it wanted to get rid of the union and after a prolonged strike, local 136 was balloted out of existence.

This bitter opposition to unions is not confined to the South. The Chemical Workers Union struck the Mastic Tile Corp., in Long Beach, Calif. The next day the company obtained an injunction imposing severe limitations on picketing. It followed this with advertising in the local press for scabs. Approximately 1,200 jobless workers applied for the openings to replace the 275 strikers. The company hired some 350 workers and is now moving to decertify the union.

This antiunionism is perhaps even more menacing when it occurs among the large employers. The International Union of Electrical, Radio, and Machine Workers represents more than 100,000 workers employed by the giant General Electric Co.

Here is no small company struggling to meet the weekly payroll. This is a corporation recently cited by the Kefauver subcommittee investigating antitrust and monopoly as one of four companies which together control more than 50 percent (sometimes as high as 90 percent) of the business in 79 product lines. This is a company that made the highest profits in its history in recession year 1958 (\$247,851,871) despite reduced sales. This is a company which spends tremendous sums to convince the public and its employees that "Progress is our most important product." Yet, this corporation works around the clock in fighting the union tooth and nail.

Probably no company devotes more money, staff, and time to convince its workers in unorganized plants that they should vote against a union; or that after the union is in, that it should be decertified or at best should not be supported in its collective bargaining demands.

GE's vast propaganda machine has been in operation for a long time. Its outlets are daily employee newspapers, news bulletins in all plants, special memorandums for all employees, letters to employees, full page advertisements in newspapers wherever plants are located. In addition, GE has a mailing list of prominent members of the community in many occupations and these community leaders receive frequent letters and periodic bulletins. GE also sponsors a number of radio and TV programs which it uses for antiunion commercials.

This tactic was an extension of the policy which originated in 1950 and has become known in labor-management relations as "Boulwareism," after its author, GE Vice President Lemuel Ricketts Boulware. According to Harvard Business Prof. Benjamin M. Selekman, writing on "Cynicism and Managerial Morality," in the September-October 1958 issue of the Harvard Business Review, Boulwareism has the following principles:

1. Management knows best what should be done for its employees.
2. It should, therefore, make up its mind prior to any negotiation what should be the maximum offer.
3. It should refuse to recede from or alter this offer in any substantial way.
4. It should take a strike, if necessary, and hold out until the union capitulates.

Such an attitude on the part of a major corporation can hardly be called a mature approach to industrial relations.

With the increasing vulnerability of labor because of automation, the recession, the McClellan committee hearings, and the widely publicized "wage push" theory of inflation, the GE policy may be setting a pattern for other large corporations. Even in the steel and auto industries where observers have glibly said for so long that unions were, at least, accepted there is evidence in last year's auto negotiations and this year's steel talks of a much tougher policy.

In commenting on the Harriet-Henderson strike, Business Week, May 9, 1959, predicted:

"Bluntly, labor disputes are getting tougher. And they will continue to get tougher—reversing a trend toward fewer and milder strikes that has been underway, with some interruptions, since the early forties. For strong unions this means harder bargaining, fewer gains, longer strikes. For weak unions it can mean disaster—plants operating right through a strike, lost strikes, even broken unions. For management, the changed climate puts a premium on tough resistance to union demands."

Boyd Leedom, NLRB chairman who has been frequently criticized by union leaders for anti-labor bias, in a speech to the Florida Bar Association recently laid the blame for much union misconduct on some companies "behind-the-scenes, illusive, undeclared warfare" against union activities. Behind the facade of general acceptance of our national labor concept, great segments of employers, Leedom charged, "take every legal step possible—and many employers overreach legality—to thwart their employees' efforts to organize even when the union involved is a respectable decent union." He cited the philosophy of "avoiding dealing with a union even at the expense of going out of business."

He asserted: "Since hostility is likely to beget hostility, I raise the question as to whether this attitude may in turn be at least partly responsible for union conduct that many people regard as quite unreasonable even though lawful. It is quibbling to embrace the abstract principle of collective bargaining and then fight tooth and nail to deny it to one's own employees."

While the instability of industrial relations should not provide an excuse for whitewashing the shortcomings of unions, it gives us a clue to understanding why many unions still behave as if they were the helpless insecure underdog of the pre-Wagner Act days.

The fact is that many unions still are. Many unions still face a long slow uphill fight for basic gains, with the law on the other side—especially in the South.

In my travels to locals throughout the country, I've been impressed—or rather depressed—with the tendency to generalize from the revelations of the McClellan committee and to believe in the absence of democracy in local unions throughout the labor movement. This belief goes hand in hand with the notion that tremendous power is wielded by the international, in whose hands the local unions are merely pawns in a giant chess game with management and perhaps, with government.

This picture simply does not stack up against the realities of the situation in many local unions. On the basis of my work experience I have found in any number of local union situations internal democracy being carried on misused to the point where it has interfered with the effective collective bargaining of the union.

In the IUE, for example, the refusal of several locals in the General Electric chain to back the negotiating committee with a strike vote crippled the International's efforts at negotiating on employment security. The result was that the company broke off negotiations. One could hardly say these locals were dominated by the policies of the International; in fact, they were barely influenced by them.

In southern locals case after case arises, where the local unions violate the International Union's position in support of integration and nondiscrimination.

In Front Royal, Va., the Textile Workers' Union local is the most vocal and leading financial supporter of the private segregated school setup in defiance of the Federal court decision.

This is one of many examples where the International Union's name is being blackened because of the local union's refusal to follow the parent union's position on desegregation. Unfortunate as it may be, it can hardly be called a case of the International dominating the local union or inadequate internal union democracy.

There are local unions that devote so much time and effort in campaigning for local union office that they weaken the effectiveness of the local union in looking after the economic interests of the membership.

As one of our IUE people put it—"they spend so much time fighting each other they have no time to fight the boss—the boss just waits around and picks up the pieces."

In one local union with which I worked, when one "party" wins, the other "party" stays away from all local activities and its followers do everything possible to weaken the union, even to urging members to drop out (yes, it's in a right-to-work State) and in general sabotage the union's efforts until the next election time rolls around.

With all the headlines on labor racketeering and corruption, very little is said about positive efforts of unions to strengthen constitutional guarantees of the individual's basic rights, to prevent corruption and abuse of power by union officials, and to increase participation in the activities and decision-making functions of the union.

The contemporary record of the labor movement is filled with examples of these practices.

The IUE, for example, was one of the first unions to develop an ethical practices code. At its 1958 convention, the union incorpo-

rated the major provisions of the code into its constitution.

To cite just a few examples: The funds of the International may not be loaned, invested or dealt with in any way that results in personal benefits to the officers or employees of the union. No officer or employee of the union may (a) have personal financial interests which conflict with performing his duties; or (b) have substantial interest in a business enterprise with which the union or one of its subordinate bodies bargains collectively or which competes with such enterprise; or (c) have an interest in an enterprise dealing substantially with an employer with whom the union bargains.

In the section dealing with health and welfare funds, no rebates, retention of dividends, or payment of any kind can be accepted by union representatives and union representatives must not have any personal ties with outside agencies. Program administrators must make full disclosures to beneficiaries and union at least annually including (a) detailed statement of receipts and expenditures; (b) salaries and fees; (c) retentions, claims paid, dividends, commissions, and charges, and (d) detailed account of the manner of which funds are invested. One would be hard put to find a corporation which could match these standards of financial responsibility.

Members' rights are guaranteed in other ways: biennial conventions, election of officers, local and international, every 2 years; referendums and secret ballots, and a host of other protections. Elaborate trial procedures to protect the rights of members threatened with expulsion are set up. These include the right to have charges presented, to hear all evidence, cross-examine witnesses, right of appeal to the district council, the international executive board, and finally the convention. Barred from holding elective or appointive office in the union are persons convicted of any crime involving moral turpitude offensive to trade union morality or anyone who is commonly known to be a crook or racketeer preying on the labor movement. And determination of ineligibility is based on regular trial procedure.

The Kennedy labor reform bill, even with the McClellan so-called bill of rights amendment, would not require changing in any way any of the policies, practices, rules, constitutional provisions, or bylaws of the IUE, financial or otherwise. Its only effect would be to provide burdensome forms to be filled out with information which is already readily available to IUE members and the public.

Similar safeguards are provided in the constitutions and practices of other unions, the United Rubber Workers and the United Auto Workers, for example.

A heartening example of a union's attempt to rid itself of its corrupt elements is the story of the American Bakery and Confectionery Workers' Union (ABC).

ABC was chartered by the AFL-CIO in December 1953, after the federation expelled the old bakery union on corruption charges. The infant union has organized more than half of the members of the old bakery union. At its convention in September 1957 the ABC adopted a series of constitutional provisions, some of them unique in union history, hailed even by the Wall Street Journal as important and workable guarantees of rank-and-file control of the union.

For example, the constitution includes a new system of dealing with trusteeships. This calls for a hearing by a panel of 20 local union officers who are not on the payroll of the international. Also, the union's general executive board must always have a majority divorced from any financial connection with the international. Rank-and-file control is assured by the provision calling for the election of 10 out of a total of 18 general executive board members, who must be nominated and elected by the locals and

membership in each of 5 regions. No one of these 10 GEB members can be nominated if he is on the payroll of the international union.

The American Newspaper Guild's representative assembly is an excellent illustration of how unions are striving to increase membership participation.

Guild locals in such cities as San Francisco, Philadelphia, Los Angeles, and New York have had for almost a quarter of a century a "representative assembly" system which encourages the membership to take part in decisionmaking through their elected representatives.

It would be extremely difficult for the guild's New York local 3, for example, to have very effective and representative local union meetings. Local 3 has 8,400 members employed on some 50 different newspapers, news services, news magazines, a radio station, and miscellaneous publications scattered throughout five city boroughs, Connecticut, and New Jersey.

Local 3's representative assembly was set up when the local was born, deliberately patterned after the representative assembly idea used by Congress, and for similar reasons. Assembly delegates are elected by units; a unit is a shop division. The New York Times employees form one unit; Saturday Review of Literature employees form another. The assembly meets once a month; it elects its own chairman and vice chairman. The local executive board members have no votes in the assembly unless they are given votes by their respective units. The assembly reviews or requests board decisions; it may authorize a strike subject to unit approval. Attendance is seldom as much as 150, less than half of the assembly. This is, however, a better percentage than most locals have.

Space doesn't permit mention of the many honest efforts by other unions to increase participation in decision-making processes and other union activities and the widespread apathy on the part of the membership.

In this article I have attempted to question some of the glib assumptions made about the "maturity of labor-management relations," to indicate how different the situation looks to someone working on a daily basis within the trade union movement, and to point out a few of the many sincere efforts currently being made to strengthen internal union democracy.

At the same time, I do not want to minimize in any way the importance of exploring further possible remedial steps that might be necessary to eliminate all vestiges of union corruption and racketeering.

In considering remedial steps, however, we should remember that it is all too easy to sit back in a comfortable armchair and talk about what unions should do. A lot of thinking and studying is necessary to develop adequate safeguards and solutions.

This study should take place not within an abstract academic framework, but should be based on firsthand observations and understanding of the changing nature of the problems that confront the labor movement today.

The Last Stand of Chief Joseph and the Nez Perce

EXTENSION OF REMARKS

OF

HON. HENRY DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD an article which appeared in the Sunday, August 2, 1959, Washington Post and Times Herald. I call to the attention of my colleagues this historically significant article which outlines one of the most momentous and stirring events in the winning of the West. I believe this American Heritage article casts a new light on the activities of the famed Chief Joseph, and I believe it is a warm and human portrayal of the problems which faced the Indians of America during those days in our history.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LAST STAND OF CHIEF JOSEPH AND THE NEZ PERCE

(By Alvin M. Josephy, Jr.)

(This story, throwing new light on a poignant event in the bloody history of whites versus Indians, is by an author who is now working on a history of the Northwest. It is condensed from the magazine American Heritage.)

In June 1877, just 1 year after the Custer debacle, a new and unexpected Indian outbreak flared in the West, an uprising by formerly peaceful Nez Percés of Oregon and Idaho.

The war, like most Indian troubles, had stemmed from a conflict over land. For centuries the Nez Percés had occupied the high, grassy lands and canyon-scarred plateau land where Washington, Oregon, and Idaho come together.

A strong and intelligent people, they had lived in peace and friendship with the whites ever since the coming of Lewis and Clark, and it was their proud boast that no member of the tribe had ever killed a white man.

In 1855, as settlers began to appear in their country, the Government called on them to cede part of their land. The Nez Percés willingly accepted the confines of a reservation, but 5 years later gold was discovered on the reserve, miners poured in, and in 1863 the Government attempted to reduce the reservation to less than one-fourth its previous size.

Those bands, whose homes already lay within the boundaries of the new reservation agreed to sign the treaty. But the other chiefs representing about two-thirds of the tribe, protested and withdrew from the council without signing.

Among the latter was a prominent old chief named Wemahotkin, father of Chief Joseph and known to the whites as Old Joseph. His band had dwelt for generations in the Wallowa Valley in the northeastern corner of Oregon.

As the years went by and Old Joseph's people continued unmolested, it seemed as if their right to the Wallowa had been accepted. But white pressure against its borders increased steadily.

The crisis came soon after Old Joseph's death. Settlers found a route into the Wallowa and moved in, claiming the Indians' land. Young Joseph protested. On June 16, 1873, President Grant formally set aside the Wallowa as a reservation for the roaming Nez Perce Indians and ordered the whites to withdraw. But the settlers, refusing to move, threatened to exterminate Joseph's people if they didn't leave the valley.

As this threat increased, a Commission was appointed to make a final settlement. Despite the fact that it was unjust, and that there was no legal basis for it the decision of the Commission was firm: Unless all the nontreaty Nez Percés voluntarily came onto the reservation, they should be placed there by force.

Twelve days before their deadline to return, they reached an ancient tribal rendezvous area just outside the border of the

reservation. Here they lingered for a last bit of freedom. It was a fatal pause.

One of the young men, whose father had been murdered by a white man, was taunted by an old warrior for having allowed the slaying to go unavenged. The next morning he stole away with two companions.

By nightfall, in an outpouring of long suppressed hatred, the youths had killed four white men along the Salmon River and wounded another. Returning to camp to raise a bigger party, they continued the raids.

Joseph tried to calm his people, but the situation had gone too far. One by one the bands departed to a hiding place farther south. But though he had vigorously opposed war, Joseph would not abandon his people; 2 days later, he joined them in their new camp at White Bird Canyon.

Back at Lapwal, headquarters of the reservation, Gen. O. O. Howard was stunned by the news of the Salmon River outbreaks because he had thought that all danger was past. At the news of the outbreaks, he hastily ordered two troops of the First Cavalry to round up the hostiles and force them onto the reservation.

Alert Indian spies warned the Nez Percés of the troops' approach. The battle, fought without plan by the Indians, lasted only a few moments. The entire cavalry command was cut into small groups, disintegrating into a fleeing rabble.

The Nez Percé successes were resulting from a combination of overconfidence and mistakes on the part of the whites, the rugged terrain which made pursuit difficult and, to a very great extent, the Indians' intense courage and patriotic determination to fight for their rights and protect their people.

The whites had no way of knowing this, and, as events continued to unfold, the legend that Nez Percé strategy was planned and executed by one man, Joseph, was spread far and wide.

Pursuing the Nez Percés, Howard opened fire on their camp on the Clearwater River. The fighting raged all day and continued in the same spot the next morning, an almost unprecedented length of time for Indians to maintain battle in one location.

But the chiefs decided that there had been enough fighting without decision. They withdrew down the bluff, escaped Howard, and after much discussion, decided to cross the mountains and join the Crows in Montana, where they could hunt the plains in peace.

Smarting under increasing criticism from Washington, Howard once more took after the Indians. It was a painful and gruelling trip across Idaho to Montana for both pursuers and pursued, but the Indian families, stumbling along over steep and rocky trails, guarded by their warriors and driving some 2,000 horses with them, managed to keep well ahead of the troops.

On their march, the Nez Percés scrupulously avoided any hostile act against white settlers. Receiving friendly treatment from Montana citizens, the Indians believed that now they were out of Idaho, the war was over and they were safe. But when they pitched camp on the Big Hole River, a surprise attack from a new Army detachment caught them unawares.

The Indians fought back desperately from their tepees. While Joseph directed the breaking of camp, the warriors remained, picking off anyone who showed himself. The soldiers ran out of water, and cries from the untended wounded filled the air. Mercifully, the warriors broke off the engagement.

The Nez Percés now quickened their retreat across southwestern Montana. Gone were illusions that the whites would let them be. In their desperation, only one haven seemed left to them. Like Sitting Bull, they would seek refuge in the country of Queen Victoria. The column headed eastward.

As they moved beyond Canyon Creek, their old allies, the Crows, now in service as scouts for the Army, began to attack them. About 30 miles short of the Canadian line, exhausted by their long flight, they paused, confident that they had outdistanced all pursuers.

Once more they were wrong, outflanked by the telegraph, and this time the pause would end in their last stand. From Fort Keogh in the east came Col. Nelson A. Miles with nearly 600 men.

When they sighted the Nez Percés close to Snake Creek on the northern edge of the Bear Paw Mountains, they attacked immediately. Most of the Indians' remaining war leaders were killed in the fighting.

His own heavy casualties deterred Miles from ordering another charge, however, and both sides dug in. Four days later Howard reached the battlefield. The appearance of their old enemy, heralding the arrival of reinforcements for Miles, took the final heart out of the suffering Nez Percés. The chiefs held a final council. Joseph mounted a horse and rode slowly up the hill from the camp and across to the Army lines.

As he reached the officers, he dismounted and handed Miles his rifle. Then, stepping back, he adjusted his blanket to leave his right arm free, and began one of the most touching and beautiful speeches of surrender ever made:

"I am tired of fighting. Our chiefs are killed. Looking Glass is dead. Toohoolool-zote is dead. The old men are all dead. It is the young men who say yes or no. He who led the young men is dead.

"It is cold and we have no blankets. The little children are freezing to death. My people, some of them, have run away to the hills, and have no blankets, no food; no one knows where they are—perhaps freezing to death.

"I want to have time to look for my children and see how many I can find. Maybe I shall find them among the dead. Hear me, my chiefs. I am tired; my heart is sick and sad. From where the sun now stands, I will fight no more forever."

The surrender speech confirmed Joseph in the public's mind as the symbol of the Nez Percés' heroic, fighting retreat. At first the Indians were shipped by flatboats and box-cars to unfamiliar, hot country in the Indian territory, where many of them sickened and died. But friendly whites and sympathetic societies in the East continued to work for them, and public sentiment finally forced approval of their return to the Northwest.

In 1885 Joseph and most of his band were sent to the Colville Reservation in Washington. Joseph made many attempts to be allowed to resettle in the Wallowa but each time was rebuffed. In 1904 he died, broken-hearted, an exile from the beautiful valley he still considered home.

What Statehood Means to Hawaii

EXTENSION OF REMARKS

OF

HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. ASPINALL. Mr. Speaker, in the third of a series of articles in the current issue of State Government is "What Statehood Means to Hawaii," by Prof. Robert M. Kamins, director of the Legislative Reference Bureau of Hawaii and a staff member of the University of Hawaii, department of economics. Mr. Kamins elaborates on the effects of statehood on the Government of Hawaii and some of the problems it raises and

explains the implications it is having on the economic and social life of the islands.

Professor Kamins' contribution follows:

WHAT STATEHOOD MEANS TO HAWAII

(By Robert M. Kamins)

Hawaii comes into the American Union with the experience of more than a century of self-government. Since the adoption of a constitution by King Kamehameha III in 1840, followed in 1848 by a division of the land which removed the physical basis for the earlier feudal system. Hawaii has been ruled under constitutional law—as kingdom, republic, and organized territory. Long before its annexation to the United States in 1898, it had adopted the Anglo-American common law and governmental practices familiar to Americans, which culminated in the deposition of the monarchy in 1893. As a sovereign republic and as a Territory of the United States, it has financed and (except during a period of martial law during World War II) has ruled itself with a minimum of assistance and direction from the Federal Government.

The coming of statehood, then, will not basically change the structure or fabric of Government in Hawaii. Unlike Alaska, her sister novitiate, Hawaii will not suddenly face the necessity of assuming governmental burdens—for example in public health, highways, education—which had previously been borne in whole or in part by the National Government. On statehood day, no new function will have to be assumed by the Government of the new State. The schools, the highway program, the administration of justice, the revenue structure, health and welfare services and, without important exception, all the rest of the governmental program, will continue to operate as on the preceding day, and for the most part under the direction of the same people.

Acting in a community accustomed to self-government, legislatures and Governors have kept Hawaii well abreast of governmental practices elsewhere in the Nation. It would be easy to compile a long list of statutes—in the fields of public health, education, agriculture, labor, and taxation—in which Hawaii has pioneered or has been in the van of American jurisdictions.¹ It has not looked for leadership to the Interior Department or other agencies in Washington.

IMPACT ON LOCAL GOVERNMENT

Changes there will be, of course. The first change is being experienced as this is written, months in advance of statehood. Persons aged 20 are registering for the first State elections, scheduled for June 27 and July 28, as permitted by the State constitution, under the provisions of which the elections will be conducted. (Alaska set the minimum voting age at 19; Georgia and Kentucky have set the minimum at 18; all other States at 21.)

The Senate Interior Committee favorably reported the bill, but no further action was taken. In 1953 the difficulty was compounded when, after the House had passed a Hawaii bill, the Senate passed one only after adding Alaska to it. The House Rules Committee refused to grant a conference request and thus killed the bill. The main problem for the two Territories thereafter involved the attempt to combine their bills, since this attempt joined those who opposed both bills with those who opposed one bill but not the other.

THE VICTORY WON

Thus in the 85th Congress, in which sentiment, for whatever reason, favored Alaska rather than Hawaii, Hawaii deliberately stepped aside, allowing Alaska to be considered alone. The astonishing swift passage—not unanticipated—of the Hawaii bill in the 86th Congress was a direct result of

Footnotes at end of speech.

Hawaii's part in passage of the Alaska bill and of that passage itself.

It is impossible to name here the many outstanding people in the Congress, in the forty-nine States and in Hawaii who have played special and notable parts in preparing for and helping to secure the passage of the Hawaii statehood bill. Fundamentally, no one man or group of men is responsible. Statehood is, as I have said, a victory of and for Hawaii's people, and it is they who are responsible. It is they who have made for Hawaii the distinguished record by which it so patently deserved statehood. Anything that any man from Hawaii did to help secure statehood was successful only insofar as he genuinely represented Hawaii's people, and embodied their deeds and achievements.

Just to hint at the tremendous, joint effort that made statehood possible, let me note very briefly a few things that helped secure passage in this 86th Congress. Certainly one major factor in the bill's swift passage was a prodigious letter-writing campaign that originated in Hawaii. The newspapers, radio, TV, civic and citizen groups, and the people of Hawaii generally, joined in promoting and implementing the idea that each citizen of Hawaii should write his friends in the States urging them in turn to write their Congressmen and Senators in support of Hawaiian statehood. In another significant move, the Honolulu Chamber of Commerce, with no publicity and a modesty that belied its very real effectiveness, sent businessmen to Washington to assist the Delegate in his efforts in behalf of statehood.

A NEW ERA IS OPENED

I have tried, very briefly, to suggest something of what statehood means to Hawaii's people, some of the events that occurred, and some of the factors involved, in the long effort of Hawaii's people to secure statehood. I have characterized this effort as a part of a movement from a closed, centralized scheme of things to more open, diversified, and flexible forms. Statehood, I have said, in one sense completes this movement, and in another sense gives it an opportunity really to begin. Statehood is the ground and condition for a full sense of identity on the part of Hawaii's people, a full sense of their possibilities and potentialities, and for the maximum development of these.

As a State, Hawaii is a unique and powerful asset to the United States in two chief ways. Geographically, economically, commercially, and culturally Hawaii occupies the central, preeminent position in the Pacific Ocean. To this world, therefore, and to the east—which together contain more than two-thirds of the world's population and countless other tremendous untapped resources—Hawaii is America's bridge, America's very real, tangible and practical key to friendly, profitable relations with these areas. Further, in Hawaii's people—who are thoroughly American yet understand the peoples of the Pacific and the east, and can sympathize with their problems—the United States has its best means of utilizing Hawaii's position.

Statehood is the catalyst which releases the energies of Hawaii's people and gives them the opportunity to exploit these energies. Statehood opens up, as a result, a whole new era, a whole new area of possibility, for Hawaii and for the Nation.

The 1959 elections will initiate the most consequential revision in the government of the Islands: the inauguration of an elected governor and lieutenant-governor, replacing the Governor and Territorial Secretary hitherto appointed by the President of the United States. By and large, Hawaii has been fortunate in its appointive Governor; with remarkably few exceptions they have been both competent and politically acceptable to the people of Hawaii. Given the best

of circumstances, however, they have lacked the solid basis of political authority which derives from election. Countervailing the personal popularity of the chief executive has been an inherent resentment that he had been chosen not in Hawaii but in Washington, and that turnover in the presidency might cause the replacement of a good governor by some person yet unknown.

Popular election may be expected to strengthen the office of the Governor, particularly since a "short-ballot" constitution gives the Governor authority to appoint all department heads as well as members of the State judiciary. Even though Hawaii has a well developed civil service system, patronage opportunities for the executive will be abundant. A byproduct will be the injection of additional zest to political action in Hawaii, already vigorous—with strong Democratic and Republican Parties.

If, as appears likely, the office of Governor will lie at the center of heightened political activity in this new State, the election of two National Senators and one or two Congressmen cannot but add to the enlivenment of partisan competition. Coincidentally, the adoption in 1959 of a charter for the city-county of Honolulu, which enlarges the membership of the municipal council which strengthening the position of the mayor, probably will further invigorate the striving at the polls.

DEPARTMENTAL REORGANIZATION

Statehood brings to Hawaii the occasion for reorganizing its structure of government. Borrowing an idea from the 1947 constitution of New Jersey the convention which drafted Hawaii's first State constitution incorporated a provision requiring that the various departments, commissions, bureaus, and other administrative agencies established over the decades by the territorial government, now numbering about 75, be consolidated in or under not more than 20 principal departments—this to be done in such manner as to group the same according to major purposes so far as practicable. The legislature is given 3 years in which to act, until the summer of 1962; if at that time it has not effected this consolidation, the constitution requires the Governor to take action within an additional year.

The reorganization mandated by the constitution is the most complex problem of the transition to statehood. Since 1949 the legislature has attempted departmental reorganization. Sometimes the efforts were defeated in the legislature; in 1951 and 1953 they went down under gubernatorial vetoes. Meanwhile the number of territorial agencies has continued to grow, and with it the potential resistance to change.

As a start toward restructuring the government, the last territorial legislature (adjourned this May) established an interim committee to consider how best to effectuate the constitutional requirement. The committee, consisting of eight senators and eight representatives, is to review the various proposals for reorganization which have been made over recent years, augment them with such studies as may seem necessary, prepare implementing bills, and report to the first State legislature which will meet this August or September.

Under rather remarkable constitutional relationships with the Federal Government, one department of the Hawaii government is protected against change by the State legislature. The Hawaiian Homes Commission Act of 1920, a Federal statute, established the Hawaiian Homes Commission, a Territorial agency designed to assist Polynesian Hawaiians in maintaining their communities and creating new ones. Relatively

large areas of public land have been made available by the commission to persons of Hawaiian ancestry (of at least halfblood, in recent years) as residential sites and agricultural homesteads. Hawaiians receiving land grants are given 99-year leases, for which they pay an annual rent of \$1. Holders may also receive low-interest loans from the commission.

The State constitution adopts the Hawaiian Homes Commission Act on behalf of the State, agreeing that the spirit of the Hawaiian Homes Commission Act looking to the continuance of the Hawaiian homes project for the further rehabilitation of the Hawaiian race shall be faithfully carried out. Furthermore, Congress, in the act of admission, permits the amendment (in the constitution or by statute) of administrative provisions of the Hawaiian Homes Commission Act but prohibits the new State from changing the provisions relating to the commission's funds, to change the qualifications to hold land under the act, or to decrease the benefits of Hawaiian landholders, unless permitted by Congress. This last tie to the Federal apron strings Congress would not cut.

SEARCH OF THE LAWS

Attainment of statehood makes it necessary to study the statutes under which Hawaii has been governed. In Washington, the Budget Bureau is examining the Federal statutes applicable to Hawaii, to determine if statehood will change their applicability. (By way of example, in Hawaii as a Territory, business transacted has been ipso facto considered to be in interstate commerce for the purpose of some Federal laws. In Hawaii as a State, presumably the same legal tests that are used elsewhere in the United States will determine what is interstate commerce and what is not.) Under an Executive order, the Budget Bureau is to report its findings to the President.

In Honolulu, meantime, the legislature has authorized the Hawaii attorney general to consider the effect of statehood on the laws under which the State is ruled, both those enacted by Congress and those of the Hawaii Legislature.

The study is given urgency by a provision in the Admission Act which repeals within 2 years of the date of statehood all territorial laws enacted by Congress. This refers to laws the validity of which is dependent solely upon the authority of the Congress to provide for the government of Hawaii as a Territory. The provision affects, among others, those of Hawaii's land laws which are found in the Organic Act (a Federal statute) and not in the Revised Laws of Hawaii. Such statutes must be identified and enacted as State law by summer of 1961, when as Federal law they will automatically expire.

JUDICIAL REORGANIZATION

Putting the State constitution into effect changes the administration of the laws as well as their form and content. Hawaii the Territory has had a three-member supreme court, appointed by the President. Under the constitution this appellate court is expanded to five, appointed by the Governor, and it is to be served by an administrative director. The establishment of the latter position, accomplished by the last Territorial legislature in anticipation of statehood, was recommended in a 1957 survey of Hawaii's judiciary as being of primary importance to improve the administration of justice.

An unusual provision of the State constitution authorizes the creation of a commission to consider and report to the Governor whenever a member of the supreme or circuit courts appears to be incapable of performing his judicial duties; on receiving the report the Governor is to appoint a

board of three to consider the case. On its recommendation, the Governor may retire the justice or judge.

As a result of statehood, appeals from the Supreme Court of Hawaii will go directly to the Supreme Court of the United States rather than, as during Territorial status, to the Ninth Circuit Court of Appeals in San Francisco, subject to further appeal to the U.S. Supreme Court. Severing this judicial connection between Honolulu and San Francisco should add to the prestige and authority of the Hawaii Supreme Court. It now becomes the final appellate body in most legal cases originating in Hawaii, rather than a way-station to the ninth circuit.

Salaries of the Hawaii judiciary, payable solely by the State rather than being borne largely by the Federal Government, as has been the case under Territorial status, are set by the constitution as at least \$17,500 per annum for the chief justice, \$17,000 for other members of the supreme court, and \$15,000 for circuit judges. An act of the last Territorial legislature in 1959 set these salaries, in fact, at \$22,500, \$22,000 and \$19,000, respectively.

EFFECTS IN WASHINGTON

More profound effects of statehood may stem from Hawaii's gaining votes, as well as a voice, in Congress than from changes in the local government of the islands. The sugar industry, still the largest grouping of private enterprises despite the post-war diversification of Hawaii's economy, has always been concerned about its marketing quota under the sugar acts while Hawaii remained a Territory. Now that it is a State with as many Senate votes as any other, Hawaii's quota seems more secure. If production on the shrinking acreage utilized by cane plantations should increase over a million tons—Hawaii's approximate annual allotment on the national market—perhaps the quota can be enlarged for the State of Hawaii. Producers of other local agricultural crops, notably coffee, which has recently suffered from depressed world prices, are now beginning to ask if the new Senators and Representatives cannot obtain coverage for their crops under the farm price support programs.

Statehood also promises to insure the stability of another source of mainland dollars, the largest—defense expenditures.⁴ Hawaii's economic development in recent years may be viewed as a race against possible disarmament or movement of military establishments out of Hawaii. If the islands are to be demilitarized ultimately (and from their position in the Pacific the people of Hawaii are at least as concerned as any other portion of America's population with the dangers of continued international tensions) two Senators and a Representative may be able to cushion the economic shock by obtaining federally financed public works in larger quantity than Hawaii the Territory could have expected.

Hawaii is land-hungry, and statehood may cause the release by military agencies of substantial acreages held since World War II, currently put by the United States to infrequent or marginal use.⁵ Under the Admission Act, each Federal agency having control over any property in Hawaii is required within 5 years of the date of statehood to report to the President concerning its continued need for each parcel. If the President determines that any land is no longer needed by the United States, the act provides that it shall be returned to Hawaii.

By such transfers, Hawaii would regain at least a portion of the public lands which were ceded to the United States in 1898 at the time of annexation. Hawaii's government hopes that the areas returned will be substantial, particularly on the island of Oahu, where a rapidly increasing popula-

tion is pressing hard against limited amounts of readily usable land. The land so transferred to the State government will become, under the Admission Act, a public trust for the support of the public schools, for the betterment of native Hawaiians, for development of farm and home ownership, and for similar purposes.

Furthermore, the Admission Act applies to Hawaii the Submerged Lands and Outer Continental Shelf Lands Acts of 1953. Hawaii has no offshore deposits of oil, the resource which supplied much of the motivation for passing these Federal laws. But it does have shallow tidal lands which can be filled in, now that their control is firmly vested in the State, to supply needed space for an expanding population and tourist trade. With some difficulty, Hawaii obtained congressional permission last year to fill and use a limited area extending from the shores of Waikiki. Now the littoral of any of the islands can be expanded as the need arises and resources permit.

ECONOMIC STIMULUS

Obtaining the use of more land, particularly on densely populated Oahu, constitutes the most obvious stimulation of economic growth under statehood. Other influences are less tangible but also important.

The greatest of these is the familiarity which Hawaii will gain for investors and merchants, for tourists and American migrants, as a State of the Union. During the past several decades an increasing part of the mainland population acquired some knowledge of Hawaii and its institutions, but a surprisingly large number of mainland Americans still wondered about the language, the money and the tariff system of the Territory of Hawaii. It is already apparent that the State of Hawaii is more familiar, and therefore inspires greater confidence as a place for investment or business enterprise. Without much doubt, the current flurry of economic expansion—the construction of Hawaii's first oil refinery, first steel mills, first cement plants, additional small manufactures, new hotels, shopping centers and residential areas, the commercial exploration of bauxite (the State's only known mineral resource), will be accelerated and sustained by businesses attracted to Hawaii by the spotlight of statehood.

Accelerated movement of persons to Hawaii from other parts of the United States is also to be expected—movement to a "paradise" which statehood has brought closer, in the popular image to accustomed American ways. Such an influx, when added to the established population growth of the islands, will place still greater pressure on the intensively utilized land area of Oahu, forcing an expansion of economic growth in the other seven principal islands of the chain. All of the latter are now relatively underdeveloped, with static or declining populations. The expansion will require the establishment of cheap interisland travel, now limited to plane and barge traffic, the supplying of water to arid lands, a shift of dairy and truck farming from Oahu to its neighboring islands, the growth of villages into towns and towns into cities, the expansion of commercial and governmental services in all areas—in a word, the overall enlargement of virtually every phase of Hawaiian activity.

SOCIAL ASPECTS

Those who have found pleasure in living here cannot but view with mixed feelings the prospect of a more crowded Hawaii. There is reason to believe that the changes associated with economic expansion will be gradual, but their cumulative effects will be profound.

A minority in Hawaii who have opposed statehood have feared some of these effects. Many persons of Hawaiian ancestry, justifiably proud of their Polynesian antecedents

(and sometimes idealizing the golden days before Captain Cook, before the missionaries, before the revolution which toppled the monarchy, or before the tide of migration from the mainland pulled in by World War II) have forebodings that they and their culture will be lost in the new Hawaii, pushed aside by a more aggressive commercialism. Were this to happen, and it does not yet seem imminent, statehood would not be the cause but rather the symbol of a social evolution of almost 200 years. What may rather result is a Hawaii which moves closer to mainland living patterns, yet retains in its amalgam much of the graciousness and individuality of the Hawaiian people.

Older Caucasian settlers, of families established in Hawaii for a century or more, may also wonder if their predominance in business, politics, and society will be further reduced by statehood. Since World War II, and particularly in the past decade, newer settlers from the Orient have begun to assume leadership in the community. However, members of these very families, not unanimously but in strength, have supported the long drive for statehood along with the rest of the population. A 1940 plebiscite showed almost 7 out of every 10 voters to be favorable to statehood; the 1950 constitution was approved by more than 7 out of every 10; and as this is written it is anticipated that 8 to 9 out of every 10 will vote approval, this June, of the conditions under which Hawaii will become a State.

EFFECTS ON THE UNITED STATES

Incompletely told, these are some of the effects which statehood will have on Hawaii, and some of the local reactions to the changes. There will also be important effects upon the United States as a whole.

Quantitatively, it might be thought that Hawaii is too small, measured against the rest of the country, to have much bearing on the Nation's life. The new State comprises only about three-tenths of 1 percent of the population of the United States, and two-tenths of 1 percent of its area. Yet there is good reason to believe that this small region will soon play an important part in the rounding out of America and in its international relations.

To date, because it was initially settled by migrants from Europe and Africa, the mainland United States has had little knowledge of Asia and its peoples, little ability to communicate with them or to understand firsthand their problems, fears, and desires. The admission of Hawaii to statehood demonstrates to the nations of the Orient that the racial attitudes of the United States are not what its traducers have said. Statehood also creates in Hawaii a pool of first-class Americans of Oriental ancestry, some of whom (though deplorably few) are able to speak one or more of the languages of the East, who can be called upon to represent the United States in discussions with Asian countries.

The preamble to the State constitution manifests some of the attributes of the people of Hawaii which especially qualify them to serve the United States in the conduct of international relations:

"We, the people of the State of Hawaii, grateful for divine guidance, and mindful of our Hawaiian heritage, reaffirm our belief in a government of the people, by the people and for the people, and with an understanding heart toward all the peoples of the earth, do hereby ordain and establish this constitution for the State of Hawaii.

⁴For brevity, two examples will suffice. (1) Hawaii has continuously imposed a net income tax since 1901. (Wisconsin's levy, commonly regarded as the first modern State

Footnotes at end of speech.

income tax, dates from 1911.) (2) Hawaii's laws prohibit the construction of billboards. Hawaii's Organic Act did require, however, that persons appointed as Governor or Territorial Secretary have resided in the Territory for at least 3 years. In 1933 Congress voted on a "carpetbagger" amendment to the Organic Act which would have removed this requirement, but the amendment failed of enactment.

Under the act of admission, Congress gave Hawaii a single seat in the House of Representatives. However, it appears that at the next reapportionment of Congress, Hawaii's population (585,025 civilians, as of January 1, 1959) will cause it to be apportioned 2 seats.

In the calendar year 1957, military expenditures in Hawaii approximated \$308 million. In that same year the combined gross incomes of the sugar and pineapple industries totaled about \$252 million, and gross receipts from tourism amounted to some \$80 million.

The Federal Government in 1958 held some 316,000 acres throughout the territory, inclusive of 187,000 acres in Hawaii National Park on the islands of Maui and Hawaii.

One measure: since 1955 the membership of the Hawaii Legislature has closely approximated, in proportion, the racial composition of the electorate.

sating hundreds of thousands of Jews and non-Jews for the atrocities and robberies committed against them. This policy of the Adenauer government is appreciated by the State of Israel and by the entire Jewish people.

The convention, therefore, has reason to expect that the Bonn Government will act with equal justice toward the unfortunate Rumanian Jews who were the victims of Nazi tyranny and who are now located in Israel, in the United States, and in other countries.

Washington Report

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. ALGER. Mr. Speaker, following is my newsletter of August 1, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Tex., August 1, 1959)

The Federal highway construction dilemma grows. The problem is shortage of money (a) immediately, and (b) for the entire 16-year program. The reasons are: (1) Increased costs beyond original estimates, and (2) forced accelerated spending last year, allegedly as antirecession. The solution for immediate funds is to (a) raise taxes, or (b) pay out of the general Treasury. So the Ways and Means Committee proposes to do neither; instead, to borrow, hardly a new idea and not a real solution at all. My solution is to pay out of the general Treasury and cut Government spending elsewhere, in less essential areas (public works, public power developments, public housing, foreign aid, sewer building, fertilizer manufacturing, and hundreds of Federal social services and Government business operations). This solution has not and will not be considered, though it cannot be disproved. Careful study should be given the dire consequences, not evident, of last year's forced acceleration of spending, which I forecast in disapproving our action then.

The more permanent solution for the entire highway construction program is manifold. To restate the problem: (a) The Federal cost of the highway program has grown \$15 billion in 2 years (from \$38.5 billion to \$53.5 billion, including \$12 billion in the Interstate program alone); (b) the cost of highway construction rose 12 percent from mid-1954 to the end of 1956 (see House Doc. 300, January 1958). Proper corrective action by Congress can rest only on careful study of the whys to these increases. Such study should be made now, before more taxpayers' money is spent to condone, perpetuate, or bury improper contracting, wastefulness, unconscionable profit, and unintentional mistakes, if such there be. The facts will exonerate as it will permit correction. Or should we just pour more money in, taxpayers be hanged, because the people want highways. I believe the people want and deserve not only highways, but their money's worth. Taxes are too high now.

My suggestions for correction of both immediate and long term shortage of funds are these: (1) Transfer funds from the general Treasury to the highway trust fund, only enough to make good on highway contracts in force; (2) budget future expenditures after realistic study of costs to date, and stretch out the building program by (a) building only those multilanes necessary

where traffic flow exceeds 6,000 vehicles per day, and (b) build by stages, establishing correct geometrics (basic roadbed and surface, engineering, drainage, etc.) and later add the frills; (3) set budget by dollar amount, not mileage; (4) change the 90-10 Federal-State matching ratio to 75-25 percent; (5) repeal the Davis-Bacon Federal wage setting so States can set the prevailing wage as in the past; (6) repeal the utility relocation reimbursement, leaving this to States. The bond proposal of financing by borrowing is (a) abandoning the pay-as-we-go principle, (b) makes the Treasury short-term Federal debt refinancing even tougher, (c) puts highway bonds in competition for loan money with home, auto, and furniture buyers, also small merchants, and (d) with interest cost of \$168 to \$268 million on \$1 billion in bonds is too much, means less highway for the money. The highway problem is the result of the same old problem, the Federal Government is spending too much in nonessential programs, now short-changing highways. The real and only solution: Reduce Federal spending, not increase taxes or borrow and charge to the troubled future.

The foreign aid appropriation (mutual security) bill and debate was history repeating itself (newsletter June 20, 1959, Mar. 4 and May 17, 1958). The earlier \$3.5 billion authorization (reduced from \$3.9 billion request) was cut this go-round to \$3.1 billion and passed 279-136 (ALGER against). The component parts are: (1) military assistance; (2) defense support; (3) Development Loan Fund; (4) development assistance; (5) technical cooperation; (6) contingency fund.

Facts and figures from debate and hearings (1,781 pages): (1) Of 86 nations in the world the United States has given \$82 billion to 76 nations since World War II; (2) U.S. foreign aid personnel has grown from 458 in 1948 to 53,600 in 1958; (3) 67 free nations' debt is \$185 billion; the Soviet bloc has debt of \$51 billion; the U.S. debt is \$285 billion, \$48 billion more than all the rest of the world combined; (4) total money available (unexpended \$4.8 billion, this bill \$3.1 billion) is \$8 billion plus foreign currencies we own of \$1.5 billion or approximately \$9.5 billion (actually there's more); (5) yearly foreign aid includes other military expenditures than in foreign aid bill (over \$1 billion) and surplus food gifts (\$1 billion or more) approximately \$5.5 billion. Add to this the yearly interest on \$82 billion of foreign aid now part of the national debt, \$3.1 billion, makes actual yearly foreign aid \$8.5 billion; (6) over 2,000 separate projects have now been reduced to 1,450, many abandoned as impractical (9 pages, 60 specific projects documented in hearings); (7) Comptroller General of United States has audited and examined foreign aid, found it overprogrammed and mismanaged, inefficient, etc., with too much money the chief cause of the trouble.

Random examples: (a) Graft, corruption, and profit from improper distribution and sales of aid materiel by foreign businessmen and officials; (b) military vehicles delivered could not be used, shortage of drivers and maintenance; (c) ammunition and equipment ruined because not properly stored; (d) 44 tires per truck stored in 1 nation; (e) 185 years' supply of particular ammunition on hand in one country and only one carburetor for trucks for entire army; (f) over 4,000 tons excess ordnance materiel in one country's depot; (g) diversion, pilfering and thievery until military supplies were short in another country, etc.; (8) civilian projects of all kinds are financed, many types of which government cannot provide in our country (list of 113, such projects, p. 940, hearings); aid for education purposes has gone to over 50 countries, including Yugoslavia; (9) classification as secret or other security designation covers up

Plight of Rumanian Jewish Victims of Nazism

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Monday, August 3, 1959

Mr. JAVITS. Mr. President, I should like to bring to the attention of the Congress a resolution adopted at the 19th Quadrennial Convention of the Farband Labor Zionist Order in connection with the plight of the Rumanian Jewish victims of nazism. I am also bringing this matter to the attention of the Department of State as a matter for their consideration. I ask unanimous consent that the resolution may be printed in the appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

FARBAND CONVENTION RESOLUTION: RUMANIAN JEWISH VICTIMS OF NAZISM

The 19th Quadrennial Convention of the Farband Labor Zionist Order held in Miami Beach from May 23 through May 27, notes with deep concern the refusal of the government agencies and courts of West Germany to approve the just claims of the Rumanian Jewish victims of nazism for compensation for their sufferings and for the property which was stolen from them by the Nazis.

The convention is aware of the fact that the Nazis conducted their atrocities against the Jews of Rumania with the cooperation of the Antonescu government in Rumania of that time. It is our profound belief that elementary justice demands that the Rumanian Jewish victims of the Nazi murders receive the same compensation as the Jewish victims of nazism in other countries.

The convention affirms that the West German Government under Chancellor Adenauer has acted with compassion and humanitarianism by at least partially compen-

glaring faults of the program; (10) 1,113 audit recommendations by ICA (International Cooperation Administration) and GAO (General Accounting Office) findings all show lack of planning and cost relationship; (11) military assistance, the most justifiable of the component parts, is replete with errors—(a) inadequate estimates of needs and costs; (b) inadequate relationship of cost and objectives to be achieved; (c) improper recordkeeping of total costs by country and others; (12) groups that enjoy windfalls or are vitally interested are (a) printing and publishing industry, (b) motion picture industry, (c) shipping, (d) manufacturing, (e) export and import firms, (f) commercial banks, (g) colleges and universities, (h) clergy, (i) military; (13) "loan" of Development Loan Fund is fictitious, repayable 80 percent in local currency which United States can't use; further, Congress has no control over this fund.

A few, even more than a few, instances of mistakes should not condemn such a program as foreign aid, but the almost endless examples of error, inefficiency, waste, mismanagement, overprogramming, lack of objectives, and underplanning, in many countries culminating in aiding our enemies (Yugoslavia, Poland, Indonesia, etc.) and alienating our friends proclaims there are basic faults that need correction, not acceptance and continuation. As a nation, we cannot spend ourselves rich. We cannot make ourselves secure by giving ourselves away. We cannot buy friends; they do not stay bought. The greatest fallacy is to ascribe aid as charity or "be thy brother's keeper" through foreign aid by our Government. The real Biblical meaning is the practice between individual human beings, not governments, which by nature must be impersonal and realistically self-interested. This fundamental difference and role of government needs to be studied. As I oppose big Federal spending where there is waste, fullness or contradiction of purpose, am I negative or anti as adduced in the last campaign?

Senator McCLELLAN this week answered labor's criticism that his labor bill is anti-labor this way: "Antilabor are they? Well, let us see. The provisions of these measures, the provisions that they criticize, are 'anti' some things beyond all doubt. I shall enumerate for you a few of the things they are 'anti.' They are anti-gangster, goon, racketeer, and hoodlum. They are anti-theft, embezzlement, shakedown, blackmail, and extortion. They are anti-larceny, anti-acid assault, and anti-vandalism. They are anti-fraud, dishonesty, crookedness, and corruption. They are anti-violence, bestiality, brutality, and cruelty. And they are anti-dictatorship, boss rule, oppression, and exploitation. Yes, they are 'anti' these two dozen things and more. And when summed up, they simply establish conclusively and irrefutably that Congress has undertaken to enact laws that will be effective in dealing with and in preventing crime and tyranny from being imposed and inflicted upon our workers, union members, and the public at large. How can anyone call laws that are designed to curb such activities 'antilabor'? I do not believe, and in fact I know, that the great rank-and-file of American workers both in unions and without, do not associate such practices with the true mission and purposes of honest, decent, trade unionism among freemen in a civilized society. But these things, these abhorrent abuses, have happened and they are happening here. I do believe they must be stopped if our system of government and way of life under law and order are to survive."

To this I add amen, and I shall do everything I can to help pass an effective labor law to curb the excesses of labor leaders and the monopolistic dangers of unions in the inter-

est of all our people, including union members. It's a toss-up whether Congressmen will have the courage to do what's needed now.

The Budget Bureau has listed some built-in increases to Federal expenditures under existing law, showing a possible \$26 billion increase next year. In addition, new legislation now pending in Congress totals \$16 billion. The only protection against this pent-up flood of spending is in the people themselves. The public alone can force Congress to exercise self-discipline. Will people realize this in time and tell their Congressmen how they feel?

Concerning the speculation over a summit conference, my own belief is simply that it should be called off. Russia's leaders should be told that in view of their sabotaging every meeting and all past agreements and their avowed dedication to world conquest, there is no area of agreement between us until and unless they establish one. Deeds, not words, are needed. To me such a positive statement on our part will promote peace and is the safest course.

On this "Government by veto" charge now being leveled by some of the disgruntled would-be spenders, it's interesting to note the veto records of some earlier Presidents. Cleveland, 584 vetoes; Roosevelt, 631; Truman, 250. Compare these records with the 142 bills President Eisenhower has vetoed to date. Personally, I'm happy that we have a President unafraid to wield his veto power in defense of fiscal responsibility.

Public Debt Management Legislation

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, 8 weeks of stalemate have elapsed since the President of the United States on June 8, 1959, sent a message to the Congress urging the adoption of legislation designed to facilitate economical public debt management. That stalemate has come into being because of the sit-and-wait attitude of the Democratic House leadership. That leadership has contented itself with politically motivated attacks on responsible Government officials who are commendably and patriotically performing their offices of public responsibility. I have been forced to conclude that these attacks are intended to distract public attention from the tragic failure of the Democratic House leadership to provide leadership.

Depending upon what newspaper and what edition an individual refers to, the chances of this legislation receiving consideration by the Congress are either on again or off again. When it is considered that the public confidence which is so vital to our fiscal strength and economic growth is inextricably involved in forthright legislative action on the administration's recommendation, the on again, off again indeterminateness that has been created by the sit-and-wait House Democratic leadership is intolerable. For 8 weeks this legislation has been bottled up in committee despite the

fact it must still be considered in the other body between the time of final House action and the adjournment of the current session.

On July 22 the Republican members of the Committee on Ways and Means addressed a letter to the Democratic House leadership pledging their unanimous support and expressing confidence that at least 140 Republican Members of the House would join in that support if the leadership would undertake to clear this legislation for floor consideration. While we have not received a reply to our letter, we have been accused in a press statement issued by that leadership of a political play.

Mr. Speaker, I assure the House membership that our Republican endeavors to break the stalemate have not been a political play, but instead those efforts have represented a sincere attempt on our part to make up for the absence of leadership in expediting this legislation through the Congress.

The crux of the stalemate centers around the so-called sense-of-Congress amendment which in essence instructs the Federal Reserve to expand the money supply by pegging the price of long-term Government securities. Financial authorities are virtually unanimous in denouncing such a proposal as being inflationary and as being an unwise limitation on the flexible authority granted by the Congress to the Federal Reserve in carrying out the Fed's primary mission of administering a sound money policy.

Mr. Speaker, as examples of informed evaluations of this sense-of-Congress amendment I will insert in the RECORD at this point three excerpts from weekly publications of Aubrey G. Lanston & Co., Inc., and an editorial from the Commercial and Financial Chronicle of New York.

[From the publication of Aubrey G. Lanston & Co., Inc., July 13, 1959]

Some things, however, are clear. The management of money, credit, and debt is an art the practice of which is replete with complexities. The means by which these arts are practiced very definitely are not matters in which Congress can afford to meddle whimsically or for purposes of advancing partisan objectives. The manner in which, and the methods by which Federal Reserve open market operations are conducted may not be subjected to black-and-white analyses. But, certainly, the national interest dictates that the choice of methods be left to the experts, and that the actual decisions with respect to these matters be left to the experts who are charged with the responsibility. Certainly, too, Federal Reserve officials know better than the House Ways and Means Committee what the Fed can and cannot do in the Government market if the public interest is to be served.

[July 20, 1959]

It seems to us that those who advocate congressional coercion of the Fed with respect to its open market operations might ponder a different side of the matter. This is: In periods of high and rising business activity and of abnormal demands for credit, Treasury debt management should seek to decrease the liquidity of banks, business corporations and others so as to prevent the development of an unsustainable rate of demand for goods and services. It happens, however, that the Government's fiscal

position has been out of tune with developments in the business situation and the Treasury, therefore, has been obliged to add to the liquidity of the economy by selling large amounts of near-dated money obligations (for cash and to refund). In such circumstances, the Federal Reserve System therefore should strive to offset such consequences and there is only one way that the Federal Reserve may do so via an enlargement in the scope of its open market operations. The appropriate enlargement—if any enlargement is truly appropriate and we firmly believe it's not—would be for the Fed to sell notes and bonds from its portfolio and to reinvest in (buy) bills. The Metcalf proposal, however, calls for the opposite of this.

[July 27, 1959]

The Metcalf amendment—what does it really mean? Apparently, this amendment is holding up (and may block) any action to permit the Treasury to sell new issues of bonds unless (as few currently expect in the near future) this becomes possible at a return to the investor of no more than 4½ percent. Therefore, it may be worth some additional comment in this letter.

We are advised that the amendment, as currently drawn reads as follows: "It is the sense of Congress that the Federal Reserve System, while pursuing its primary mission of administering a sound monetary policy, should to the maximum extent consistent therewith, utilize such means as will assist in the economical and efficient management of the public debt; and that the System, where practicable, should bring about future needed monetary expansion by purchasing U.S. securities, of varying maturities."

We also are advised that this amendment constitutes (in the eyes of some of its backers) a "directive" to the Fed that when the money supply must be expanded the Fed is to achieve this by purchasing U.S. securities (actually Treasury notes and bonds) instead of by further lowering bank reserve requirements. This is strange because only recently Congress passed a measure to amend the authorization to the Federal Reserve Board to vary the reserve requirement percentages of member banks. And, in passing this piece of legislation, the ranges of variation set by Congress allow the Fed far more leeway to lower reserve requirements than to raise them. This produces a strange situation. Having just reaffirmed the Board's authority to vary member bank reserve requirements, in its discretion, no amendment to the Second Liberty Loan Act (to remove the interest ceiling on new Treasury bond issues) is to pass unless the Fed is put on notice—by a "sense of Congress" resolution—that it should not exercise its discretion with respect to varying member bank reserve requirements, downward.

Advocates of this position rationalize their stand by saying that the Metcalf amendment simply directs the Fed to consider each purchase (made in its open market operations) on its own merits. Isn't that what the Fed has been doing? It also is claimed that the Fed should not be inhibited from purchasing Treasury notes and bonds by any doctrinaire preconceptions. Yet, some in Congress are taking the point of view that the Fed should be instructed to prefer one of the instruments available to it (open market operations) over another instrument created for it (authority to vary reserve requirements) and it further be directed how to use the first of these instruments (open market operations). The Fed is not to use its discretion in these regards—at least, it is not to use its discretion as set forth in the Federal Reserve Act as it now stands. So, we have a situation wherein the Metcalf amendment is deemed to be innocuous by some and a directive by others. If the purpose of the bill which back this amendment really is to amend

the Federal Reserve Act—why is it that they don't so label the amendment and cause it to stand on its own feet, instead of trying to make it a part of a bill to amend the Second Liberty Loan Act?

Of course, the innards of this piece of Congressional debate amount to this: Some see in the need for more flexibility in Treasury debt management an opportunity to include a provision the ostensible purpose of which is to bring about lower interest rates. Actually, the chances are high that if such an amendment were to be approved by Congress, the ultimate result would be precisely the opposite. We would have an increasing number of sellers and fewer buyers for intermediate- and longer-term Government securities. The somewhat tragic aspect of the matter is that the prolonged, somewhat acrimonious debate over a relatively simple matter is taken by people in other countries as a sign of the unwillingness of Congress as a whole to take the steps that are necessary to maintain order in the Government's financial affairs and to preserve the future value of the dollar.

[From the New York (N.Y.) Commercial and Financial Chronicle, July 30, 1959]

AS WE SEE IT

"I have been forced to the conclusion that the Federal Reserve authorities have reached a point in their thinking where they consider themselves immune to any suggestion or direction by Congress, let alone a simple expression of the sense of Congress. It appears that the fault of the suggested committee bill (for authorizing higher rates of interest on long-term Government obligations but suggesting certain changes in Federal Reserve policy) was not that the language itself was wrong, but that the Congress dared even to speak to the Federal Reserve, a creature of Congress."—SAM RAYBURN, Speaker of the House of Representatives.)

We shall not undertake to decide whether this remarkable utterance of one of the most influential leaders in Congress represents merely an exaggerated concern for the prerogatives of Congress, a play for political popularity with his party and, perhaps, with the voters in his part of the country, or a warped notion of the functions of a central banking system and its relation to government in general. What we are certain of is that it had been much better left unsaid. What is really disturbing about it is the fact that it so neatly expresses the views and feelings of sections of the public whose ideas of a central bank are both crude and inaccurate and who are an eternal threat to a sound monetary and credit system in this country. It can hardly fail to lend aid and comfort to such elements.

CONGRESSIONAL POWERS

Lest there be some misunderstanding, let it be conceded that Congress, with the cooperation of the President, can create any sort of banking and monetary system it deems best, the limits being only the Constitution of the United States. It can, if the President agrees—and even if the President does not agree, assuming sufficient majorities—abolish the Federal Reserve System, and set up some other agency which will be as obedient to the sense of Congress as desired. Such a new agency could be given a mandate to buy any and all varieties of Treasury obligations under conditions to be set by Congress. So much for the notion of an independent Federal Reserve System if and when Congress wills otherwise and has the courage to proceed with its madness.

But Congress has as yet done no such thing, and we most earnestly hope that we shall not live to see the day when it does. What it has done or purported to do is to create a Federal Reserve System and

place it under mandate to perform the normal functions—whatever they are under present conditions and present day thinking on such matters—of a central bank. It has provided for the selection of men of experience and judgment to manage that System. There is nothing in the law and nothing in the concept of a central banking system so conceived and so organized that would require or even suggest that the specialists chosen to operate the System go to Congress or any group in Congress for assistance or guidance in the performance of their highly technical duties. It is very difficult for us to believe that all this is not well known and understood by Mr. RAYBURN.

Of course, this is a real world in which we live, and it would be naive indeed to suppose that members of the Board of Governors of the Federal Reserve System do not—along with members of the Supreme Court—read the daily newspapers or are not aware of the general political trends of the times as reflected in Congress. They are naturally well aware of the power of Congress to alter their system and their powers at any time. They must almost perforce keep alert to these things and doubtless, as unfortunate as it is, the awareness of it all has its influence upon policy. There is, however, no need whatever for Mr. RAYBURN or anyone else to make their road rougher and more stony, and the country would be much the better off if no such behavior were indulged in by members of the national legislature.

SENSE AND NONSENSE

The "sense of Congress" in such matters is, in any event, very likely to be nonsense or worse, as it was in this case. The political powers that be and two World Wars have vastly complicated the tasks of central bankers the world over. Time was when the central banking theory was relatively simple and in certain quarters well understood and expertly practiced. World War I badly upset the apperception both as respects conditions in the various countries of the world and the thinking that had governed and guided central banking. The New Deal abolished the gold standard which was one of the key forces in the management of credit in days gone by. World War II increased the national debt to astronomical proportions and left it all too largely in short-term form and in the hands of banks especially the Federal Reserve banks.

Here was a situation trying enough in all conscience, but things had meanwhile happened to popular thought—and for that matter to technical thought—that have tended not only to continue these conditions but to threaten to make them permanent. So morbidly fearful were we of a horrible postwar depression, and so vivid were memories of the depression of the thirties, that all sorts of so-called built-in stabilizers (often called that in order to cloak their real nature) were created at enormous public expense. After certain early postwar adjustments of a technical nature, the national debt began to rise and is now higher than it has ever been. Thus the problems of the Treasury tend to reinforce the demands of those who would have the Federal Reserve eternally expand.

The reformers have thrown practically all the accumulated wisdom and experience in central banking overboard. The tasks of the central banker are infinitely more difficult today than in pre-World War I. No one has seriously attempted to formulate a well-rounded coherent central banking theory under conditions such as those that exist today, but despite all the changes and notwithstanding all the newness of conditions existing today, some elementary truths are more or less self-evident. One of them is that in times such as those now existing—

we should be tempted to say under any conditions—the central banking authorities are not warranted in substituting funds of their own creation for savings which are absent or insufficient for the demands of the day. How one can possibly doubt the essential truth of this simple rule, we are at a loss to understand.

Yet this is precisely what all too many, including some Members of Congress, would have the Federal Reserve authorities do. The fact that it has not been doing it of late is precisely the reason for the expression of the "sense of Congress" in the proposed legislation which is now in dispute. When the Federal Reserve authorities cease to be at least partly immune to such a "sense of Congress," we shall have come upon evil days. Let no one doubt that for a single moment.

Mr. Speaker, the writers of those articles may not be schooled in political expediency, but they are recognized authorities in the field of public finance. It is time—it is past time, for us to take heed of the advice of these financial authorities by acting on the administration's request for legislation. It is time for us to break the stalemate and end the uncertainty caused by the small group in the House who are the militant advocates of printing press money and who are dedicated to inflation and Government regimentation of our economic way of life. Mr. Speaker, I respectfully submit that the Democratic House leadership has a very grave responsibility to further the progress of this legislation in the House.

New Markets

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. HOEVEN. Mr. Speaker, pursuant to my remarks in the Record on July 7, 8, 9, and 20, I include the fourth in a series of articles prepared by Mr. Alvin F. Bull, managing editor of Wallaces' Farmer, concerning the farm problem. This article appeared in the August 1, 1959, issue of Wallaces' Farmer:

NEW MARKETS—THIS IS THE ANSWER WE'D ALL LIKE TO FIND FOR THE EXCESS AGRICULTURAL PRODUCTION—HOW MUCH HELP CAN WE LOGICALLY EXPECT FROM NEW MARKETS

(By Al Bull)

The happiest solution to the problem of agricultural surplus would come in the form of new markets. This has become the golden hope of many folks concerned about the future of agriculture.

Economists estimate our production exceeds demand by 5 to 10 percent. So it's easy to hope—even believe—that markets can be stretched enough to close the gap.

Possibilities of bigger markets are usually pinned to one or more of four areas. These are: (1) more food use by low income groups; (2) more advertising and promotion; (3) more nonfood uses; (4) more exports.

Economists at a number of experiment stations, often working with the Center for Agricultural Adjustment, have looked in detail at each of these possibilities. Let's look

at the results of some of these thorough studies:

Low income groups: Government programs can increase the amount of food used by these people.

Subsidies to the 9 percent of our population with lowest incomes could increase food consumption by about 2 percent.

But subsidizing food purchases up to a point where half the population received Government help would not be enough to solve the surplus problem completely.

A nationwide subsidy to reduce food prices holds little promise. Estimates show that \$5 billion a year for this purpose would increase demand by only 2 percent.

Giving everyone in the Nation an adequate diet isn't the answer, either. With everyone on a moderate-cost diet providing adequate nutrition, food consumption could drop 5 percent. Most folks are eating at a luxury level rather than one to meet nutritional needs alone.

A food stamp plan is probably the most practical move in this area. It can help low-income families improve their diets and eat more food.

But in view of its limited adjustment effect, it could be viewed partly as a welfare plan as well as a minor agricultural adjustment measure.

Advertising and promotion: Food advertising is already getting its fair share of the Nation's advertising budget. It accounts for about the same percentage of total advertising that food items get of our total disposable income.

Advertising by commodity groups is more likely to shift consumers from one product to another than to increase total food use.

Advertising might help in shifting folks from products taking few agricultural resources to those requiring more production resources. From bread and breakfast cereals to eggs and bacon, or from spaghetti to beef-steak, for example.

Karl Fox, Iowa State University economist, uses this estimate of possible gain from advertising and promotion: \$100 million spent per year for 10 years might build up food demand by 1 percent.

Limited demand growth might come from improved quality, too. Lean cuts from meat-type hogs would likely sell more pork. Such gains come slowly.

In the case of milk and eggs, most of the gain from improved quality is probably already realized.

Nonfood uses: A major technical breakthrough of some sort is required before this field shows great promise.

Agricultural products could be used more widely in industry—at a price. For example corn can be turned into alcohol. But it is much cheaper to make it from gas, air, and water. Corn price would have to sell below 50 cents a bushel to become competitive.

There is limited possibility for new crops with industrial uses. Most of these are grown outside the Corn Belt.

While research aimed at new uses for farm products is going forward, research on synthetics develops even faster. In fact, efforts to find new industrial uses for farm products are hard pressed to maintain current levels of use.

Exports: This holds the most promise of the four areas for expanding demand. But significant results must come in the face of real obstacles.

Agricultural exports have been pushed artificially high by subsidized export programs. This is a source of friction with friendly nations which share the export market. Here's why:

If Iowa hog producers raised 20 percent more hogs, hog prices in the whole Nation would suffer. Much the same thing happens in the world market when our exports are increased.

Export demand might be bolstered somewhat by careful attention to quality. And by gearing production more closely to the desires of particular foreign countries. But at best these gains will be small.

Even giving away surplus food is extremely difficult.

Other exporters argue that this replaces part of the cash export market.

Rulers of nations with people accustomed to hunger prefer not to chance short term food assistance. The shift back to hunger from adequate diets can produce riots and overthrow governments.

This thought, however, leads into one possible way to increase exports. We could tie long term food commitments to a program of economic development for hungry nations. In this way, we stand to export more food and develop stronger allies in the cold war.

Such moves are so vital in international relations and national security that the agricultural adjustment aspect becomes a minor consideration.

None of the above possibilities hold an immediate answer to our farm problem. Even combining the practical programs from each of the four areas promises to use up only about half of our annual agricultural surplus.

This does not mean that we should in any way neglect our effort at demand expansion. But it does leave one point clear:

We must turn to supply control for an early solution to the farm problem.

Variety of Entertainment Marks Oregon's Centennial Celebration

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. NEUBERGER. Mr. President, residents of the State of Oregon are celebrating the occasion of our State's 100th birthday with the same verve and enthusiasm which their pioneer predecessors devoted to its development. The spirit of Oregon's centennial observance was well captured by travel writer Horace Sutton in an article in the August 2, 1959, issue of the Washington Post and Times Herald entitled "A Vast Blast in Century-Old Oregon." I ask unanimous consent that this account be printed in the Appendix of the Record. I hope that Mr. Sutton's sprightly comments will stimulate Members of Congress and citizens of other States to travel to Oregon this year and join us in this gigantic birthday party.

There being no objection, the article was ordered to be printed in the Record, as follows:

A VAST BLAST IN CENTURY-OLD OREGON (By Horace Sutton)

PORTLAND, OREG.—They're celebrating the first 100 years of statehood with a 100-day wing ding up here in lumberland. The hangover ought to last for 3 weeks.

This is probably the biggest place anybody ever threw a party in. They're using the whole State. Up in Banks, Oreg., the celebration includes an international muzzle-loading turkey shoot and buffalo barbecue, whereas over in Fossil the citizenry is staging an international parimutuel porcupine race.

Both a 70-year-old lady and a pack of covered wagons left Independence, Mo., last April following the Oregon Trail used by the original settlers to get to the homeland. So far the lady is ahead of the wagons.

The whole town of Redmond has put up a false 1849 front and every Saturday everybody in the place dresses up in early Oregon. The effect ain't exactly new Dior.

So many Oregonians have grown centennial beards and mustaches that there has been a run on mustache wax. Some Portland stores hang out big signs when new stocks of handlebar paste come in.

Naturally, the biggest do is being done in Portland City where the burghers are staging a giant 100-day fair. On view are live Indians, live Bulgarians and a real live living room with purple carpet on the ceiling. Also performing seals, performing cowboys and the Takarazuka Ballet from Japan.

The Chicago World's Fair had Sally Rand, New York had Gypsy Rose Lee, but Portland's got a talking transparent lady. What she shows would make Sally blush. And besides, her gall bladder lights up. The lady talks, turns and comes from Cologne, Germany. She cost \$12,000, plastic transparent ladies coming a bit higher than those you can't see through.

Spread over a 65-acre layout on the edge of the Columbia River just outside Portland, the Centennial Exposition will run through September 17. Lumber being the biggest payroll in the State it is no wonder that the centerpiece of the fair is the Forest Products Pavilion. The building is seven hyperbolic paraboloids tacked together and looks like the entrance of next year's Miami Beach Hotel.

In front is a way-out kiddie's wooden playground the likes of which no square kiddie ever saw before. Inside is a free wood sculpture called the Monarch that is pretty fair out, too. Nearby, Chief Lelooska, a 300-pound Indian, is spending the summer carving a gigantic totem pole for the State. They make everything out of wood here except nickels.

The Hall of Religious History is encased in a hall of cornea-rupturing design known as a decahedron. Although it resembles a surrealist tepee, it is really a shaft of wheat in the minds of many, and has become a symbol of the exposition.

Every hour on the hour a shoot-out erupts in the frontier town, with badmen robbing trains, cowboys falling off buildings, marshals shooting hustlers and villains ending up in jail. In its more peaceful intervals the can-can girls wiggle over at the Golden Nugget. A saloon called the Pink Garter sells pink lemonade, and the Flap Jack House flips sour dough pancakes.

Umatilla Indians have set up an encampment of a score or more tepees. Bear hides stretch in the front, clotheslines are stretched in the rear and any time you can see the Indians parading around in their old tribal jeans. The Umatillas dance twice a day and there is as well a Hall of Fame of such famous Indians as Fish Hawk, Willie Wokatsle, and Poker Jim.

Many of the exhibits are on view inside an 11-acre building—the second largest barn in the country after the Pentagon. Tucked away in this preserve, which is approximately the size of Rhode Island, is a pint-sized Brussels Fair, with exhibits on hand from 23 foreign nations.

Much to the surprise of the centennial planners, they include displays from such new nations as Ghana and Morocco and from such unexpected entrants as Yugoslavia and Bulgaria. The Bulgars are showing everything from wine to soccer balls all laid out around a fountain that spritzes rose water, no less.

In case anyone is curious what the future has in store for Oregon during the next 100 years, there is a house of ideas on hand.

Pressing for Flying Saucer Inquiry

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include today the first of three articles by the well known and highly respected commentator, Mr. George Todt of the North Hollywood (Calif.) Valley Times.

Mr. Todt's subject, "Flying Saucers," is one that has held public attention for several years. It has drawn the interest of many of our colleagues also. It has become a very controversial subject and reaction to it runs the emotional gauntlet through humor, fear, and a healthy desire for more information and knowledge. We are indebted to Mr. Todt for his penetrating analysis of this matter:

PRESSING FOR FLYING SAUCER INQUIRY

The drive for open hearings in Congress relative to the flying saucer mystery seems to be gathering momentum these days.

According to the June issue of the U.F.O. Investigator, publication of the National Investigations Committee on Aerial Phenomena (NICAP, 1533 Connecticut Avenue NW., Washington, D.C.; Maj. Donald E. Keyhoe, director), many highly regarded solons on Capitol Hill have expressed serious desires to get to the bottom of the controversial matter.

"There is little doubt," said Senator STUART SYMINGTON, former Secretary of the Air Force, to a NICAP affiliate in New York City recently, "that the American public has sound reason for being confused about the existence and nature of these phenomena. I am certain it would be in the interest of public understanding if a current and objective evaluation of this situation were issued."

"The public should be given all information which would not adversely affect our national security. There are undoubtedly some objects observed directly and on radar-scope which are not subject to positive analysis."

Prior to this, Senator SYMINGTON had urged the Senate Space Committee, according to the U.F.O. Investigator, to make a careful study of the UFO subject. A decision on hearings is still pending.

The interesting publication also listed statements of other prominent Members of Congress made to NICAP board members, advisers, affiliates, or individual members. Here are a few samples:

Senator BARRY GOLDWATER, of Arizona, himself a jet brigadier general in the Air Force Reserve: "Flying saucers, unidentified flying objects or whatever you call them—are real. . . . The Air Force has a project to investigate these reports, but when you ask about them they clam up."

Senator LEVERETT B. SALTONSTALL, Massachusetts: "As a member of the Senate Armed Services Committee, this is a problem in which I am deeply interested. . . . We must consider the genuine security necessities, as I am sure you appreciate, but I think there are many cases in which more information should be made available to the public."

Senator GEORGE SMATHERS, Florida: "The subject of flying saucers is one in which we all share a great interest."

Representative THOMAS L. ASHLEY, Ohio: "I share your concern over the secrecy that continues to shroud our intelligence activities on this subject, and I am in complete agreement with you that our greatest national need at this time is the dissemination of accurate information upon which responsible public opinion can be formulated."

Representative WILLIAM H. AYRES, Ohio: "Congressional investigations have been held and are still being held on the problems of unidentified flying objects. . . . Since most of the material presented to the committee is classified, the hearings are never printed. When conclusions are reached, they will be released, if possible." (NICAP note: This confirms our claims of official secrecy. Our goal is the holding of open congressional hearings.)

Representative DANTE B. FASCELL, Florida: "There are many areas where unrealistic policy keeps vital information from the American people. Certainly, accurate information concerning so-called unidentified flying objects, within the proper bounds of national security, should be made available immediately to the American public."

Representative FRED MARSHALL, Minnesota: "There has been growing interest in the release of military information on unidentified flying objects. . . . The subject has been discussed with appropriate committees of the Congress."

Representative WALTER H. MOELLER, Ohio: "I cannot help but feel that there may be some justification behind some of the UFO reports. . . . I have every confidence that the American people would be able to take such information without hysteria. The fear of the unknown is always greater than fear of the known."

Representative RALPH J. SCOTT, North Carolina: "I quite agree with you that the general public should be allowed information thus far known about flying objects. . . . If this information could be presented to the American public in such a way as to appeal to reason, and not to emotion, I think it would be a good thing."

One Congressman who may allow his name to be used later, stated as follows according to the U.F.O. Observer:

"The public is not getting the straight story. We (Members of Congress) are told one thing in closed-door sessions. Then the public is told something entirely different."

What is the real story behind the flying saucers, anyway?

Statement by Dr. Spencer Smith, Jr., Before the Senate Subcommittee on Flood Control and Rivers and Harbors

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, August 3, 1959

Mr. MORSE. Mr. President, one of the most able leaders of the conservationists in the United States is a professor at the University of Maryland, Dr. Spencer M. Smith, Jr. He is secretary of the Citizens Committee on Natural Resources. Recently, he testified before the Senate Subcommittee on Flood Control and Rivers and Harbors. His testimony was so able that I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY DR. SPENCER M. SMITH, JR., SECRETARY OF THE CITIZENS COMMITTEE ON NATURAL RESOURCES, BEFORE THE SUBCOMMITTEE ON FLOOD CONTROL, RIVERS AND HARBORS OF THE SENATE COMMITTEE ON PUBLIC WORKS, JULY 23, 1959

Mr. Chairman, I feel privileged to appear before you on behalf of the Citizens Committee on Natural Resources, an organization devoted to conservation in the public interest and composed of some of the most outstanding conservationists in the country. We appreciate the opportunity of placing our views before you and members of this committee.

We should like to indicate how we feel the present Federal antipollution law would be changed by the enactment of S. 805 and H.R. 3610. Under the present measure, the Federal Government will pay 30 percent, or \$250,000, whichever is the lesser, to the individual States for the construction of sewage treatment plants. The proposed measure would increase the amount of Federal payments to \$500,000 and would allow communities to build joint projects. The effect of the latter would double the amount normally authorized per project, allocating it to each community as if there were two separate projects.

In addition to this, the present proposal would reallocate the funds which States have not used or requested. Such funds would be reallocated by the Surgeon General to other States, thus providing increased funds to those States which have a greater need for funds than their original allotments. The present legislation authorizes \$50 million per year, or a total amount of \$500 million for 10 years. The proposed legislation would double this amount, providing for \$100 million a year for 10 years, or a total of \$1 billion.

It would be foolish for us to reiterate the expert testimony showing the great need for this legislation. The logic of the situation, however, should offer sufficient testimony to the effect that a nation such as ours cannot expand its population, its industry, its general growth in almost every dimension without effecting a very great demand for water, and without polluting water as a result of such extended uses. Hydrologists and other water authorities estimate that imperfectly treated sewage has been placed in streams and rivers from cities alone in the equivalent of 15 million persons. Prior to the present Federal Water Pollution Control Act, every indication pointed to the fact that pollution was increasing at an increasing rate. The remedial efforts under present law have kept us about even during the last few years. Unfortunately, it has not been large enough to make any significant inroad on the backlog of facilities that are needed, and our present efforts will start to fall behind the new onslaughts.

Public health officials reported by a majority of 82 percent in favor of the current Federal sewage treatment plant construction but indicated that the current and sustaining need was of greater proportions. In addition to this, the President's own Water Pollution Advisory Board has approved doubling limitations on individual grants as well as the reallocation of unused funds. Further, Gen. J. S. Bragdon, the President's own adviser for public works, has stated:

"Most important of all, our rivers will have to be clean and adequate treatment facilities installed to prevent upstream pollution. To accomplish this job, we need almost 8,000 municipal plants, and in all, some 17,000 facilities, public and private, to insure that all of the potential sources of pollution are adequately controlled."

We are saddened by the fact that the administration has not seen fit to heed its own expert testimony. Even if such expert testimony were not available to the committee, the many personal contacts with groups interested in water use and water supply, recreational, industrial, municipal, agricultural—all highly interested in the preservation and utilization of water—give resounding support to an enhanced program to clean up rivers and streams.

Not within our experience of resource questions has a program come to our attention that is as universally and unanimously acclaimed among our own people as is the measure before you. It might well be said that if the program has such overwhelming approval by these groups, why has its original enactment been so difficult, and, also, why has there been such difficulty in obtaining appropriations for carrying out the most minimal program in terms of the needs?

When the matter of pollution control was before this committee in the last Congress, only two supporters of the administration came forward to oppose this legislation. They were the National Chamber of Commerce and the National Association of Manufacturers.

The critics of the present measure state that some cities would build plants if it had not been for Federal funds being made available to them. Hence, they claim Federal funds have, in reality, caused a slowdown in the actual building of sewage treatment plants.

Their second argument is that this problem should not come to the attention of the Federal Government, but should be a matter for the individual States and localities. The arguments supporting States rights in general is adaptable here, i.e., there is too much centralization in Washington—we must keep most of the Government close to the grassroots, etc. While these are the arguments offered in opposition to the Federal grants-in-aid to the States, it should be remembered that many of these large business organizations are heir to large tax bills. Unless it can be pointed out to them that expenditures of tax funds are going to be beneficial to them directly, they quite often oppose any such expenditure on general principles. In fact, it might be said that some have a fetish for economy which quite often overshadows any public welfare that may result from such a venture.

It is also suggested that too much financing and too much vigor on the part of the Federal Government in cleaning up streams and rivers may prove of considerable embarrassment to some of the industrial users who are doing a good bit of the polluting. Since time immemorial large industrial interests, especially those in business in many States, have always felt that they could rebut arguments to effect their control or repel local laws attempting to control them when their own activities were interstate, and this has been one of the strongest motives for large corporate enterprise in championing State rights.

The merits of the argument against the proposed changes seem hardly compelling. The Federal funds have increased the supply of sewage treatment facilities available to the public. If, as the opponents contend, the making of this money available has caused a reduction in the expenditure for these facilities, the record does not bear them out. When this committee was considering H.R. 11714 in the last Congress, a measure much like the one the committee now has before it, I placed in the record with my testimony a comment on pollution control which appeared in the Engineering News Record of August 8, 1957. It posed the question, "Had grants in aid stimulated construction?" They responded, "The States say 'Yes,' the municipalities say 'Yes,' the figures say 'Yes.'"

More recently, the contract awards of 1957 rose to \$351 million and at present are in the vicinity of about \$390 million in 1958. The 1952-56 average was about \$222 million. Additionally, at least 35 States experienced their highest treatment plant construction levels in 1957-58. It would seem that the argument that this caused a reduction in local and State moneys for construction is significantly rebutted, for the result has been quite to the contrary. Some have argued that the States would have done this anyway, and perhaps by a greater amount, but the argument is even more compelling against such logic, since they had never done so before, and it would be a little difficult to try to determine how they had planned to do it in the future.

When people contend that it is the problem of the States and municipalities alone, one has to ask the question, "How have they been doing?"—"Why haven't they solved it?" and "What assurance do we have that they will solve it in the future?" If they do not solve it in the future, are we in a position to say that this is simply their misfortune, or is the national interest in national health involved?

There are many good reasons why the States and municipalities have been doing poorly. First of all, the overwhelming economic differences between States creates a situation where pollution may be the worst in the very State that has the least economic base to support remedial measures. The contrary may also be true. The States that have the most effective economic and tax base may have minimal problems of this type. It is not enough to say, as some have, that all that is needed is a strong will, and that if people are interested in doing something about it, they will do something about it.

Unfortunately, if they do not do something about it, for whatever reason, the effect upon the public welfare is certainly adverse.

Most States are eager to effect some sort of remedial program that can effectively curb the pollution in their streams and rivers. It must be remembered that the States and municipalities have limited financial liability, hence, the competing aspects of other moneys further complicates their problem of floating loans for sewage treatment plant construction. Anyone who had been on a door to door canvass to raise money or get subscriptions for school bonds is aware of the difficulty that municipalities have, as well as the States, in obtaining sufficient bond subscriptions for any municipal capital structure.

Further, the geographic nature of the problem is one which belies the statement that this is a local or sectional problem. Many rivers and streams run through many different States, and the failure in any one of them to take action to build the necessary sewage treatment plants can very well vitiate the efforts of the others. Thus, economically, financially, geographically, there appears to be no basis whatsoever for the contention that this most pressing problem is not national in scope and should be left to the inabilities of the States. The States and municipalities have proven again and again that they cannot handle the problem, or the problem would not be in its present egregious State and would not be called to the attention of this committee. No one is able to give us any assurance that it would be handled in the future.

Certainly special or parochial cases do not argue convincingly against the measure. There is no question that some people may be able to point to successes in some States without Federal aid. The fact that some States and some municipalities can show a good record in sewage treatment construction does not mean that every other State or area is capable of it.

We are somewhat shocked to hear of the administration's attitude in this matter. We have been told in almost every state of the Union speech since the President's inauguration of the necessity of partnership between the State, local and Federal Governments, as well as between the Government and private enterprise. Certainly, the present measure meets the criteria of the President's proposal.

Thus, the program appeared to have the blessing of the administration, more particularly of the President, because of its partnership features. To learn at this late date that the Federal Government is now abandoning its efforts and retreating to a position so totally inept, is to abrogate its responsibilities in the greatest measure.

One does not have to be clairvoyant to see the possible attitudes and practices that will occur if H.R. 3610 is defeated. The catastrophic condition of our rivers and our streams, of our water supplies, of the needs of industry and others, will be brought to the Nation's attention and a crash program will be effected. Everyone knows the hazards of a crash program. One hundred dollars is spent as one dollar under such conditions. The amount that could have been expended, if properly timed, prudently planned, and expeditiously undertaken, will be far less than that expended in the sure-to-arrive emergency. H.R. 3610 represents a conservative and sober look at the problem. It provides basic remedial measures for the present circumstance. We think that anything less than H.R. 3610 will be a major setback to the entire water supply problem of the United States.

Keenotes

EXTENSION OF REMARKS OF

HON. ELIZABETH KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mrs. KEE. Mr. Speaker, under leave to extend by remarks in the Appendix of the RECORD I include copies of my newsletter which was released today:

K-E-E-N-O-T-E-S

(By Representative ELIZABETH KEE)

The House has approved an appropriation bill of \$3.1 billion for the mutual security program. The amount voted by the House represented a reduction of about \$700 million below the amount requested by the President.

The President expressed disappointment over the size of the House reduction. He has even threatened to call a special session this fall if Congress refuses to vote as much money for foreign aid as he deems necessary.

There is growing dissatisfaction with the foreign aid program in Congress. Shortly before the House voted on the appropriation, reports were made to Congress which indicated that part of the foreign aid money is being spent in a slipshod, wasteful manner.

As usual, the people in charge of the program tried to scare Congress with assertions that any reduction in the amount of money voted would bring about an extension of communism. This is an old story but it failed to impress Congress this year.

Many supporters of the program believe the reductions will serve notice on the administration that wasteful practices must end. These Members believe that if less money is available, the administrators will

have to be more careful in handling the program.

I supported reductions in the program. The \$700 million which the House cut from the appropriation will go a long way in bringing the budget into balance.

COAL RESEARCH BILL PASSES

The Senate has passed a coal research bill similar to legislation passed earlier by the House. This is good news for coal areas such as West Virginia.

If the President signs the bill, we can begin a program to find new and expanded markets for coal, one of our most important basic resources. The country will be seriously affected if this great industry, employing hundreds of thousands of people, is allowed to get in serious trouble.

The industry itself is aware of the need for more research. It is spending a large sum each year in developing new uses for coal and in improving production and distribution methods. But more research is urgently needed and the coal research bill offers a sensible plan, supported by the entire industry, for achieving the type of program that will bring about beneficial results.

GAS TAX INCREASE DEFEATED

The House Ways and Means Committee has turned down efforts to increase the Federal gasoline tax by 1½ cents a gallon. Instead, the committee proposes to finance the interstate highway program by issuing \$1 billion in bonds, to be retired by earmarking a part of the taxes now paid by automobile users. This makes good sense. An increase in the Federal gasoline tax would have been a serious mistake. It is significant that more than 30 Governors opposed the increase. The committee offers a sensible plan for keeping the highway building program going.

Home Rule for the District of Columbia

SPEECH

OF

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. GIAIMO. Mr. Speaker, several months ago this House passed the necessary legislation which later resulted in Hawaii becoming a State of this great Union. I voted in favor of statehood for Hawaii and I can honestly say that it was one of the most exciting and rewarding days of my life to have participated in this great body on a matter which resulted in the extension of our system of statehood to a former Territory. It was a pleasure and gratification which does not come to many persons—for that I am grateful.

However, when I look at the plight of the disenfranchised Americans who live in the District of Columbia; when I see the lack of interest in District matters on the part of some of my colleagues; when I see this great body, rightfully concern itself with affairs of the United States and of the world, having to also concern itself with the local problems of the District of Columbia, then my pleasure and gratitude on the accomplishment of statehood for Hawaii becomes somewhat diminished.

This is the Congress of the United States not the common council of the District of Columbia. It is fitting and

proper that we should concern ourselves with national and international problems and understandable that there might be a lack of interest on the part of some of us in problems of the District of Columbia. These problems would best be handled by a local District of Columbia governing body elected by and directly responsible to the inhabitants of the District of Columbia.

I can see no sound reason for failing to restore self-government to the inhabitants of the District. I can see no good reason to continue to deny to the Americans living in the District the rights and privileges of American citizens in the States. Let us put an end to this inferior status for the District of Columbia inhabitants.

My own State of Connecticut recognized the inequities which exist in the District of Columbia and our general assembly on May 28, 1959, adopted a joint resolution memorializing Congress to sign a discharge petition to bring a bill granting home rule to the floor of the House of Representatives in the event such bill be bottled up in the several committees of the House.

I urge the signing of this discharge petition now on the Speaker's desk and I urge the adoption of legislation designed to return to the citizens of the District of Columbia the right to conduct their own affairs and their own local government.

Resolutions Adopted by the Western Association of State Game and Fish Commissioners

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD certain resolutions adopted by the Western Association of State Game and Fish Commissioners, 39th annual conference, Portland, Oreg., July 1, 1959:

RESOLUTION 4, U.S. FOREST SERVICE OPERATION OUTDOORS, PART II

Whereas the U.S. Forest Service Operation Outdoor program as submitted to Congress set up certain necessary annual appropriations; and

Whereas the first appropriation for the fiscal year 1957 was reduced substantially from the amount considered necessary under the proposed program with the assumption that the first year operations would not permit full program activities; and

Whereas the Bureau of the Budget for fiscal years 1959 and 1960 has not recommended to Congress, and Congress has not appropriated, funds equal to the 1957 appropriation; and

Whereas there is an unprecedented increase in the use of the national forests for recreation, thereby aiding the economy of the Nation, resulting in a great national need for appropriations under the Operation Outdoors program in excess of those

originally contemplated: Now, therefore, be it

Resolved by the Western Association of State Game and Fish Commissioners, That the Bureau of the Budget recommend to Congress increased appropriations for the fiscal year 1961 at least equivalent to those originally contemplated; be it further

Resolved, That the U.S. Forest Service request and the Bureau of the Budget approve substantial funds to initiate part II, the wildlife phase of Operation Outdoors.

RESOLUTION 5, PROTESTING THE BOTTLENECK OF LAND WITHDRAWAL UNDER THE COORDINATION ACT

Whereas the need exists to speed up the processing of land withdrawals for fish and wildlife conservation purposes; and

Whereas there is a definite obligation on the part of certain State and Federal agencies to meet the public's growing need for recreation; and

Whereas such needed withdrawals of public domain lands will not exclude grazing, but emphasize the multiple use concept; and

Whereas since there is a backlog of withdrawal applications that has piled up during the past 5 years: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners does hereby strongly urge the Department of the Interior to see that the Bureau of Land Management is given the needed adjuncts necessary to speed up the processing of all applications for withdrawals of public domain lands submitted under the Coordination Act or in accordance with the desires of the individual States concerned.

RESOLUTION 7, WATER POLLUTION CONTROL

Whereas Public Law 660 of the 84th Congress included the sewage treatment construction grants program authorized thereby, has resulted in substantial progress in the abatement of stream pollution in the United States; and

Whereas studies carried out by State and Federal agencies indicate that a doubling of the construction grants program would result in the virtual elimination of sewage pollution in this Nation within a decade: Now, therefore, be it

Resolved, The Western Association of State Game and Fish Commissioners endorses the funds included by the Senate Committee on Appropriations for the fiscal year 1959-60 to facilitate this program and in addition H.R. 3610 as passed by the House of Representatives on June 9, 1949, urges the Senate and House to act favorably upon this legislation and requests the President to sign it into law; be it further

Resolved, This association commends the Honorable Arthur S. Flemming, Secretary of the Department of Health, Education, and Welfare, upon his efficient administration of Public Law 660 and especially upon his vigorous enforcement of the provisions of the law relating to the abatement of interstate water pollution.

RESOLUTION NO. 8, FEDERAL RESERVOIR LANDS

Whereas construction agencies, including the U.S. Army Corps of Engineers and the Bureau of Reclamation, are contemplating the construction of several dams on the Columbia River watershed; and

Whereas it is necessary for them to negotiate with landowners or land agencies to secure the right to flood necessary land; and

Whereas as a result of the activities of the construction agencies adjacent lands will increase in value because of the increasing demand for access to recreational areas: Now, therefore, be it

Resolved by the Western Association of State Game and Fish Commissioners, That all construction agencies be required to acquire necessary land for authorized im-

poundments in fee simple title rather than simply a flowage easement; and be it further

Resolved, That such lands adjacent to these impoundments be assigned to conservation agencies to be managed in the best interests of the public generally and fish and wildlife in particular; and, be it further

Resolved, That setting aside of tracts for summer homesites be considered of secondary importance to access and utilization in the public interest; and be it further

Resolved, That in addition where the flowage easements are insufficient to provide adequate lands for recreational use, that the Western Association of State Game and Fish Commissioners hereby endorses H.R. 6198 which will make provision for the allocation of certain project costs for land acquisition and fish and wildlife improvements.

RESOLUTION 10, PUBLIC LAND MANAGEMENT AND ACCESS PROBLEMS

Whereas the public domain of the United States, including some 470 million acres in the Western States and Alaska, encompass and produce natural resources of vast economic and social value to all Americans; and

Whereas overgrazing, range trespass, soil erosion, inadequate fire protection, and other land abuses are known to persist on the public domain in many areas, to the detriment of the local economy and the public welfare; and

Whereas access for hunting, fishing, and other legitimate uses is denied the public in many places by the owners or operators of adjacent private lands, and preliminary estimates indicate as much as 14 million acres of Federal lands are so closed to the public in the Western States; and

Whereas the Bureau of Land Management is underfinanced and understaffed for its highly important task of managing and protecting the public land resources under its jurisdiction, and the Taylor Grazing Act and other laws under which the Bureau operates are believed to be outdated and deficient in other respects: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners commends and endorses the proposal by Senator JAMES E. MURRAY, chairman of the Senate Committee on Interior and Insular Affairs, that the Department of Interior prepare a comprehensive and long-range program for the conservation, rehabilitation, and development of the lands under the Bureau of Land Management, and further endorses the proposal of Senator RICHARD L. NEUBERGER calling for a Senate committee staff study of problems of public access to the public lands; be it further

Resolved, That this association recommends that appropriate committees of Congress initiate studies leading to the revision and strengthening of the Taylor Grazing Act and other laws relating to the conservation and multiple-use management of the public domain lands.

RESOLUTION 12, AMENDMENT TO FEDERAL POWER ACT

Whereas the Federal Power Act fails to provide adequately for the conservation of fish and wildlife and related resources in the licensing of hydroelectric dams, as evidenced by the licensing of dams on the Cowlitz River in Washington and the Deschutes River in Oregon, against the considered judgment and over the protests of Federal and State conservation agencies, and as further evidenced by the recommendation of the Federal Power Commission that a high dam be built at the Nez Perce site on the Snake River: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners endorses the principles of S. 1420 as introduced in the 86th Congress by Senator RICHARD L. NEUBERGER and urges the Congress to enact such legislation.

RESOLUTION 13, ELIMINATION OF ACP SUBSIDIES FOR MARSH DRAINAGE

Be it resolved, That the Western Association of State Game and Fish Commissioners reaffirms its opposition to Federal subsidies which encourage the drainage and destruction of valuable and irreplaceable waterfowl habitat and requests the Congress to enact corrective legislation incorporating the principles of the Reuss-McGovern bill, H.R. 3909, as introduced in the 86th Congress; and be it further

Resolved, That pending the passage of such corrective legislation, this association urges the Secretary of Agriculture to revise the regulations and guidelines governing the administration of the Agricultural Conservation Program Service in such a way as to be effective in discouraging the drainage of potholes and marshes that are valuable for waterfowl production.

RESOLUTION 15, PESTICIDES RESEARCH

Whereas the use of chemical insecticides, herbicides and fungicides continues to grow in volume on public and private lands of the United States; and

Whereas a complex multiplicity of new chemical pesticides are appearing on the market and their use by public agencies and private individuals is promoted and often initiated without adequate knowledge of the immediate and long-range effects upon forms of life other than the target organisms: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners endorses and urges enactment by the Congress of H.R. 5813, by Congressman LEE METCALF, or S. 1575, by Senator WARREN G. MAGNUSON, proposing to amend the Pesticides Research Act of 1958 by increasing the authorization for appropriations to \$2,565,000 annually.

RESOLUTION 16, EXTENSION OF THE CONSERVATION RESERVE

Whereas the problem of burdensome agricultural surpluses continues to grow; and

Whereas the acreage of land devoted to production of surplus crops is greater than presently needed; and

Whereas the State game department programs are presently receiving benefits to wildlife from croplands being retired from cultivation under the Soil Bank Act: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners urges the Congress of the United States to pass legislation extending the Soil Bank Act program beyond 1969 and appropriate adequate funds for increasing the acreage eligible for being placed under conservation reserve contracts.

RESOLUTION 17, WILDLIFE DISEASE LABORATORY

Be it resolved, That the Western Association of State Game and Fish Commissioners endorses the legislation proposing to establish a National Wildlife Disease Laboratory as introduced by Senator GORDON ALLOTT (S. 2086), by Congressman WAYNE N. ASPINALL (H.R. 7455), and others, and requests the Congress to act promptly and favorably upon this proposal.

RESOLUTION 18, SURPLUS FEDERAL PROPERTY FOR FISH AND WILDLIFE MANAGEMENT

Be it resolved, That the Western Association of State Game and Fish Commissioners endorses the legislation proposing to authorize the donation of suitable personal property declared surplus by the Federal Government to the States for fish and wildlife management purposes, and urges the prompt enactment by the Congress of H.R. 7190 as introduced by Congressman LESTER R. JOHNSON, or S. 2103 by Senator ALAN BIBLE, or a similar bill to achieve this purpose.

RESOLUTION 21, ENDORSING CREATION OF ARCTIC WILDLIFE RANGE

Whereas there has been introduced in the Congress of the United States a bill calling for the creation of an Arctic Wildlife Range: Now, therefore, be it

Resolved, That the Western Association of State Game and Fish Commissioners approves Bonner's bill No. H.R. 7045, and requests its immediate passage; be it further

Resolved, That the Honorable HERBERT C. BONNER, Congressman from North Carolina, and Interior Secretary Fred A. Seaton be forwarded a copy of this resolution; and be it further

Resolved, That the State of Alaska retain administration and regulatory control over resident game species.

the result of that was inflation. To counteract inflation we have these repeated proposals, like the present one, for some form of price-wage control even though experience suggests it is impossible to control inflation merely by trying to control some of its symptoms.

A spectacular current example of Government guidance is the farm program. No segment of the economy has been more wrapped up with Washington, and nowhere has the defiance of all reason been more bizarre.

Other countries' experience is also instructive. Britain in the postwar Socialist era suffocated under official rules, regulations, and bureaucracy; recovery began when the Socialists left power. West Germany's miraculous recovery started when the people were permitted to junk their inflated currency and wartime and occupation economic controls. Russia's economy, one of the most guided (regimented), is also the most unbalanced among industrial nations.

Surely not all of this can be coincidental. Why does government, time after time and place after place, prove such a poor guide?

When people work without this guidance they certainly can make mistakes, but the mistakes affect themselves and relatively few others. Set up a Ministry of the Economy, however, with a Bureau of Steel, a Department of Automobiles, a National Refrigerator Agency, and so on and on, and the mistakes will be colossal, for they will affect all those in an industry and all those in any way related.

Moreover, the mistakes will be inevitable. Government officials cannot run an economy well. It's not so much that they often lack experience as that they must interfere with and disrupt the marketplace; to do so is their excuse for existence. They substitute their judgment for the collective judgment of millions of individuals, and it just is no substitute.

Many of the bureaucrats' judgments will not even be economic at all but political because they are political creatures subject to political pressures. For that and other reasons, a Government-guided economy is bound to be an inflationary economy. Inflation's appeal to politicians is notorious, and quite understandable since they can almost never raise enough taxes to do all the public investment and what not they want.

Economists who clamor for Government guidance are echoing Lord Keynes' misplaced faith in officialdom; they naively assume that bureaucrats, once an economy is delivered into their hands, immediately become saints and repositories of total wisdom.

And this is also something worse than naïveté. It is not only saying they know better than Jefferson, although that is saying a good deal. It is saying they know so much they can reject the guidance of history itself.

No Room at the Inn

EXTENSION OF REMARKS

OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the July 29 Washington Post, entitled "No Room at the Inn":

No Room at the Inn

Morality, Jesus taught, is kindness to the weak. Yet in the name of morality, the well-fed and comfortable men who have been empowered to direct the affairs of the Alexandria Housing Authority have decided to throw out into the streets a child of 14 because she has become pregnant out of wedlock—because, as they no doubt like to put it, she has sinned. The irresponsible behavior of the girl's distraught father has no real bearing on the case and cannot be a valid excuse. We wonder whose sin will seem the greater in the eye of Heaven—the little girl in whose body a new life has been conceived because she was ignorant or impetuous or imprudent, or the moralists of Alexandria in whose morality there is no room left for charity or compassion.

The Moment of Truth

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. ROBISON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of August 3, 1959:

FROM POLAND'S HEART

Americans must be deeply moved by the incredible reception the people of Warsaw gave Vice President Nixon yesterday. In the heart of Communist-ruled Eastern Europe, in a nation with Soviet troops on its soil and with Soviet troops on its eastern and western borders, hundreds of thousands of people turned out spontaneously to cheer and throw flowers to the Vice President of the United States.

This happened in a city which but a few weeks ago gave only a tepid welcome to Premier Nikita S. Khrushchev for whose reception the Polish Government had mobilized all its resources. Once again truth has shown itself to be stranger than fiction.

No one planned it that way, but yesterday's outpouring of friendship from Poland's heart toward our country symbolized by Mr. Nixon was the most effective answer possible to Premier Khrushchev's gibes at our celebration of Captive Nations Week.

The Polish Government is a member of Moscow's Warsaw Pact. Wladyslaw Gombulka and his fellow leaders have time and again associated themselves with Khrushchev's denunciation of American "imperialism," and his threats against the West's position in Berlin. For almost a decade and a half the Polish people have been indoctrinated with Communist propaganda from almost every possible organ of education and communication. But yesterday the people of Warsaw gave Mr. Nixon what may well have been the warmest welcome an American leader has received in a foreign nation for a decade or longer. The political implications are unmistakable and will be understood by peoples and leaders wherever the facts are known.

At the end of World War II we did not use our power to compel Stalin to live up to his promises of a democratic Poland, but instead permitted him to enslave its people and destroy all public opposition. And almost 3 years ago, in October 1956, we contributed nothing but verbal encouragement to the Polish people as they defied Khrushchev's threats and set a new course, of which Gombulka was then the symbol. Nor have we done anything of crucial importance these

Certain Economists Cry for Controls

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an editorial from the July 29 Wall Street Journal.

This editorial calls attention to the panaceas proposed by several economists—panaceas for a problem which perhaps does not even exist.

The able analysis of their fallacious reasoning is worthy of keen study by all who are interested in our battle against Federal encroachment on individual rights. Such proposals are not in the spirit of America, and in my judgment are textbookish and devoid of the sense of freedom to compete and succeed—or fail:

"We reject the notion that that government governs best which governs least."

A forthright statement, at any rate. The repudiators of Jefferson are seven prominent economists, including J. K. Galbraith and Gerhard Colm, who came out with a report the other day on what should be done to fix up this rickety old country.

For, as the group sees it, the United States today "is a rudderless ship drifting on what is at the moment a rising tide of economic activity. Without a firm policy we will descend again into the trough of economic stagnation and retrogression. . . . The Federal Government is our only instrument for guiding the economic destiny of the country."

The panel offers specifics as well. Among others, proposed price and wage increases would be subject to compulsory Federal fact finding; the Government could say "No" and make it stick. Expansion of investment in the public sector; that is, lots more Federal spending. Studies designed to get away from tight money and high interest rate policies. And other Government action to try to make the economy grow 4 to 5 percent every year.

This is a program for Government guidance all right—and with a vengeance. So it is perhaps pertinent to ask just how good a guide any government is.

In this country we have by now had considerable experience with it. We had the benefit of Washington's guidance (and spending) throughout the thirties, only it didn't guide us out of the depression. We have had guidance in the form of vast public investment and cheap money, and

past 3 years, in which the concessions of the Polish October has been steadily whittled away or abolished. Yet, as Warsaw proved yesterday, the Polish people still see in us the beacon of their hopes for a better tomorrow.

The cynical may argue that nothing really important was changed yesterday. Poland's unenviable geographic position between occupied East Germany and the Soviet Union was not altered by an inch. The harsh realities of the nuclear age which make any talk of liberation by force of arms unthinkable are as terrible this morning as they were yesterday before Mr. Nixon arrived in Warsaw.

But the cynics are wrong; something of great importance was changed yesterday. By their welcome the people of Warsaw destroyed the propaganda campaign which has sought so hard to prove that Communist totalitarianism has won over the people of Eastern Europe so there can be no more talk of captive nations. In 1 hour of truth, as the Nixon caravan rode from the airport to the city, the friends of freedom and democracy gained new courage and new heart, which cannot help but affect profoundly the world political scene.

Enter, Czar Nikita

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. BOSCH. Mr. Speaker, one cannot pick up a newspaper today or listen to a newscast without references to a visit to the United States by Nikita Khrushchev. I, personally, tend to the view that he should not be invited unless and until he has definitely demonstrated that he is willing to forsake his previous arrogant attitude and uses his influence to obtain the release of U.S. airmen and other Americans forcibly held by the Soviet Union or its satellites. I do not believe that we should dignify any visit contemplated by him.

Under leave to extend my remarks, I include the editorial which appears in the August 10, 1959, issue of U.S. News & World Report, which is very apropos:

ENTER, CZAR NIKITA
(By David Lawrence)

Officially the Government of the United States cannot decline to permit any member of a foreign government to come to this country for a visit as a tourist. Nor can the Government in Washington deny our own citizens the right to say what they please to any visitor, whoever he may be. Freedom of speech is the rule in America.

If, therefore, as is being widely discussed, the Soviet Premier comes to the United States, our officials will have to be courteous. But this does not require cheers of applause from the resentful among us who see in Nikita Khrushchev the man who has ordered the murder or exile of tens of thousands of men and women in Hungary, East Germany, and the other captive nations, as well as inside the Soviet Union itself.

A convict who returns to society rehabilitated in mind may or may not be received in his community as an equal. But Nikita Khrushchev would be coming to America unrepentant, arrogant, dictatorial, and without abandoning a single one of his threats to our safety.

The hope of those Americans who favor his trip is that he will become educated about this country and its economic strength as well as its spirit of peacefulness. It is optimistically assumed that, when he gets to know America better, he will lose his misconception of our purposes and will be more flexible in negotiations.

This, however, is a fallacious theory. The leopard doesn't change his spots when he emerges from the jungle. Khrushchev is just another Hitler. He has gotten to be boss of the Soviet Union by trampling over his opposition and by distorting truth. He has threatened to bury the people of the United States under an avalanche of atomic missiles. He has issued an ultimatum to force us out of West Berlin. He has instructed his Foreign Minister to make no agreement at Geneva that substantially alters his previous position. He wants no reunification of Germany. He insists that our troops withdraw altogether from Europe and that we give up our plane and missile bases there.

Some misguided westerners think there is logic in his demands—that we ought not to encircle the Soviet Empire. But they forget that, once our forces withdraw from bases overseas, we cannot instantly get them back, whereas it would take the Soviets just a few hours to send their troops and planes to conquer Germany, France, and Britain.

It is imperative that the United States and its allies maintain their psychological as well as their military position. To yield to Khrushchev means discouragement to the peoples of the captive countries and, indeed, to the hopes of freedom-seeking peoples everywhere.

Why should we yield? To make money out of trade? Khrushchev thinks we are addicted to materialism and that the businessmen of the West place the pursuit of money above all else.

But the Soviet leader is mistaken. While the Allies in the 1930's did allow trade in strategic materials to go on almost to the time of Hitler's attack in September 1939 we shall not make that same error again.

Things have not changed too much with respect to autocratic rule in Russia over the years. In 1951 there was published a translation of a book originally written in 1839 by the Marquis de Custine entitled "Journey for Our Time." It is a journal of his travels in Russia 120 years ago. Walter Bedell Smith, former American Ambassador to Moscow, in an introduction says:

"A change in nomenclature has not altered the character of Russia's rulers or of its institutions. Whether it is Stalin or the Czar, it is still 'the little father' of the Russian people and it is still merciless despotism. . . ."

"The privileged class is today as remote from the mass of citizens as was Nicholas' court. The rank and position of the individual derives from the new Soviet Czar as surely as it did in the days of Nicholas I or in the days of Peter the Great. The ruler continues to be the most powerful and least accessible of all the world's sovereigns. . . ."

"But like his czarist predecessors, he is omnipresent, dominating the lives and thoughts of his subjects in every city, village, and hamlet across one-sixth of the world's surface. In Custine's words: 'All must strive scrupulously to obey the thought of the sovereign; his mind alone determines the destiny of all.'"

Essentially, there is little difference between the Russian Czars of yesteryears and the Soviet Premier of today. Czar Nikita's rule is just as absolute. The people live under a reign of terror, and there is no limit to his tenure. He is the Czar of all the Russias—the Soviet Empire. This now includes the neighboring countries in Eastern Europe, which are kept in a state of subjugation by the presence of Soviet troops.

Yes, if Czar Nikita wants to come to visit our shores, the U.S. Government can only say, "Welcome," in an official sense, but the American people reserve the right to say that no tyrant or murderer can ever be "welcome" in free America.

Poison in Your Water—No. 149

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in the Green Bay (Wis.) Press-Gazette of June 2, 1959, entitled "Chances for Solution to River Odors Slight":

CHANCES FOR SOLUTION TO RIVER ODORS SLIGHT—COMMITTEE HOLDS LITTLE HOPE FOR EAST STREAM AID

The city council's East River water pollution committee almost ran into extinction Monday night when it admitted there was no immediate solution to eliminating the pungent odors that have plagued river area businessmen and residents for the past several years.

The committee was established about a year and a half ago with the purpose of taking action to reduce the odors stemming from the river during the summer months.

Last year about \$3,000 was spent on a liquid chemical intended to counteract the odors. It was unanimously agreed by those conducting the experiment and the persons living and working along the river that the project was a failure.

NO ACTION THIS YEAR

Monday night the group met again, and after 2 hours of discussion, agreed that no action would be taken this year to improve the East River odors.

The only foreseeable improvement is expected from the action to be taken by the three paper mills which are dumping waste products into the East and Fox Rivers. They are Northern, Charmin, and Green Bay Paper & Pulp.

All three have received orders from the State water pollution committee instructing them in various phases of action which will be part of a plan to eliminate the discharge of wastes into the river.

The earliest improvement is expected from Northern, where plans have been made to discharge waste products now going into the East, to lagoons to be built on Northern's property along North Quincy Street.

FED BY PIPES

The lagoons would be fed by a 36-inch concrete pipe extending about 6,000 feet north along Quincy. It would carry the fibrous wastes from the mill to the lagoons where the wastes would settle out and clear water would be discharged directly to the bay. The remaining fibrous wastes then would be dug out and used for fill material.

Green Bay Paper & Pulp Co. has been ordered to show plans on a commercial sized reactor for atomized suspension treatment plant by December 31, 1959, and Charmin Paper Products was ordered to improve facilities for treatment of wastes by July 1, 1960.

The committee indicated no attempt would be made to treat the East River this year, although it heard a report from Karl Mohr, deputy health officer, who told of the

success achieved in other areas through treatment with sodium nitrate pellets.

COST AT \$10,000

However, he said the cost would be at least \$10,000. He noted no money has been budgeted for such a program this year.

Nic Van Roy, representative of the North-side Businessmen's Association, reported on a plan forwarded about 10 to 12 years ago to divert the East River through a 12- by 12-foot sewer into Green Bay. The line would run northward from somewhere in the area of North Baird Street.

Pat Schraufnagel, Madison, a representative of the State water pollution committee, reported that tests have shown that pollution in Fox River is down slightly over the past 10 years.

COMPLAINS ABOUT MILL

George Martin, engineer-manager of the metropolitan sewerage district, complained that one of the biggest violators of pollution control on the Fox was the Kimberly-Clark Corp. paper mill.

He noted that the mill discharges its wastes into lagoons, and when the Fox River water level is high, they're pumped directly from the lagoons to the river without any prior treatment.

The committee agreed to contact the State water pollution committee to inquire why Kimberly-Clark hasn't acted to treat the wastes before their discharge into the river.

N. L. Malcove of Northern reported that five companies along the Fox River will begin to pump oxygen into the river through their power turbines this summer. He said it is expected each plant will add one part of oxygen per million parts of water.

The plan already has been tried on an experimental basis and has proved practicable, he said.

Waste, Secrecy Out of Oversea Aid

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. FEIGHAN. Mr. Speaker, the Cleveland News has long advocated elimination of waste and secrecy in the expenditures of our foreign aid. It is my hope that the House conferees will stand fast and insist upon the House provisions which require elimination of secrecy and waste in the administration of foreign aid.

Under leave obtained, I insert in the Record an editorial which appeared in the Cleveland News July 31:

WASTE, SECRECY OUT OF OVERSEA AID

The House vote on President Eisenhower's foreign aid appropriation bill slashed \$700 million from his \$3.9 billion request—the largest sum since the U.S. aid program was originated—and banned secrecy on our munificent overseas spending.

It did so by means of an amendment which provides that Congress will obtain information on what funds are going to what countries, and in what form, or Congress can halt particular foreign aid.

Various Government administration agencies disbursing our foreign-aid dollars have for years wrapped a cloak of secrecy around outlays. It has been one of the most grievous aid spending plagues, infuriating even the program's defenders. Administrators of foreign aid have constantly refused to give Congress pertinent fact and figures on count-

less projects, economic and military. Considering the wastefulness, bribery, and other maladministration features which have come to light in the program, small wonder the foreign aid disbursers haven't wanted Congress, or the American public, to know the gruesome facts.

The fact that the House cut so deeply under the President's \$3.9 billion request shows that the constant instances of waste and graft revealed in the aid program finally have persuaded Members of Congress the people's money must be protected.

The Nature of the Enemy

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. BOSCH. Mr. Speaker, in my opinion, we can better cope with our enemy when we understand him and what he seeks to do and the methods he uses. The New York Daily News, I believe, is rendering a very valuable public service in running a series of editorials which expose every facet of communism.

Under leave to extend my remarks, I include the second article in this series entitled "The Nature of the Enemy" which appeared in the August 3, 1959, issue of the Daily News:

THE NATURE OF THE ENEMY

Plowing through some of communism's vast and horribly boring so-called literature, you get the impression that Karl Marx dreamed up a highly complex philosophy, and that V. I. Lenin and Josef Stalin made it more so.

Actually, communism—the enemy discussed in this series of editorials—rests on a few simple and easily understood propositions. The pompous language the comrades use is for the purpose of impressing suckers and confusing opponents.

At the core of the Communist doctrine is the belief that government—the state—can plan and direct people's lives, down to the smallest detail, far better and more efficiently than people can plan and direct their own lives.

Admit that, and you have to admit that the people should surrender their liberties to the state, so that it may make them happy and prosperous; and that the state, in its supreme wisdom, should own and operate all industries, businesses, and farms for the good of the people.

Obviously, only a handful of persons in any country can have the super-brainpower needed to run such a gigantic machine of government. Communists everywhere freely admit that they fill this bill.

Haven't they studied the scientific teachings of Marx, Lenin, and Stalin till they know them by heart? What more do you want as mental equipment for a master class that can lead the suet-brained masses around by their collective nose for those masses' own good, while killing anyone who gets in the way?

Another basic Communist proposition is that religion—Christianity, Judaism, Mohammedanism, Buddhism, or whatever—is a complete fraud. The Communists have to maintain this atheist attitude chiefly because they cannot safely admit that there is a Supreme Being blessed with more wisdom than any Red or Red government possesses.

THE COMMUNIST MASTER CLASS

A third Communist dogma is that, until communism takes over the world, all the non-Communist nations will be infested with oppressors (capitalists, kings, nobles, sheiks, sultans, and so on) who will persistently exploit and persecute the people, or proletariat.

The Communist objective is to stir up the proletariat to rebel in every non-Communist country and put the Reds in power—after which, as we'll be seeing in this series of editorials, the proletariat, to its pained surprise, will find itself worse off than it was before.

Add to these basic principles the claim that a Communist world takeover is inevitable—the wave of the future (they say), and you can't escape it, bud, no matter how you may try—and you get a social and economic fighting machine which is bound to go places and profoundly affect human history before it cracks up.

Further, the Communist sales talk to hoped-for Red converts is cleverly worked out.

Communist agitators aim their appeals at every one of the worst human instincts and emotions—envy, avarice, conceit, laziness, gluttony, lust, selfishness, hatred, fear.

Ignorant poor people are assured that, come the revolution, they can virtually quit working and move in on the good jobs, the big houses, the best automobiles, and the prettiest women.

THEY'LL PROMISE YOU EVERYTHING

Poor intellectuals are told that they will be brainy philosopher-kings in the Communist state.

Timid wealthy people are urged to contribute to the Communist Party in hope of buying mercy from the Reds (which they won't get) when the great day comes.

Idealistic youngsters are occasionally attracted to communism as an alleged shortcut to the rubbing out of all the admitted evils and injustices in the world.

Economic, social, religious, racial, and national groups are incited by Communist agitators to hatred of one another.

If you have any resentment on any score, just bring it to a Communist agitator or propagandist, and he'll promise you a cure for your inward wound a day or two after the Reds take over.

So much for the principles and promises of communism.

In later editorials in this series, we'll outline some of the fearful and wonderful ways in which these principles and promises work out in practice after the revolution.

Kick or Be Taxed

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. CHAMBERLAIN. Mr. Speaker, I have already expressed my unqualified opposition to the proposal made by our Ways and Means Committee to temporarily earmark part of the automobile excise tax for the Highway Trust Fund.

Apparently, I am far from being alone in my skepticism about temporary tax laws. The Davison Index of Davison, Mich., for example—writing just before the committee came out with the excise tax transfer as an alternative to increas-

ing, "temporarily," gasoline taxes—express the same apprehension that "temporary" and "permanent" are synonymous in Government parlance. Under permission to extend my remarks in the RECORD, I include the perceptive editorial from the July 30, 1959, issue of the Index, which follows:

KICK OR BE TAXED

What chance has the public for protection from constant tax increases? Apparently it has almost none. A proposed increase of 1½ cents a gallon in the Federal gas tax was voted down by Congress. Within days a new proposal came up to increase the tax one-half cent a gallon for 1 or 2 years and transfer some receipts now received from present gas taxes from the general fund into the special highway trust fund, where they should have gone in the first place. Another proposal would raise the gas tax 1½ cents for a 2-year period only.

Any way you look at it, the determination is to make the public pay additional gas taxes for a crash program of highway building instead of doing the construction work as money becomes available.

If anyone is gullible enough to believe that a 1- or 2-year "special" gas tax would be dropped at the end of such periods, he should have his head examined. All one has to do is to check over the "emergency" taxes that were passed for various purposes years ago to realize that no special tax for 1 or 2 years would be dropped at the end of that period.

The tax spenders will always be exceeding their income no matter how large the taxes are. The people will never get relief until they tell Congress in no uncertain terms, that tax reductions, not tax increases, are in order.

At the end of 2 years roads will again be costing twice as much as estimated, "special" taxes will have to be retained and it is safe to say increases will be asked.

Randolph E. Myers, YMCA Head, Washington, D.C., Dies

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me so to do, I am pleased to comply with the request of many, many admirers and friends of the recent general secretary of the Young Men's Christian Association, Washington, D.C., Randolph E. Myers, who passed on while at his desk at the local YMCA at the age of 61. The following article was furnished me by his friends, it having appeared in the Washington Post and Times Herald on Friday, June 5, 1959:

R. E. MYERS, 61, "Y" HEAD, DIES

Randolph E. Myers, general secretary of the YMCA, died yesterday at his desk of a heart attack. He was 61.

Mr. Myers was born in Loudoun County, Va., and came to the YMCA in 1918 following duty in the Marine Corps during World War I. His first job with the YMCA was as a room and information clerk at the central branch.

In his early years with the association, he also worked as program activities secretary,

membership and public relations director, and educational director.

In 1944, he became executive secretary of the central branch. Four years later, he was named assistant general secretary of the Metropolitan Washington YMCA. In 1951 he achieved the association's highest area post.

Mr. Myers represented the Washington association at the Paris convention of the World Alliances of the YMCA, in 1955.

He had served as a director of the Home Building Association and as a board member of the Federation of Churches. He was secretary of the Washington Lions Club for 15 years, later becoming vice president, then president.

Mr. Myers was a handball enthusiast, and was an area champion in his younger days. Other hobbies included fishing, gardening and music.

Surviving are his wife, Mollie, of the home address, 2643 North Rockingham St., Arlington; two daughters, Mary Valente, of Bethesda, and Betty Newlen, of Kensington; two sisters, Mae Myers, of Leesburg, Va., and Mrs. Robert L. Grubb of Hagerstown, Md.

Funeral services will be held at noon Monday at the S. H. Hines funeral home. Burial will be in Arlington Cemetery.

In addition to the foregoing newspaper comments, I am pleased to include a final tribute to him beautifully worded by one of the young men who had told me that the general secretary had been an inspiration to him—as well as to many, many hundreds more:

TRIBUTE TO RANDOLPH E. MYERS

The Congress of the United States announces with deep regret the death of Mr. Randolph E. Myers, general secretary of the Metropolitan area YMCA, Washington, D.C., which occurred on June 4, 1959. He was born in Loudoun County, Va., and completed his education in this area.

He served with the Marine Corps during World War I, and in 1918 began his professional career at the central branch YMCA in Washington as a room and information clerk. He was soon promoted to assistant membership secretary and later became membership and program secretary. In 1944 he was appointed executive secretary of the central branch and 4 years later he was named assistant general secretary.

In 1950 Mr. Myers became general secretary, the highest post in the area. He represented the Washington association at the Paris Convention of the World Alliances of the YMCA in 1955. He also served with distinction as director and vice president of the Home Building Association. Mr. Myers was secretary of the Washington Lions Club for 15 years, later becoming vice president and then president. He was selected by the local Lions club as official delegate to 13 international conventions.

Mr. Myers' constant interest in civic affairs and philanthropic activities was further emphasized by his years of service as a member of the board of the Washington Society for the Blind. He was also a leader in all United Givers Fund campaigns from the time UGF was inaugurated. He was awarded an honorary degree of doctor of laws by Southeastern University in 1952.

Throughout his 41-year career, Mr. Myers gave a special kind of dedicated devotion to his work and to the hundreds of thousands of young men associated with the YMCA. His life was characterized by sincerity and kindness and motivated by the highest standards of Christian purpose. During his impressive "Y" career, he gained international recognition. With his untimely passing, we have lost an eminent citizen and world renowned YMCA leader.

Race Incident Jolts Foreign Labor Guests

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. DIGGS. Mr. Speaker, I am submitting for the information of those who read the Appendix of the RECORD, the following report on a racial incident involving one of our foreign guests in Kansas City, Mo.:

[From the Washington Post and Times Herald]

RACE INCIDENT JOLTS FOREIGN LABOR GUESTS

KANSAS CITY, Mo., July 29.—A top Nigerian labor official touring the United States with a group of international labor leaders was told not to return to a downtown Kansas City cafeteria Monday night because of his race, it was learned today.

Alaba Kalejaiye, 42, secretary-general of the Nigerian Civil Service Union, said he was allowed to eat his food because he had already gone through the line and purchased it, but the Forum Cafeteria manager told him not to return.

"We feel quite bitter about this," said Ranajeet Majumber, vice president of the West Bengal Committee of the Indian National Trade Union Congress. "We all deeply resent the treatment of Mr. Kalejaiye and feel that this incident has spoiled our visit here."

In Washington, George C. Lodge, Assistant Secretary of Labor for International Affairs, apologized to Kalejaiye by phone. He later issued a statement in which he said he hoped the Nigerian would realize that the incident was in no sense typical of the United States.

"The overwhelming majority of the American people condemn such inhospitality," Lodge said. The Labor Department is sponsoring agency for the visit of the group.

Kalejaiye said he considers the incident "an affront to my country."

The 10 union leaders are in Kansas City this week on part of a nationwide tour of factories and industries.

I have through various sources confirmed the details of this report. It is my understanding that this incident occurred after this group had received the keys of the city from the mayor and after they had had a meeting with former President Harry Truman. It is unfortunate that the favorable impressions received up to that point were cancelled out by the prejudiced attitude of the manager of one of the Forum Cafeterias, a chain in that community. It is my understanding that the Forum Cafeteria is one of the chief offenders of civil rights in Kansas City. It is my further understanding that up to this point the city attorney for that community has ruled that proposed ordinances prohibiting discrimination in public accommodations are not permissible under the city charter. There is hope, however, that this interpretation may be reversed by more enlightened legal advice. I certainly join the Kansas City Commission on Human Relations in hoping that this remedy will be forthcoming as soon as possible. It is a sickening experience to see our effort to win and maintain the friendship of non-

white peoples in Africa, Asia, and South America damaged by the unenlightened attitudes of America's bigots.

Why is it so difficult to make people understand the effect of these incidents upon our relations with the darker peoples of the earth and the question mark it puts behind our sincerity with respect to democratic ideals? When will people realize that we no longer live in a vacuum but are exposed for the whole world to see?

It was interesting to note a few days ago, on the front page of the Jackson, Miss., Clarion Ledger, a picture of three Cuban soldiers, former members of Castro's revolutionary forces, eating in a hotel cafe in downtown Jackson with apparently no restrictions whatsoever. Yet, a foreign visitor who happens to be black and is from Nigeria which is pro-American and the largest country in Africa would not be welcomed in that restaurant or in one in Kansas City, which is supposed to be infinitely more enlightened than Jackson, Miss. And when you consider that the Internal Security Subcommittee of the U.S. Senate, headed by the senior Senator from Mississippi, recently received testimony from former commander in chief of the Cuban Air Force, Maj. Pedro Luis Diaz y Lanz—whether that testimony can be substantiated or not—that Castro and his followers are Communists and Communist sympathizers, it is difficult not to draw the conclusion that it is all right for even an avowed Communist to eat in a restaurant in Mississippi, the "anti-Communist, Bible belt" State, as long as he is white.

Let me make clear that I do not infer that Castro or his followers are either Communists or Communist sympathizers. But I do point out the monstrous insincerities and inconsistencies which is the bigot mind, of which there is too much example in American democracy.

Report on Castro

EXTENSION OF REMARKS OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES
Monday, August 3, 1959

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "One Inside Report on Castro," written by George Todt, and published in the Valley Times of July 16, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ONE INSIDE REPORT ON CASTRO

(By George Todt)

"The little foxes that spoil the vines."
(Song of Solomon 4: 15).

Is Fidel the Fox really Castro the Communist?

This is exactly what the Senate Internal Security Subcommittee is now being told in Washington by no less an authority than Major Pedro Luis Diaz Lanz, former chief of Castro's air force.

His story seems to ring true and he has described both of the Castro brothers—Fidel and Raul—and others high in the present Cuban Government as out-and-out Communists.

Diaz Lanz was a Cuban patriot who gave up some high-paying flying jobs to fight against the former tyrant, Batista. He joined Castro in 1956 because he thought that the latter meant to bring democracy to the people of our nearby island neighbor.

On June 30 of this year, a sadly disillusioned Major Diaz Lanz resigned his position as chief of the air force and later fled to the United States.

What he has told our Senators and intelligence chiefs may be boiled down to this: Instead of bringing liberty and freedom to Cuba, Castro has brought a Communist dictatorship.

The airman said that anyone who has heard Castro express himself privately would have no difficulty in assessing his true nature as an unblushing Red, as are other important members of his cabinet. These include both the Secretary of State and the Minister of Defense.

Furthermore, the former air chief states unequivocally that the Cuban dictator has no intention whatsoever of holding free elections for the Cuban people.

It's a pretty grim picture, this fiasco which is literally taking place at our Nation's doorstep. What's the matter with our side, anyway?

This column has been calling the signals correctly with relation to Fidel Castro for many months now. We had loads of eminent company, too. Such outstanding national publications as U.S. News & World Report, National Review and Human Events, for example; and commentator Fulton Lewis Jr.

On Capitol Hill there were at least several alert solons in both parties who also called the shots correctly with reference to Castro, the Red Fox. This bipartisan group included liberals and conservatives of varying shades and hues on both sides of the aisle, among them the following:

Senators WAYNE MORSE, Democrat of Oregon, and GEORGE SMATHERS, Democrat of Florida, and Congressmen DONALD L. JACKSON, Republican of California, ALVIN E. O'KONSKI, Republican of Wisconsin, WAYNE HAYS, Democrat of Ohio, and CLARE E. HOFFMAN, Republican of Michigan. Not to mention an astute lady Congresswoman KATHARINE ST. GEORGE, Republican of New York.

These voices crying in the wilderness where Castro was concerned are mentioned only to show that there has been no lack of an objective appreciation of his communistic tendencies by our citizens here in the United States.

And yet what action worthy of the name has been taken against this cunning Red upstart at this stage of the game?

Here we are—the most powerful nation on earth—and we are foolishly permitting ourselves to be pushed around by this Caribbean pipsqueak as though we might be the very dirt beneath his feet.

First, he threatened neurotically to murder "200,000 gringos" if we landed any Marines to protect the interests of our endangered nationals as Cuba's streets were running red with blood—much of it innocent, incidentally.

Second, he has more recently threatened to appropriate the legitimate property of American corporation in Cuba without payment, which is about par for the course. At least, for Castro.

Now, according to international law, there seems to be a substantial case for "nationalizing" the property of aliens in foreign countries upon occasion, all right—but only if they may receive a fair financial reimbursement in return and settlement. Not for free.

Castro says, in effect, of course, that he would very much like to reimburse the American "exploiters" in Cuba—if he only could. It's merely that he doesn't have any ready cash on hand. All of which is really too bad, you see. For the only way in which he might readily obtain the necessary funds would be for the rich American taxpayers to hand him large grants of money with the usual "no strings attached." (An honor, gringos.)

Then Castro the fox could have his chicken and eat it, too. Which is mighty nice work if you can get it.

Actually, our position in regards to expropriation of American properties by Castro or other close friends of Moscow ought to be summed up in these words:

"If you can't pay—don't play."

Isn't it about time for Uncle Sam to make a suitable show of force in the Western Hemisphere's "Red Sea," to wit the Caribbean? When will we put our foot down? Why wait any longer?

Outstanding New Officers of ROA

EXTENSION OF REMARKS OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. PORTER. Mr. Speaker, no Member of this House needs to be told why our colleague LEROY ANDERSON of Montana, is highly qualified to be vice president—Army—for the Reserve Officers Association. LeRoy is a major general in the National Guard, a quiet, capable, and responsible man, certainly a model of a modern major general. We rejoice in his recent election as vice president—Army—of the Reserve Officers Association and congratulate the ROA on its outstanding choice.

We also think that the ROA was most fortunate to elect as president Col. John W. Richardson, Air Force Reserve, Detroit, Mich. It was my privilege to become acquainted with Colonel Richardson on a Reserve officers leaders exchange program which entailed a 2-week tour of Europe during March of this year. He is a man of energy, dedication, and resourcefulness. It is plain that he will make a notable record as President of the Reserve Officers Association.

Under a unanimous consent previously granted I am including further details about Colonel Richardson:

ROA'S NEW PRESIDENT

The Denver convention by unanimous vote chose Col. John W. Richardson as our new president for 1959-60. He got off to a quick start with conferences in Washington at national headquarters, Capitol Hill, and the Pentagon.

A long-time, hard-working, dedicated member, Colonel Richardson assumes the presidency with full knowledge of our problems and our potentialities. Under his leadership, ROA can look forward to another great year.

Colonel Richardson has just completed three terms as national vice president for Air. He also has held office in the Department of Michigan.

In private life he is manager, automotive fabric sales, F & F department, E. I. du Pont de Nemours & Co., with headquarters in Detroit. He lives with his wife and two children in Bloomfield, Mich.

Colonel Richardson was born in Camden, S.C., July 14, 1910. He graduated from Virginia Military Institute in June 1931 with a B.S. in chemistry and a second lieutenant's commission in the Cavalry Reserve. He transferred to the Air Force in February 1942 and went overseas the following month.

After 4 years' extended active duty in World War II, 35 months of which was overseas, Colonel Richardson came home to take up an active and continuing interest in the Air Force Reserve and the ROA. For the past 3 years his mobilization assignment has been Chief of Staff, 10th Air Force, which encompasses 18 States. He has served on several Air Force committees and boards, besides his local and national offices in ROA.

Colonel Richardson is a director of Canadian Futurama Fund, Ltd., Toronto, and the Economic Club of Detroit. He also is active in other organizations including the Aero Club of Michigan, Bloomfield Hills Country Club, Detroit Athletic Club, the Recess Club, the American Ordnance Association, Bloomfield Hunt Club, Air Force Association, and National Aeronautic Association.

His decorations include the Legion of Merit, Presidential Citation, and two commendation ribbons.

Saginaw River Dredging Project

EXTENSION OF REMARKS

OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Saginaw News on July 26, 1959, concerning the Saginaw River dredging project. I felt that this editorial which points out the business and shipping problems resulting from the delay in this project should be brought to the attention of the Members of this body:

"FOR WANT OF A NAIL A SHOE WAS LOST"—
OR WAS IT A SHIP?

When the Norwegian freighter *Lindenford* last week refused to enter the Saginaw River at Bay City because of the shallow channel, and so forced Bay City Shovel Co. to ship cranes to Detroit by rail for ship loading at an added expense of \$2,000, this Saginaw Valley got a better understanding of political economics in action.

The public must have gotten a good idea, too, of the potential economies to be gained through St. Lawrence Seaway shipments. Had that freighter been able to pull into dock and take aboard this cargo in a single handling, the Bay City firm could have realized an extra \$2,000 profit. As far as Bay City Shovels is concerned, that money is wasted—spent unnecessarily in delivering its equipment to the same destination.

A Bay City freight official is quoted as saying that the Norwegian freighter incident would repeat itself "again and again." And the manager of a freight forwarding concern dryly commented: "We'll be sitting on the shore watching the smoke on the horizon."

What they say certainly must be true of most deep-draught freighters whose captains will point their ships' helms away from our Tri-County seaway port until the Saginaw River is dredged deep enough to assure safe passage.

We not only have seen business in a solid dollar figure lost in this single instance: We also have been told that a \$5.9 million

Saginaw River dredging project under supervision of the Army Corps of Engineers is now dead for at least another year.

The loss of business and the delayed Federal project stem from failure to raise \$218,000 for protective alterations to two railroad bridges at Bay City which might be weakened by the deepening operation. Army engineers held that the cost of this work should be absorbed locally to free the Federal Government of any liability.

Our State waterways commission viewed this project as a proper State obligation. But the House Ways and Means Committee in late May rejected the request saying bluntly that the State of Michigan wasn't going to subsidize any benefiting industries along the Saginaw River.

There is little point in arguing that subsidy of industries was not the intent. We would be first to oppose the State's getting into the business of building up port facilities, patently a field for private enterprise. The need came as a Federal order, however, not for improvement of anything but for prevention of possible damage to existing private property.

As an apparent policy, the House Ways and Means Committee has decided to restrain the State Waterways Commission from getting into anything involving Seaway development or encouraging with State funds. This has thrown the responsibility entirely into local hands.

Our Tri-County Seaway Study Committee has been sounding out major river shippers in Saginaw, Bay City, and Midland to see whether the \$218,000 could be raised privately. Now, we note, a Bay City commissioner seeks to muster still another group of businessmen and industrialists to see what can be done toward getting the major dredging project underway.

The experience of Bay City Shovels Co. with the Norwegian freighter suffices to demonstrate that shippers have a direct and predominant interest in clearing this bottleneck to development. It is a public question, however, whether the financial burden should be solely their obligation. The port and the river constitute a public waterway of major magnitude in the economic development of this area, if not of the State.

Bay City, Midland, Saginaw, and the interior on which they hope to draw will not realize the benefits of a deep-water river and harbor until this \$218,000 "insurance" construction has been financed. A year's delay already is conceded, and the losses from that delay are now being counted.

We never have encouraged the shirking of local responsibility, just as we have deplored the handout route as the easy way to evade obligations. Our State legislature, like Congress, is deluged with appeals for undeserved assistance. The News has been quick to discourage these temptations within this Saginaw area as elsewhere in the State and Nation.

If we did not believe that the State shares a responsibility in advancing Federal waterway improvements, such as confront us in this engineering problem which has arisen in conjunction with dredging, we would not urge that the Ways and Means Committee reconsider its view. The development of public water routes is not a matter of purely local concern. If it were, the Federal Government never would have assumed its historic authority and responsibility in this area of public interest.

We cannot reconcile the Federal view which accepts this \$5.9 million waterway improvement as a public necessity with the State legislative committee's view that correction of a local impediment to the project is nothing but a subsidy of private industry.

Because of their direct benefit from a navigable waterway shippers admittedly have a greater immediate stake in the project

than anyone else. But this is an economic view point of narrowest vision. In the interest of Michigan's economic development there should be room for reconciliation of these opposing views.

Vice President Nixon Opens Wide Crack in the Iron Curtain To Steal the Show, but Rockefeller Aides Want To Push the Governor on Stage

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. MICHEL. Mr. Speaker, in the August 10, 1959, issue of U.S. News & World Report, Francis B. Stevens, former Director of the U.S. State Department's Office of Eastern European Affairs, gives this appraisal of the Nixon visit to Russia:

In the 15 hours, spread over 4 days, which he (Nixon) spent with Nikita Khrushchev in Moscow, RICHARD NIXON was exposed to a favorite Soviet weapon in the cold war—diplomacy by bear baiting. He proved such an apt pupil that a world audience, at first startled, then enthralled, hung on every word of the verbal slugfest.

Mr. Stevens went on to say that through the heat came a measure on enlightenment for both Khrushchev and Nixon and the citizens of Russia and the United States as well:

This in itself is a positive step. "No high American official had said these things to Khrushchev since the summit conference of 1955, and they badly needed saying."

In view of the foregoing, I read with dismay an article from the July 30, 1959, issue of the New York Times under the heading of "Rockefeller Aids Prepare for 1960." The story indicated that Rockefeller's aids had made an analysis of current political trends purporting to demonstrate that Rockefeller would make a stronger Republican presidential candidate. Not only was there a notable absence of any statistics in the article, but the story quoted the fantastic comment that Governor Rockefeller "is a better bet to sell himself to practical conservatives than Vice President Nixon is to sell himself to liberal Republicans."

This type of thinking is not only contrary to the facts, but counters the cohesive forces of the Republican Party which have been steamrolling into action, and is a great disservice to Governor Rockefeller himself. My thoughts on this matter are best expressed in an article by Gould Lincoln which appeared in the August 1, 1959, issue of the Evening Star and under unanimous consent I request it be included at this point.

The article follows:

ROCKEFELLER FORCES ON THE MOVE

(By Gould Lincoln)

Vice President RICHARD M. NIXON is gaining new laurels by his visit to Moscow, by his personal bearing there and his public and private statements. He has, indeed, added to his stature, as is admitted even by his

critics. All this is doing his chances for the 1960 Republican presidential nomination no harm.

Apparently all this favorable pro-Nixon publicity, adding to the Nixon political strength, is giving concern to the Republicans who are boosting Gov. Nelson A. Rockefeller of New York for the presidential nomination. It is acknowledged that the Vice President is extremely strong with the GOP organization throughout the country. Polls of these party leaders have shown an overwhelming preference for Mr. Nixon. Now it appears his popularity with the rank and file of the voters is on the increase.

Reports from New York are that the Rockefeller supporters and advisers already have set to work to offset Nixon advances and to check any future gains. Their one hope is to prove that Governor Rockefeller has a better chance to win the presidential election next year than has Mr. Nixon. They are preparing to make this argument to Republican leaders throughout the country, but particularly in the big industrial States of the East, Middle West, and the Pacific coast. They will argue that Mr. Nixon is hated by the Democrats who, for 7 years, have conducted a campaign of vilification against him; that liberal independents look coldly upon him, and that without a considerable number of Democratic and independent votes the Republicans cannot hope to win the presidency next year. They will argue, too, that some Republicans among the rank-and-file voters do not like Mr. Nixon.

THE CASE OF TAFT

What effects such arguments will have on the Republican presidential nomination contest between Mr. Nixon and Mr. Rockefeller—for it is now admittedly a contest although neither has announced himself a candidate—is still very much a matter of guesswork. The argument that the late Senator Robert A. Taft of Ohio could not have been elected President was used against the Ohioan, not once but several times. It did more than anything else to deny Senator Taft a nomination.

One thing is certain, however. If the Rockefeller forces persist in carrying on such a campaign, it is not going to make it easier for Mr. Nixon, if he becomes the presidential nominee, to win next year's election. On the contrary, it could help sink Republican chances for victory without trace. At best this seems a very negative way of winning a nomination for the New York Governor.

SHOULD SHOW HIMSELF

Another and more direct way for the Rockefeller campaign to operate is for the Governor to get out and show himself and his abilities as a campaigner to Republicans in all parts of the country. In this way, he will give them a choice between himself and Mr. Nixon without tearing down the Vice President in the minds of the voters, a poor way of doing business. Mr. Nixon, during his career in Congress and as Vice President has shown courage, ability to handle himself under most difficult circumstances, and real statesmanship. Why should another Republican attempt to belittle him? But if present reported plans of the Rockefeller camp are correct, the effort is to be made to convince the GOP leaders that Mr. Nixon could not win.

Governor Rockefeller won an amazing victory—in a so-called Democratic year—over the then Gov. Averell Harriman, Democrat, last November. He won it because of his own campaigning ability, which is admittedly great, and because the Democrats had a bitter quarrel which tore them wide open. The Governor is recognized as a progressive Republican. That does not endear him to many of the more conservative Republicans, although it strengthens him with some of the wavering Democrats and the independents.

Mr. Nixon, for his part, has certainly gone along absolutely with the progressive republicanism preached by his chief, President Eisenhower, without faltering. Despite this, the conservative Republicans like him. They insist that with Mr. Nixon as a candidate against a Democrat, the people will have a real choice to make at the polls, whereas, if Governor Rockefeller is the GOP candidate there will be no such distinction. They charge that the Governor is too "new dealish."

It is generally conceded that the GOP has in the persons of the Vice President and Governor Rockefeller two outstanding presidential possibilities—either of whom would make an able President of the United States. Mr. Nixon, however, has been brought into far greater contact with the problems which confront the country today, both at home and abroad. The knowledge he has acquired is a real asset.

The Temper of the Negro Community Everywhere Is To Fight Back

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. DIGGS. Mr. Speaker, I ask unanimous consent to include in the RECORD an editorial, "The Temper of the Negro Community Everywhere Is To Fight Back," recently published in the Los Angeles Tribune, a Negro weekly of that city.

On May 17, this year, the anniversary of the Supreme Court school desegregation decision, I had the privilege of giving the principal address at a rally in Memphis, Tenn., and made certain statements on this same subject which have been deliberately distorted by some people. In that address, I made reference to the uprisings of peoples around the world concerned with the issue of human rights and I called attention to the fact that all Americans, regardless of race or creed, have cause to be grateful to such organizations as the National Association for the Advancement of Colored People for absorbing the emotional impact of the Negro's reaction to racial prejudice, discrimination, and segregation in America. I also stated that as we approach the 100th anniversary of the emancipation in 1963, which has long been the goal of the NAACP for full attainment of equal rights for Negro citizens, if Negroes have continued to experience silence from the White House and slow motion tactics of congressional committees and stubborn resistance and injustice from local segregationist-diehards, organizations and individuals who preach meekness and nonviolence will find it exceedingly difficult to contain the fire that is smoldering within so many American Negroes.

Despite criticisms, by some persons, of comments of this kind, this editorial and my remarks simply reflect the feelings of Negroes and are realistic. I am persuaded that it is the obligation of those who are dedicated to the principles of

democracy and devoted to the welfare of this country and all its peoples who see this Nation plummeting to danger to warn and warn again until our Nation hears and heeds and heals itself, for the welfare and honor of us all.

The editorial follows:

THE TEMPER OF THE NEGRO COMMUNITY EVERYWHERE IS TO FIGHT BACK

It does no good that the NAACP has suspended Robert F. Williams, the honest spokesman of Negroes of Union County, N.C., for his statements advocating that Negroes "meet violence with violence" in the South where they "have no 14th amendment," where there is no justice for them, and even little of physical safety.

The "cat is out of the bag," as the saying goes; and it will not be long before the Negro will start suiting the deed to the word; and, we might add, like Mr. Williams, we believe that then, and only then, will terrorism against Negroes in the South end.

Williams only spoke the "temper of his community," as was testified to in New York at the NAACP hearing last week.

He only spoke the temper of the Negro anywhere, who is ready to fight, if it comes to that, who has seen the futility of giving ground, of looking to the courts, of depending on the "good white people," of turning the other cheek.

TO COME IN A NEW NEGRO ATTITUDE

It will not come, this violence, as a matter of organized technique or strategy.

We don't anticipate any guerilla combat teams being organized to take hapless Negroes out of jails or to raid white communities for a little reciprocal bloodletting.

But you are going to encounter it in a new Negro attitude, which is going to say "yes, and what of it?" * * * and, "do you want to make something out of it?" * * * and in a new Negro who is going to act to "take some of 'em with me" * * * and is going to mass to fight off lynchings, and to repulse the Ku Klux Klan, and is not going to turn the other cheek.

And this is not going to be strictly a defensive war. For the violence which the white man has made the order of the day where the Southern Negro is concerned, is unnerving. And nerves reach the breaking point. And men run amuck like the Negro man did in Louisiana the other day who killed three whites without provocation and held three others as hostages before he was finally put out of his misery by troopers' bullets.

The National Board of the NAACP need not worry. The frontrunners of this stage of the Negro's "war" for freedom from oppression will rarely be presidents of NAACP branches, or "leading citizens," or people who know anything at all about NAACP policy.

For, these kind of people are perhaps too often conservative, and conciliatory, and have too much to lose.

It is seldom that you find a president of an NAACP branch with the courage, the bluntness, the plain-spokenness, the intuitiveness, the sympathy, the righteous wrath of a Robert F. Williams.

The NAACP's hands will be clean, and the Urban League's, and the "Negro leadership's" * * * and the Rev. Martin Luther King, Jr. can go on preaching his fanciful philosophy of loving those who bomb my home and assault me.

The frontrunners of the Negro's "crusade," and it is a crusade, will be the poor, the ignorant, the nervous, the unstable * * * those with what psychiatrists call a low threshold of fear. These will provide the whirlwind which the white man's injustice, his callousness, his violence, his obscenity, his power-drunkenness, have planted and which he deserves to reap.

These, huddled in their huts in the South, resolved not to be no Mack Charles Parker. These started at a footstep and shooting first and asking questions later. These, the miasma of their fear, borne on sultry, southern winds to crowd their nostrils and to cause them to run amuck, cutting down all the faceless whites in their path, will free us at last, where the courts, and the conservative men, and the speeches, and the appeals to morality have failed.

THE NAACP SHOULD HAVE UNDERSTOOD

Of course, we think the NAACP should have been understanding of Robert Williams' provocation and should not have fed him to the wolves as it did.

The judge, who would have tried Mack Charles Parker had he lived, told newspaper reporters the other day in Mississippi that as Parker sat in his court at the arraignment, and he thought of what he had done (not of the crime of which he was accused) * * * he had to restrain himself, there and then, on the bench, from killing him.

No Mississippi State Bar Association jumped, that we have heard of, or are likely to hear of, to rebuke, reprimand, or suspend that judge.

NAACP executive secretary Roy Wilkins, who sat in judgment of Williams and suspended him in spite of the man's despairing statement of his provocation, in spite of his humbly stated love of his people and of justice, occupied himself in a speech denouncing a Mississippi county prosecutor who said after the lynching of Parker that it was really much ado about nothing and made no difference whether Parker was lynched before or after the trial.

For, no Negroes would have set on the jury which would have convicted Parker.

Therefore, his conviction would have been reversed.

Therefore, a mob would have taken Parker out of his jail cell and lynched him and sent his body to the Federal judge which reversed his conviction and said, "this is what you have done"; and Mississippi "justice" would have been vindicated in its own eyes and in the eyes of the white South.

Why all this haste to suspend a president of a branch of the NAACP who, in the teeth of such provocation, advocates that the Negro meet violence with violence, and stop lynching with lynching?

The first damn good advice, and the second—well, one could have counseled with the "brother" and pointed out that lynching is cannibalism, and now that the white man has civilized us, the Negro doesn't go in for cannibalism any more, and that, anyway, from a tactical point of view, white people have made Negroes allergic to lynching, and it is doubtful that you could raise a quorum in a Negro community for a "neck-tie party."

But there is absolutely nothing wrong with firing when you see the whites of their eyes, and being "ready" is about the quickest way to cut out all the Poplarville and Money, Miss., and Belzoni, nonsense known to mankind.

Self-defense is only self-respect and any philosophy of leadership which preaches anything less, is playing the Negro cheap as a man, and we don't care if the philosophy is Gandhi's or Jesus Christ's.

It is all right to use nonviolent techniques as long as they are met in kind; but a man who will not defend himself and his own deserves to remain a slave, and this consignment of the Negro's defense to the Lord is undoubtedly the reason why almost 100 years after the Emancipation Proclamation we are virtually slaves in parts of the country where we all but have the numerical advantage.

One of the most shameful acts in history, we think, was the surrender to the mob

of 14-year-old Emmett Till by his grandfather and other kin.

Does anyone wonder that lynchings continue of a people who will hand over children and women, to be murdered and raped?

There have to be terms on which life is not to be lived, and in cowardice is one of them. The principle of defense of human life, of the weak and the helpless, should be inbred in people so that it is a reflex action. Otherwise, man is not civilized, and there is no such thing as mutual security.

The Negro is victim of the most successful brainwashing in mankind's history.

He is not only divided as a group. He is divided against himself until he does not know his own interest.

And this has been cleverly done by a white man who fears him, fears his wrath, fears his righteous indignation, fears his numbers, fears the very sympathy in himself for the justice of the Negro's cause, and fears world opinion, and the Negro's cohorts in other parts of the world.

It is time we rejected the brainwashing and realized our own strength.

It is time that we decided that there are some terms on which life is not worth living.

It is time we resolved to be men and women. Then, and only then will we have interracial peace * * * peace born of equity. There is no other kind.

Union Members Call Her Lady Esther

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, Lianne Cordero, contributing writer for the Washington Post and Times Herald, has written about a gracious lady in the August 2 issue of that paper.

Mrs. Esther Johnson, national secretary-treasurer of the American Federation of Government Employees, has a cogent interest in her fellow Federal workers. She has worked hard and long to improve their lot and to educate them in their responsibilities as public employees.

I commend this article about Mrs. Johnson and include it as part of my remarks, as follows:

UNION MEMBERS CALL HER "LADY ESTHER"

(By Lianne Cordero)

"Lady Esther" may sound like an unusual title for an official in the class-conscious union world.

But that's just what members of the American Federation of Government Employees affectionately term smiling, vivacious Mrs. Esther P. Johnson.

Mrs. Johnson is the AFGE national secretary-treasurer, the only woman secretary-treasurer in the 137-member AFL-CIO. She is now serving her second two-year term of office after being unanimously reelected in 1958.

Explaining her rise in an all-male profession, Mrs. Johnson confessed, "Whenever an opportunity beckoned, I grasped it and went along. It took imagination in those days to do these things."

Mrs. Johnson had some challenging words: "Today's woman must develop every educational opportunity open to her and remove from her mind the fear of accepting

responsibility as well as the fear from having been rebuffed in the past."

One of Mrs. Johnson's major concerns is convincing women that they can perform as adequately as men in many fields. Warning women "not to let the spectre of age stop them," she said, "Women in the past have played an interesting and vital role in labor, education and health."

Mrs. Johnson has spent all but four of her working years as a Government employee. For one year she taught grades five through eight in a two-room Iowa schoolhouse. She quit because she "felt it was not for me."

She first became interested in union activities through her husband, a brakeman and railroad conductor. Although school teaching held no challenge, "educating fellow employees about their rights and privileges" became a driving concern. She called the lack of information "quite surprising."

As AFGE secretary-treasurer, Mrs. Johnson does a great deal of traveling. This and acting as official hostess for Washington visitors she calls the "highlights of my position."

In her apartment near Rock Creek Park and in her spacious office at AFGE headquarters, Mrs. Johnson frequently entertains foreign unionists sent by the Department of Labor.

Although she has little time for outside activities—"I work all day and go to meetings at night"—she is able occasionally to indulge her interests in music and movies. "Cooking? Yes, I'm a very good cook. I'm living proof of that," she said laughingly.

Peoria Journal Star Editor in Russia

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the eighth and ninth in a series of articles by Editor Charles L. Dancy appearing in the Peoria Journal Star: STUDENTS JOKE WITH REAL U.S. CAPITALIST (By Charles L. Dancy)

YALTA.—One evening in Yalta I was sitting on a bench on the esplanade with little Yuri talking and two college students joined in with a little English. They turned out to be engineering students specializing in heating and refrigeration systems.

When Yuri's bedtime came, the students and I walked the esplanade talking about education, culture, entertainment and philosophy in America and in Russia. They were wonderfully intelligent, seemingly frank, and realistic and we had a beer together.

Some young girls strolling turned and told us we were not fooling anyone trying to pretend that one of us was an American, and to quit joking. The boys asked if girls were stupid in America, too, and I replied that they apparently were the same the world over. (We had been agreeing frequently that many things are much the same anywhere anytime.)

By this time much of our conversation included joking replies, and then I spied one of the Americans I had met on the boat. He was Mr. Lushing, a rare fellow, a big homebuilder from southern California who is Jewish and has a love of trouble. He took part with the Palmach in juggling credentials to spirit Jews out of concentra-

tion camps and off to Israel, and he dodged his share of bullets in the Israel-Arab war—although not a young man.

I stopped him and introduced the two young men, both of whom were Jewish, and whose names were Vladimir and Mischa.

Lushing, a big man with a little weight on him now, gray hair, and glasses, well groomed and well dressed, stopped there in the middle of the broad esplanade overlooking the Black Sea on the Crimean peninsula, surrounded by a surging crowd of Russians, threw out his chest, and in booming voice announced: "I am a real, genuine American capitalist. I build 2,000 houses a year, and sell them with 30 years to pay. I hire thousands of workers at about \$4 an hour, and I exploit the hell out of them."

The boys stopped dead a moment, then broke into broad grins, stuck out their hands with flourishes, and Mischa said: "It is a pleasure sir to come face to face with a real, live American capitalist."

"I am it," said Lushing. "I make so much money I'm ashamed to mention the figure, but you should see the houses I build."

"How much taxes do you pay?" I stuck in.

"Eighty percent" he boomed.

"You see our system," I laughed. "We won't shoot him, and we certainly don't want to stop him. Every year we let him use his ingenuity to build more and better houses for people to live in, and then we take 80 percent of what he gains to boot. This way we don't just strip him once like you did here. We milk him over and over."

Both boys laughed, "It would be a mistake to shoot him," said Mischa.

"Especially if he manages to get so many homes built," agreed Vladimir.

But the most interesting part of this story is the sequel, for which I must jump ahead a bit so far as my travels are concerned.

I had to leave early the next morning, but I ran into Lushing again briefly in Sochi which is the last leg on the resort circuit.

He told me that the following evening he had taken the boys to dinner, and they had talked of heating and refrigeration systems and practices in the United States, of the kind of houses he builds (complete with all appliances, garage, etc.), of the status of Jews under the Communist, of capitalism, and of Israel.

They had talked until a hotel employee approached the table and spoke briefly to the students in Russian, whereupon they said they had to leave.

Lushing walked out with them onto the esplanade and asked what the man had said. Finally one of the boys remarked, "That we are talking too much."

They walked a way down the esplanade and found the policeman normally on station in front of the hotel walking one pace behind them all the way along.

"I hope I haven't gotten you two boys in trouble," said Lushing.

"Five years ago, under Stalin," said one quite openly, "it would have been very bad—especially for Jews, but now I think it is probably only a little trouble."

I hope he was right.

CARGO OF FACTS CAULKS HOLES IN PROPAGANDA

(By Charles L. Dancy)

ON THE BLACK SEA (YALTA TO SOCHI).—I sailed from Yalta on a fine big ship, the SS *Ukraine* (Ookraena) which I would describe, however, as more comfortable and less luxurious than the *Nashima* that had brought me to Yalta—and with more friendly passengers.

One other American was aboard—a man named Peoples—and we had quite a time because he was an insurance man. Everyone wants to know what you do. When Peoples would tell them, they still didn't know.

They seemed tremendously impressed and delighted by such a system as it unfolded regarding fires, storms, auto accidents, sickness, and the obviously endless list of items.

At one time we were surrounded by seven young sailors of the Black Sea fleet, and we wound up in the salon until midnight answering questions.

They want to know how much everything costs, starting from your shoes up—and then what else you have and how much it costs. This is hard to explain. The official rate of exchange is 4 rubles to the dollar. The unofficial tourist rate of exchange is actually 10 to 1 but they call 6 of the rubles a bonus. The black market offers 20 to 1 and better, I'm told. (Later, this was verified firsthand.)

So how much are things really worth in rubles? If they are obtainable at all.

These Russians insisted, after due explanation, in counting at four to one—with the result, of course, that everything was sky-high.

One gray-haired wizened-faced fellow brought me a beer, and Peoples came in and sat down. He refused the beer. Our Russian friend said to me: "He wants to live to be 100."

Peoples is 71 years old and extremely agile and youthful. When our friend learned this he shook his head. "He is 71, and he is a young man. I am 56 and I am an old man."

Then he and I joked with the waitress as to Peoples still being young enough to be interested in girls. (Note: This "youth" business popped up several times both regarding other tourists and myself. Their preoccupation with the contrast in Americans and themselves seems to stem from the Communist propaganda line that we Americans are "degenerate society" while the Communist society is young and virile—and having cast off a belief in immortality is using science and health methods to keep people young and alive longer.)

They were especially interested in my drip-and-dry shirt, and of what it was made.

One fellow piped up out of nowhere saying "5 million Amerikanyets nyet robato" (unemployed) and I replied when I left it was down to 3 million, and that the Government pays them for 26 weeks while they find new jobs. I added that most construction work is summer season work.

He popped up immediately: "5 million zemoy (winter); 3 million lyeta."

"What do you like most in Russia?" said another.

"The people," I replied.

"What do you dislike most?"

"The control over what you can read and know about the outside world."

No more questions.

Schedule of Grassroots Conferences in Third Ohio District

EXTENSION OF REMARKS

OF

HON. PAUL F. SCHENCK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. SCHENCK. Mr. Speaker, it is a great privilege and an honor to represent the people of the Third District of Ohio here in the Congress of the United States. I am deeply grateful for this opportunity to be of service, and it is my constant aim to serve my constituents in the best way possible. It has been my regular policy to keep in close contact with the people of the Third Dis-

trict so that I may know how they feel about the many important issues facing us here in Congress.

As the Representative of this great district, I have considered it my duty not only to be well informed of the opinions of my constituents, but also to be of the greatest possible service to persons having problems dealing with agencies or departments of our Federal Government.

Eight years ago I initiated the idea of holding grassroots conferences throughout our district, and I have continued this practice each year during the time Congress is in adjournment. I also have a full-time congressional service office at the U.S. Post Office Building in Dayton, where I can meet with people personally at any time that my official duties permit me to return to the district.

During the time I am in Washington attending to legislative and official duties, a competent secretary is in charge of my district service office to assist callers and to help them with requests for aid in dealing with the Federal Government so that I can be of every proper assistance to them.

In these ways I have sincerely tried to keep well informed as to the personal opinions of my constituents, and I have also tried continuously and sincerely to be of every proper service to them.

Members of Congress are constantly called upon to give careful and earnest consideration to legislation dealing with many complex national and international problems. These day-to-day decisions often affect the lives and living of every citizen in our Nation. Consequently, these personal and private conferences help me to serve all of the people in my district in a much more effective manner.

This year, during our official congressional recess, I am again taking time to hold these grassroots conferences throughout our district at convenient public buildings. I deeply appreciate the fine cooperation of the many officials who have made these meeting places available to me as an aid in rendering this public service.

This is the schedule I have arranged:

Dayton post office, room 314, September 21 and 22, 9 a.m. to 4 p.m.

Miamisburg City Building, September 24, 4 p.m. to 8 p.m.

Germantown City Building, September 25, 4 p.m. to 8 p.m.

Phillipsburg City Building, September 26, 1 p.m. to 3 p.m.

Brookville City Building, September 26, 4 p.m. to 8 p.m.

Hamilton Courthouse, September 28, 9 a.m. to 4 p.m.

Oxford Municipal Building, September 29, 4 p.m. to 8 p.m.

Middletown American Legion, October 1, 9 a.m. to 4 p.m.

Fairfield City Building, October 2, 4 p.m. to 8 p.m.

I have been greatly encouraged by the increased attendance at these conferences. It is sometimes surprising to see how much can really be accomplished when a citizen and his Congressman can sit down face to face and talk over problems of mutual concern.

Special appointments are not necessary for these conferences, and I sincerely urge individuals or groups to meet with me on the date and at the place most convenient to them. The knowledge obtained through these grassroots conferences will help me to render better service, both legislative and personal, to all of the people of our important Third District as their Representative in the Congress of the United States.

If the Southern Negro Got the Vote

EXTENSION OF REMARKS

OF

HON. CHARLES C. DIGGS, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include in the Record the following article from the New York Times entitled "If the Southern Negro Got the Vote." The article is important in giving a succinct account of the experience of Negroes in certain areas of the South with regard to voting restrictions. However, its primary significance is in the facts it presents exploding the myth that equal rights at the voting polls would lead to Negro domination of political affairs. The contention that Negro bloc voting would run all other races out of political office is a fear-inciting fraud used by segregationists in their campaign for white supremacy. The myth, as we know, is right now being used in efforts to forestall home rule for the citizens of the Nation's Capitol.

This article, by Ralph McGill, this year's Pulitzer Prize winner for distinguished editorial writing, does an excellent and forthright job of putting the matter straight and showing that the Negro voting pattern is like the voting pattern of Americans in general. It "belongs" to no party or candidate, for reason of color. It votes in its own interest when the issue calls for it—as do farmers, laborers, schoolteachers, and so forth. It attempts to be, as Mr. McGill points out, "more American, not less; to be complete citizens, not semicitizens."

IF THE SOUTHERN NEGRO GOT THE VOTE

(By Ralph McGill)

ATLANTA.—On the night of April 25 a fast-working, disciplined mob brutally dragged Mack Charles Parker, Negro, awaiting trial on a charge of rape, from a cell in the unguarded jail at Poplarville, in Pearl River County, Miss. On May 4, his body, bearing two gunshot wounds, was found in an eddy of the nearby Pearl River.

None knows what was in the collective mind of the mob, beyond a determination to kill Parker. Yet, despite the surface incongruity of the suggestion, it is likely that the systematic denial of voting rights to Negroes was one of the motivating factors in the hate-heated heads of the murderers.

April 25 was a Saturday. Parker's trial was set for Monday. It would be a jury trial with an all-white jury. For in Pearl River County only qualified voters may serve on juries, and in that county there was not even

one Negro on the voting lists. But the Supreme Court has held that contrived exclusion of Negroes from jury duty denies a fair trial to a Negro defendant and is unconstitutional. It was common knowledge in Poplarville that Parker's defense planned to challenge the whole proceeding on this ground.

For days there had been sullen talk in the town square to the effect that, in these circumstances, it would never be possible to obtain a valid conviction. Without question, this feeling combined with the more familiar ingredients of prejudice to doom Mack Parker to death on that night when the air was soft with spring, and the young people of Poplarville were dancing happily not far from the shabby jail.

The mob, in a manner of all mobs, thus achieved something it did not intend. It focused national attention anew on the almost unbelievable restriction of the right of Negroes to participate in the choice of public officials in the Southern States, particularly those of the old cotton South.

This denial of the ballot does not occur only in isolated places like Poplarville. Nor is its meaning confined simply to inability to vote for candidates for office. The ballot is the basic civil right. Once obtained, it would be the best remedy for all civil grievances.

Any attempt to provide a picture of the status of the Negro voter in the South runs into many difficulties. Accurate registration figures are not easily obtained. Voting lists are not always kept up to date. In a surprising number of counties in most of the Southern States the lists have not been thoroughly checked in years. Names of person long dead, and those of voters who have left the county or State, often are not removed. It is not uncommon to find counties which report white registration totals exceeding the white population of voting age.

Further, Negroes have been enfranchised in the South for only 13 to 15 years. Until the mid-forties when the U.S. Supreme Court ruled the white primary unconstitutional, the Negro voter was a Deep South rarity.

The white primary—restricting the vote in Democratic primaries to white citizens—was a deliberate device of State Democratic committees to deny the Negro the right to participate in the choice of those who would govern. Since there was no opposition in the one-party South, the elections customarily found the Democratic primary nominees unopposed. The Supreme Court ruled that such a system disfranchised the Negro and was unconstitutional. (The poll tax, a second restrictive device, today is retained by only five States—Alabama, Arkansas, Mississippi, Texas, and Virginia. It has lost some of its deterrent effect with the movement of people from the land to the urban areas and into higher income brackets.)

When the white primary was removed there was angry resentment and a hurried putting together of heads to contrive a substitute the courts could not invalidate. While the legal minds worked out their plans for new restrictive legislation, requiring some form of literacy tests of which the registrars would be the sole judges, others resorted to the ready technique of intimidation. In some counties, following the court ruling, motorcades of masked men drove silently along the roads and through the Negro sections of the county seats. A few crosses were burned before the homes of those Negroes who were regarded as likely to encourage interest in voting. Uncle Toms—pliant Negroes—were used to carry warnings to the others.

The first so-called literacy law, supplanting the white primary, was adopted in Alabama in 1901. It required a registrant to "read, write, understand, and explain any article" in the Constitution of the United States. In 1949, a Federal district court ruled this out as hopelessly vague, and also

noted that the registrars, not being constitutional lawyers, would not themselves know whether the replies were correct.

In a 1951 law the "understand and explain" clause was therefore omitted. But a severe test was established in its place. In addition to the usual qualifications of age, residence, and lack of a criminal record, the Alabama law provides:

"The following persons . . . shall be qualified to register . . . those who can read and write any Article of the Constitution of the United States in the English language which may be submitted to them by the Board of Registrars: *Provided, however, That no person shall be entitled to register as electors except those who are of good character and who embrace the duties and obligations of citizenship under the Constitution of the United States and under the Constitution of the State of Alabama: And, provided further, That . . . each applicant shall be furnished . . . a written questionnaire . . . Such questionnaire shall be answered in writing by the applicant, in the presence of the board without assistance.*"

This with variations providing registrars with opportunities for wide discrimination, is almost a South-wide pattern. In all States the registrars have powers of discretion, actual or assumed. In rural areas white registrants are "passed" quickly while most, or all, Negroes are rejected.

In one Alabama county no standard form is used. The registrars may ask on what date the 10th amendment was adopted or on what date Oklahoma became a State. Veteran Negro college teachers have been refused registration for failing literacy tests. In still other counties the sheriff has been known to sit in a chair close by where the questioning was going on, compounding the uneasiness most rural Negroes feel in the courthouse, which to them has too often been a symbol of injustice rather than justice. Various other stratagems and forms of intimidation are used—frequent, unannounced changes of hours for registration, highly technical purges of Negro voters, gunshots in the night in the vicinity of those who are known to have talked of registering, a few persons actually killed.

As a result Negro registration in eleven Southern States—Alabama, Arkansas, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Tennessee, Texas and Virginia—had reached a total of but 1,321,731 in 1958. This is about 25 percent of the 4,980,000 Negroes of voting age. Mississippi has the lowest rate of any State—30,000 to 35,000 out of a Negro voting-age population of about 500,000. The Southern Regional Council, a highly respected interracial research organization, has found that 80 to 85 percent of Negro voting is in the cities and larger towns of the South.

It should be added that white voter participation in the South is also below the national average. It is held down by the one-party system, low educational and income levels, the dominance of "the courthouse crowd" in most rural counties, the poll tax and the difficulties of registration—the same factors that discourage Negro voting. Booker T. Washington the illustrious Negro leader, once said that to hold the Negro in the economic ditch, the white man would have to get down there with him. This prophecy has been painfully accurate and applies, too, in the fields of politics and education.

The familiar bugaboo raised by those who oppose Negro suffrage and who create elaborately contrived legislation to restrict and discourage registration is the cry of "bloc vote," expressing fear of Negro domination through the ballot. The specter of Negro political rule is one constantly cultivated and exaggerated by those determined to maintain the status quo. Extremist demagogues make the most of it.

"You let the civil rights do-gooders have their way and you'll have a nigger mayor, nigger police, a nigger sheriff, a nigger superintendent of schools, and nigger tax collectors," wrote one of the more violent editors in a White Citizens Council pamphlet given general distribution.

Actually, in less than 20 years that the Negro may be said to have been partially enfranchised, his voting pattern has proved to be just like everyone else's. If Negroes feel that their interests are directly involved they vote in a bloc—as do farmers, union members, businessmen, or as doctors do on any issue which seems to them to involve socialized medicine. But when racial questions are not at issue, Negro voters tend to split their votes just as consistently as do the rest of the population.

For example, Dr. Rufus Clement, able Negro president of Atlanta University, twice has been elected to the city's school board. Each time he carried the white wards as well as those heavily Negro. In the last election a successful, respected Negro businessman was a candidate for another municipal position. His vote in the Negro wards was far less than that of Dr. Clement, strongly indicating that there is no bloc voting unless the Negro voters' special interests are at stake.

Naturally, once the Negro acquired the right to vote, he would use it to obtain his full civil rights. He would, in addition, become a pressure group in his community, seeking community services in exactly the way white voters have been doing all these years.

In Southern State elections the Negro voter would be a force behind expansion of schools and industry. He would provide, too, the possibility of creating a two-party system where today there is one. It is precisely this which adds to the fears of those who do not want him to vote and which causes them to try to picture the Negro voter as a dangerous factor.

The fear of bloc voting arises in its most caloric form in the few Southern counties where the Negro population is a majority of perhaps 60 or 70 percent. At least a part of it contains an element of guilt—as revealed in the assumption that if Negroes were allowed to vote they would all have reason to vote as a strong antiwhite bloc. But for many white residents the fear also takes tangible form in the visible presence of more Negroes than whites. It understandably is difficult for those so situated to apply reason to the question—and few have tried.

But there would never be a time when all the Negroes would vote. A high percentage of any Negro community—higher than in white communities—is under voting age. Many of the adults in these rural counties are illiterate, though not entirely by their own choice. They could not meet a legitimate test.

Moreover, the southern Negro population is steadily declining, nowhere more rapidly than in the old plantation cotton counties where Negro population majorities now exist. It is quite possible that the 1960 census will show that half of the Nation's Negro population is outside the Southern States.

Because of the emigration of the southern Negro, as well as that of the whites, the Bureau of the Census already has said that if the trend continues—and it is continuing—several Southern States will lose some representation in Congress in the reapportionment which will follow the 1960 census. This emigration is speeding up the decline of southern political power in Congress, a process that has already become evident during the past 3 or 4 years.

Three basic suggestions for meeting the problems raised by denial of Negro voting rights are indicated by present conditions and unmistakable trends. They are:

(1) Not even the most sincere believer in States rights, alone with his conscience, can

doubt the need for a bolstering of civil rights legislation to at least the moderate, commonsense level requested by President Eisenhower and Attorney General William Rogers. True, law alone is not enough. But history teaches that once prejudice and discrimination lack the sanction of law, both decline.

(2) The Federal Civil Rights Commission, established to look into denial of voting and other rights, may not need to be made permanent. But through the turbulent years immediately ahead, the Nation will badly need such a board.

(3) The continuing concentration of Negroes in cities offers an opportunity and an urgent need for a boldly imaginative co-operative civic job of political education by service clubs and other recognized agencies devoted to civic improvement. It should be obvious—as unhappily it is to but a few—that it is necessary and possible to provide for the Negroes (and for that matter, the whites) who leave the mechanized farms, honest instruction in the duties and responsibilities of citizenship. Most of those who come to town have little political consciousness. The average fieldhand or small Negro farmer, with little or no education, knowing that if he does not "keep his place" he may encounter violence, is not aware of the meaning of voting.

But the present pattern of southern life does not allow for real interracial cooperation in public-service schools for potential voters. Political education is left to those who are trampling out the vintage where the grapes of wrath are stored. There is rarely any mention that a moral question, as well as one of political health, is involved for the white and Negro leadership of the cities.

So far, the more progressive Negro churches have carried the burden of both inspiration and instruction. Some have achieved excellent results. But they would be the first to say they have barely scratched the surface. They must have help from a community which sees the Negro voter as an asset if he has honest leadership and example.

Negro society is as stratified as that of the white population. Its members are by no means a closely knit set bearing aloft the slogan, "All for one, one for all." The Negro knows that some of his own race have exploited him as ruthlessly and have deceived him as cruelly as have white men of like character. He knows, too, that some of his own people have provided some of the most venal examples of southern politics. Yet one of the best features of the Negro minority now seeking voting rights has been that its leadership has not sought to set it apart and ask for special privileges. It attempts to be more American, not less; to be complete citizens, not semicitizens.

Reading, Pa., City Council Urges Housing Bill Veto Be Overridden

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, President Eisenhower's ill-advised veto of the compromise housing bill has threatened the progress which many communities have made in the fight against slums and urban blight.

My own city of Reading, Pa., has made an outstanding record in this field. The

Walnut Street project has provided needed off-street parking in downtown Reading by eliminating a substandard housing area. The Cherry and Court Street projects are well along in the planning stages. A 102-unit public housing project for the aged has been approved, the first such project in the Middle-Atlantic region.

The veto of the housing bill therefore came as a setback to the long-range urban renewal plans made by the responsible local officials. Under leave to extend my remarks, I include the text of a resolution adopted by the Reading City Council calling on Congress to override the President's veto of the housing bill and an editorial from the Reading Times, which discusses the importance to a sustained housing and redevelopment program to the future growth of our city:

RESOLUTION 219

Whereas the city of Reading has made great progress in eliminating slum areas and creating sorely needed off-street parking areas under the Federal urban renewal program; and

Whereas two redevelopment projects are now underway as a result of Federal participation; and

Whereas another important project of 102 housing units for our elderly citizens is in the planning stage and depends upon Federal assistance for its completion; and

Whereas the Federal urban renewal program offers to our city and others throughout America genuine relief from the blight and strangulation that has impeded the progress of many municipalities; and

Whereas despite this great need President DWIGHT D. EISENHOWER has seen fit to veto urban renewal and housing legislation enacted by duly elected representatives of the people in Congress and thereby has jeopardized future modernization of our population centers, including Reading: Now, therefore, be it

Resolved by the City Council of Reading, That we call upon our representatives in Congress to override the presidential veto and thus insure continuity of planning so that our cities may continue to nourish our industrial, commercial, social, and cultural life; and be it further

Resolved, That copies of this resolution be sent to Hon. JOSEPH S. CLARK and Hon. HUGH SCOTT, U.S. Senators from Pennsylvania, and Hon. GEORGE M. RHODES, Member of the House of Representatives from Reading and Berks County.

Passed council July 29, 1959.

DANIEL F. McDEVITT,
Mayor.

Attest:
SAMUEL H. ROTHERMEL,
City Clerk.

[From the Reading Times, July 31, 1959]

READING HAS A SIZABLE STAKE IN OVERRIDING HOUSING VETO

The U.S. Senate is now in the throes of a big debate. It is trying to decide whether or not to attempt to override the carryall housing bill that the Congress passed and President Eisenhower vetoed in mid-July.

Senator JOHN SPARKMAN, Alabama Democrat and chairman of the Senate Housing Committee, said early this week that congressional leaders are determined to pass housing legislation this year, either by overriding the President's veto or by drafting and passing a new bill.

It is devoutly to be wished that one or another course be taken. For Congress to end its session without housing legislation would be for the Democratic-dominated Congress to admit that it is more interested in keeping

alive an issue for the 1960 elections than it is in getting houses built.

There would seem to be some chance that the Democrats in the Senate would be able to summon the two-thirds majority that is necessary, under the Constitution, to override a Presidential veto. There would seem to be substantial doubt, however, that the housing bill veto could be overridden in the House.

If it is believed that this is a remote subject for the folks of Reading, let that opinion be jettisoned. Housing legislation at this session is of great importance to all of us. On such legislation, plus appropriate appropriation bills supporting it, depends to a pretty large degree whether we go forward or slide backward in urban redevelopment.

We are informed that the failure of Congress to pass housing legislation cannot, at this point, bring to a halt the Housing Authority's plans to build low-rent housing for the aged. There is already governmental commitment on this.

We also are informed, however, that the redevelopment projects known as Court and Cherry, that would level many substandard areas in the central city, probably would stop in midstream if housing legislation is not passed by the Congress.

The Court and Cherry projects, as we understand the situation, are assured Federal money for planning but still lack Governmental commitment on the Federal Government's share of the actual razing of dwellings and other buildings and on whatever construction—parking lots or what-not—will take place after the razing. These projects are gradually changing the ancient face of downtown Reading and for them to be halted would be a shame.

But there is another consideration. For the first time in a good many years planners in many categories are beginning to look ahead in our municipal development. They are looking ahead not a year or two but 5, 10, 20 years. One of our troubles has been that we have not looked far enough ahead. Now that we are doing so, by way of municipal planning, it would be singularly unfortunate to bring the planning to a screeching halt, which obviously would happen if the Congress were not to pass a housing bill which would provide ample funds for urban renewal.

In view of these matters the people of Reading, along with those of many another American community that is affected, may hope that the Congress will either override the President's veto of the housing bill that has already been passed or rewrite the bill and hasten it on its second journey through the Federal Legislature. If, then, the President is still adamant, the people will then know at whose door to lay the blame.

Nixon Sets Khrushchev Straight

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. CRAMER. Mr. Speaker, under leave to extend my remarks in the Record, I include three editorials from the Washington Evening Star, of Wednesday, July 29, 1959, commenting on Vice President Nixon's tour of Russia and Siberia: "He Is Doing All Right," "Changed Khrushchev Unlikely," and "Nixon Sets Khrushchev Straight":

He's DOING ALL RIGHT

Some of our amateur political experts, especially those to whom the man's very name is anathema, are taking a dim view of RICHARD M. Nixon's Russian-Polish tour. They think the Vice President is up to no good and they devoutly hope that he will fall flat on his face.

It is interesting to note, however, that the professionals take a somewhat different view. They realize that the trip can boost the Nixon political stock in this country. Most of them also think, or profess to think, however, that it may help relations between our two countries or that, in any event, it is not doing any harm in this respect. Some of these professional views appear to be colored by the individual's own stake in the game. Thus, Senator KENNEDY, a leading Democratic presidential prospect, comments rather tartly that the trip has been helpful to Nixon. Senator HUMPHREY, another Democratic hopeful, thinks the idea of the trip was very constructive, but he doubts that the Vice President should have gotten into a rough-and-tumble debate with Mr. Khrushchev. The Minnesota Senator says that Mr. Khrushchev is a tough man to handle in such a contest, and, having spent 8 hours with him, he ought to know.

Other Democrats, who are not presidential aspirants in their own right, have been surprisingly favorable in their comments, among them being such men as Senators FULBRIGHT and PROXMIRE. The Republicans, of course, with the notable exception of Governor Rockefeller, whose opinion has not been recorded, would have you believe that the Nixon trip is the answer to all our troubles, and why wasn't something of the sort done long ago.

In our judgment, without attempting to be either pro-Nixon or anti-Nixon, it seems perfectly clear that the Vice President, up to this point at least, has had a successful trip, and this is bound to improve his personal political fortunes. It does not mean, of course, that he necessarily is the best man for the presidency, or that he has either the nomination or the White House in the bag. Neither does Mr. Nixon's trip, assuming that it will be a bangup success in both Russia and Poland, bring us to the point at which the storm clouds hanging over our relations with the with the Soviet Union are about to be blown away.

The trip was not made with any such expectation and it would be childish to expect any such result. The most that it can do, again assuming its success is to help prepare ground for the cultivation of a better understanding between our two countries. This, however, is something which is important, and which should not be underestimated. Soon or late, something is going to have to give in the relationship between the United States and Russia. We hope that the break will come in the form of an easing of mutual distrust and dangerous ambitions. There is no really good reason, economic or otherwise, why this is not an attainable objective. And those among us, in both countries, who seek some petty advantage by fanning the fires of suspicion and fear should not forget that the alternative to a workable live-and-let-live arrangement will almost certainly be a mutually ruinous war. If Mr. Nixon's trip casts a little weight in favor of the former and against the latter it will have been well worthwhile.

CHANGED KHRUSHCHEV UNLIKELY—NO EFFECT ON GOAL OF U.S. SURRENDER SEEN POSSIBLE IN VISIT TO AMERICA

(By David Lawrence)

Many people who watched the boorish, arrogant Khrushchev on television a few nights ago wondered why such a dictator and bully should be humored so much by the

American Government. In view of the deliberate distortions of the Nixon-Khrushchev repartee in the officially controlled press and radio of the Soviet Union, the question that naturally arises now is what possible good could come from a summit meeting with such an irresponsible mind.

There is nothing really new being uncovered nowadays about the Khrushchev personality. He has talked for hours with various American officials and other prominent men from Western countries. He is shrewd and skillful in debate. He is used to having his own way and can't understand why the United States doesn't knuckle under at his command.

His point of view hasn't changed a bit since he first grabbed power in the Kremlin. He insists that the way to ease tensions and prevent crises in the world is for the United States to do what he says. There is no middle ground, as he sees it, between capitalism and what he inaccurately calls socialism. In the end, he is sure one will triumph, and he is confident it will be Communist imperialism rather than the system under which America and the West have thrived.

Most of Khrushchev's visitors, including perhaps Vice President Nixon, come away with the idea that maybe it would be a good thing to educate the Soviet Premier by arranging for him to come to the United States for a visit.

But this is a fallacy. Khrushchev can no more be "educated" than Hitler could have been. The two men are very much alike. There is one little difference—Khrushchev secretly orders his murders and tortures of dissenters, while the Nazi dictator did it openly and boasted about it. Khrushchev is responsible for the execution or exile of thousands of Hungarians. The present Hungarian government is his slave and captive, as also are the other neighboring countries in Eastern Europe. But Khrushchev resents any mention of "captive nations."

What Khrushchev lacks is a sense of decency and dignity and an appreciation of the other fellow's viewpoint. He is as absolute as a czar. The impression has been widely spread that he has an inferiority complex and wants to be invited to stay at the White House so as to show off to his people that he is accepted as a world leader. But even after he did this, he probably would argue just as vehemently that what America and Europe need is communism. He has an obsession on the subject of world conquest.

To accord Khrushchev the kind of invitation he wants is to give him a chance to make propaganda and belittle the very country that would be treating him as its guest. He would distort the purpose entirely on his return home and boast to his people that even America recognizes his prowess in a position of leadership in the world.

In the Soviet Union Khrushchev isn't popular with the people outside the ruling Communist group who are familiar with his personality. He needs prestige at home. One way to get it, he thinks, is to be accorded attention by the heads of other governments. He enjoys being sought after. He nevertheless plays constantly at the game of trying to divide the Western allies by appealing to their materialistic interest in trade relationships.

What should the West do about such a dictator? Domestic politics in Britain and a tendency on the part of some British Labor Party people to seek a close working arrangement with the Kremlin complicate the problem for the West. As for France, General de Gaulle declares he wouldn't come to the United States for a summit meeting and says it should be held in Europe if at all. So, even if the United States were agreeable to a meeting with Khrushchev in this country

for the summit, French objections would prevail.

Then what about a summit meeting of only President Eisenhower and Nikita Khrushchev in the United States? This would arouse suspicions among our allies. It's true that Prime Minister Macmillan went alone to Moscow, and Khrushchev showed his bad manners by insulting his guest in a public speech.

The British leader, incidentally, was busy for weeks afterward explaining that he wasn't making any separate deals. So it seems that if General de Gaulle will not come, there is no likelihood of a summit meeting in America. If one is held, it will be in Europe, and President Eisenhower would attend reluctantly and then only if "progress" has been made through the four foreign ministers toward a settlement of the Berlin problem.

Judging by the way the Soviet Premier has handled the visit of Vice President NIXON, nothing substantial would result from a summit meeting. Khrushchev doesn't understand that an American President isn't a dictator and can't make "deals." And the only kind of deal the Soviet Premier wants is of the appeasement and surrender variety. This he will never get as long as Dwight Eisenhower is in the White House.

NIXON SETS KHRUSHCHEV STRAIGHT—VICE PRESIDENT'S STRAIGHT TALK TERMED EFFORT TO AVERT RED MISCALCULATION

(By William S. White)

The so-called striped pants set, the old career diplomats, tend to tut-tut Vice President RICHARD NIXON's bare-knuckled politician's approach in Russia. But the truly responsible chiefs at the State Department—those who, under the President, actually run our foreign policy—are delighted by his performance in the first, or Moscow, phase of his mission.

Indeed, it can be stated responsibly, these controlling heads believe that if Mr. NIXON is able to wind up his trip without a major mistake he will have well done all he went to the Soviet Union to do.

Three circumstances have confused many estimates as to the effectiveness of the Vice President's trip. There is the quite unhidden fact of his fierce ambition. Of course, he wants to be President after 1960—as do some of his critics, too. There is the fact that, partly because of his past undoubted partisan savageries, he has enemies who will never credit him with doing anything well. And, most important of all, there is this: Some have never understood what his assignment really was and was not.

If the real purposes of his journey are understood, this much can be said with complete confidence: It is not necessary to be for Mr. Nixon for President, or to like him or approve him even in the smallest possible way, to demonstrate that the Moscow phase has gone very well.

It is complained that Mr. Nixon is "not a diplomat" and has not acted like one. This is absolutely correct—and absolutely irrelevant. It is complained that he has been "acting just like a politician." This is absolutely correct—and absolutely intentional. It is complained that he has been trading some tough and highly unreserved words with Nikita Khrushchev. That he has. But there was no mistake in this; quite the contrary.

For to trade such words with Khrushchev and other Soviet leaders was one of the two main reasons Mr. Nixon was sent to Moscow by the administration. His other main purpose was to set at rest, if he could, what our top people are willing to concede possibly were some honest misconceptions by Khrushchev about the United States.

The State Department was fed to the teeth with a series of easy world propaganda victories Khrushchev had scored in his pre-

vious conversations with unofficial envoys like former Gov. Averell Harriman, of New York, and Senator HUBERT H. HUMPHREY, of Minnesota. State Department leaders had no criticism of the motives of such envoys. The Department felt, all the same, that they were not in position to do full justice to our side of the world argument.

And the Department wanted some person of great power—Mr. Nixon—not only to put our side to the world but also to warn the Russians against miscalculating our basic determination. The Vice President was briefed up to the neck by departmental experts on these points. He knew just what he was going to do and why. For example, his decision to come home by way of Poland was not sudden, though it looked to be. It was, in fact, a decision made here weeks ago.

For the bottom truth about the Nixon mission is simply this: The time had come when the cold war was too important to be left to the diplomats—as old Premier Clemenceau of France once said that war was too important to be left to the generals. The view of career diplomats and their followers to the contrary, it is politicians and not diplomats who in the end are controlling our system—and the Soviet system, too, if it comes to that. Secretary of State Herter, for example, is a politician, and a good one.

Diplomats, after all, are employees, if elevated ones. Politicians, however dreadful the word, still make the policy—and run the show. This they do because the Constitution gives them the right and because they represent the facts of life, which are the facts of power.

Certainly Mr. NIXON is running hard for President. But the very fact he might one day be President of the United States was the very ultimate reason why he was sent to Russia in the first place. This was done not to assist RICHARD NIXON but to assist the high policy of this country. If it all helps him politically, as well it might, everybody concerned will just have to live with that fact.

Shall Unions Be Free?

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 30, 1959

Mr. HIESTAND. Mr. Speaker, example after example of misguided labor union control has come to attention of the House and Senate Subcommittees on Labor.

One example which has not been related in detail appears in the August 1959 issue of the Reader's Digest. Lester Velie tells the story of a rank-and-file member who tried to bring control of the local to the members, themselves. He was thwarted by powerful officers of the international union who were fully protected by watery labor laws.

Under leave to extend my remarks, hereafter appears "Attention, Congress. Consider the Death of Roy Underwood." This story poignantly illustrates privileged bosses usurping the rights of local members. This could not be done without the tacit approval of weakly drawn legislation which acts to nullify self-government efforts by the union membership—if the officers of the parent union want it that way:

On a windy hill outside Philadelphia early last April, an undertaker's assistant scattered the still-warm ashes of Roy Underwood. Thus ended in tragic martyrdom the life of a valiant union man who had merely dared to seek for his fellow workers a few basic civil rights. His tragedy is a scathing indictment of Congress, of the National Labor Relations Board, of the courts and of the good unions for their current apathy—for their failure to provide protection for the members of a few bad unions against repression by their leaders.

Roy Underwood was a spectacled man in his early fifties full-faced and ample of girth. Had he been a printer, or a plumber, or a member of some equally upright union, he would undoubtedly have been one of America's important union leaders, for he was a dedicated union man and the sort of man other men follow. But Roy Underwood, a crane operator, was fated to be a member of the Operating Engineers. And so he was doomed to make the most frustrating of all struggles: the fight against evil masked as unionism and defended by men commanding entrenched power.

The things which Underwood laid down his life to win were things all of us take for granted: the right to assemble and speak out freely; the right to elect those who will rule and tax us; the right to seek redress against injustice. In the debate now raging over labor reforms, his story becomes exhibit A in the case for urgent action to win for union citizens the rights they presumably enjoy as American citizens.

I first met Roy Underwood 5 years ago when I was piecing together the fantastic story of Joe Fay, the Operating Engineers vice president who had gone to jail for extortion but continued to rule his union empire from prison. Underwood was then the picture of the happy warrior. He was in a fight, and his round face exuded the confidence of the born leader. His international president, a crony of Joe Fay, had booted him out of his job as president of a local, and out of the union. The international president had then plunged the local into a species of union martial law known as supervision, and Underwood was suing in the Philadelphia Federal court to win reinstatement for himself, plus self-rule, and an election for the duespayers.

Underwood had come to Philadelphia in 1937 and into a topsy-turvy Operating Engineers world. In the local, as ruled by Fay—and as spelled out in McClellan committee testimony—wrong was right and right was wrong. It was right for business agents to extort 3-percent weekly assessments (over and above dues) from the members; it was wrong for the members to ask about this at meetings—thugs patrolled the aisles and beat them up. It was right for Fay to make soft conniving deals with employers; it was wrong for the members to have a voice in the kind of contracts they would work under. It was also wrong for them to elect their own officers, because the union had been under supervision as long as the oldest member could remember—and Fay was the supervisor.

Underwood formed a committee of liberation in 1945, and soon learned his first bitter lesson about trying to right wrongs inside a corrupt union.

He found that he must exhaust every means of obtaining justice within his own union before he could appeal to the courts. This meant that in the Operating Engineers he had to appeal to the men who were responsible for his plight. For it was with the connivance of Fay's crony, the international president, William Maloney, that Underwood's local remained under supervision. And, under the Operating Engineers' constitution, it was Maloney to whom petitions for relief had to be addressed.

When Underwood's committee of liberation tried to get members to sign petitions, Fay's toughs beat them up and tore up the petitions. When Underwood's men got the petitions signed, anyway—at clandestine night meetings in members' basements—Maloney ignored them.

After several months, Underwood and his followers obtained a lawyer and in 1947 sued for union self-rule in the Philadelphia Court of Common Pleas. Miraculously, they got away with their suit—for a while. Maloney was in no position to fight, because Joe Fay, to whom he had entrusted the lives and fortunes of the 2,000-odd men in the Philadelphia local, was on his way to jail. Fay and his henchmen had kept no records of an estimated \$3 million collected in assessments and permit fees. Written contracts with employers had said one thing, but (as subsequent arbitration hearings proved) verbal agreements resulted in softer conditions. It was a system of built-in corruption in which the local's business agents got paid off for overlooking the contract.

To avoid airing this mess, Maloney settled with Underwood. The rank and filers could have their union back provided they didn't sue Fay and his buddies for the missing money. So in a court-supervised election Roy Underwood was elected president of the local. He proceeded to bring back clean unionism.

Underwood and his regime were living on borrowed time, however. President Maloney could no more permit free rule in Philadelphia than Khrushchev could permit freedom in Hungary. For Underwood's local was an island in a sea of union corruption—two of Maloney's locals in Chicago had been under union martial law for 23 years; the New Jersey local was still under the thumb of Joe Fay, although Fay was in prison; the Long Island local was run by one William DeKoning, Sr., who was soon to go to jail for extorting from his members.

Restive members of these locals might get ideas from Underwood's free union. Worse still was Underwood's threat to the rotten fabric of collusive-agreements between Operating Engineers officials and favored employers.

When Underwood tried to make one big contractor live up to the Philadelphia-area agreements, he got an angry call from Maloney. "Stay away from him (the contractor)," the International president ordered, according to McClellan committee testimony. "He is a friend of mine, and that is all I should have to tell you."

When bitter wrangles over the contracts Fay had left behind him exploded into a prolonged strike over wages and conditions, Maloney stepped in and took the union away from Underwood and the members. Underwood was tried by a union board controlled by Maloney and dependent on him for union jobs. Under provisions of the union constitution he was fined \$3500 and suspended from the union for 8 years. Union martial law returned.

What broke Roy Underwood's heart now was the system of union and legal custom which gave him and his men no forum in which they might hope to win justice. As rebels many of the Underwood men could no longer get work—jobs were largely controlled by the union hiring hall and by the "supervisor's" business agent. So, first, they complained to the NLRB. For a workingman who lives from paycheck to paycheck, however, justice that takes 2 or 3 years to get is no justice at all. And in the end only a handful could win their NLRB cases. How can you prove that a business agent has put pressure on a boss to keep you off a job? Where are you going to get the witnesses?

Underwood tried the Federal courts. Here there were 5 years of delay. His followers fell away. His wife had to go to work. The

other side had no such problems. From the parent union's \$15 million treasury, contributed by the members came ample money to hire lawyers. Against these, Underwood had but one lawyer, Abraham Freedman, who neglected his regular practice, gave his time free and even dug into his own pocket to defray occasional expenses.

Underwood's day in court crushed him. He listened as the judge praised the local that he, Underwood, had run, and excoriated the terrorists who had taken over. But the court would not interfere in a union's internal affairs, provided the union gave complaining members a fair trial. And Underwood, said the court, had had a fair trial.

Underwood didn't know whether to laugh or cry. Fair trial? Was it a fair trial when the union boss whom he fought—William Maloney, who, as Senator McClellan told his committee, had risen to power with gangster guns—had tried him with his own executive board? Was it a fair trial when the charges were that he had spread defamatory literature—the papers in his suit against Maloney? Even more, should Underwood have had to stand trial by his union at all—for going to court to prevent Maloney from intervening against his own members in a strike?

"It is crystal clear," the judge summed up, "that under the leadership of [Supervisor] Hunter P. Wharton . . . there will never be a chance for decent operation [of the Philadelphia local]." But the judge held: "The courts do not look with favor upon interference by the courts in the internal workings of any . . . labor organization." In effect, the judge ruled: There is a grievance, but I can't help you.

"When Roy came home from the court," his wife told me, "he looked like a licked man. 'All those years of fighting, and where do you wind up? I'll never believe there's justice in the courts,' he said."

Now, alone in his home, Underwood brooded. Evil seemed to be inheriting the earth—and legally.

Joe Fay, out of prison, had been rewarded by his old local with a lifetime pension of \$10,015 a year—after taxes. To give him additional cash, some locals also bought their limousines through him.

William Maloney had quit his presidency rather than face questions by the McClellan committee about the contents of 11 secret safe-deposit boxes. But no civil or criminal suits followed. Now he lived in happy retirement on his estates outside Chicago and in Florida.

Hunter P. Wharton, supervisor of Underwood's Philadelphia local, who had been excoriated in court and before the McClellan committee as a harbinger of terrorists, continued as the local's boss. More, he was elected secretary-treasurer of the parent union on a clean-up slate.

"Never fight the rackets as I did," Roy Underwood said to his 16-year-old son, Roy, Jr., on the morning of last April 3. "You can't win."

These were among the last words he uttered. When his son had left for school, and his wife for work, Roy Underwood methodically burned the bushels of papers, clippings, legal documents that had accumulated during his 14-year fight. He typed a note to his wife, and his hand shook so with exhaustion that he couldn't sign his name. Then, utterly defeated, he went into his garage and shot himself.

I went to Philadelphia after Roy Underwood's death and made my way, uninvited, into a meeting of his old local one night. Some 600 men had crowded into the basement auditorium of Philadelphia's Town Hall to hear the wages and conditions that the supervisor and his business agents, none of them elected, had accepted from the contractors.

There had still been no election, after 9 years, for on the rostrum was a chairman whom the supervisor had chosen, presumably for his leather-lunged ability to shout down the heckling from the floor. The same old crowd that had been involved in brutal beatings of Underwood's men still dominated the proceedings on the floor. All around me men grumbled to each other about the terms of the contract, hurling occasional four-letter epithets at the chairman. But when the time came to be counted, few stood up to indicate their opposition openly. The old fear of antagonizing men who hold your livelihood in their hands prevailed.

I talked to a remnant of Underwood's followers and found that the old pattern of discrimination against troublemakers was still making it difficult for them to get work. And a union member who had briefly held office as a business agent disclosed that the old system of built-in corruption in which employers paid off for relief from the hard provisions of a contract still flourished, too. When the ex-business agent, an honest man, sought to confer with a contractor about his labor needs on a new job, he found the contractor closeted with the local's acting supervisor, then under indictment for extortion, and now dead. Employer and acting supervisor worked out their own deal for conditions on the job.

"Don't stick your nose into things that aren't your affair," the ex-business agent was told by the acting supervisor.

It was as if Roy Underwood had never lived.

But can Americans let the Underwood story end this way?

"The International Union of Operating Engineers stands out as an ugly example of ruthless domination of workmen through violence, intimidation and other dictatorial practices," the McClellan committee reported a year and a half ago. The committee's declaration that "democracy within this union is nonexistent" and that "there has been extensive collusion between union officials and management" went to the AFL-CIO's ethical practices committee for investigation. The AFL-CIO has before it a report that has been gathering dust since August 1958.

It is this kind of apathy, delay and postponement that destroyed the hope, the fight and finally the life of Roy Underwood.

AFL-CIO leaders argue that no written guarantees are needed to protect the rights of the union man. His own union constitution—enforceable as a contract in court—protects him, they say. This the life and death of Roy Underwood contradicted.

A bill of rights for the union man is urgently needed. How long will Americans stand by without establishing this protection?

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

Governor of Kansas Starts To Straighten State's Financial Woes

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES
Tuesday, August 4, 1959

Mr. JOHNSON of Texas. Mr. President, as Governor of Kansas, George Docking has welded together efficiency and economy in government. This achievement, focusing national attention on his Democratic administration, is reviewed in the August-September 1959, issue of the Eagle, official publication of the Fraternal Order of Eagles. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAN WITH A PLAN—KANSAS EAGLE GOVERNOR STARTS TO STRAIGHTEN STATE'S FINANCIAL WOES

Of the many Eagles who have occupied the chief executive's chair in our various States, Brother Eagle George Docking, Governor of Kansas, is unique. He is a Democrat in a traditionally Republican State.

How did he get there? His opponents say that he was elected because the Republican Party in Kansas was hopelessly split. His supporters, however, minimize such claims.

Regardless of the reason for his election, Governor Docking is a "different breed of cat" as far as a politico is concerned. He is a country banker with a grasp of finance which verges on the miraculous.

The Docking administration inherited a precarious financial situation from previous State administrations. The obvious way out of the State's financial straits was to increase the 2 percent sales tax to 3 percent. This Docking refused to do.

In Docking's solution to the State's fiscal problems lies the key to his continued popularity. Campaigning on businesslike government, the Kansas Governor is applying to the affairs of Government the same principles which made his bank successful. An austere, but efficient operation of all departments in government is the Docking approach. All of the Docking appointments have been made on the basis of individual record rather than political rank. "One good man on the job is better than two mediocre ones anytime," says the Governor.

Docking is a firm believer in the people's right to know what is going on in government. As his first act in office, Docking opened the doors of his suite to all who wish to see him there.

Governor Docking and his wife, Virginia, have two sons: Robert, who is a banker, and Richard, just starting in law practice.

A strong-minded man Docking is a believer in the strength of family ties and is respectful of the idea advanced by his wife and sons.

He's a new thing in Kansas, this banker-governor, and his approach is giving the political pros of both parties something of

a shock, but in the opinion of the citizens of Kansas, his mark will be imprinted in its future.

Alaska and National Defense

EXTENSION OF REMARKS OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 28, 1959

Mr. RIVERS of Alaska. Mr. Speaker, under leave to extend my remarks in the RECORD, and as a followup on my remarks of yesterday on the subject of the vulnerability of our national defense because of inadequacy of missile installations in Alaska, I include a timely article from the Fairbanks News-Miner of July 31, 1959, featuring the strong reaction of Senator E. L. (BOB) BARTLETT, who was for 14 years seated in this Congress as Delegate from Alaska. The situation is very serious from a national standpoint and must be given vigorous consideration and corrective action:

SENATOR BARTLETT PLANS WARNING TO NATION ON ALASKA DEFENSE

Alaska's Senator E. L. (BOB) BARTLETT said yesterday he plans to go back to Congress and sound a warning to America that Alaska has "a paper defense" which is threatening the security of the entire Nation.

Speaking to officials of 15 airlines at a meeting here of the Association of Local Transport Airlines, BARTLETT echoed an earlier warning issued by Lt. Gen. Frank A. Armstrong in Anchorage on Wednesday. He later reiterated his views over station KTVP.

In a dramatic departure from his prepared speech on Alaska aviation, Senator BARTLETT declared he was going to find out what has happened to those back in the Pentagon charged with providing defense not only for Alaska but for the entire Nation.

SENATOR SHOCKED

"It was shocking to learn that Alaska has what amounts to no defense at all after we have spent millions of dollars maintaining what we believed to be a reasonably adequate defense," BARTLETT told the airlines officials. "It's enough to frighten anybody."

BARTLETT referred repeatedly to General Armstrong's speech on Alaska's military capabilities.

He restated a number of times that he was shocked to learn of this weakness, and praised General Armstrong "for having the courage to tell the Nation about it."

"I cannot help feeling deep concern on being told the Russians could immobilize what we have here and lay waste to all the cities of the west coast. I had no notion at all that we had a paper defense in Alaska rather than an actual one."

FELT DEEP CONCERN

BARTLETT said Alaska ought to have one of the strongest defenses in the Nation.

He declared: "I intend to return to Congress and bring the attention of the entire Nation to this alarming situation from the floor of the U.S. Senate."

He pledged he would continue to work with vigor and determination for the establishment of the kind of defense Alaska and the Nation must have.

BARTLETT referred to an article by Gen. Billy Mitchell in the November, 1927, issue of the magazine Aeronautics in which Mitchell assigns a strategic and vital role to Alaska in continental air defense.

"Billy Mitchell's words become more meaningful than ever when placed in context against General Armstrong's remarks on Wednesday," the Senator said.

TELLS OF THREAT

Armstrong told the ALTA audience in Anchorage that two enemy bombers could put Alaskan bases out of commission and leave both Alaska and the west coast defenseless.

"With Russians in the Fairbanks and Anchorage areas, President Eisenhower would have to decide quickly whether to bomb Alaska to save Chicago or leave the country wide open to close-range attack," General Armstrong said.

To expand on remarks made yesterday afternoon at the airlines meeting, Senator BARTLETT appeared before a television camera last night.

He referred again to Alaska's strategic geographical position and to the warnings issued by General Armstrong.

RESTATES WARNINGS

"If the commanding general of the Alaska Command tells us that across the way there are 26 Red bases and we can knock out only eight of them, and that there should be installed in Alaska intermediate-range ballistic missiles, then we had better believe him," BARTLETT said.

He praised once more General Armstrong's willingness to bring the matter out into the open.

"I am glad General Armstrong spoke as he did," said BARTLETT. "This was in his heart. It was not easy, I suspect, for a man in uniform weighted with such tremendous responsibility to open his heart on such a matter. My feeling is that in doing so, General Armstrong performed a vital service to our country."

DRAMATIC MOMENT

BARTLETT referred to Armstrong's comments before the ALTA group in Anchorage, at which BARTLETT was present, as "one of the most dramatic situations in my life."

As a member of the Senate Armed Services Committee, BARTLETT was critical of the fact that the matter of Alaska defenses had not been brought before the committee.

A Job Diplomats Couldn't Do

EXTENSION OF REMARKS OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES
Tuesday, August 4, 1959

Mr. YOUNG of North Dakota. Mr. President, I never read an editorial with which I more wholeheartedly agreed than one appearing in the Bismarck Tribune, published at Bismarck, N. Dak.,

datelined July 31, 1959, and entitled "A Job Diplomats Couldn't Do."

Vice President Nixon made a most commendable contribution to world peace on his recent trip to Russia and Poland. He possesses the warm and friendly attitude of the average American citizen. Far too often career diplomats of the United States and many other great powers lack this down-to-earth approach.

I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A JOB DIPLOMATS COULDN'T DO

People in North Dakota like those elsewhere throughout the country have followed with great interest the course of Vice President Nixon's trip through the Soviet Union, some applauding his performance and some criticizing it.

Nixon has encountered some critical questioning from Russians but he also has been loudly cheered by the Russians, and the chances are that Soviet-American understanding will have been advanced as a result of his visit.

If history proves this to be the case, then it will also write it into the record that the cause of world peace was well served by his going to Russia.

There comes a time when it is necessary to remove the kid gloves to be understood by someone who has never learned the kid-glove soft talk of diplomacy. Khrushchev is certainly not a soft talker. Nixon is the first American to really speak to him in the blunt language he can appreciate.

William S. White, a New York Times expert on foreign affairs, discussed this in a recent column.

"The complaint has been made that Nixon is 'not a diplomat' and has not acted like one. This is absolutely correct—and absolutely irrelevant. The complaint has been made that he has been 'acting just like a politician.' This is absolutely correct—and absolutely intentional.

"To trade (some tough and highly unreserved) words with Khrushchev was one of the two main reasons Nixon was sent to Moscow by the administration. His other main purpose was to set at rest, if he could, what our top people are willing to concede were some honest misconceptions by Khrushchev about the United States."

White declares that the bottom truth of the Nixon visit was simply that the time had come when the cold war was too important to be left to the diplomats. He explains:

"The views of career diplomats and their followers to the contrary, it is 'politicians' and not diplomats who in the end control our system—and the Soviet system too. Diplomats, after all, are employees, if elevated ones. Politicians, however dreadful the word, still make policy—and run the show. Certainly Nixon is running hard for President. But the very fact he might one day be President of the United States was the very ultimate reason why he was sent to Russia in the first place."

Nixon obviously was carefully briefed before the trip. He knows what American policy is and he knew how to talk to Khrushchev. It must have been something of a shock for that individual, not accustomed to being talked back to, when Nixon gave him back as much as he handed out.

The purpose of diplomacy is to protect and advance, in peace, a country's interests. The only alternative to living in peace with Russia is war with Russia. We know of no one who is advocating total war, as war

with Russia would be. Nixon's Russian visit seems so far to have served the purposes of diplomacy better than they could have been served by any employee diplomat. It appears obvious also that a summit meeting between Khrushchev and President Eisenhower is almost inevitable. It is only to be hoped that such a meeting will come off as well as the Nixon Russian tour.

Observance of Swiss Independence Day by the Swiss Rifle Club, Altoona, Pa., August 2, 1959

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. VAN ZANDT. Mr. Speaker, among the many observances in the United States of the 668th anniversary of Swiss Independence Day none was more colorful and interesting than the program conducted by the Swiss Rifle Club, Altoona, Pa., August 2, 1959.

It was my privilege to deliver the principal address to the several hundred American citizens of Swiss descent who were present for the enjoyable occasion.

My address follows:

ADDRESS DELIVERED BY REPRESENTATIVE JAMES E. VAN ZANDT, 20TH DISTRICT OF PENNSYLVANIA, FOR THE CELEBRATION OF SWISS INDEPENDENCE DAY BY THE SWISS RIFLE CLUB, ALTOONA, PA., AUGUST 2, 1959

For 668 years, August 1 has been a great day for the Swiss.

Today, we celebrate Swiss Independence Day—the anniversary of the founding of the Swiss Everlasting League for Common Defense.

On August 1, 1291, the first milestone was passed in the evolution of the modern federation of Swiss cantons.

Today in the United States, several hundred thousand Americans of Swiss origin rightfully look with pride on the achievements of their forebears almost 700 years ago.

Throughout the United States, Americans of Swiss descent have formed over 300 organizations.

Thus a widespread celebration of this great holiday throughout the United States is assured.

These organizations—such as the Swiss Rifle Club of Altoona—make invaluable contributions to the civic, cultural, social, and recreational life of their communities.

They are a splendid example of the unique capacity of the Swiss to "live the good life," in harmony with one another and with their neighbors.

On August 1, 1291, the Everlasting League was formed as a measure of self-defense against all who might attack them.

This league was the foundation of the modern Swiss Federation.

From the very beginning, the Swiss Confederates showed a willingness to fight for independence from foreign domination.

In 1313, a valiant band of Swiss Confederates completely defeated a brilliant Austrian army on the precarious slopes of Morgarten.

Two years later, representatives of the victorious Swiss Highlanders met at Lake Lucerne to reaffirm the everlasting league and to strengthen the unity of the confederation.

The league won great renown for its victory at Morgarten over the Hapsburg oppressors.

As years passed, other members were admitted to the original alliance of the three cantons.

First came Lucerne.

The ancient town of Zurich followed, after receiving aid from the four confederated cantons against the threat of an attack from Austria.

Glarus and Zug were admitted in 1352, and the next year, the famous town of Berne entered the confederation.

Thus by the end of the 14th century, the threats of invasion and foreign rule and the glories of Morgarten had impelled eight Swiss communities to join hands in collective self-defense.

While preserving their territorial integrity and independence by joint action for common defense, the Swiss confederation continued to expand.

By 1315 the confederation of Swiss States had grown into an organization of 22 cantons.

1848, when the cantons united into a federal state, was a memorable year in Swiss history.

The Constitution of 1848 added strength to the union by increasing the authority of the central government over national defense, foreign relations, internal security, customs, the postal service, and the promotion of the common welfare.

A national government with a cabinet, a federal supreme court, and a legislature was established.

Each canton retained its own legislature, executive, and judiciary for local affairs.

Thus from the formation of the everlasting league on August 1, 1291—which we are celebrating today—the Swiss people have developed into one of the world's most stable and successful governments.

America promised broader opportunities than many of the most ambitious, adventurous, and gifted sons and daughters of Switzerland could find in the crowded, narrow valleys of their Alpine homeland.

Consequently, for nearly 350 years, a small but steady stream of immigrants from Switzerland has contributed immeasurably to the development of our own Republic.

As early as the 17th century, Swiss settlers immigrated to Colonial America.

Many of these early Swiss colonists came from communities where they were not permitted to practice their religious convictions.

The Swiss Mennonites were among these victims of religious persecution.

Large numbers of Mennonites made the decision to join in the movement that resulted in the settlement in Lancaster County.

During the 18th century, religious persecution abroad and more promising economic opportunities in the New World motivated about 25,000 Swiss people to begin a new life in the American colonies.

The Swiss settlers were warmly welcomed by the New World.

From the beginning of colonization in North America, Swiss were eagerly sought as settlers because of their mountain-bred hardihood and their rare combination of agricultural and industrial skills.

For example, Swiss craftsmen were imported to provide technical assistance to the colonists in the art of woodworking and silk production, and Swiss families were brought to America because of their expert ability in raising grapes and producing wine.

The Swiss colonists, inspired by their 500 year tradition of liberty and self-government in Switzerland, made an important contribution to the movement for American independence.

Freedom-loving colonists of Swiss origin were among the earliest and strongest supporters of the Revolutionary War.

The Reverend John Zubly of Georgia was a delegate to the Continental Congress.

Judge Emanuel Zimmerman of Pennsylvania and Henry Wisner of New York rallied support for the revolution by their valuable service on the committees of safety in their respective States.

Wisner was one of the most farsighted leaders of the Revolution.

When the British embargoed the importation of ammunition into the colonies in 1774, Wisner—anticipating the inevitable outbreak of active warfare—boldly established a gunpowder mill in his home in New York State.

Elected to both the First and Second Continental Congresses, Wisner worked unceasingly for the adoption of the Declaration of Independence.

After the outbreak of the Revolution, Wisner built two more ammunition plants, and then, as a colonel in George Washington's army, he helped plan the defense of West Point and the Hudson Highlands.

Throughout the Revolutionary War, the Continental Army was supplied with shot and cannonballs from the iron works of John Jacob Friesch, a Swiss immigrant and a friend of Washington.

A Swiss gunsmith, Martin Meylin, erected the first boring mill in America—near Lancaster, Pa.—and trained other craftsmen in the making of rifles.

Meylin's long-ranged rifles were so effective against the Redcoats that the British Parliament hastily investigated what it called "these strange arms used with such deadly certainty by American regiments."

Many Swiss-Americans laid down their plows and tools of trade, picked up their rifles, and marched off to war in answer to the Continental Congress's call for volunteers in 1776.

Pennsylvania was asked to contribute six companies of sharpshooters, but so many volunteers stepped forward—especially from the frontier counties where hardy Swiss settlers were concentrated—that an entire battalion was formed.

In addition, many Swiss settlers fought in all the German-speaking units from Pennsylvania.

In addition, a Swiss fur trader, Charles Gratiot, sacrificed his personal fortune to provide supplies for the starving forces of George Rogers Clark during the perilous campaigns in the Northwest Territory.

These and other Swiss patriots of the American Revolution—like Emanuel Carpenter and George Zillcoffer—wrote their distinguished records into the glorious pages of U.S. history.

Swiss-Americans have been active in politics, too.

One of the United States' greatest political leaders was Albert Gallatin, who left his classes in Geneva to enlist as a volunteer under Lafayette.

After the war, Gallatin became a teacher at Harvard and then moved to the Pennsylvania frontier where he surveyed land, built a gun factory and a glass works, and became a naturalized citizen of the United States.

Soon Gallatin was elected to the Pennsylvania Legislature and then to Congress.

In Washington, he distinguished himself as a dynamic political leader.

For 13 years, he served as Secretary of the Treasury.

During this term, the public debt was cut in half and the internal revenue taxes were abolished.

Later, Gallatin was one of the negotiators of the treaty which terminated the War of 1812.

Afterward he served 8 years as our Minister, first, to Great Britain and, then, to France.

This durable Swiss-American lived to the ripe old age of 88.

After his retirement from active politics at age 68, Gallatin became one of the leading American historical scholars of his time.

Following in Gallatin's footsteps, many other Americans of Swiss origin have achieved fame in public life.

Swiss-Americans have served as Attorney General, Senators, U.S. Representatives, State Governor, Supreme Court Justice, and in many other important capacities.

Former President Herbert Hoover traces his ancestry back to Swiss descendants who emigrated to Pennsylvania in 1738.

Furthermore, a large number of Swiss-Americans have risen to high posts in our Armed Forces, including Adm. Edward Eberle, the World War I Chief of Naval Operations, who exploded the old joke about "Swiss admirals."

Both Gen. Robert Elcheberger, former Army Chief of Staff, and Gen. Lewis B. Hershey, Director of Selective Service, are descended from early Swiss emigrants to Pennsylvania.

The resourceful Swiss farmers have made amazing accomplishments in tilling the soil of America.

In Switzerland, farmers were able to prosper on the sharply sloping and rocky fields only because of their ingenuity in developing new crops, better cattle feed, and improved methods of fertilization.

Therefore, when they came to America, the Swiss brought along with them not only their rugged tenacity and their love for the earth, but also their openminded willingness to experiment.

In South Carolina, for example, Swiss farmers converted the coastal swampland into flourishing and productive fields of rice.

In the Napa Valley of California, Swiss vine dressers made a highly successful experiment in grafting the choicest varieties of European grapes onto native American root stocks and thus succeeded in establishing large vineyards for the production of wines.

For over 100 years, Swiss families, such as the Delmonicos, have propagated the cult of fine cooking all over America.

Americans of Swiss ancestry have played major roles in the development of the chemical, textile, electrical, and automotive industries in the United States.

Many of our leading scientists, engineers, and doctors of medicine were born or educated in one of the several great universities in Switzerland.

Among the first Swiss settlers in Pennsylvania were a few skilled clock and watch-makers.

Many other practitioners of the trade followed these initial craftsmen.

Today, scattered all over America, the descendants of these superb technicians occupy major positions wherever fine watches or other precision instruments are manufactured.

How can one explain the vast current of contributions that have been made to the edification of America by so small a stream of immigration as that which has flowed from Switzerland?

Undoubtedly, individual talents and a high level of education were important.

Of far greater significance is the fact that the Swiss in the United States have come from a country where for many centuries the members of four language groups and several religious faiths have lived together in peace, harmony, and brotherhood.

In America, they encountered no problem of assimilation which they had not already met and overcome in their homeland.

Thus, to become Americans, the Swiss had merely to be themselves.

Wisconsin Museum Dedicated to the American Circus

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. WILEY. Mr. President, with everybody discussing the political implications of Nixon's visit to Russia and Khrushchev's future visit to this country—I should like to discuss a subject of much less complexity and controversy, but one that is nevertheless representative of the American tradition and way of life.

A news story from Baraboo, Wis., informs us that a new museum created to capture and preserve the color, sounds, atmosphere, and tradition of the golden age of the big top, the American circus, is off to a tremendous start. Within a few weeks of its opening, this museum has drawn more than 50,000 visitors and—as Austin Wehrwein comments in the New York Times of Sunday, August 2—an oldtime circus press agent would call that gigantic, adding perhaps, that it was a spectacle never before brought before the eyes of civilized man.

Circuses have been an important institution in American life. They brought before the people, at times in a rather garish fashion, the spectacular, the unusual, the picture of a world unknown and one to be searched for. Baraboo, Wis., was a center for many circus enterprises and more than 70 circuses sprouted and bloomed on Wisconsin soil, according to the State historical society library in Madison. The backyard of the jail at Baraboo was the site of the first Ringling Bros. show that was to grow into the greatest show on earth.

There has been a decline in the big-top shows in recent years. Many explanations have been given for this decline. Some say this was a result of the intense cutthroat competition of the many shows and their failure to organize along the lines of chain theaters. I believe that the reason may be different. I believe that the circus now-a-days has too much competition from other sources and it is quite possible that the development of science now offers our youngsters a better opportunity to dream, think, and do something about the far world of the unknown. Now it is television and science fiction that are competing for the imagination of the American youth. But what the museum at Baraboo, Wis., will manage to do is to preserve the folklore and the excitement of the circus of yesteryear.

To all our friends that have not yet visited Wisconsin this summer, I recommend that they include a trip to Baraboo in their tour of the State. According to all accounts this museum is a most unusual one, and it is probably the only bona fide educational museum in the world that sells popcorn, pink

lemonade, and welcomes their consumption on the premises.

Baraboo, if you need instructions, is in central Wisconsin about 40 miles north of Madison, between Devils Lake State Park and the Wisconsin Dells.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 2, 1959]
WISCONSIN MUSEUM DEDICATED TO THE BIG TOP

(By Austin Wehrwein)

BARABOO, Wis.—A new museum created to capture and preserve the color, sounds, atmosphere, and tradition of the golden age of the big-top American circus is off to a good start.

Within a few weeks of its July 1 opening, it had drawn more than 50,000 customers. An oldtime circus press agent would call that gigantic, adding, perhaps, that it was a spectacle never before brought before the eyes of civilized man.

It is the Circus World Museum set up here in the former winter quarters of the Ringling Bros. Circus on Water Street next to the Baraboo River.

The old quarters have been refurbished to house exhibits, but for those nostalgic for the smell, there is an adjacent menagerie tent with real, live animals, including a resident pachyderm on whose back children are given rides.

This is probably the only bona fide, educational museum in the world that sells popcorn and pink lemonade, and welcomes consumption on the premises.

The museum is dedicated to the breathtaking, stupendous, colossal spirit of all the big-top shows but it has revived memories of the days when this small town of 7,500 population was the center of the American circus world.

CIRCUS LAWYER

President of the not-for-profit corporation that established "the only museum in the world built in circus winter quarters" is John M. Kelly. Mr. Kelly was for 31 years the lawyer for the Ringling Bros. and for scores of other circus folk.

At 86 years of age he is alert, vigorous and still so much in love with the almost-vanished tradition, that when he reminisces his voice has the timber of a ringmaster or a side-show barker.

Actual administration of the museum is handled by the State Historical Society of Wisconsin, but Mr. Kelly's many contributions include the wording of the explanatory plaques on the exhibits.

Not many museums can boast display cards as colorful. His written style is as vivid as that with which he speaks, and some of Mr. Kelly's explanations are almost racy in their humor.

The usually staid researchers at the State historical society library in Madison, who discovered that more than 70 circuses sprouted and blossomed on Wisconsin soil, have caught the rhythm, too.

One of their documents described the exhibits as showing "all the color and panoply of the big top . . . all aspects . . . from animal acts to the clowns, the aerialists, the trapezes, the wonderful old parades."

Among the exhibits on view is the 18-ton steam callopie, the America. One of the few surviving "cal-eee-opes," as circus regulars pronounce the word, it began its career with the Barnum & Bailey circus, passed through several hands and was sold in 1952 by the Cole Bros. circus to the Cleaver-Brooks Co. of Milwaukee.

Appropriately enough, Cleaver-Brooks makes steam-generating equipment. The company restored the America to full-throat and donated it to the Baraboo Museum.

Also on hand is the Parson collection of circus materials; the Henry Atwell collection of 5,000 negatives taken by the official Ringling photographer over a 40-year span; and the Gollmar collection of photographs, route cards and books, tickets and programs.

There are the nursery tale floats built for Barnum and London, forerunner of Barnum and Bailey, in 1832.

Exhibits from the Chindahl collection of photographs, books and manuscripts are also on display. They were collected by the late George L. Chindahl of Maitland, Fla., who had been official historian of the Circus Fans Association of America.

TWO BANDWAGONS

Two of the larger exhibits are the Mirror and Columbia bandwagons. The Mirror was built here for the Gollmar Bros. Circus about 1905.

The astonished and bedazzled beholder can also see such things as a parade cannon and chariot, numerous costumes, early refreshment and cook tents, an ancient restored lion's cage and props for performing elephants. Another sterling attraction is the miniature circus that John E. Zweifel of Evanston, Ill., spent 16 years creating. With its 1,500 handmade figures and items of equipment, it almost fills a building adjacent to the main structure.

As the visitor approaches, he can hear strains of the vibrant old circus band music, on records, and he buys his ticket from a high ticket booth flanked by garishly painted canvases like those used for sideshows.

Mr. Kelley has rooms in his home piled high with other memorabilia. Other precious items are stored in bank vaults and warehouses. He dreams of the day when additional buildings on Water Street can be found to display the material, much of it sent to him by his old pals or the children of now-dead circus folk.

He can remember how in the days when the circus wintered here, Baraboo housewives out shopping rubbed elbows with snake charmers, sword swallowers, giants, midgets, and an acrobat from Arabia.

"I am," he said, "the only person alive in the circus world conversant with the inner life of the American circus in its prime. I saw it come to the peak of its development and I saw it decline."

Mr. Kelley ascribed the decline of the big-top shows to their intense cutthroat competition and their failure to organize along the lines of chain theaters. He thinks they missed a bet in failing to acquire permanent sites in choice locations to which they could return year after year.

The backyard of the jail at Baraboo was the site of the first Ringling Bros. show that was to grow into "the greatest show on earth," and to require a 10-acre lot to accommodate its rings.

The date of the first show was 1884, and Baraboo was the winter headquarters until the spring of 1918. The next year the show was combined with Barnum and Bailey, and the combined shows wintered in Bridgeport, Conn. In 1927 the winter quarters were moved to Sarasota, Fla.

The moving spirit in the Ringling team was Al Ringling, who picked up circus skills from one Joe Parsons, including the trick of balancing a plow on his chin. The family had various theatrical talents besides plow balancing, and before they organized their circus they gave hall shows, playing musical instruments, telling jokes and carrying on in other entertaining ways.

CIRCUS FAMILY TREE

The Ringling brothers' sister, Ida, married a railroad engineer named Henry North

and their son, John Ringling North, now heads America's largest circus. The original five, Al, Otto, Alf T., Charles, and John, was later joined by brother Henry, and for a while, by brother Gus.

Another tangible reminder of the family here is the Al Ringling Theater, which repeatedly has been praised as one of the finest in the country.

The Circus World Museum is open every day until October 31.

Baraboo is in central Wisconsin about 40 miles north of Madison, between Devil's Lake State park and the Wisconsin Dells, both well-known tourist attractions. Baraboo is easily accessible from Madison by way of U.S. 12 and State Route 113 out of Madison.

Distressed Areas Bill Deserves Better Fate From President

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Harrisburg (Pa.) Evening News of Thursday, July 30, 1959, concerning the need for Federal assistance to the many distressed areas throughout the country:

President Eisenhower's fellow Pennsylvanians cannot share in his joy over the unbroken string of vetoes he boasts.

One of them—last September's pocket veto of the aid to depressed areas legislation—still rankles in the Keystone State, which continues to have more chronically depressed areas than any other State.

Gov. David L. Lawrence just has returned from a flying visit to Washington during which he tried to rally the Pennsylvania congressional delegation to virtually unanimous bipartisan support of new depressed area legislation now bottled up in the House Rules Committee. And he paid a visit to House Speaker SAM RAYBURN to try to ease the way for the bill's consideration.

It's a familiar role for a Pennsylvania Governor. George Leader fought hard for the compromise \$275 million bill that finally passed last year, only to have the Ike veto kill it. And it's a role that merits full cooperation by Pennsylvania Republicans in Congress.

Pennsylvania hasn't sat on its hands through the years doing nothing about its depressed area problem. Local efforts have been considerable. And the Commonwealth's PIDA program to bring more industry into the hard-hit areas of the State has begun to pay off. But even this hasn't been enough. An extra push is needed by the Federal Government to really get those areas started on the way back to economic health.

The Eisenhower administration can point to general economic recovery if it wishes, but the good news never can apply to the depressed areas of Pennsylvania where unemployment constantly remains over the distressed limit set by the Government.

"Giveaway" is a word that doesn't apply to this legislation either. The vast bulk of the funds involved would be in revolving loans. There would be some grants for needed public facilities.

The Senate faced three bills when it took up the subject this year:

The administration's \$53 million bill, which hardly would take adequate care of Pennsylvania's needs alone.

A full measure \$389.5 million bill, sponsored by Illinois Senator PAUL H. DOUGLAS and 38 other Senators.

A compromise \$200 million bill, sponsored by Pennsylvania's Republican Senator HUGH SCOTT, who had criticized Ike's veto but wanted to come up with legislation that might sidestep further Presidential disapproval.

In March, the Senate approved the Douglas bill. On May 14, a House committee trimmed the figure to \$251 million. It remains stymied in the Rules Committee.

There is every hope that the Governor's trip and the Pennsylvania delegation's pressure will break the logjam and aid to depressed areas will pass once more.

Another veto by the President is a possibility.

But President Eisenhower must realize by now that his \$53 million program would be hopelessly inadequate, that Federal aid to be matched by States and localities is needed to give these distressed areas an economic lift and that his veto can't help but rebound against such administration programs as foreign aid.

The domestic aid program for which Pennsylvanians are fighting again is too important to be killed by the House or by another ill-advised Presidential veto this year.

Power Supply Assurance for State of Oregon

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. NEUBERGER. Mr. President, the system of Federal dams in the Columbia River Basin provides a vast supply of energy for the Pacific Northwest States. This electricity is marketed at wholesale by the Bonneville Power Administration to industry and to private and public-owned electric utilities. In dividing up the supply of power, the public-owned utilities enjoy the benefits of the clause in the Bonneville Project Act which gives them a preferred position over other wholesale customers.

It so happens that power users in my home State of Oregon are supplied largely by privately owned companies. Legislation which I have introduced in the Senate, S. 2437, seeks to reserve one-half of the power from the great John Day Dam, now under construction on the Columbia River to each of the States of Oregon and Washington. This is a measure to give a minimum assurance to our Oregon people that they will continue to share in the power created by Federal dams in our own region.

A thoughtful editorial on this subject was published in the Oregon Journal, Portland, Oreg., of July 29, 1959, and I ask unanimous consent to have the editorial printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

JOHN DAY POWER RESERVATION

Senator RICHARD L. NEUBERGER's proposal for a reservation of John Day Dam at-site power, divided between Oregon and Washington, did not become full blown overnight.

For a long time he has been deeply concerned over the impact on Oregon of the Bonneville Act's preference clause, giving priority claim on Federal power to public agencies. He has shared the anxiety of others that some day this will mean a siphoning away of all Federal power from this State because its distribution here is largely through private utilities.

He has never budged an inch from his belief in public power, but he has said publicly that "the residents of communities that decline to establish public utility systems should not by that fact alone be wholly foreclosed from sharing in the benefits of a regionwide power system developed with the resources and funds of all the citizens."

Early in 1958 he introduced legislation which would have modified the preference clause, giving certain priorities to industry. A year ago, he called attention to the power reservation as applied to the yet-to-be-constructed Big Bend Dam on the Missouri River between South Dakota and Nebraska, which would assure 50 percent of the output to South Dakota. In that State, as in Oregon, power is largely distributed by private utilities. Nebraska, like Washington, distributes most of its power through public agencies. In his proposed Columbia Valley corporation bill, NEUBERGER has also sought modification of the preference clause.

The Senator's latest proposal, which is without reference to the valley corporation bill, has ample precedent, as he pointed out in his Senate speech. The proposed high Hells Canyon bill would have reserved 500,000 kilowatts of that dam's 800,000 at-site kilowatts to Idaho and the Snake River Basin. At-site power from Hungry Horse Dam has been reserved for Montana. A bill proposing the Knowles-Paradise project in Montana would do the same.

While Washington does not need the protection that Oregon does in this matter, it is included as an equal beneficiary in NEUBERGER's proposal to satisfy the theory of distribution based on geographical location. This was done at least partly on the advice of Dr. William Pearl, Bonneville administrator.

This approach should not be carried to extremes, nor will it be. It cannot be made retroactive to existing projects where power reservations do not now apply. But the John Day Reservation offers a minimum protection which is amply justified on the basis of the realities of the situation and precedent.

Secretary Benson's Reply to Letter From Howard Hill, of the Iowa Farm Bureau Federation

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. SCHWENGEL. Mr. Speaker, on July 28, I caused to be placed in the Appendix of the CONGRESSIONAL RECORD a copy of the text of a letter which Howard Hill, of the Iowa Farm Bureau Federation, wrote to Secretary of Agricul-

ture Benson, expressing his views with respect to the current farm program and what could be done to improve it.

This letter appears on pages A6522-A6523 of the July 28 RECORD. It outlines several areas where the program could be modified to bring about a more realistic approach to the farm problem in the light of today's national economy. It is worthy of attention.

Equally worthy of attention is the reply which Secretary Benson sent to Mr. Hill. Because I feel that the extension of Mr. Hill's letter in the Appendix justifies a similar courtesy to Secretary Benson, I have asked for, and have been granted, permission to publish it as I see fit. Accordingly, under leave to extend my remarks, I ask that Mr. Benson's reply to Mr. Hill appear in the Appendix.

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE SECRETARY,
WASHINGTON, July 24, 1959.

Mr. E. HOWARD HILL,
President, Iowa Farm Bureau Federation,
Farm Bureau Building, Des Moines, Iowa.

DEAR MR. HILL: May I express my sincere appreciation to you for taking the time to write me regarding the problems of agriculture. The views of a farm leader such as you, who understands the problems of agriculture and its relation to other segments of this Nation are most welcome.

In speeches, in testimony before congressional committees, and in press conferences I have tried in every way possible to point out many of the very same points which you feel should be called to the attention of the public. In some instances the publicity media have misused the implications of the facts we have been trying to present to the American people.

I believe that there are certain fundamental factors which all citizens should recognize:

- (1) Farmers have done a magnificent job—outstripping industry in productivity.
- (2) The American standard of living would have been at a much lower level in the absence of the high production levels generated by farmer efficiency.
- (3) This increase in efficiency has enabled the rest of our society to eat better at lower costs.

(4) The farmers relative position in our society has been definitely injured by the impact of inflation. Both the cost-price squeeze and the increase in marketing margins are real and disturb me greatly. We cannot play fast and loose with the Federal budget without ultimately impairing the position of agriculture. We cannot have soft wage settlements and undue price rises without impairing the position of agriculture. Those who have posed as friends of agriculture while at the same time recommending policies which result in more creeping inflation are the enemies to agriculture. Those who say "a little inflation is inevitable, relax and enjoy it" are doing a tremendous disservice to our farm people.

Your letter makes several suggestions. I have examined these suggestions carefully. In reply, I should like to make the following comments.

The conservation reserve program has proved to be an effective attack on the source of the surplus problem. Under this program substantial amounts of farmland have been shifted out of production for periods of 3 to 10 years or more. This has led in many instances to a permanent shift of such land to uses for which it is better adapted. It achieves this adjustment without subjecting our farm people to further regimentation and without the necessity of

the Government having to take ownership of the farmland.

Experience under the conservation reserve program has shown that in many instances the program has resulted in speeding up some trends generally recognized as being desirable. This includes such trends as reforestation over wide areas of deteriorated lands, particularly in the Southeast, and expansion of allied industries. Another example is the nearly 5 million acres of Great Plains land that have been included in the conservation reserve program. Nearly all of that acreage has been planted to grass to the longtime benefit of the Great Plains area.

Up to this time 23 million cropland acres have been signed up in the conservation reserve. Much, if not most, of this land is of average or better productivity and has been retired at least temporarily from adding to our surplus problems and at lower cost than disposing of surpluses.

We have recommended that the conservation reserve authority should be extended.

But there is no point in pushing disposal programs and the conservation reserve on the one hand unless we tie it all in with realistic price support action on the other.

With respect to the utilization of surplus agricultural commodities, we have taken many steps to increase the effectiveness of utilization of our surpluses. As you know, we are moving forward steadily to implement the President's food for peace program.

In an effort to improve the position of agriculture we have recommended the Agricultural Trade Development and Assistance Act, Public Law 480. We feel that this program has been of great assistance in keeping agricultural exports at a high level. We have recommended an extension and will continue to do so as long as it is necessary.

We have held meetings with the principal wheat exporting countries to review operations under existing programs and to explore additional methods whereby agricultural abundance can be used constructively in the free world.

Expansion of exports of U.S. farm products is difficult. Although it may be uneconomic, many countries try to be as self-sufficient as possible in agriculture. To achieve protection they impose substantial import duties and other barriers to increased trade in farm commodities.

We have had some problems with respect to our efforts to increase exports under special Government programs. Most countries, even those lesser developed, take into account their own production while seeking assistance under concessional Government programs. On a total basis, for example, world production of wheat, rice and feed grains in 1953 reached an alltime high. Wheat production in 1953 is estimated at nearly 9 billion bushels, 12 percent above the 1956 record crop and 25 percent above the 5-year average for 1950-54. Obviously there is a relationship between world production of food and feed crops and the quantities of these commodities which we might program under title I and other programs.

Our best opportunities to increase food and fiber consumption and to export food for economic development purposes are in the less-developed countries. These countries, however, often have limited port, transportation, and storage facilities which place a physical restriction on their capacity to import commodities. I have not intended to belabor the problems encountered in maximizing U.S. agricultural exports. But in seeking ways to use our surpluses we must be realistic. We must recognize some of the limitations involved. However, we shall continue to do everything sound and feasible to maximize our exports.

In addition we have in operation a very substantial food donation program, both at home and abroad.

Over the past 7 years we have moved a total of 12 billion pounds of food out of CCC warehouses and onto the plates of schoolchildren and the needy, at home and abroad. In just this past year, over 14 million of our schoolchildren used this food. Almost one and a half million in the Nation's charitable institutions and millions of needy individuals in families have benefited from our donation programs.

We are reaching the areas of greatest need. Of 74 major labor market areas classified as "areas of substantial labor surplus" in March of this year, our donation program was operating in 72. The commodity donation program also reached a large number of distressed rural areas not officially designated as labor surplus areas. In many counties we have, month in and month out, been supplying food to better than 25 percent of the total population resident in those counties. In a few counties of severe economic distress, we have been supplying food to more than 40 percent of the county population.

I want to emphasize that participation in the domestic donation program is entirely at the option of State and local officials.

After requirements of domestic recipients have been met, the Department has exerted every effort to move available surplus foods to the needy abroad. In the past fiscal year, an estimated 60 million people in 85 countries benefited from these surplus foods.

This has been a striking record of achievement, at home and abroad. But, we are asked, why don't you do more? I would like to make the answer crystal clear.

The Commodity Credit Corporation is not a supermarket bulging with a fabulous variety of foods. I have seen articles and speeches citing the fruits and vegetables, the meats and fresh eggs we presumably have on hand. You know and I know that we have none of these items in our inventory.

Better than 85 percent of our inventory consists of the so-called basics, corn, cotton, wheat, rice, peanuts, and tobacco. We are processing and distributing corn, wheat, and rice—every pound that any accredited agency anywhere in the United States says it can use for needy people without waste.

We are similarly distributing dry milk. Likewise, we have distributed butter and cheese until it became necessary to reserve remaining supplies for schools and charitable institutions. And, when it became apparent that eggs faced extreme marketing difficulties, we used section 32 funds to process eggs and distribute them in dried form.

We believe we are doing everything feasible in the field of utilization of available surplus foods in the most constructive manner possible to help those in greatest need.

We agree with you that utilization research to find industrial uses for farm products should be expanded. There have been many recommendations for crash programs which in some cases involve setting up a new agency. This would mean competing for available scientists who it is generally recognized are in relatively short supply.

During the past 6 years the budget for agricultural research has more than doubled. This is concrete evidence of our interest, and that of the Congress, in an adequate, balanced, sound research program. It is rather significant that last year our appropriation was cut below our request for utilization research. You may rest assured that such a program will have our continuing and vigorous attention with emphasis on utilization and market expansion.

With respect to the study requested regarding the European Common Market I have asked the Foreign Agricultural Service to analyze the implications.

With respect to the elimination of labor exemptions from antitrust legislation you of course recognize that this matter has been considered at some length by the Congress. You recognize it is technically outside the immediate area of the Secretary of Agriculture. I shall be glad to pass this question on to the Secretary of Labor.

In my recent testimony before the House Committee on Agriculture, I made the following statements:

"My admiration for the job farmers are doing is exceeded only by my sympathy for their problems. The cost-price squeeze and the spread in marketing margins are two economic factors in agriculture that disturb me greatly, as they do all farmers. We are trying to hold the line on inflation. Through increasing emphasis on marketing research we are constantly striving to reduce the gap between what farmers receive for their goods and what these goods sell for."

"These two fundamental problems, plus the more spectacular dilemma of the vast surplus in a few crops, are certainly not the fault of our farmers."

"They are not to blame. I make this point because as this dilemma worsens, there is a growing public tendency to point the finger of blame at the farmer. This is unfair. Farmers are not responsible for the high costs of Government involvement in agriculture."

"These excessive costs are directly traceable to war bred legislation continued too long in peacetime. The farmer's response to mandatory price supports at production-stimulating levels was what any reasonable person might expect. Naturally, not all the outlay of public moneys resulting from this overproduction finds its way back to farmers' pockets, as some mistakenly believe. Costs of storage, interest, and handling alone are now about a billion dollars a year."

This statement regarding the unjust criticism of farmers I am sure coincides with yours. I will do everything within my power to give publicity to these heartfelt sentiments. You are to be commended for your efforts on behalf of clarifying public misunderstanding of farmers.

Sincerely yours,

EZRA TAFT BENSON,
Secretary.

You'd Hardly Know Asbury Park Today

EXTENSION OF REMARKS OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. CASE of New Jersey. Mr. President, a recent issue of the Asbury Park Evening Press contained a special supplement, "Your Invitation to Vacation Land." The pages of this supplement describe in words and pictures the invigorating climate and unequalled amusement and recreation areas that the New Jersey coast offers to vacationers.

As an example of the many fine articles in the supplement, I have chosen one, dealing with the growth of Asbury Park, and I ask unanimous consent to have it printed in the Appendix of the Record.

For years, New Jersey has been proud of its broad, sandy beaches, refreshing surf, famous boardwalks and varied fa-

cilities for sports. More recently, a vast new highway system has made this holiday area even more accessible. The construction of new hotels, motels, and other guest accommodations assures the traveler of the finest in comfort and convenience.

I commend the Asbury Park Press for publishing this supplement, and I take this occasion to extend to my colleagues a warm invitation to visit the New Jersey shore soon.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOU'D HARDLY KNOW ASBURY PARK TODAY

ASBURY PARK.—This resort city is coming into its second growth 'mid a program of new buildings and improvements unparalleled here in the past 30 years.

More than \$3 million worth of public improvements, which will make this resort more attractive to visitors is being completed now.

Focal point is a modern new steel and brick bathing pavilion and store facilities on the boardwalk, which will accommodate 4,200 bathers.

CONSTRUCTION BOOMING

While public construction is booming, private building is beginning to move into an accelerated tempo also.

Another famous landmark undergoing change is the Arthur Pryor Memorial Band Pavilion, being altered to include additional seating capacity for band concerts facing the boardwalk.

The boardwalk itself, which resounds yearly to the echoed tread of millions of visitors, is being raised as protection against scouring by sands.

TWO NEW MOTELS

Two new luxury motels, with a total of some 80 units and costing an estimated \$650,000, are near completion in the beach front area. At least three others are on the drawing boards and expected to be announced shortly.

The building program, is in keeping with the changing character of Asbury Park, both as a year 'round resort which attracts some 3 million visitors annually from a wide area, and as a seasonal resort, growing in popularity each year.

NEW LIGHTING

An entire new citywide lighting system, which will increase illumination by some 400 percent is also being completed. As part of the program, municipal officials have borrowed a technique from southern France and will illuminate the colorful flowerbeds in the extensive park areas with low, flat lighting which develops a picturesque night scene.

MORE PARKING

To meet the ever-increasing parking problem, new perimeter areas are being completed and a new four-story, slope level, \$500,000 parking garage is soon to be undertaken in the heart of the downtown shopping area. Here too, new additions to existing department stores, costing several hundred thousand dollars, give answer to the competition picture presented by construction of surrounding highway shopping centers.

BEACH POLICY

Perhaps the most important new phase of the resort program here, from the visitor's viewpoint, is the new municipal bathing policy with all bathing facilities being operated by the city. This makes it much easier for guests at hotels and motels to use the ocean bathing facilities directly from their rooms.

Many of the hotels have carried out modernization programs during the past several months, and an augmented 'round-the-clock entertainment policy for all ages will be in force during the coming summer.

The Panama Canal: Red Target

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Bedford (Mass.) Standard-Times of Monday, July 27, 1959. This editorial was sent to me by Mr. Charles J. Lewin, editor and general manager of the Standard-Times.

THE CANAL: RED TARGET

In an exclusive interview with the Standard-Times July 18, Panama's Ambassador to the United States declared "seething unrest in the Caribbean, promoted if not provoked by international communism, poses a major threat to U.S. control of the strategically and commercially vital Panama Canal."

The grim fact is, as emphasized by Ambassador Ricardo Arias and U.S. news stories since January, that violence has flamed in 13 of the 20 Latin-American Republics during the first half of 1959, and more very likely lies ahead.

Counting Fidel Castro's New Year's Day coup in Cuba, seven nations lived through revolts or invasions. Major rioting or banditry took its toll of life and property in six others.

James R. Whelan of United Press International, writing from Buenos Aires July 11, commented of these outbreaks of violence, "Nor were all in the name of freedom. According to Pravda (official Kremlin newspaper), there are 360,000 card-carrying Communists in the hemisphere. The 'Red hand' was visible in many of the disturbances."

In April, Mexico ousted two Russian diplomats for helping organize a railroad strike. Argentina, one of two nations on the South American Continent with diplomatic ties with Russia, has sent home six Iron Curtain diplomats and banned Communist-line publications and activities. Uruguay, the other nation maintaining diplomatic relations with the Reds, appears about to break off with Moscow.

The Caribbean crisis has been intensified since Castro came to power in Cuba. Following the victory of this rebel leader, who now faces mounting accusations of being Communist-influenced, unsuccessful invasion attempts were launched against the Dominican Republic, Nicaragua, and Panama.

It is totally unrealistic for American interests to dismiss such military operations as "comic opera," simply because the troops involved are numbered by dozens or hundreds, rather than thousands. In the last 20 years, from Singapore to the Suez, the world has had ample evidence of what a handful of well-trained saboteurs can accomplish—regardless of security measures—if they set out to halt traffic on land or sea. A canal, any canal, is particularly vulnerable.

The big danger in this situation is that it may be ignored or minimized. Representa-

tive Flood, Democrat, of Pennsylvania, has warned that U.S. State Department emphasis on Asia, Africa, and Western Europe may result in losing "the war in our own backyard."

Specifically, there are long-standing frictions between the United States and Panama, regarding U.S. operation and control of the waterway; no one has suggested they are insurmountable, yet real effort to solve them lags.

Meanwhile, the canal is a rallying-point for political nationalists of either right or left; it provides an excuse for anti-American propaganda, and the Communists now are urging internationalization of the waterway.

The State Department, working with the Organization of American States, would do well to give the Latin American situation—with emphasis on Panama—some high-priority attention. Otherwise, North Americans may one day find it has lost many of its good friends to the south, and that unfriendly influences, with allegiance to the Kremlin, have something to say about America's waterborne traffic between the Atlantic and Pacific Oceans.

Wisconsin Takes Steps To Establish a Stronger Safety School Program

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. WILEY. Mr. President, today the country is faced with the serious challenge of finding ways and means to promote safety on the Nation's highways.

The tragic toll in death and property is a blight on our national progress. Somehow, an effective program must be designed to reduce this toll, rather than to see it climb annually.

According to reports, about 37,000 people lose their lives each year on the Nation's roadways.

In addition, there are nonfatal injuries to 1.4 million. The value of property destroyed amounts to an estimated \$1.8 billion. All costs—including medical, wages lost, insurance, and property damage, are estimated to be about \$5.4 billion.

We recognize, of course, that one of the objectives of the national highway program is to provide not only better—but also safer—roads for the Nation's travelers, either for pleasure or business.

Recently the Ways and Means Committee in the House of Representatives reached some compromise agreements on amendments to the highway trust fund, to provide funds to carry forward the highway construction program.

We realize that if this is not done, the projects for expanding and improving our Nation's roads will be seriously curtailed.

In addition, there will be adverse economic repercussions that will be felt throughout the economy.

I am hopeful, therefore, that the Congress will now find it possible to take

early action on these proposals for carrying forward the highway program.

An important feature of the new roadway system, of course, is the matter also of greater safety.

Across the country, we are aware, of course, that State and local communities are undertaking programs to promote greater safety. In addition, civic groups and other organizations are conducting similar campaigns.

Recently, the Melrose Chronicle, of Melrose, Wis., published an article outlining the constructive program designed by the State Motor Vehicle Department of Wisconsin, aimed at reducing traffic accidents.

Specifically, the program provides for expanding and improving traffic safety schools.

Representative of one of the many ways in which constructive efforts are being made to promote safety, I ask unanimous consent to have the article printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From the Melrose (Wis.) Chronicle]

WISCONSIN TAKES STEPS TO ESTABLISH A STRONGER SAFETY SCHOOL PROGRAM

Stabilizing and expanding traffic safety schools for traffic law violators is a current project which Commissioner James L. Karns of the State motor vehicle department believes will provide a strong, basic answer to the question: "What can we do to stop traffic accidents?"

The strength of the program lies in the fact that it will be reaching the right people, he points out.

"Some safety education efforts appear to be misdirected in that they fail to reach the persons who need them most," Karns commented. "This cannot be said about the safety school whose enrollees have been handicapped by the traffic judge himself, and whose past records prove they are in need of special attention."

The motor vehicle commissioner is named by statute as the State official responsible for approving these schools, and Commissioner Karns points out that procedures have been set up to guide communities in establishing schools which will meet approval standards.

"This action does not mean we are dissatisfied with the schools already in operation," he said. "In fact our procedures are based largely on practices already being used successfully in existing schools."

"In setting up these procedures, the motor vehicle department's safety division has also drawn upon many years of experience in connection with the high school driver education program in our State."

As an aid to communities seeking to set up a traffic safety school under authority granted in section 345.16, Wisconsin Statutes, the safety division has developed:

An official manual, "The Wisconsin Traffic Safety School."

An application form for approval and registration.

A list of safety materials.

A final report form.

And a certificate of attendance for presentation to students completing the course.

"We are asking for final reports to enable us to survey the effectiveness of these schools as time goes by," Karns said. "These reports, together with information contained in our central driver record files, will provide a basis for future studies."

The commissioner commended Wisconsin judges and schools of vocational and adult education already cooperating in the traffic safety school program, and invited other communities to establish schools of their own.

"This is the best way I know to impress violators that traffic court justice is concerned, not merely with punishment and fine collection, but with the rehabilitation of persons whose driving practices and social attitudes have taken a wrong turn somewhere along the way."

The Folly of Berlin

EXTENSION OF REMARKS

OF

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. COHELAN. Mr. Speaker, under leave to extend my remarks I commend to my colleagues an article in the August 3 issue of the Wall Street Journal by William Henry Chamberlin. Mr. Chamberlin gives us a valuable and current report on the economic, political, and military situation in West Berlin.

The heart of the article is in the quotation of a refugee student when he said:

If freedom fails in West Berlin it will not live long in Germany, or in Europe; and then America itself will be in grave danger. For our sake, but also for America's, we hope America will stand firm.

How many Americans really understand this?

THE FOLLY OF BERLIN: ITS ECONOMIC AND MILITARY VULNERABILITY UNDERSCORES ONCE MORE THE GREAT U.S. ERRORS OF 1945

(By William Henry Chamberlin)

WEST BERLIN.—Spending a few days in this island of political and economic freedom makes one increasingly conscious of a monstrous folly in the history of U.S. foreign affairs.

The military and economic weaknesses inherent in West Berlin's isolated geographical position strike the eye. The garrisons maintained here by the United States, Great Britain, and France are of token strength, about 11,000 men altogether.

Their presence is most useful and necessary, however, for the double purpose of discouraging any attempt to overrun West Berlin by means of a raid organized in the Soviet zone and reminding the Russians that any attack on Berlin would provoke most serious consequences. But West Berlin is obviously indefensible against a major attack, mounted by forces such as the Soviet Union maintains in the zone.

The city is even more vulnerable economically. Its livelihood depends on free, uninterrupted routes of access to the Federal Republic, and to the West generally. About 80 percent of Berlin's output is exported to pay for the imports of food and raw materials and other goods needed by a city of 2.2 million inhabitants, the largest in Germany today. Trucks, railways, and barges account for virtually all this essential traffic; and roads, railways, and canals are under the control of the Soviet zone administration.

The more one looks at Berlin's geographical situation the more one is conscious of the folly of the political direction in Washing-

ton in the spring of 1945 in failing to urge Eisenhower to get to Berlin ahead of the Russians. This, rather than any subsequent slips in drawing up agreements for access, was the cardinal, basic mistake. For Soviet Russians will always find ways to tear up a paper agreement.

Yet West Berlin today, with the Damocles Sword of economic blockade or slow strangulation hanging over it, is demonstrably better off than it has been at any time since the end of the war. Many new buildings have gone up since the writer was last here 2 years ago, including one of the omnipresent Conrad Hilton hotels; others, including a 23-story skyscraper, highest building in Berlin, are under construction.

UNEMPLOYMENT FALLS

Unemployment, long a weak spot in the West Berlin economy, is at a record low level of 55,000, of whom 30,000, according to Mayor Willy Brandt, are unemployable—older workers and government employees and others who cannot continue working. An upsurge of new orders from the Federal Republic since Khrushchev's first threatening note of last November has put the West Berlin industry in a favorable position. The streets around the zoo section, the center of hotels, travel bureaus, movies, cafes, now that Unter den Linden and adjoining streets are in the Soviet sector, are torn up because of construction on a new subway line.

And all over the city new "Siedlungen," or housing projects, can be seen. Some already are functioning, others are under construction. Over 20,000 apartments are being built every year, and in modern style, with attention to proper sun exposure and provision of stretches of green around the apartment houses. It will still be several years before the tremendous bombing destruction wrought by the war is made up; but West Berlin remains easily ahead in the race of providing housing and other amenities with neighboring, Communist-ruled East Berlin.

Both energetic, 45-year-old Mayor Brandt and Senator Paul Herz, in charge of the city's finances and credits, emphasize that West Berlin, while hoping for the best, is prepared for the worst. The stockpile of several months supply of food, fuel, and raw materials, built up after the end of the blockade of 1949, has been expanded until Berlin is now supplied with enough reserves to last for almost a year, and at a fairly high standard of living. The city is also self-sufficient as regards gas, water, and electricity.

Americans here are probably more popular than in any other city in Europe and nothing could be in more ludicrous contradiction of the facts than the Communist line that West Berlin is suffering under the heel of alien occupation. The day of withdrawal of American and other foreign troops would be a day of mourning for the whole Berlin population, which knows very well that the presence of allied troops is the best guaranty of their freedom. Berlin has its Clay Allee, in honor of the first American commander here, whose stand during the blockade made Berliners forget some of the harsh features of early American occupation.

There is a Taylorstrasse, named after the recently retired Army Chief of Staff, Gen. Maxwell D. Taylor, and the city has just renamed another street after John Foster Dulles. It is interesting to note that the West Berliners, whose lives would be most directly affected by any aggressive Soviet move, seem to be unanimous in rejecting ideas of concession and appeasement. From Mayor Brandt to a recently arrived student in a refugee camp, the apprehension is not in the Western Powers will incur Khrushchev's wrath and bring on a blockade of Berlin by standing firm at Geneva. It is rather that concessions and retreats will lead

to a steady erosion of Berlin's rights and liberties, until only a shell remains.

DANGEROUS PROPOSAL

And in this attitude the Berliners are not alone. RIAS, the American broadcasting station in Berlin, which is widely heard in the Soviet Zone, receives an enormous amount of fan mail, about 250,000 letters during 1958, according to Director A. A. Killeforth. About one-third of those letters are from listeners in the zone. The predominant note in these letters ever since Khrushchev's note of November 27 has been: Stand firm. Keep Berlin free.

Many write to RIAS that they were forced to sign letters endorsing Soviet policy as a result of a government campaign; for this reason they want to express their true sentiment: That a free Berlin is an inestimable benefit to the silenced population of the Soviet Zone.

The political danger of Khrushchev's demilitarized free city proposal for Berlin has been generally spotted abroad. What is perhaps not so well understood is that, even if there were no overt attack on what would become a defenseless city, Khrushchev's proposal would mean economic ruin. This point was brought out by Dr. Heinrich Voegel, representative of the federal government in West Berlin, in the course of a talk.

"Berlin is not self-supporting," said Dr. Voegel. "It imports about \$250 million more than it exports. If one reckons all forms of aid which the Federal Government gives to Berlin, direct subsidies, tax rebates, loans for housing, guarantees for industrial deliveries, you get a figure close to \$500 million a year. Under Khrushchev's proposal this would have to stop, because he demands that all connection with the Federal Republic cease. The aid given from Bonn is almost 40 percent of the total expenditure of the Berlin city government. Take it away and Berlin's prosperity vanishes overnight. It is absurd if Khrushchev suggests that increased orders from the Soviet Union and other Communist states could make up for this loss. Do you know how much of Berlin's exports went to the Communist bloc last year? About 2 percent.

"It would be difficult, but perhaps not quite impossible, to finance a united Berlin, because East Berlin is financially and economically integrated with the Soviet bloc. But West Berlin as a 'free city' would lapse into stagnation and ruin."

"Status quo" may be a dirty word among some who like to regard themselves as advanced thinkers. But the more one studies the political and economic angles of the Berlin situation the more it seems that the maintenance of the status quo in Berlin is the only way in which the Western Powers can fulfill their obligations to maintain the freedom of West Berlin until the time, which looks very distant on the horizon now, when a united Berlin may become the capital of a united Germany.

This is why the Berliners become a little nervous whenever it seems that the status quo will be chipped away to any serious extent by the talks at Geneva. A refugee student talking fast from pent-up emotion, seemed to speak for almost all West Berliners, and for a good many Germans in the Soviet Zone also, when he said:

"If freedom falls in West Berlin it will not live long in Germany, or in Europe; and then America itself will be in grave danger. For our sake, but also for America's, we hope America will stand firm."

States Enact New Laws To Curb Drunken Driving

EXTENSION OF REMARKS OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. NEUBERGER. Mr. President, one of the most dangerous combinations in the world is alcohol and gasoline. Thousands of people die each year on our streets and highways because of drunken driving. Indeed, a special committee of the American Medical Association has announced that liquor has been involved in 50 percent of the fatal automobile accidents occurring in this country in 1958. This shocking announcement makes more imperative than ever that we have adequate laws and effective enforcement against the drunken driver. Such statutes are for the protection of us all—particularly children, who are frequently the innocent victims of these drunken drivers.

Therefore, it is encouraging to learn that various States of the Union have adopted new and rigorous laws to curb the drunken driver. Last year law-enforcement officials obtained over 86,000 such convictions, especially by State and highway police. In the New York Times for August 3, 1959, Mr. Bernard Stengren, staff reporter for that outstanding daily newspaper, has prepared an exhaustive compilation of the progress made recently in efforts to prevent people under the influence of liquor from getting behind the steering wheels of high-powered automobiles. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record Mr. Stengren's article from the New York Times, entitled "New Laws Attack Drunken Driving." I think that many of my colleagues will be interested in his information because, eventually, the Federal Government will have to cope with this problem of drunken driving if the 50 States find it beyond their means and methods to do so.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 3, 1959]
NEW LAWS ATTACK DRUNKEN DRIVING—86,000
CONVICTED IN NATION LAST YEAR—MORE
STATES PASS TOUGH MEASURES

(By Bernard Stengren)

More and more States are acting to reduce drunken driving.

An indication of the size of the problem is that the State and highway police across the country obtained 86,500 convictions last year. How many more were obtained by the police in cities was not known.

More State legislatures are adopting laws authorizing the use of chemical tests of blood, breath, urine, or saliva to determine alcohol levels. A growing number are adding

"implied consent" provisions to older statutes.

New York State's provision holds that in accepting a driving license, a person "shall be deemed to have given his consent to a chemical test." If he refuses such a request by the police, his license is automatically suspended pending a hearing for revocation for driving while under the influence of alcohol.

At the same time there is a current of opposition diminishing only slightly, to the tide of more severe treatment for drinking drivers. This has taken two principal forms: Challenges of the validity of chemical tests and the attitude on the part of some judges and juries of "there but for the grace of God go I."

SAFETY EXPERTS CONCERNED

At the root of the situation is the deep concern of police, medical, and safety experts over the role of alcohol in fatal highway accidents.

Recently a special committee of the American Medical Association estimated that alcohol had been involved in 50 percent of the fatal automobile accidents in this country last year—accounting for 15,000 deaths.

This figure is considerably higher than that of the National Safety Council, which has estimated that nearly 17 percent of the drivers involved in fatal accidents had been drinking—and that 25 percent of the adult pedestrian fatalities had been drinking.

Difficulties in getting complete, detailed statistics from 50 States and the District of Columbia, make an accurate count impossible.

What is the minimum amount of alcohol that makes a normally adequate driver an unfit one? How can it be determined when an individual has passed that threshold? What should be done with such a driver when he is discovered? These are questions that probably never will be answered definitively.

FIFTEEN ONE-HUNDREDTHS PERCENT IS STANDARD

At present in this country a person with 0.05 percent of alcohol or less by weight in the blood is considered not under the influence of alcohol. If there is between 0.05 and 0.15 percent "blood alcohol," there is a question of the degree of influence. Over 0.15 percent, the person is regarded as definitely under the influence.

These criteria are embodied in section 11-902 of the Uniform Vehicle Code, which has been adopted substantially in that form by 32 States and the District of Columbia.

Lower minimums have been adopted in Europe. Sweden, for instance, considers 0.06 percent too high. There is a considerable body of opinion here that would revise the "under the influence" level to 0.10 percent.

How much imbibing is needed to bring the blood-alcohol level to a given point varies with the individual—his weight, physical condition, drinking habits, length of time between drinks; and the amount of food eaten before or while drinking. Researchers say that, on the average, 6 ounces of whiskey or six bottles of beer taken over a period of several hours will produce a 0.15 percent level.

VARIES BY PERSONS

"This does not mean," according to Dr. Clarence W. Muehlberger, "that all persons having 0.14 percent alcohol in their blood are stone sober, nor does it imply that all having 0.15 percent are staggering drunk."

Dr. Muehlberger, a Michigan toxicologist, has studied intoxication for more than 3 decades.

Along with other experts, he holds that alcohol produces a marked deterioration of automobile-driving ability long before one reaches the stage which is ordinarily classified as drunk.

For this reason, safety and police officials hold, the social drinker who has two or three drinks before driving is a far greater menace than the so-called staggering drunk. The social drinker does not always realize his trouble.

Methods for determining when a driver is under the influence—the phrase commonly used in State laws—vary from the observation and performance type to more precise chemical tests.

In the former, a suspect is asked to do such things as walk a straight line, touch the tip of his nose, and pick up coins from the floor. This is still used in conjunction with chemical tests in most cases.

Another method finding some support—Tucson, Ariz., and Rochester, N.Y., are among the cities using it—is motion pictures of the suspect taken after he is brought to a police station.

But in the last 2 decades chemical tests or blood, urine, saliva, or breath have become the primary ones.

Although blood tests are the most accurate, they are also the most difficult for police agencies to use because a physician must take the sample, and some time is needed to make the analysis. Nonetheless in 37 States, police or highway patrols use this method.

Tests for blood alcohol using urine or saliva also are relatively cumbersome. The breath test, first devised by Dr. R. N. Harger, of the Indiana University School of Medicine, is most commonly used.

Twenty-six States and more than 150 local police departments use the "balloon" device called the drunkometer or other breath devices known as intoximeters, breatholizers, or alcometers.

Results of such tests are specifically authorized as admissible in the courts of 39 States and the District of Columbia, and 4 other States have such statutes under consideration. All 50 States, with the exception of Mississippi, Alabama, and Massachusetts, permit use of the tests, either by specific statute or under general police powers.

State police agencies administered more than 42,000 chemical tests last year to persons suspected of driving while under the influence of alcohol. Figures of cities and counties are not available, but in 1958 the New York City Police Department gave 1,502 tests and in the first 6 months of this year administered 677.

Challenges of the tests—either on constitutional grounds as alleged self-incrimination or on their scientific validity—have been almost universally rejected by appellate courts.

But to avoid litigation, nine States have now adopted, and three others have under consideration, the implied consent provision first adopted in New York in 1953.

In addition to New York, Vermont, Rhode Island, North Dakota, South Dakota, Nebraska, Kansas, Idaho, and Utah have the laws. In Delaware, Illinois, and Michigan, the matter is under consideration.

OPPOSITION BY AAA

A vigorous opponent of the implied consent provision is the American Automobile Association. While condemning driving while under the influence of intoxicants or narcotics as a grave menace and calling for strict enforcement through use of chemical tests, it particularly condemns the assumption that the right to drive is conditioned on implied consent.

Periodically scientific challenges to the tests' validity arise.

A recent example was a Brooklyn court case. A pathologist poured onion juice, garlic juice, acetone, and alcohol in tubes containing sulfuric acid and potassium permanganate—the chemicals used in the Drunkometer. He obtained the same action in each case, proving that any one of the four substances could register intoxicated.

But the test was designed for testing air samples, not liquids and solids. Subsequent demonstrations for the police and prosecuting officials—shaken by the defendant's acquittal—showed that any solid substance containing carbon, hydrogen, and oxygen, even paper towels, would cause identical reactions.

The pathologist was denounced by experts in the field for performing misleading tests. He was "either grossly misinformed or deliberately misrepresented facts," according to Drs. Robert B. Forney and Morton Mason of the Indiana Laboratory of Toxicology.

The defendant, although acquitted, had his license revoked by the State motor vehicle bureau after a hearing.

Punishment for convictions on driving while under the influence ranges from very severe to most lenient. In 6 States the first conviction is considered a felony—5 years is the maximum jail term in California—and 17 States regard a third conviction as a felony.

Sokolism Versus Spartakiada

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following most interesting and informative article by Mr. John C. Sciranka which appeared in the Allentown (Pa.) Times on Friday, July 24, 1959. Mr. Sciranka is a writer and an editor from Passaic, N.J.:

SOKOLISM VERSUS SPARTAKIADA

(By John C. Sciranka)

While the eyes of the Slovaks of the United States and the free world are turned toward Reading, where the Slovak Catholic Sokol is completing its week-long gymnastic and athletic meet, known as the Slet and National Convention ending July 25, the Communists of Czechoslovakia, where the Sokol idea originated in 1862 are busy preparing for the Spartakiada, which is a substitute or ersatz for Sokolism.

The Sokol idea for almost a century put into action its rockribbed principle and purposes: Equality and brotherhood, as well as patriotism on Christian principles for out of those grow freedom and independence.

The word "Sokol" means "Falcon," a bird whose swiftness appealed to the early Slavonic authors and poets, and they have woven their epics and legends around this lofty bird. The Sokol members are well trained and disciplined. Equality, freedom, brotherhood, and morality are their first elements in training. They train youth to cultivate power and memory, acquire courage and skill, and have self-confidence. The Sokols are trained to transform aims into actual deeds.

That is why the Sokols were the first to organize Czechoslovak legions during World War I and fought for freedom and independence. The Sokol is an organization of Slav

nations trained to keep on guard against enemies of democracies and fight for justice and peace.

The Communists disbanded the Sokols in its mother country, Czechoslovakia, and all other satellite Slavonic countries where it was a leading organization. In its place they inaugurated Spartakiada, which will hold its meet next year in Prague. Sparta was the capital of ancient Lacedaemon in the southeast corner of Greece. The people there made the first great experiment of socialism. Each child was examined at birth, and killed if weakly. Boys and girls were educated by the state in gymnastics, boys in military drilling. The family was disregarded. All ate in common, lived plainly, and no coined money was allowed. The system produced a race of military athletes, without commerce, art, or literature, but was a barren one and failed.

Communists, unfortunately, are trying hard to replace Sokolism with Spartakiada, which has failed in the past as barren, for it has no soul.

Perhaps the proponents of Spartakiada instead of Sokolism had also in mind Spartacus, the Thracian war prisoner and gladiator. In 73 B.C. he incited a slave insurrection, armed his men, led them with consummate generalship and defeated the Roman legions. After 2 years he was killed at the head of his men. Pompey, whose genius won the final victory, crucified 6,000 captives along the road from Capua to Rome. Perhaps this sort of history of murder and brutality appeals to the present regime in Czechoslovakia and Communist countries, where Sokolism took root close to a century ago and where they disbanded it.

However, the people of the free world will continue to look upon Sokols and Sokolism as a youth fitness training organization such as President Eisenhower is advocating for the American youth. The Slovak Catholic Sokol, founded on July 4, 1905, has trained tens of thousands of American youth. Thirty years ago their 21 member delegation of gymnasts and athletes won first prizes during the All Slav Nations Slet in Prague. We are looking forward to 1962 when Sokolism will observe its centennial birthday when there will be a huge slet (meet) and Sokolism will march in the spirit of equality, freedom, brotherhood, and Christianity to a better future and peaceful world with Christian democracy and justice reigning.

In World War II the Slovak Catholic Sokol had over 5,000 men and women in service of Uncle Sam.

Of the original 43 founders of the Slovak Catholic Sokol we salute the 3 living founders, namely Stephen Bigos, of Garfield, N.J.; Andrew Klukosovsky, of Clifton, N.J., and Andrew Bekes of Little Falls, N.J.

Problems of Poultry Farming

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. TALMADGE. Mr. President, today I received a letter from one of my good friends and constituents, Hon. J. G. Blanchard of Evans, Ga., who is a poultry and egg farmer. Mr. Blanchard is a practical poultryman and I was so impressed by his penetrating analysis of the grave problems confronting the poul-

try and egg industry that I feel his observations and conclusions should be called to the attention of all the Members of Congress. Therefore, I ask unanimous consent to have the text of Mr. Blanchard's letter to me printed in the Appendix to the Record.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EVANS, GA., August 1, 1959.

Senator HERMAN E. TALMADGE,
Senate Office Building,
Washington, D.C.

DEAR HERMAN: I am sure that you are aware of the extenuating conditions of the broiler and egg farmers in Georgia and the Nation. As you know, the southern theme at the recent congressional hearings on the poultry situation was that "the South never had it so good" that southern poultrymen don't suffer from low prices as other areas do. Such is not the case of the farmer.

The spokesmen for the southern poultry industry at the recent hearings, and on all other occasions, has been industry representatives. Naturally these industry people present the side of the story that is most favorable to them. Their side of the story is not the farmers side and is not in the best interest of the farmer.

While the industry is speaking, the farmer is at home, completely ignorant of the fact, working 12 hours per day, 7 days per week and hoping for some miracle which will never happen so long as industry is the farmer's spokesman.

While my teenage son is out of school for the summer, I have spent considerable time studying my farming operation of 10,000 layers and visiting other poultrymen throughout the State and discussing our (the farmer's) problem. The only happy poultrymen I have found are those just getting into business and those getting out.

The following comments are typical from the poultry farmers I visited:

1. "If the feed mills would stay in the feed business instead of getting in the egg business, things would be better."
 2. "If the feed people would help the farmers in established broiler areas make a living instead of promoting new areas, they would be helping the farmers in both areas."
 3. "If the extension service would stop publishing ridiculously low cost production figures for eggs and broilers, the feed promotion people would have less false propaganda with which to induce more people into the chicken business."
 4. "If feed and chick salesmen would stop telling southern farmers that the North and Midwest is getting out of the egg business next year and that the South will have to produce eggs for the whole Nation, so let's put in more hens."
 5. "How can we produce broilers and eggs on price supported grains and sell on a supported market?"
 6. "People will seat only so many broilers and eggs, so why produce more. This spring, when egg prices were lowest in years, per capita egg consumption continued to decline."
 7. "Stop, or correct, the misleading publicity given poultry farming. Magazines and newspapers are still publishing get-rich-quick stories about poultry farmers—thus giving a false impression of our situation."
- Also I have heard where some unscrupulous feed salesmen have resorted to sowing seeds of discord among farmers in their efforts to increase feed tonnage and boost their commission incomes. I believe, though, that farmers are at least beginning to realize that a farmer is another farmer's best friend.

My friend, J. H. Marshall, who has been vacationing in Florida, has mailed me news-

paper clippings advertising dressed and drawn broilers in Miami for 19 cents per pound and in Tampa for 15 cents per pound.

The feed and hatchery industry are trying to blame today's problems on the chain-stores. It seems that this is a mighty feeble way of trying to pass the blame.

A friend of mine in an adjoining county recently grew out 9,000 broilers under contract with a local feed company. He received 25 cents for his efforts which included furnishing the house, equipment, brooding costs and labor for 10 weeks. There are other stories all over Georgia just about as bad as this one. This is worse than sharecropping and tenant farming.

I have heard of several instances where farmers receiving soil bank money have invested this money in poultry farming—thus adding more overproduction. Some feed company people go around and find the soil bank farmers and show them a lot of misleading figures and put them to chicken farming. Is this right?

We hear much today about efficiency. Anyone knowing anything about chicken farming will tell you that a farmer with 5,000 hens can produce eggs cheaper than a farmer with 50,000 hens, or a broiler grower with 10,000 broilers can do a better job than a person with 100,000. This is a proven fact. The Extension Service would do well to avail themselves of this fact.

Industry, of which feed mills are the major part, have established volume as their creed. Their every effort is in the direction of more output. And so far, the farmer has been the one to suffer most. Industry, in nearly every case has protected their profit margin. Naturally they want to continue to expand production without Government control, as long as they can make a profit by doing so. They have no particular love for the farmer, and the farmer is beginning to see it.

The chicken farmers are fast realizing that industry is no place of mercy. And they are beginning to wonder if Benson is Secretary of Agriculture or "Secretary of Industry."

There is a great deal of unrest among the Nation's poultry farmers, Georgia poultrymen very much included. As you know, farmers are not a letterwriting and publicity-seeking group. Therefore, their feelings are not generally well known.

HERMAN, you are one of the few people in Washington who understand the farmer's language and know his problems. This letter presents the feelings of the poultry farmers throughout the State, especially the areas where I visited during the past few weeks, talking to fellow chicken farmers.

Every farmer I visited thinks that you should know the farmer's story, but none of them have written. I am writing you as much in their behalf as in my own. You may have unrestricted use of this letter. Should you desire any further information, I will be glad to furnish what I can.

Very sincerely yours,

J. G. BLANCHARD.

Lake County Citizens Committee on World Refugee Year

EXTENSION OF REMARKS OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. MADDEN. Mr. Speaker, several months ago I spoke to our Members regarding the outstanding work which the

International Institute of Gary, Ind., Inc., has been doing in the Calumet region of Indiana during the last 40 years in behalf of new immigrants and future American citizens who come from other nations to live in our great free Republic. This organization, during and since World War II, has aided thousands of world refugees who have settled in Indiana seeking citizenship under our flag.

I am herewith submitting an article from the Gary (Ind.) Post-Tribune, setting out a new organization called the Lake County Citizens Committee on World Refugee Year, created to generate national interest in the world refugee problem. I wish to commend the committee for taking this much needed and necessary step not only in behalf of the refugees concerned, but in furtherance of our Government's relations with other countries.

The above-mentioned article follows:

[From the Gary (Ind.) Post-Tribune, July 28, 1959]

LAKE GROUP AIDS REFUGEE YEAR

The Lake County Citizens Committee on World Refugee Year has been organized to whip up interest in the world's refugee problems.

Donald Houskeeper, president of the Gary International Institute, has been elected temporary chairman of the steering committee which will focus countrywide attention on what has been described as a "human year"—utilizing the emphasis of the recently concluded scientific International Geophysical Year to spotlight refugees' problems.

Houskeeper said the committee was organized in response to President Eisenhower's request for participation of people in local communities in the United Nations World Refugee Year which was inaugurated on July 1, 1959.

The Lake County committee is representative of the community built largely by immigrants.

Members of the steering committee are:

Elizabeth N. Wilson, executive secretary of the Gary International Institute; Joseph Chulak, business representative of the Building Service Employees Union; Don F. Datisman, editorial page editor of the Gary Post-Tribune; George Hrnjak, community services representative for the United Steelworkers; the Reverend Eugene Lazar, of the Romanian Orthodox Church; Philip M. Look, executive director of the Gary Community Chest and United Fund; Rabbi Carl Miller, president of the Gary Community Welfare Council; also Rauben Olson, president of Gary Anselm Forum; James W. O'Neill, president of the Gary Chamber of Commerce; Attorney Nicholas Stepanovich, a member of the council of the U.S. Committee on Refugees; Msgr. W. Edward Sweigert, Gary diocesan resettlement director of the National Catholic Resettlement Council; the Reverend Humphrey L. Walz, First Presbyterian Church of Crown Point; the Reverend S. Allan Watson, executive director of the Lake County Council of Churches, and Houskeeper.

The steering committee will be expanded as the Lake County program is organized.

Walz and Stepanovich explained the beginning and the significance of World Refugee Year to the steering committee members. Both Lake County personalities are acquainted with international refugee problems and both have been very active on a national scale in helping seek solutions to these problems.

The United Nations has designated July 1, 1959, to June 30, 1960, as World Refugee Year.

World Refugee Year has these aims:
1. To focus interest on the refugee problem and to encourage additional financial contributions from governments, voluntary agencies, and the general public for its solution.

2. To encourage additional opportunities for refugee solutions, through voluntary repatriation, resettlement or integration, on a purely humanitarian basis and in accordance with the freely expressed wishes of the refugees themselves.

The High Cost of Learning

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. WILLIAMS of New Jersey. Mr. President, a striking example of the urgent need for Federal aid to education appears in an editorial from a recent issue of the Wyckoff (N.J.) News. The editorial is a concrete demonstration of the obvious inability of a local community to meet the school crisis.

The editorial shows that the construction cost of one local school ran into millions of dollars; another school has need of a large addition; and still another elementary school is needed, at an estimated cost of a million dollars. As the editorial asks, "Where is the money going to come from?"

I certainly feel that our State and local school districts have been doing a commendable job in maintaining educational facilities on the limited financial resources available to them from State and local revenues. But, clearly, with the rising population and ever-rising school costs, they can no longer be expected to cope with the problem alone.

And I note unhappily, too, that the article states that perhaps the local community should be turned into an industrial area, since—so it is reasoned—if not, the land will be used for homes, which will mean more children and more schools.

Therefore, Mr. President, the need for us to attack the school and education problems on a national basis grows ever more compelling.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IN OUR OPINION—THE HIGH COST OF LEARNING

Senator HARRISON A. WILLIAMS told the Senate last week that New Jersey was a perfect example of the necessity of Federal aid to education. He lamented the rise in local property taxes, suggested that the burden could be better borne by the Nation as a whole than by the few residents of small communities.

Certainly our area has been struck as hard, if not harder, than any other, by the growing population and rising school costs. (Last year we're told, on a county average,

they rose another 12 percent.) The construction of Ramapo Regional High School and Midland Park High School within the last few years ran into millions of dollars. The Ramapo school already has need of a large addition. Franklin Lakes is contemplating the construction of a new elementary school at a million dollar estimate; Wyckoff seeks land for still another school. Education news and its costs fill the newspapers every day. Where is all the money going to come from?

At a recent planning board hearing, Frank Perrotta explained that Wyckoff must be marred by industrial areas. If we don't turn this land into industry, Mr. Perrotta reasoned, the land will be used for homes, which will mean more children and more schools. At the word "schools" a large segment of the audience winced. It's a scary word, any word is that can signify a million dollar increase in taxes.

Actions of the board of education today arouse more ire than the work of the township committee. School board elections are harder fought, bring out larger votes, than elections which are technically political. Towns in the area repeatedly reject their school budgets.

Why is there so much concern, so much difficulty? Surely not because school boards are peopled by rank spendthrifts. But because the strain is too great. The local pocketbook simply cannot provide all the money that is really, truly needed.

The towns of Bergen County need help. We need help. The time for that help is not, as Senator WILLIAMS chides the Congress, in a "next year that never comes." The time for that help is now.

Russia's Economic and Education Goals and Their Implications for American Civilization

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD a very fine speech delivered by Mr. M. D. Mobley, executive secretary of the American Vocational Association, Inc.

Speaking before the association's annual advisory breakfast in Los Angeles, Calif., on May 5 of this year, Mr. Mobley clearly made a case for vocational education in America as part and parcel of meeting the Soviet challenge. The title of his address, "Russia's Economic and Education Goals and Their Implications for American Civilization," was well chosen.

Mr. Mobley's speech, I believe, offers a proper background of facts and knowledgeable observations which back up his concluding remarks that—

We should not slacken for a day our efforts to expand and improve vocational educational programs in order to increase the productivity of all our citizens. Our security and our American way of life may well depend upon our success in this important undertaking.

The address follows:

RUSSIA'S ECONOMIC AND EDUCATION GOALS AND THEIR IMPLICATION FOR AMERICAN CIVILIZATION

(Speech by M. D. Mobley, executive secretary, American Vocational Association, at the annual advisory breakfast, Los Angeles Trade-Technical Junior College, Los Angeles, Calif., May 5, 1959)

Mr. Chairman, members of advisory committees and fellow Americans, for some time I have believed that the phenomenal growth and development of vocational-technical and scientific programs of education in Russia have grave implications for American civilization. I am glad to have opportunity to share my beliefs with this distinguished group.

It has long been my firm conviction that productive workers constitute America's greatest resources. I am convinced—as I believe most thinking Americans are—that the security and economic well-being of the United States is tied inseparably to the productivity of our people.

The United States has become the most powerful and the most productive nation in the world today. Our people enjoy the highest standard of living of any people, anywhere, anytime.

As evidence of this, may I bring to your attention the fact that here in the United States we have only 6 percent of the world's population but we own 70 percent of all automobiles, 50 percent of all telephones, 45 percent of all radios, 34 percent of all railroads; we use 56 percent of all silk, 53 percent of all coffee, 51 percent of all rubber; we produce 62 percent of all the oil, 53 percent of all the corn, 50 percent of all the cotton, 34 percent of all the coal, 32 percent of all the copper, 30 percent of all the iron and 32 percent of all the manufacturing production.

America's high economy is not an accident. It has occurred because our people at the local, State and national levels have planned intelligently and have developed great education programs for both youth and adults to give them ability to produce more and thus have more.

These programs comprise both general and specialized education. They include instruction in citizenship, in the humanities, in technical, scientific, and practical education. There is no conflict in the development of general and specialized education, except in the minds of a few who lack understanding of the need for a total program of education. One is not complete without the other.

No nation can remain strong or maintain a high standard of living unless there are adequate provisions for passing on to the oncoming generations the skills and knowledge of the productive workers of today and yesterday—and in the march of progress acquire new knowledge and develop new skills. These things are just as essential to our way of life as is the teaching of citizenship and the humanities.

Today, throughout the world, there are two ideologies battling for the minds of men. In addition, there exists an armament race between Soviet-dominated countries and the free nations. These facts are generally known. They have been given much publicity. Another battle is beginning to take form—about which there has been little publicity until very recently. This is a battle of economy which involves education—the training of manpower for efficiency.

To lose the productive manpower race could eventually mean losing our lead in the production and distribution of goods and services, and in the maintenance of a high standard of living. This is a matter that

has grave implications for American civilization.

During the past 18 months, the American press has given a tremendous amount of publicity to Russia's system of education and has been very critical of the program in this country. Unfortunately much of the publicity about Russia's system has been misinformation. Some of the writers would lead us to believe that Russia's entire program of secondary education is devoted to science, mathematics, and the languages—and that America's schools should follow suit.

Some of our writers and some of our educators have become almost hysterical in their clamor for reorganization of the American secondary school program. Some of the writings became so ridiculous and so incorrect that last fall in my column that appears monthly in the American Vocational Journal, I attempted to "debunk" some of the misinformation being blandly presented in speeches, in the press, and over radio and television programs. It evidently hit upon a popular chord since I received requests for more than 2,000 copies of reprints of the column.

For the last 13 years, ever since serving on General Clay's staff in Germany in 1947, I have attempted to keep in rather close touch with economic and educational developments in Russia. About 13 years ago I began making speeches in which I warned at least a few people of the economic and educational developments in Russia and their implications to the security and well-being of this and other free nations. I stated then that one of Russia's long-time goals was to lick the United States in an economic war. In the last 18 months volumes on this subject have appeared in the American press. Today there is no question in the minds of thinking Americans as to Russia's economic goals.

Russia's Khrushchev has already made known in no uncertain terms Soviet economic plans. Not long ago he said to an American newspaper publisher, and I quote: "We declare war upon you—in the peaceful field of trade. We declare a war we will win over the United States. The threat to the United States is not the intercontinental ballistic missile, but in the field of peaceful production. We are relentless in this, and it will prove the superiority of our system."

In a more recent report made by Khrushchev on January 27, 1959, he stated among other things the following:

"The Soviet Union exceeds the United States both in the rate of increase and in the absolute annual increase in production. . . . In per capita output of industrial production the world Socialist system, taken as a whole, has already caught up with the world capitalist system. . . .

"In spite of all existing obstruction, trade between the Soviet Union and the capitalist countries of Europe and America in 1958 was almost triple that of 1950."

I do not claim Khrushchev's statements are true, but they do reveal the Soviet goals.

In October 1957 while in Karachi, Pakistan, I saw positive evidence of Russia's attempt to battle us and other free nations for the markets of the world. While there I visited the exhibit of Soviet manufactured goods being offered for sale in this foreign country. The exhibit included tractors, grain drills, pumps for irrigation, automobiles, motorcycles, machine tools, sewing machines, bicycles, scales, meat grinders, microscopes, electric percolators, cameras, watches, porcelain, and many other items. Placed on each exhibit was the name of the local concern where it could be purchased, and in some cases the prices were displayed.

The products I saw were well made. In fact many of them appeared to be carbon copies of American manufactured products and goods produced in other countries.

For example, the cameras were almost identical with the German Leica camera. The tractor for sale looked very much like the John Deere.

The thing that alarmed me was the fact that the prices were much lower than the prices of similar goods manufactured in this country. For example, the tractor on display was being offered for 5,000 rupees, which at the rate of exchange was a little more than \$1,000. The same tractor in the United States sells for well over \$2,000.

Next let's look at Russia's plans to reorganize its education system in order to help the Soviets to accomplish their economic goals. The reorganization plan, which is already well underway, calls for a greatly expanded vocational education program, somewhat similar to the program we have been developing in this country during the past 40 years.

This expansion of vocational education is underway, even though Russia has had in operation for sometime quite an extensive program of vocational training—including nearly 4,000 technicums—specialized trade schools—which turn out about 70,000 technicians per year.

The following are quotations from Khrushchev's reports which have been approved by the governing Central Committee. They were made on September 22, 1958; November 14, 1958; and January 27, 1959.

September 22, 1958: . . . "At present our 10-year secondary schools do not solve the task of preparing youth for life, but are training them only to enter higher educational establishments. . . .

"Life has shown long ago that such an idea about the tasks of secondary schools is incorrect. . . .

"Owing to the separation between the program of secondary school education and life, these youths and girls are quite unfamiliar with production, while society does not know how to make the best use of the people, who are young and full of vitality. . . .

"How can all these shortcomings be eliminated from our schools? It is essential to carry out a fundamental reorganization in the system of school education. . . .

"In my opinion, after they have finished 7 or 8 years at school, all schoolchildren without exception should take part in socially useful labor at enterprises, collective farms, and other places of work. Both in town and in the countryside, as well as at workers' settlements, all children finishing schools should go to work in production. No one must evade this stage. . . .

"With that aim it seems to be useful to divide secondary education into two stages.

"The first stage should obviously comprise the 7- or 8-year school with compulsory education for all."

He further outlined in a very involved statement that the 7- or 8-year school should be comprised largely of general education—that is teaching the tools of learning.

"The second stage of secondary education may proceed along several lines. One of them, for instance, can be as follows: In the 2 or 3 years after the 7- or 8-year schooling, schools shall lay the main stress on special vocational training for schoolchildren . . . their education. . . . must be closely linked with vocational training and help them acquire trade skills and working habits, not only an abstract knowledge of production but also practical experience. . . .

"In the countryside, the schoolchildren, after a 7- or 8-year schooling period, shall acquire practical and theoretical knowledge in agronomy, zootechnical, and other branches of agriculture, or undergo a 2- or 3-year training in some sort of trade, because the village youth as well can learn particu-

lar trades. Thus, boys and girls after leaving school will have acquired both proper education and trade and production experience, and will start their lives as prepared people."

In his report he mentioned other kinds of secondary school programs, virtually all of which would be closely linked to work experience and near the end of his report when again speaking of work experience and vocational training he stated:

"I repeat that there must be no exceptions in this matter, whatever the position of the parents in society and the posts which they may hold."

In other words Russia has already launched a program of reorganization that means work experience and vocational training for virtually all of its people.

In his statement regarding higher education he said the following:

"The system of higher education must be reorganized. . . . It must be brought closer to productive work and actually linked to it."

Khrushchev's November 14, 1958, report to the Central Communist Committee dealt with "Target Figures for the Development of the U.S.S.R. National Economy in 1959-65" and "Strengthening the Ties Between the School and Life and on the Further Development of the Public Education System in the Country." In this report he stated:

"The target figures for the development of the U.S.S.R. national economy for 1959 to 1965 are an integral and decisive part of the long-term plan for the development of U.S.S.R. for the next 15 years, during which the U.S.S.R. will take first place in the world not only in total volume of production but also in per capita industrial production. This will be a great victory of the Soviet Union in the peaceful economic competition with the most developed capitalist countries."

In an article that appeared in Nation's Business, published by the U.S. Chamber of Commerce, Assistant Secretary of Commerce, Harold C. McClellan, was asked this question: "What's behind the Soviet Union's new interest in expanding world trade?" His answer: "The Communists are challenging us in fields where we excel. This is clearly a new international game of matching economic wits. Immediately at stake are awakening millions of people in the underdeveloped areas and the vast potential markets which they represent. Russia wants these people, their trade, and their sympathy."

Allen W. Dulles, Director of the Central Intelligence Agency, probably has at his finger tips more information on developments in the Soviet Union than any other man in the Federal Government. Not long ago an article by him appeared in the Washington Sunday Star in which he stated:

"The Soviet Union has become the second greatest industrial power in the world. Today the gross national production of the U.S.S.R. is slightly more than one-third that of the United States; it is about three-fourths again as large as that of the United Kingdom, which ranks in third place. We still have a great lead, but the Soviet rate of progress is rapid. . . .

"In general, this examination has led me to the conclusion that the only safe position to take is that in technical, engineering and industrial fields the Soviets can achieve any particular objective we can achieve. . . .

"Those who have assumed that we have superior technical skills, that we could produce atomic weapons, aircraft, and the like which are beyond the competence of the Soviets, have generally proved to be mistaken. Certainly in recent years I have not proceeded on any such assumption."

From these quotations, which I have presented to you—and many more that I could present if time would permit—I am sure that you will agree that without a doubt Russia is trying desperately through research and the expansion and improvement of vocational, technical and scientific education to increase production and thus place itself in a position to lick the United States in an economic war. This is one of Russia's longtime goals. It is the battle of economy that may last longer than any of us will live.

On June 16, 1916—almost 43 years ago—the late Congressman Dudley M. Hughes in a speech on the floor of the U.S. House of Representatives, while the Smith-Hughes vocational education measure was under consideration, said, and I quote:

"National efficiency is the sum total of efficiency of all individual citizens, and the national wealth is the sum of their wealth-producing capacity. . . . In the markets of the world we compete, not as individuals but as a unit against other nations as units. . . ."

"This . . . unquestionably introduces a national element into vocational education."

In closing may I summarize by saying—the American people are being challenged as never before in the field of economics. Contrary to much recent publicity Russia's education program is being reorganized along vocational education lines—patterned somewhat after the program we have developed during the past 40 years. The Soviet leaders believe that their hope in winning an economic war is dependent in large measure on the skill and productivity of its people.

In light of these facts we should not slacken for a day our efforts to expand and improve vocational education programs in order to increase the productivity of all our citizens. Our security and our American way of life may well depend upon our success in this important undertaking.

Again I commend you and salute you for the important role you are playing in helping to improve a phase of education which is vital to our American way of life.

It has been good to be with you.

What Do We Need for Economic Survival?

EXTENSION OF REMARKS OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an outstanding address entitled "What Do We Need for Economic Survival?" delivered by Mr. Lansing P. Shield, president of the Grand Union Co. of East Paterson, N.J.

Mr. Shield is one of the leading businessmen in our State and has just completed a term as president of the New Jersey State Chamber of Commerce. More recently, he was elected president of the International Association of Food Distribution, and served as a representative of the food industry at the Moscow Fair.

Mr. Shield has long been concerned about the position of America in the continuing international economic competition. He has led the way for other

enlightened and patriotic businessmen in recognizing the many problems which this Nation faces and has offered some concrete and logical suggestions on how we can improve our position vis-a-vis the Russians.

The address was delivered at the 11th annual New Jersey Business Conference at Rutgers University on May 14. Mr. Shield serves as a member of the board of trustees at this university and is the recipient of the Rutgers' Alumni Federation Award for distinguished service to Rutgers. I commend his talk to my colleagues in the Congress.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT DO WE NEED FOR ECONOMIC SURVIVAL?

(An address by Lansing P. Shield)

If that wise old statesman, Winston Churchill, had prophesied in his farewell press interview last Saturday that the world would come to an end by 1970, we would all be greatly aroused. But the world could come to an end before 1970—at least the kind of a world to which we are accustomed. In the Soviet Union's determination to defeat us, our adversary is overtaking us rapidly in the field of production (and it doesn't have to worry about slowdown and strikes). The living standards of Ivan, the Russian, are rising sharply. Breakeven points in the Russian economy are constantly dropping. Ours are steadily rising. The crash program of our competitor overseas is catching up fast—he now boasts that by 1970 he will have a greater material production than (to use Khurshchev's words) the "moribund capitalism" of the United States. Your dictionary will define "moribund" as "in a dying state" or "on the verge of extinction."

And so it may be a safe assumption that, despite threats and barring miscalculations by either side, the war for survival of our system will be fought in the marketplaces instead of on battlefields. To win this conflict, America must rely not so much on armament and combat veterans as on economics and economic veterans.

Probably the most reassuring thing about our position is a general awakening to the possibility that our system may not survive. President Eisenhower said recently that, "It is not the goal of the American people that the United States should be the richest nation in the graveyard of history."

Now if this is not our goal, logically we should ask ourselves, "Does the formula which may be said to represent our economic system insure survival of our way of life?"

The answer is a qualified "yes"—yes, providing we add to our strength and attack more vigorously the weaknesses in our economy.

When we are concerned about the survival of our businesses, the first thing we do is to take a hard look at our balance sheets. We weigh our assets against our liabilities. Let's take a look at America's balance sheet.

Our assets are so obvious that we need dwell on them only long enough to give us the proper perspective in an examination of our liabilities.

On the left side of the balance sheet, freedom—political, religious, and economic—is still our greatest asset. This asset, won through the American Revolution, for almost two centuries has made democracy the hope of millions around the world.

Next in the asset column are the basic characteristics of our people. Other great sources of strength are our natural resources—a soil and climate second to none (our farms produce more food than we can consume).

High in the asset column is American industry—America's mass production and mass distribution systems. We all know that in the number of homes, automobiles, and gadgets, the United States is still way out in front. Just as examples, Americans own 47 million refrigerators and the U.S.S.R. less than 3 million (someone has said every Russian home is a refrigerator). One hundred and twenty-one million persons in the United States have life insurance policies worth over \$500 billion (the best insurance a Russian can get is to slip outside the Iron Curtain).

Yet these impressive assets that have yielded both freedom and the highest standard of living on earth are in jeopardy.

With our system under attack, our liabilities seem to outweigh our assets.

Every day we are losing battles to the enemy and we have lost, for the most part, the moral leadership of the world. Donald David, Chairman of the Committee for Economic Development, said recently, "Our civilization, based on the spiritual concept of man created in the image of God, has acquired the reputation of being hard, cold, and often inhumanely materialistic."

RESERVOIR OF GOOD WILL NEARLY EMPTY

In 1941, Wendell Willkie, a businessman who looked beyond his business, made a trip around the world. When he returned, he pointed out that, over the years, America has built up a reservoir of good will—a national image in the eyes of other nations that pictured America as the champion of individual freedom—a people with an unselfish desire to help nations less privileged. That was 18 years ago. If Wendell Willkie were alive and making that same trip today, he'd be a disillusioned man. He would find that reservoir of good will nearly empty. At a time when we can least afford it, we seem to have replaced an asset with a liability.

It is hard for us to realize that millions of people in countries undergoing great social and economic changes now consider us allied with reactionary forces. As our liabilities are overpublicized and overplayed both by our friends and our enemies, these millions doubt the intrinsic worth of our economic system and question whether it will survive.

Is it any wonder that our national image is marred when headlines around the world read, "3,600,000 Unemployed in United States, New Low Since December, 1957" (that's more than the total population of some of the uncommitted countries), "Mob Lynches Negro in Mississippi" (foreign newspapers don't bother to point out it was the first lynching in 4 years), "Strikes Threaten to Paralyze Hospitals," "Inflation Weakens U.S. Economy." A worried citizen who had been reading too many headlines went to a doctor for a checkup. After a thorough exam, the doctor said, "You're as sound as a dollar." The patient said, "Gosh, Doc, I didn't know I was that bad off."

When we find ourselves in a defensive position, we might ask ourselves questions like these: Are we businessmen assuming our share of the responsibility for strengthening our economic formula or are we too preoccupied with beating last quarter's profits? (Of course, that's important, too.) Are we moving fast enough in eliminating weaknesses in our own businesses? For example are we prepared to move faster in the direction of a true business democracy in which employees become partners through stock ownership or sharing profits or both? (That may be the only long-range solution of our labor problems.)

Have we the courage to fight monopolistic labor tactics rather than take the expedient way out? Are we prepared to take a more active part in Government? Or, to sum up, as dealers in commodities and securities, are

we also prepared to discharge our responsibilities as dealers in human security and human freedom?

Some of our most serious liabilities lie in another important segment of our economy. Even that mythical figure, the man in the street, is beginning to understand that the greatest single threat to our economic system is the short-sighted philosophy of some of our labor leaders. Where there is no regard for a relationship between productivity and wage increases, when strikes are called in callous disregard of public health and welfare, when the philosophy becomes prevalent that "we'll get ours regardless of its effect on the business or social community," then our system begins to fall apart. Rising break-even points, loss of world markets, foreign competition that we can't even meet in our own domestic markets are the signals of the approaching storm. Economic storms breed in a climate of unbalanced budgets, wage-price thrusts and unfavorable trade balances.

INDUSTRY AND LABOR MUST WORK AS A TEAM

The philosophy of more pay for less work is being carried to a point where we are dividing up something we haven't got (and it may not be long before Moscow is saying, "We planned it that way.")

We are late in facing up to these liabilities that mar the effectiveness of our economic formula. It may be that we need stronger unions, but unions which get their strength through discharging their responsibilities to society as a whole. It may be that industry-wide bargaining, strike insurance, and legislation should be the means of striking a better balance between industry and organized labor. One definite conclusion may be drawn: we need desperately a greater will to fuse the interests of economic groups into the common objective of promoting the public welfare. This is the real core of our domestic problem if we are to preserve our institutions against the worldwide challenges they now face.

Our form of society, shaped around a capitalistic system, places primarily on business the responsibility of finding solutions for economic problems. While Government is in a unique position to promote a balance between divergent economic interests, you and I and thousands of business leaders should take a major share in shaping an economic system that will insure its survival. Politicians are the mouthpieces of their constituents. Their constituents, for the most part, work for us. What we do either in the public interest or otherwise, sooner or later will be reflected in Washington or the State Capitol. How fast and how well, also, largely depends upon us.

We are reaching the point where industrialists and labor leaders must submerge their short-term selfish interests if they want our economic system to survive. Either we start hanging together or we'll hang separately.

On the grounds that it is not the function of government, some of our leaders in Washington appear to be reluctant to make an all-out effort to bring industry leaders and organized labor closer together. The relationship between management and labor in this country reminds me of the relationship between manufacturers and retailers which may be found in some countries in Europe. Apparently there is a strong antagonism between these two European groups because they believe their interests are divergent. While in this country the manufacturers and retailers, for the most part, work closely together for the reason that they realize one cannot be prosperous without the other. Industry and organized labor are equally interdependent. They must work together as a team if either is to remain strong.

NEED FOR A NATIONAL COUNCIL

Up to now, government, management and labor had had no common meeting place where attempts can be made to close ranks against our common enemy—where conflicting interests may be examined in an atmosphere other than that of an emergency. A possible first step toward a solution is the formation of a national council, appointed by the President, composed of forward-looking leaders in government, labor and industry. This seems like a logical step in breaking down the hostility between economic groups and promoting understanding. Similar councils at the State level might well implement the efforts of the national council. In our own State, steps are being taken under the leadership of our Governor to move in this direction. These are only first steps, but we can only start from where we are and there is a pressing need for action.

But a formula for survival embraces more than correcting some of the basic weaknesses in our economic structure here at home. In this hot economic war now being fought on two fronts—here and abroad—we seem to be doing even more poorly abroad than at home.

Let's take international trade as a measure of our effectiveness. We're coming off second best in every brush with Russia and with most of the industrialized nations of the free world. The excess of U.S. exports of goods and services excluding military aid, over imports dropped from 5,800 billion in 1957 to 2,800 billion in 1958 (over 50 percent). (The 1957 figures were affected slightly by the Suez crisis so the comparison is not entirely valid.) And this decline in our trade balance is continuing in 1959. Our failure in the market places of the world cannot be ascribed solely to rising costs. After all, the wage-price spiral is not a U.S. phenomenon. It will be found in most of the industrialized countries of Europe.

The reasons for our ineffectiveness are primarily a lack of central direction and inability to move fast. In a shooting war, the President becomes Commander in Chief in fact as well as in name, and Congress temporarily delegates to the executive branch some of its powers. In this hot economic war, we are still using cumbersome peacetime methods. The story is told that recently when Khrushchev, Mikoyan and a third Russian were at a cocktail party in Moscow, a message was handed to Khrushchev, a matter of great importance had to be decided. In a corner of the room filled with guests, the three men made a quick decision of far-reaching importance.

INTERNATIONAL TRADE, FIRST LINE OF DEFENSE

I am informed that if the same matter had to be settled in Washington, 8 to 10 committee meetings involving 10 to 20 people in each meeting would have had to be held. There would be delay after delay, and the final decision would not be clear cut. While Russia is capturing markets, we are in committee. The first camel must have been designed in Washington. You know the definition of a camel—it's a horse designed by a committee. Nor do you win a war by legislation or legislative hearings.

We have many dedicated men in Washington, but their efforts are nullified through lack of central direction, overlapping jurisdiction, and insufficient authority. Under the present system, or lack of it, planners are afraid to make commitments. They are not sure of their authority or where they stand, because Congress controls the purse strings on a year-to-year basis. Steps in the direction of remedying this situation are the Fulbright amendment to the administration security bill and the President's recommendation made on Monday for a billion-dollar development bank and fund for Latin America.

These bills provide for greater emphasis on long-range loan funds and economic aid.

In this hot economic war, it's time we dealt with this emergency through emergency measures. Business as usual and Government as usual have no place in unusual times.

But measures such as these just mentioned, in themselves do not go far enough. A system that is fast-moving and flexible enough to compete with aggressive competitors in the marketplaces of the world is desperately needed. There is a pressing need for centralized and top-flight direction and authoritative leadership in our foreign economic affairs.

International trade is our first line of defense. For military defense, we have a Department of Defense with Cabinet status, independent of, but working with, the State Department. Equal Cabinet status should be given to another Department of Defense—a Department of International Trade. By having a department headed by a Secretary of Cabinet rank, the United States will be in a position to marshal its forces and compete aggressively in the world markets.

In this capacity, the Secretary of International Trade should have the right to make trade agreements, subject to the approval of the Senate. He should also have at his disposal funds of sufficient size so that he can undertake to develop long-range programs to compete in international trade as well as assist underdeveloped countries.

In this fast-changing world, whether our form of society survives is primarily a question of whether we take positive steps like these. If leaders in industry, labor, and Government will dedicate themselves to the solution of some of these major weaknesses in our society, we shall revitalize our national image, an image which once again can capture the imagination of the world. By so doing, we shall insure a strong America and a free world.

Opinion Poll Results

EXTENSION OF REMARKS

OF

HON. ROBERT J. CORBETT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. CORBETT. Mr. Speaker, I am reporting herewith the percentage results of my latest poll of public thinking in the 29th Pennsylvania Congressional District on 12 major national issues. I sincerely hope my colleagues in the Congress find them interesting and informative.

As background, I might point out that I have been taking these polls since first coming to Congress in 1939. They are in the form of a printed questionnaire, requiring simple "yes" or "no" answers, and they are mailed to the voters of my district, regardless of political party. The district is almost evenly divided between Republicans and Democrats.

The returns to this questionnaire were exceptionally good, and the total response virtually constitutes a referendum of the district.

The questions and the percentage replies follow without editorial comment.

	Yes	No
1. Do you believe that the Federal Government should promptly start a program designed to orderly terminate farm price supports?	94	6
2. Do you think that the Congress should pass an annual appropriation of at least \$1,000,000,000 for national debt retirement prior to the passage of any other appropriation bill?	85	15
3. Do you agree that if State and local officials enforced existing laws against criminal activities in labor unions that Federal laws in this field would be unnecessary?	38	62
4. Is it your impression that from a military point of view we are stronger than Russia?	51	49
5. Are you more in favor of building the Kinzua Dam than any other plan you know of for controlling the floodwaters of the upper Allegheny River?	67	33
6. Would you vote to reelect President Eisenhower if it were legally possible for him to run again?	63	37
7. Do you favor Federal funds for urban renewal projects?	30	70
8. Would you vote for Federal financial aid to public schools not limited to building construction?	33	67
9. Granting that so many dollars will be voted for foreign aid, would you favor increasing aid to Latin America and decreasing aid to western and southern Europe?	63	37
10. Do you believe that Government is more to blame for inflation than business and labor?	52	48
11. If current wage negotiations in the steel industry indicate a price increase for steel, would you favor the imposition by law of price and wage ceilings for steel and affected metal products?	59	41
12. This, the 86th Cong., has been labeled a "Can Do Congress" by some and a "Won't Do Congress" by others. Would you agree that it is a "Do Little Congress"?	71	29

Action on Water Pollution Control and Saving of Wilderness Areas Sought by Conservationist

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. NEUBERGER. Mr. President, an able spokesman for one of our Nation's leading conservation organizations has reviewed in a recent article the need for early congressional action on two issues of great importance—the House-passed water pollution control bill and the wilderness area preservation bill. The article was written by Mr. Howard Zahniser, executive secretary of the Wilderness Society. Because both of these bills may soon come before the Senate for action, I believe many of my colleagues will find Mr. Zahniser's article both useful and informative. I ask consent to have the article, published in the New York Times on August 2, 1959, printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 2, 1959]

TWO CONSERVATION BILLS PENDING—SENATE LEADERS URGED TO ACT ON WILDERNESS LEGISLATION

(By Howard Zahniser, executive secretary, the Wilderness Society)

A couple of weeks ago a group of national conservation leaders, meeting in Washington with a representative of Senate Majority Leader LYNDON JOHNSON, urged attention to pending legislation dealing with two main conservation objectives: clean streams and a system of wilderness areas maintained under a soundly established national policy and program.

Meeting in this mid-July discussion were executives of the Citizens Committee on Natural Resources, the National Wildlife Federation, the Wildlife Management Institute, the Wilderness Society, and Washington representatives of the Izaak Walton League and of Trustees for Conservation. The delegation, however, spoke also in effect for many other conservation organizations and for other groups supporting conservation programs. Twenty-two national organizations and 58 other State, regional, and local groups had supported the wilderness legislation being advocated, and practically all such organizations and groups that had acted had favored the measure being advanced to clean up the Nation's streams.

For clean streams the Senate leadership was urged to act favorably on a bill (H.R. 3610) already passed by the House of Representatives; for wilderness preservation the Senate was being asked to take the first steps toward enactment of a measure (S. 1123) that would also require House approval.

PUBLIC SUPPORT

As Congress enters the hot Washington month of August, prospects for this legislation are still uncertain. The outcome will probably depend on the amount of public support given these bills throughout the country.

In 1948 the Federal Government undertook a program to help control pollution in the Nation's streams. Twice renewed by Congress, the program has made much more than an important beginning in a Federal aid program of construction grants administered by the U.S. Public Health Service under the Secretary of Health, Education, and Welfare. Yet funds made available have not been sufficient to help municipalities across the land do much more than keep up with new sources of contamination. To clean up the streams will require a larger program.

This is the objective of the Blatnik bill (H.R. 3610) passed by the House on June 9 by a vote of 255 to 143, under the leadership of Minnesota's Representative JOHN BLATNIK, long a national champion of clean streams. This measure, now pending in the Senate, would amend the Federal Water Pollution Control Act to increase the authorization of construction grants for sewage treatment works to \$100 million per year over a 10-year period. Present annual allocations, which are inadequate, total only \$45 million.

The interest of conservationists is also focused on the wilderness bill, now before the Senate Committee on Interior and Insular Affairs, of which Senator JAMES E. MURRAY is chairman. This measure, to establish a national wilderness preservation system, was reintroduced this year in the Senate by Senator HUBERT H. HUMPHREY of Minnesota and RICHARD L. NEUBERGER of Oregon and 17 other cosponsors, and by Pennsylvania's Representative JOHN P. SAYLOR and 10 others in the House.

This bill was held over from last year to the present Congress by demands for field hearings, as a result of which the public interest has grown greatly and the expectation of favorable action has increased.

Strong opposition to the bill has been continued by timber and other commercial interests. According to supporters of the measure, these interests hope for future opportunities to exploit the areas that the wilderness bill would more clearly safeguard, although these areas are already in the National Park System, or within some 20 out of the 275 National wildlife refuges and ranges, or within specially designated portions of the national forests that are mostly above timberline. They make up only about 8 percent of the national forests.

The proposed wilderness system was designed to avoid damaging or threatening other interests. Special provisions have been included to safeguard existing grazing and other interests, and to provide for mining and other nonconforming uses of wilderness where these would be in the public interest.

NEED FOR PROTECTION

The fact that opposition has come from commercial interests in the face of such a reasonable and modest proposal has been surprising to proponents of the program. At the same time it has emphasized the need for added protection.

Commercial opponents of the wilderness bill have made much of an argument to postpone this legislation until the 3-year Outdoor Recreation Resources Review, which has just gotten under way, has been completed. Recognized as a delaying move, this argument has been refuted by demonstration that wilderness legislation will facilitate the review by setting up guidelines, policies, and procedures that will help the review commission both in formulating its recommendations affecting wilderness and in indicating how they can be applied.

The original wilderness bill introduced in the 85th Congress was the subject of hearings held in June 1957, in Washington, the proceedings of which were published in a 444-page volume. Revised on the basis of criticisms and suggestions at these hearings, the bill was changed in 1958 and made the subject of hearings in Washington on July 23, 1958, and in the West in November 1958. These proceedings have been published in two volumes that total 1,060 pages. Two additional field hearings were held in March and April on the bill as introduced in this 86th Congress, these proceedings being published in a 490-page volume issued last week.

In addition much correspondence has been received by the legislators—preponderantly in favor of the bill. During the course of the November field hearings, the Senate committee tabulated the mail and reported that the total number of persons communicating were 1,284 in favor of the bill and 173 against.

SOME CHANGES PLANNED

Changes expected to be incorporated in the bill are elimination of Indian lands from the system, revised procedures to govern the incorporation of certain national forest areas, and elimination of a proposed National Wilderness Preservation Council. With such changes the wilderness bill now has the support of the Government's land administering agencies that would handle the program. Even with the elimination of features that have been strongly favored, the bill is earnestly advocated for immediate passage by its conservation supporters who feel the urgency of positive legislation for wilderness protection. The Senate committee is being strongly urged to report the bill favorably to the Senate for passage early this month.

"It is time," said Secretary of the Interior Fred A. Seaton in his June 17, 1959, report on

the wilderness bill, "that wilderness and allied values be given greater recognition—their rightful place—in the statutes relating to management, development, conservation, and use of Federal lands and associated resources." He urged Congress to "give serious consideration to taking action now to initiate the establishment of a wilderness system by granting existing wilderness areas statutory protection," which is what the wilderness bill would do.

Asylum for Fulgencio Batista

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. HERLONG. Mr. Speaker, I would like to call the attention of the Members of the House of Representatives to an outstanding story in the Daytona Beach (Fla.) Sunday News-Journal of July 26, 1959.

This article tells of the anxiety and plight of Mrs. Fulgencio Batista and her five children as they wait daily to receive some word that our Government has granted her husband asylum.

Many of the outstanding citizens of Daytona Beach, Fla., which is in my district, have signed a petition directed to the former President of Cuba, inviting him to again make his home among them. He lived in Daytona Beach from 1945 to 1948 and during the time he was there conducted himself in an irreproachable manner and was a fine and upstanding and public-spirited individual.

The text of the petition is as follows:

We, the undersigned citizens and residents of the city of Daytona Beach and other cities in Volusia County, Fla., hereby present this memorial to you and in such behalf represent and state as follows:

1. This memorial is signed by us who were your neighbors, acquaintances, or fellow residents when you lived in your adopted home in Daytona Beach from 1945 to 1948, and who witnessed and observed your high and irreproachable standards of ideas, concepts, conduct, friendship, fellowship, public-spiritedness, and citizenship;

2. At this, the time of your adversity, we desire you to know that we have and hold the same high degree of respect, admiration, and friendship for you as we had when you lived with us and later when you served as President of the Republic of Cuba;

3. And, finally, we express to you our sincere hope and trust that you and your family will return to your second or adopted home in Daytona Beach as soon as conveniently possible, and again become one of our residents and on a permanent basis.

Mr. Speaker, I am advised by the State Department that they are studying Mr. Batista's application for asylum. I would hope that favorable action will be taken on it soon. The grant of sanctuary by this country to a political refugee has never involved a political commitment or a determination of any political controversy. This man simply has a very natural desire to rejoin his wife and family in Daytona Beach.

The full story from the Daytona Beach Sunday News-Journal follows:

(By Mabel Norris Rees)

The followers of erratic Fidel Castro may be acclaiming their new hero wildly in Havana on this, the 26th of July, but among them are thousands who once felt the steady, cool hand of a lady during their time of trouble.

Today, while Cubans celebrate, the lady sits in Daytona Beach and weeps. Her world is crushed by events over which she had no control. Her heart is gripped by the hand of constant fear.

She is Marta Batista, wife of the fallen President Fulgencio Batista.

She lives in the Batista home on the Halifax River, daily praying for his safety in the Dominican Republic, praying for the day the State Department will grant him an entry permit. Her prayers are whispered at St. Paul's Catholic Church on Sunday in company with her children.

Marta Batista granted an interview with the News-Journal yesterday. Though she has stayed mostly in the background through the long weeks since that fateful New Year's Day of this year, she is speaking out now because of her intense worry over her husband.

She spoke out 6 days ago in a telegram to Mamie Eisenhower—a heart-rending appeal, woman to woman, asking understanding and help.

"I have called to the heart of many people and I swear that I never wanted to take a minute of your attention, but I am discouraged, I am almost dead," her message said. "My husband, Gen. Fulgencio Batista, is in the Dominican Republic fearing for his immediate and uncertain future. I have been a first lady, and I do not pretend for you to interfere in the decision of your honorable husband, but you are a woman, a wife, a mother, and to those human titles, I come with the hope that in some way you could help my husband who is a father of five children. One of them is a little girl of 2, and one is a boy of 4.

"My husband, who always has been a friend of the United States, will make sacred his promise of living in peace with his family in our home in Daytona Beach. I have devoted my life to help and pray for those who suffer, and I ask you, lady, in the moments of my sadness, shall I have you to help me? Dear lady, do your best. At least give your sympathy to make my husband admitted in the United States . . . I can't cry any more."

There has been no reply, as yet.

Two days later, Roberto Batista, who writes to his father every day, sent his own telegram to President Eisenhower.

"Sir: I am the second son of Gen. Fulgencio Batista. I am 11 years old, and was born in this country, which my father taught me to love. The house I was born in at Daytona Beach is now a museum for the will of my father, but we live next to it. Mr. President, I want you to know that I've not seen my father since last December, and our home is not what it used to be.

"We only see our mother crying all day long and the light in her room is never turned out because she cries all night, too." My younger brothers live in sadness and do not play like other kids do.

"Mr. President, do something for our happiness. We want our father to live with us. His life is in danger and we know also that if our father dies, our mother is so sick that she will die too, and we want them to live for us.

"Please, Mr. President, give the visa to my father to enter the country. Everybody knows in this city how he respected the law and citizens while he stayed here in the year I was born. Dear Mr. President, save the life

of my father. Bring him to us. Forgive me, Mr. President, and receive my respects."

Roberto also has not received an answer.

Washington attorneys for Batista say the State Department has not decided yet what will be done about the appeal for an entry permit. They say too that he did not try to come here last week, permit or no, as rumor had it.

The statement of Marta Batista to Mamie Eisenhower: "I have devoted my life to help and pray for those who suffer," was no idle boast.

THAT WAS HER LIFE IN CUBA

Dr. Blas M. Rocafor, a former Cuban attorney who was interpreter for the interview, talked extensively about her life there before he relayed questions to her. And her son, George, 16, interposed in English: "She worked until 3 o'clock in the morning, night after night."

"The President would conceive ideas that were needed in Cuba," Dr. Rocafor related, "and then he would turn them over to Marta to organize and supervise. There were the hospitals for children—three big hospitals in three different Provinces, and 36 dispensaries for the care of children. She formed committees to work in establishing them, and always she presided at their meetings.

"There were the schools and the school dining rooms. The President conceived the idea that they should be places where children of the poor could get good meals, paying just enough that they did not feel degraded by charity. So the children paid 5 cents for their meals; their parents could come, too, and pay 25 cents.

"Mrs. Batista supervised it all—including the hiring of dietitians to see to it that the meals were balanced."

Her rapid flow of Spanish cut in occasionally to say that it was her husband who conceived it all, and talked it over with her, and she took charge. They formed the National Institute for Public Assistance to provide general welfare, including homes for orphans and the old, and the Organization for the Rehabilitation of the Invalid, to aid the mentally retarded and cripples.

And they organized Christmas treats for the poor: Food befitting the season and toys for the children.

Through it all, there was always the presence of Marta Batista—organizing, supervising, making inspection tours, visiting the sick and injured in disaster areas, ordering a wheel chair sent here, a hospital bed there.

We were forced to explode the bombshell question: "But what of the story of the millions of dollars in jewelry scattered about her bedroom?"

George's dark eyes flashed: "That's a dirty lie. My mother didn't have time for jewelry—she worked 16 hours a day."

The question was translated to Marta Batista, and her gray green eyes reflected a deep hurt.

"If I had had all that jewelry, would I have left it lying around my bedroom? And I beg anyone to look at the pictures taken of me in Cuba—are there any where I was loaded with jewelry?" came the answer through Dr. Rocafor.

There were a few valuable pieces, yes—most of them gifts from visiting dignitaries. But Marta Batista said she cared little for jewelry, for social life, for ostentation, though it was expected from a first lady of a Latin country. She was always too busy, she said.

Then there is the story of the gold faucets in the "elaborate" Batista beach house. This was the only time that a flicker of laughter showed in her eyes, to be replaced swiftly by that look of a frightened woman, as she told what she says is the truth about the beach house.

In the first place, it wasn't a Batista house.

It was built by a wealthy sugar grower, and the Batistas rented it from him at the recommendation of a doctor who said Roberto needed to get the benefits of sea air for a throat condition.

But it had no solid gold faucets. They were fine faucets, as the rest of the house was fine, but not gold. And the Batistas turned them on only on rare weekends when they slipped away to the house for a week-end of rest.

Once Marta Batista was a beautiful woman. Tall, queenly in her bearing, she is yet lovely, but the last few months have taken their toll. She has lost 20 pounds. She runs her hands through her black hair so that her grooming suffers. Her pale face is drawn. Her eyes are red from constant crying.

She thinks of her husband's safety and of the effects of the fear of an assassin's bullet cutting him down on the thoughts of the children. Even 2-year-old Marta Maria shows it; their family doctor describes her as a "sad child." Her mother weeps afresh when she finds the baby standing before a picture of her father, fanning it and saying to the big, laughing man in the photograph: "Papa, please come home."

"We want only for him to be allowed to come here so our family can be together again," she said through the interpreter. "We are so close—always, no matter how tired he was, he never went to bed without going in to kiss the children goodnight. He was so proud of his little girl, after so many boys, and always, he took time to play with her. He was so concerned with the children's education, and determined they would be mannerly, courteous and considerate of others."

"For me, always, when we got dressed for a state affair, I would consult with him on what dress I should wear. We have been so close, so understanding."

Marta Batista feels confident that history will record that her husband was not the ogre he has been pictured by his enemies. She claims there were no murders of those enemies, and she points to the fact that her husband once had Castro, his worst enemy, in jail, and personally pardoned him after he had served 2 years of a 15-year term. She cites the constitution under which her husband operated, it had no death penalty.

Her eyes flashing, she said: "He never tortured anyone, as they charge. The records of the courts would show that everything was handled according to law and order. And he directed two revolutions—both without bloodshed. He did not believe in it."

She recalled the time 3 years ago when the palace was attacked and she and their children—with little Marta Maria on the way—were threatened with death. But even after that, she declared, Batista ordered no executions of those who had tried to harm his family.

Marta shrugged at the question of why they chose to go to the Dominican Republic when they fled Havana January 1. "It was just one of those quick decisions," she said. "He wanted to get out to save bloodshed; he said to me, 'If I am the cause of the trouble for Cuba, then maybe there will be peace if I leave.'"

But if he suddenly became bad for Cuba, she continued, "he still was the best president Cuba ever had. He did more for the people than any other. It's there in the hospitals, the schools, the roads—they can't deny them. And he always was trying to help the economy, building up plantations, providing more tourist attractions to bring in more money."

The other bombshell question: "What of the charge that he milked the treasury?"

Her eyes flashed even more as she got the question, and the reply came: "My husband

never took any money from the treasury for himself. He worked for the people of Cuba."

She said part of their hearts will remain in Cuba always, but now their only thoughts are to be together again and to live quiet, peaceful, useful lives in Daytona Beach.

The way he believes he can be useful, she said, is in helping Cuban refugees in this country, and in trying to soothe relationships between the United States and the island. She pointed to his stand during World War II, when he defied German submarines, virtually at the door of Havana, to supply air bases and cooperate with the U.S. military effort in every way—including joining the declaration of war 24 hours after Pearl Harbor.

For the sake of what was good in the past, for the sake of what he hopes to contribute to the future, and for the sake of his sorrowing family, Mrs. Batista thinks the United States should grant that entry permit.

So she prays today that she will receive an answer from the First Lady of the United States.

Pan-Asian Culture and Recreation Center

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. BEALL. Mr. President, plans for the development of a Pan-Asian Culture and Recreation Center on a tract of land along the Potomac River in nearby Calvert County, Md., were announced recently, and I take this opportunity to call the attention of this body to these proposals.

According to reports concerning this project, the center will cost several million dollars, and will carry the endorsement of numerous Pan-Asian countries and various American foundations.

An article concerning the proposed center was included in the July 30 edition of the Calvert Independent newspaper of Prince Frederick, Md., and I ask unanimous consent that a copy of this item be printed in the Appendix of today's RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Calvert Independent]

CULTURAL CENTER PROPOSED—PAN-ASIAN CULTURE AND RECREATION CENTER TO BE DEVELOPED

On Monday of this week Mr. William A. Reick of Lower Marlboro, Mr. Emerson Phillips, president of the Calvert County Chamber of Commerce, and Senator Edward T. Hall were guests for lunch of Mr. and Mrs. William D. Lee, owners of the Chinese-American Restaurant "Genghis Khan" at Connecticut and Florida Avenues in Washington, at which time Mr. Lee explained the development that is being planned on a 138-acre tract of land on the Patuxent River in Calvert County.

Mr. Lee is a Columbia graduate and his guests were greatly impressed with his sincerity, his religious background, and his keen interest in our American way of life.

The development will be known as "The Pan-Asian Culture and Recreation Center," and will include a swimming pool, a golf course, tennis court, a center culture build-

ing with dining facilities in keeping with the customs of the Pan-Asian countries, an amphitheater, and Asian style structures. Each country would have its own building of the architectural design representative of the 23 Pan-Asian countries. The center culture building will have hotel facilities to accommodate at least 75 people.

Mr. Lee stated the purpose of such a development would give a true down-to-earth picture of the American and Pan-Asian way of life and methods of living. He also stressed the importance of religion in this center and stated that great emphasis would be placed on the freedom of worship of each country. As he so aptly stated, "Without religion there is no culture—there can be no way of life."

This \$5 to \$6 million project will carry the endorsement of the 23 Pan-Asian countries, the Ford Foundation, the Rockefeller Foundation, Mrs. Guegenheim, Mrs. Merriweather Post, and the United Nations.

Following the signing of the option which was consummated on Monday it is expected that ground will be broken in the spring.

Mr. Lee is the promoter and organizer and his three guests were indeed impressed with his comprehensive knowledge of the necessity for better international relationship and could visualize the importance of such a development and offered themselves to be of whatever service that they could possibly render.

Mr. E. Steuart Vaughan, a Calvert real estate broker, handled the transaction.

The Federal Credit Union Bill

EXTENSION OF REMARKS

OF

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. BARR. Mr. Speaker, when I came to this Congress about 6 months ago, I was assigned to the Banking and Currency Committee. Since last January our committee has been hard at work on many different bills that have dealt with the financial institutions of this country. It has been a real privilege for me to work on this legislation in committee and to defend it on the floor of the House. Our record so far has been excellent. We have passed bills concerning the International Monetary Fund, the World Bank, the Inter-American Bank, the Federal Reserve System and technical bills designed to modernize the banking laws of the United States.

There has been one big trouble with all this hard work. I am sure that it has been constructive legislation and of real value to this Nation. But all these bills have been so technical and so complicated that it has been very difficult for me to explain to the people of my congressional district just what I was doing.

Last Friday we finally came to a bill which I defended on the floor of the House that everyone can understand. This was the credit union bill. In Marion County, Ind., there are 93 credit unions with a membership of over 60,000 people. These people have joined together in different industrial plants, offices, and agencies of government in

a cooperative effort to meet their short term needs for money. While there are not too many people that I can talk to about the highly technical provisions of the Federal Reserve System, there are thousands and thousands of people who understand perfectly well just how a credit union works and what it means to them. It is for this reason that I was so pleased to be able to do my part on the committee and before the House of Representatives in defending this bill.

Basically this credit union bill is an attempt to modernize the law—to bring it up to date. This is just the same thing that we have been doing with the great financial institutions that make up the membership of the Federal Reserve System. Many of us feel that the United States is facing a drastic shortage of money and credit in the next 10 years. Our population is increasing at an explosive rate. In the next 10 years it is very probable that we will have 50 million more people in this country. It is going to take a lot of money and a lot of credit to make sure that these people have jobs, to see to it that they have houses, and that they have the opportunity to live a decent life. It is absolutely necessary that this Nation use its savings as wisely and efficiently as possible. This is the theory that we used in all our previous banking legislation, and this is the theory that we are using in the credit union bill.

Basically this is what the credit union bill does:

First of all, it permits a credit union to make a loan for 5 years instead of the 3-year limit that is now in force. Second, it permits a credit union to loan as much as \$1,000 instead of the present \$400 limit. Third, it makes it a Federal crime for anybody to rob a Federal credit union. The rest of the bill deals with technical parts of the law, but these three provisions are the things that will be of most interest to credit union members.

The short explanation above shows that in the credit union bill we are trying to bring existing law up to date. We are trying to use the savings of the members of these credit unions wisely and productively. I am certain that this is a good bill, and I think it is especially fitting that this legislation should come on the 50th anniversary of the credit union movement of the United States and the 25th anniversary of the Federal credit union legislation. My work toward the passage of this bill is my personal anniversary gift to the 60,000 members of credit unions back in Marion County, Ind.

Great Lakes Become Scientific Laboratory

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. WILEY. Mr. President, with the completion of the St. Lawrence Seaway, the Great Lakes region—the greatest

reservoir of fresh water in the world—is coming increasingly into the spotlight of national affairs.

For the most part, expansion of trade and commerce on the Great Lakes—stimulated tremendously by the seaway—is generally considered to be the major interest of the Great Lakes region.

The significant lakes area, however, is also experiencing a wide variety of other activities.

According to a recent article in the Milwaukee Journal entitled "Great Lakes Become Scientific Laboratory," for example, a number of research projects are underway.

With more than 100 scientists from the United States and Canada engaged in research activities, special studies are being made to gain information: First, to aid commerce in connection with the St. Lawrence Seaway; second, to gain more data bearing on Chicago's diversion of water from Lake Michigan; third, to determine the effects of the lakes on weather in the region; fourth, the impact of increasing population on the lakes; and other purposes.

For the future, I believe that the Great Lakes region—now surrounded by the greatest agricultural—industrial complex in the world—will become increasingly important as a commercial, tourist, residential, cultural, and recreational center of the world.

As an example of the kind of ground-work that will help to create the new status for the lakes area, I ask unanimous consent to have the article from the Milwaukee Journal printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

GREAT LAKES BECOME SCIENTIFIC LABORATORY—HALF DOZEN RESEARCH PROJECTS ARE UNDERWAY THIS SUMMER IN THEIR WATERS
[From the Milwaukee Journal, Aug. 2, 1959]

(By R. G. Lynch)

The Great Lakes are a huge scientific laboratory this summer with more than 100 scientists from the United States and Canada engaged in a half dozen projects for Federal agencies and the States of Michigan, Ohio, and Illinois.

Information to aid commerce in connection with the St. Lawrence Seaway, information bearing on Chicago's diversion of water to flush sewage down the Illinois River, the effect of the lakes on weather in the region and the impact of increasing population on the lakes are some of the things involved.

The five lakes together constitute the greatest reservoir of fresh water in the world, a natural resource of tremendous importance to the region bordering them. One of the important problems is that of keeping this fresh water from being contaminated seriously.

States are exercising greater control over inland waters. Some prohibit industries which use a great deal of water from building on inland waters. Some are making greater demands for maintenance of water quality.

More and more industries are expected to seek sites on Great Lakes shores to be near water supplies and to facilitate waste disposal. Of course, population increases will follow and domestic wastes will increase.

WASTE IS PROBLEM

Increased commerce since the St. Lawrence waterway was opened has been accompanied by an increase in wastes from steamships.

The University of Michigan's Great Lakes Research Institute, which has been working on the lakes for several years, will continue studies of currents, plant and animal life, bottom core samples and water conditions in northern Lake Michigan and Traverse Bay, Lake Huron.

It also will explore the natural aging process of the lakes and the effects of the St. Lawrence Seaway, and carry on a cooperative project with the university's meteorological laboratories concerning the drag force of wind on water.

Currents affect navigation and distribution of fish food and wastes. Knowledge of them can be used to predict bacterial quality of deep water and to determine hydroelectric possibilities.

This summer, the Michigan Institute will carry on several projects. It will survey industries on Lake Erie to determine the temperature and composition of water they use.

It will study microscopic plants, the beginning of the food chain of water organisms, in Grand Traverse Bay. It will take core samples of Lake Huron's bottom to study the relation between the geology and erosion along the shore north of Port Huron in the Lexington area.

Ohio also is studying geology and shore erosion on Lake Erie. The findings of the two studies will be of value in the whole Great Lakes area.

RAINFALL STUDIED

Effects of the lakes on weather in the region, particularly rainfall, are being studied by personnel of the Illinois Waterways Commission.

The Chicago station of the Federal Weather Bureau is studying the relationship between rainfall and lake levels. Presently the belief is that it takes several years for rainfall in the watersheds, or lack of it, to influence lake levels.

The Canadian hydrographic office and the U.S. lake survey are charting deepened channels and ports of the seaway.

The U.S. Public Health Service is working on a problem of filtration of treated municipal sewage through sand beds. Clogging of filters is believed to be caused by some dissolved organic chemical from living organisms.

And commercial fisheries agencies of both nations and several States and Provinces are continuing efforts to control the sea lamprey and restore the lake trout fishery.

The Wisconsin conservation department has two men checking commercial fishermen's catches in Lake Superior for the recovery of stocked trout and the percentage of lamprey scarring on all trout.

Jim Farley

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial that appeared in the June 12, 1959, issue of the Iola (Kans.) Register, following the address by Hon. James A. Farley, chairman of the Board, the Coca-Cola Export Corp., before a joint meeting of the Iola Area Civic Clubs on June 11, 1959:

JIM FARLEY

Jim Farley, whom several hundred Iolans got to see and hear for the first time yesterday, has been quite a fellow in his 71-year

lifetime. And it hasn't all been politics either.

You might be interested to know—

That his first job, after graduating from the Packard Commercial School of New York City in 1906, was as a bookkeeper for the Merlino Heilholz Paper Co. In exactly 20 years, he had worked up to the position of sales manager for the Universal Gypsum Co.

In that same year, 1926, he formed his own building supply company under the name of James A. Farley & Co. And in 3 more years he had merged with five other building material companies to form the General Builders Supply Corp.

He served as president and director of this very considerable company until 1933 when he resigned to become Postmaster General for 7 years under President Franklin Roosevelt. Incidentally, he was reelected to this position with General Builders Supply in 1949.

Meanwhile, of course, (1940) he had been appointed chairman of the board of directors of Coca-Cola Export Corp., which is the main job he has held since being Postmaster General.

But he is also a director of Coca-Cola Co. of Canada, president and director of Coca-Cola International, a director of Compania Embotelladora Coca-Cola of Cuba, and a director of the Empire State Foundation, Inc.

But he still has a little time to spare so he is also a trustee of the Cordell Hull Foundation and the Alfred E. Smith Memorial Foundation.

His political career began when he was appointed town clerk of Stony Point, N.Y., in 1912. He was a member of the New York State Assembly in 1923, chairman of his local county Democratic committee from 1919 to 1929.

He was chairman of the State Democratic committee from 1930 to 1934 and of the National Committee from 1932 to 1940. He was a delegate to every Democratic National Convention from 1924 to 1948.

And just to wind it up, he is first vice president of the Friendly Sons of St. Patrick, New York.

Vice President Nixon's Trip to Russia and Poland

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, August 4, 1959

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD representative editorials which reflect the almost universal acclaim for Vice President Nixon's trip to Russia and Poland.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Philadelphia Evening Bulletin, Aug. 3, 1959]

NEW DIMENSIONS

It will take time, perhaps a lot of time, to assess with confidence the results of Vice President Nixon's visit to Russia, and its sequel, his current visit to Poland.

Today's announcement that Premier Khrushchev and President Eisenhower will exchange visits, however, dramatizes one certainty: The past 10 days have profoundly altered, at least for the moment, the nature of the relations between the statesmen of East and West.

These relations, from the very beginnings of the Bolshevik regime, have been confined rigidly to meetings between the statesmen, and even these have for the most part been at arm's length. They have also been largely sterile. Personal contacts that approached friendship have been rare, and most often a prelude to the demotion of the Soviet official.

Mr. Nixon's visit has added a new dimension to these relations.

He has been allowed to speak freely, and at length to the Russian people over television and radio, as Soviet representatives have been able to speak to the American people.

He has made the most of this opportunity, to tell them frankly, though diplomatically, why the United States feels compelled to arm for the defense of itself and its allies. He has cited the record of this country's efforts to reach agreement on disarmament and other thorny problems, and told them openly that the Soviet radio and press have not been giving them the whole truth.

He has made the most, too, of opportunities to show the friendly face of this country to the Russian people in personal contacts.

It is an opportunity that has not been given to other Western statesmen, and the response has been warm. It is evident that the plain Russians who met him discovered that America, too, can be warm, and may begin to believe that Americans are as anxious for peace as they are.

The results of these contacts with the people may be far reaching, if the Soviet Government allows them to be.

[From the Philadelphia Inquirer, Aug. 3, 1959]

A FAIR AND FORTHRIGHT SPEECH

Vice President Nixon's half-hour speech from Moscow Sunday to a multimillion Soviet radio and television audience was remarkable not so much for the presentation of fresh ideas but for the clear and forthright manner in which the basic ideas for achieving world peace were stated.

This was the first time in history that any senior American Government official has had the opportunity to talk directly and frankly to the Russian people—to have his remarks translated on the spot in full and without fear of censorship.

That Mr. Nixon managed to combine so well blunt talk about Soviet obstinacy and praise for Soviet progress without appearing either belligerent or hypocritical, is a tribute to his statesmanship.

In carefully chosen words, with strict adherence to facts and without rancor, Mr. Nixon expressed the American desire for peace and friendship with the Soviet Union based on mutual respect, not on surrender or dictation by either side.

Saying that both countries were too strong to tolerate being pushed around, he laid the responsibility for world peace squarely on Khrushchev's shoulders.

Praising the Soviet Premier as a born leader of men with tremendous drive and talent, Mr. Nixon urged him to use his energies to create a better life for his people.

Specifically and categorically he stated that if the Premier, however, used the resources of his people to promote the Communization of countries outside the Soviet Union, nothing could result but continuing fear, distrust, and tension.

For emphasis, in substantiating the American desire for peace, he made the telling point, "We have fought in two world wars and have demanded and received not an acre of territory or a cent in reparations."

Unlike the generalities and strictly diplomatic doubletalk that have plagued so many efforts to achieve understanding, Mr. Nixon made several good and detailed recommendations for the promotion of a more relaxed

atmosphere between the United States and Russia.

He urged that the language barrier be removed, and neatly congratulated the Soviets on being far ahead of America in this respect. He urged that the exchange of teachers, students, visitors, and all types of cultural programs be sharply expanded.

And most important, he said, was the need for a much greater exchange of information so that misconceptions which we have about each other can be removed.

There is little doubt that Mr. Nixon's whirlwind, 11-day tour of Russia has given him a better insight into the workings of communism and the minds of the Soviet people than that of any other short-time American visitor.

He has been to industrial cities heretofore off limits for Americans; he has spoken to thousands in Moscow, Sverdlovsk, Novosibirsk, and other great centers; he has had a rough and tumble, highly spectacular, and blunt argument with Khrushchev and has been allowed to speak freely over a nationwide radio and 50-station television hookup.

He has, in short, presented the official American point of view to the Soviet Government and the Russian people in concise, unmistakable, and eminently fair language without bluster, belligerency or exaggeration.

He has handled himself with dignity, given as good as he got and in all personal appearances showed himself to be friendly and sincere.

He now has the opportunity to repeat this excellent performance in Poland. If the warmth of his reception at the Warsaw airport is any indication of the willingness of the Poles to hear some plain American talk on world conditions and what can be done about them, Mr. Nixon's tour will have been a success indeed.

[From the Yonkers Record, Aug. 2, 1959]
NIXON, KHRUSHCHEV, AND THE CITY OF YONKERS

Editorials in a weekly newspaper by tradition are supposed to comment on local matters. And that's just what we are doing by picking Vice President Nixon's historic tete-a-tete with Comrade Khrushchev as a subject.

For what happened in the now famous first meeting between these two is of supreme importance to every citizen of Yonkers and to every other American and to every individual all over the world who cherishes freedom. Thus Mr. Nixon as a world figure is fittingly a local subject.

To begin with when Mr. Nixon left the United States as a potential presidential nominee for 1960, his presidential boosters privately conceded that he had much ground to gain if he were to beat off the rapidly advancing newcomer to politics, the dynamic, personable Governor Rockefeller. Now, a short time later, Mr. Nixon, by his superb handling of a difficult situation, has zoomed his presidential stock and henceforth will be measured, not as a Vice President necessarily overshadowed by the dominance of the Office of the President, but as a vital, personal force completely equipped to stand on his own capable two feet and slug it out with a crude double dealer in an atmosphere of barely submerged hostility.

This demonstrable asset will give many a political pollster a second and considerably altered look at the Nixon who has ably acquitted himself in every home in the Nation where there is a television set.

Mr. Nixon's head-on clash with the ram-bunctious monologues of Khrushchev have at the very least given us two things which we ought to remember. One is the ordinary language which Mr. Nixon wisely used in the free exchange with the Russian "Big Wheel." This is the kind of language, stripped of

State Department soft sounding euphemisms, which is understood by all people. And secondly, Mr. Nixon has given us firsthand evidence that Khrushchev and the rest of his Kremlin cohorts are never to be trusted. Mr. Nixon exacted a public promise from Khrushchev that the meeting would be translated fully for the Russian people and the Soviet captive nations. This promise was not kept. Here in America and in every free nation around the globe, the Nixon-Khrushchev meeting was honestly, completely translated. Khrushchev returned the compliment by deleting some of Nixon's remarks and even appropriating some of the Vice President's telling blows to himself.

There's a great lesson in the devious way of the mind of the Communist in all this. We in Yonkers should study it and learn it well. It can help equip us to combat the sick mind which is sucked into the deadly pervasion of clever Communist propaganda.

[From the Dallas (Tex.) Morning News,
July 31, 1959]

PILGRIM'S PROGRESS IN RUSSIA

Vice President Nixon is doing himself no harm as the record of his Pilgrim's Progress in Russia unfolds. Thus far he has done the United States a lot of good. The consternation within the breasts of international diplomats, however, appears to be as unprecedented as are the methods of the pilgrim.

The lads with morning coats and striped pants are agape and aghast at this routine of chucking babies under the chin and slugging it out with Khrushchev just inside the kitchen door. It isn't done, you understand. But Pilgrim Nixon does it, with all the vigor, and all the deft folkiness of running for Congress in California.

Nixon seems to reason this way: A man like Khrushchev is half peasant, half Caesar, with Karl Marx cataracts over his eyes and a ball-bearing tongue. Well, then, if Khrushchev decides to yank a post off the bedstead and make a bludgeon of it, a bedstead has more than one post for bludgeoning purposes in defense. Khrushchev sticks out his jaw, he is leading with his chin—why not let him have it?

It isn't diplomacy. But Khrushchev understands it. He even seems to appreciate a man who can and will meet him on his own terms. And the proletariat understand hopping out of a car to shake hands or chuck a baby's pink chin.

Nobody is going to trip Nixon up on Marxian dialectical dispute. Dick Nixon met and downed Alger Hiss, the smoothest customer that ever sought to serve Moscow's interests. With the exception of J. Edgar Hoover, no American in office today knows more about the Communist theory and practice of world domination.

Hailed or heckled, the Yankee Pilgrim knows what to do. He can give as good as he gets—and have a wonderful time while he is at it. He may not settle the problems of our days, but he has already let Russia know that when we go horse trading we expect to come back home with something more than the halter.

As that simple idea sinks in, maybe we will be getting somewhere later on.

[From the Fort Wayne (Ind.) News-Sentinel,
July 30, 1959]

GOOD EVENING

(By Clifford B. Ward)

Pity at this moment the poor pinkish liberals in this country who despise Vice President RICHARD NIXON, but don't know, lacking signals from Moscow, how they should assess Nixon's behavior and reception in the Communist motherland. They can't very well say that he has acted like a chump to alienate the Russian leaders, because after roughing up the Russian leaders, the latter

gave every appearance of liking it. For the first time, Khrushchev and the others seemed to show a healthy, wholesome respect for an American shrewd enough to cut through the diplomatic jungle growth and swing on the Russian jaw. And to the discomfiture of both the Kremlin leaders and the Communists here, the people of Russia have shown so much affection for Nixon that it's highly embarrassing to them.

Nixon's political trick of jumping out of parade automobiles to shake hands and exchange words with ordinary people along parade routes is making the same hit in Russia as in any American city. It only goes to prove that human beings are pretty much alike the world over.

LIBERALS' NIGHTMARES

What would have made a great picture to cause the liberals in this country to have nightmares from now on would have been a photograph of Westbrook Pegler shaking hands with Khrushchev in Moscow after Nixon introduced the two men. If there is any man that the liberals dislike it is Pegler and there was Pegler in Moscow being presented to Khrushchev by the Vice President.

In our perverse way, we wish that Nixon had even said, "Aw nuts," to Khrushchev, giving further respectability to the American idiom of speech, but in effect he did the same thing. To the credit of Khrushchev, he liked being roughed up, as much as he liked roughing up Nixon.

Certain political figures always seem to have the hand of destiny on them and Nixon is one of those persons. Whenever his enemies try to put down a trap for him, he ends up using the trap for his own profit. And it all started from a political point of view while a Congressman. Looking at Alger Hiss under oath, Nixon decided that Hiss was lying about his acquaintanceship with Whitaker Chambers. Had he not had a second thought about Hiss' credibility, Hiss would have gone free, but more than that Nixon would never have been heard of politically.

ATMOSPHERE CLEARED

State Department bureaucrats have probably been taking tranquilizers ever since Nixon landed in Russia, but he has done a lot to clear the atmosphere of some heavy threatening clouds. He may have accomplished more with his blunt, frank remarks to Khrushchev than all the ministers did at Geneva after weeks and weeks of diplomatic gobbledygook.

What has scored a hit for Nixon is very old, old stuff, which put in one bottle can be labeled courage. A timid person would never have undertaken the Russian trip. A timid person would never have dared to talk back to Khrushchev and the other Russian leaders. And apparently, despite the fact that they have roughed him up, the Russian leaders actually like him. As we say, that must make Reds in this country and elsewhere wonder how they are going to follow the game without a better program.

[From the Los Angeles Examiner, Aug. 3,
1959]

NIXON'S SPEECH

In contrast to the teacup pleasantries of the past, which more often masked differences than furthered understanding, Vice President Nixon's speech in Moscow Saturday was resolute modern statesmanship.

It was blunt where it needed to be.

It was sympathetic in recognizing the yearning for peace of the Russian people and friendly in acknowledging their vitality and strength.

It was a warning to the Russian leaders that there can be no peace by "surrender or dictation" and a direct warning to Premier Khrushchev that if he continues to try to impose communism on nations out-

side the Soviet Union, he will insure "an era of fear, suspicion and tension" for himself and his people.

It was a clear and calm explanation why the existence of our foreign bases has been compelled by previous Communist aggressions and the enormous proportion of Soviet effort that goes into weapons.

It was a factual countdown of the proposals we have made for disarmament and peace, all of which have been rebuffed or twisted out of expectation of achievement.

It was a quiet and forceful affirmation of the right "of different peoples to choose the economic and political systems they want," and thus an implicit assurance to captive nations that we do not accept the status quo of their captivity.

Naturally, we do not expect Khrushchev to rush to the microphone with a panting endorsement of Mr. Nixon's views.

But we hope the millions of Russian people who heard him will have a better understanding of our country's aims, motives and principles.

We think the free world will approve the Nixon speech and we hope the uncommitted nations reflect upon it.

As for ourselves, we second President Eisenhower's message to Mr. Nixon on the windup of his Russian travels: Well done.

[From the Shreveport Times, July 29, 1959]

NIXON, KHRUSHCHEV, AND AESOP

What the West has needed for a long time in its dealings with Khrushchev is more of Vice President Nixon.

The Vice President's emphatic—yet courteously spoken—verbal lambasting of Khrushchev when Khrushchev lambasted the United States seemed to amaze the Red dictator. He had been talked to bluntly by President Eisenhower, but always it had to be through diplomatic notes. He had insulted the British without retaliation. With Mr. Nixon he found himself facing a person as tough—perhaps tougher—than he, and vastly better informed and better able to handle himself on any subject.

Mr. Nixon did not insult Khrushchev. He just pared him down to frying size. In the end, Khrushchev seemed to change his whole approach as he was given the only treatment he understands—straight from the shoulder.

The Nixon-Khrushchev meetings and exchanges were in sharp contrast to the visit some time ago of Prime Minister Macmillan of Great Britain to Moscow, although the environment in each case was directly parallel. Both Mr. Nixon and Mr. Macmillan went to Moscow by official invitation of Khrushchev. Both were greeted coolly but courteously at the airport. While each was touring the city talking to people informally, Khrushchev, in another part of town, delivered tirades against the West in general and the Nation of his visitor in particular. Both were taken to Khrushchev's country home for overnight visits in a sort of unspoken apology for Khrushchev's conduct. But here was the difference:

Mr. Macmillan figuratively hid his head in chagrin and uttered nothing but milk-toast replies to Khrushchev. Mr. Nixon traded verbal blow for verbal blow, face to face with Khrushchev, and "made him like it." The Vice President aroused pride and satisfaction in the hearts of free people. Mr. Macmillan did not.

When Khrushchev roared on with long criticisms of life in free countries, Mr. Nixon smilingly told him: "You talk too much. Quit filibustering and do something." Khrushchev likes to talk in idioms, mottoes, fables, and even allegories. He told Mr. Nixon that the way to get rid of bedbugs (problems) is to catch them one at a time and pour boiling water in their ears. He loves to use the one about the sorcerer's ap-

prentice who became so adept he "disappeared the sorcerer." Mr. Nixon, when asked by Khrushchev to drink a toast to "end of American bases overseas," replied: "I don't like this wine." He then proposed a toast "in better wine"—to peace. Khrushchev withdrew his toast and drank to Mr. Nixon's.

Mr. Nixon, in light vein, could have resorted to Aesop's Fables, as Khrushchev often does. When the latter boasted that Russia is stronger and tougher than the United States, Mr. Nixon could have replied with this one by Aesop:

"Wandering in a lonely place as the sun went down, a wolf noticed the long shadow cast by his body. 'Fancy a big fellow like me being afraid of the lion,' he said. 'Why, I must be 30 yards long. I'll make myself king and rule all the animals, every single one of them.' But for all his boasting, a strong lion caught him and sat down to devour him. Too late, he regretted his mistake. 'Conceit,' he wailed, 'has helped to bring about my ruin'."

And when Khrushchev got tough about American bases and brought a seeming stalemate in serious discussions, Mr. Nixon could have quoted Mr. Aesop this way:

"On a hot, thirsty summer's day a lion and a boar came to drink at a small spring. They started quarrelling which should drink first, and so provoked each other to a mortal combat. But stopping for a moment to take breath, they looked around and saw some vultures waiting to devour whichever of them was killed. This sight made them stop their quarrel. 'It is better for us to be friends,' they said, 'than to be eaten by vultures and crows.' * * * Strife and contention are ill things, which end in danger for all parties, if they have not the sense to be reconciled."

In fact, that is just about what Mr. Nixon did say, but in blunt English and not in the language of fables. He told 5,000 Russians hearing him in impromptu street talk: "If we cannot learn to live together, all of us will die."

Khrushchev had better understand the seriousness of that statement. And the West would do better to use Mr. Nixon more often as its emissary in discussions with Khrushchev.

Inequities in Our Immigration Laws

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. MADDEN. Mr. Speaker, I do hope that before this session of Congress adjourns, legislation can be enacted and signed by the President to liberalize our immigration laws with respect to inequities to some nationalities that exist in the present legislation.

I am herewith submitting a resolution which was unanimously adopted by the Order of Ahepa at its recent district convention in Fort Wayne, Ind.:

ORDER OF AHEPA,

July 20, 1959.

HON. RAY J. MADDEN,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR SIR: At the district convention of the Hoosier District No. 12 of the Order of Ahepa which was held at Fort Wayne,

Ind., a resolution was unanimously adopted which reads as follows:

"We appeal and urge you to give full support to additional Greek quotas for Greek families and relatives, to liberalize our immigration laws, and to humanize its policies. Additional Greek quotas should be transferred from other undersubscribed nationality quotas and visa appeals. May we call to your attention the fact that at the end of each fiscal period nearly one-third of the immigration quotas literally are wasted or unused. Many countries in South America are quota exempt, while Greek quotas are frequently exhausted and very heavily oversubscribed. This inequity should be corrected. Thus, it is urgent to give full support to H.R. 3033 and S. 952, and/or similar legislation. Such action will allow separated families to reunite and aid fourth-preference quotas to reunite separated families of brothers, sisters, and adult children of U.S. citizens. Also, such action will reaffirm further America's friendship to Greece—a nation which has been a bulwark in the freedom fight against communism and aggression. The attention of all hellenism and the eyes of eastern orthodoxy are focused upon your action on this vital legislation. Now is the time for Congress to act to remove the many inequitable and discriminatory aspects of our immigration laws."

We on the district lodges would appreciate your support on the above matter knowing that in the past you have been very fair and equitable on your decisions on this urgent matter.

Fraternally yours,

SPEER C. SKALTSAS,
Secretary, 12th District.

Untold Story of Panama

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following review of Mr. Earl Harding's recent book by Dr. Louis Martin Sears, noted historian, author of many historical works and essays, and now emeritus professor of history, Purdue University:

THE UNTOLD STORY OF PANAMA

Those Americans who still idolize Theodore Roosevelt will be grateful that this definitive exposure of his chicanery at Panama was made so many years after his death. Even so, he lived to see America pay heart-balm to Colombia for our unneutral attitude toward the Panama revolution.

It is unlikely that the international law firm of Sullivan & Cromwell will derive any satisfaction from the exposure of William Nelson Cromwell's equivocal relationship to the assets of the French Panama Canal Company. "Who got the \$40 million"? Is it possible that some of these found their way to Cromwell himself and his \$19-million estate?

On a more constructive side, Mr. Earl Harding's careful research provides the soundest of bases for America's present rights in Panama which liberals treat so lightly when cooperating with the Russians to communize the Caribbean. Witness the lighthearted, even jolly, abandonment of both terminals of the Panama Railway.

Among the numerous personages so carefully assessed in the present pages, Philippe Bunau-Varilla, hitherto a somewhat shadowy figure, emerges in a clear but far from rosy light.

The book is peculiarly timely when American rights are jeopardized by Communists without and traitors within.

LOUIS MARTIN SEARS.

Swiss National Holiday

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. MULTER. Mr. Speaker, August 1 is the anniversary of the founding of the Swiss Confederation and is one of the oldest national holidays in all Europe. The Swiss people, keenly aware of their distinct individuality and possessing a robust character, have maintained their freedom because they proved always ready to defend their liberties against all comers. They have taken up arms innumerable times in defense of their freedom in the course of many centuries.

The Swiss people built their cherished republic in the hard way. Of course there is no easy road to national independence, but the stouthearted people of that mountainous country high up in Europe attained theirs very gradually in slow stages. Beginning with the Defensive League formed on August 1, 1291, their persistent efforts led to practical independence in 1499, and finally culminated in complete independence from the Holy Roman Empire in 1648.

Since those distant days the Swiss people have stoutly maintained their independence and their freedom of action against all foes. This little country of just over 15,000 square miles, with a population a little over 5 million, has earned the respect and admiration of all countries, great and small, powerful and weak. No conqueror or dictator has dared to violate Swiss neutrality, which the people cherish as their most priceless possession next to their independence. As a matter of fact the Swiss feel, with considerable justification, that their very independence is in a way conditioned on their centuries-old neutrality.

Today Switzerland with its democratic government, its efficient democratic institutions, its highly developed technology, and its sound finance and stable currency, has become a living model for efficient democracy. Through their industry, ingenuity, education, and utilization of their natural gifts, the well-meaning, humane, impartial, and highly public-spirited Swiss people have made a valuable contribution to the whole world. By working together, irrespective of their French, German, and Italian origin, they have proved to the world that for the good of all concerned it is better to subdue linguistic and racial feelings and develop a higher and better type of patriotism. In this spirit they have fought

their adversaries, have won their independence, and have proved always ready to fight for its preservation.

On this anniversary of their national holiday, I wish them continued prosperity and a happy and peaceful future.

Poison in Your Water—No. 150

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Champaign (Ill.) News-Gazette of June 3, 1959, entitled "Council Hears Danger of Bad Drainage to Health":

COUNCIL HEARS DANGER OF BAD DRAINAGE TO HEALTH—CITIZENS AIR FEAR OF DEATH OF CHILDREN

(By Coryl Crandall)

A dead child because of sewage and filth in Champaign streets is among the possible results of bad drainage here, Champaign City Council was told Tuesday.

Violent language was used by Burt E. Nixon, unsuccessful Council candidate this year.

Nixon, 1612 West Clark, described in blunt terms and loud voice the debris he and his neighbors see floating in their streets, lawns, and walks each time the rain is more than mild.

And a new Champaign City Council—in office just 1 month—listened.

FROM WEST CLARK

A woman, among the 14 persons present, all of whom were from the 1600 block West Clark, choked to stop tears:

"My doctor said action will come only after some child dies from sewage contamination. 'We want our children.'"

Each complaint was heard before Councilman Ellis Danner, University of Illinois civil engineering professor, told what must be done.

NO DISAGREEMENT

Neither Mayor Emmerson V. Dexter nor any councilman disagreed.

"Drainage improvement in one area is not the answer to the problem which faces the growing city of Champaign. Here is a problem for the entire city," Danner said.

"Drainage in one area will lead only to flooding in another. Drainage must have some place to go."

Danner explained that Clark, Daily, and Dietz, consulting engineers, now are studying drainage needs for the entire city. The survey is financed with a Federal grant.

AWAITING SURVEY

"When this survey is completed, the council will consider what action it can take," he said.

"It may cost several million dollars," he said. "But it will be only what is necessary."

Apathy on the part of Champaign citizens can deter the progress of drainage plans, Councilwoman Gladys Snyder reminded:

"Voters will decide future city improvement; no voters from just one area, from all areas."

ANSWERS STATEMENT

Danner, in answer to Nixon's claim that four council members from the same district

could not appreciate the problems of another district, told the citizens:

"I would not be here if I did not have an interest in the welfare of the total population, of all areas."

"The council can do only what the money it has will allow it to do," Mrs. Snyder said. Sewage backing up into residents' basements and the necessity of special care to keep children from filth-flooded streets, were brought to the attention of council members.

HINT LEGAL ACTION

Threats of legal action against the city because clogged drainage tile ran beneath his home were mentioned by Nixon.

"A member of the last council sweet talked me out of action," Nixon said. "He said something would be done. But there has been no change."

Drainage troubles for as long as 8 years was cited by some.

MANY COMPLAINTS

Pumps bought at the owners' expense for flooded basements; walls marred with holes because of drainage backup; constant increase in drainage damage—inspite of all past drainage construction—were among complaints.

Technical questions on present drainage construction and why it was not lessening the problem were raised.

Among citizens present were Mr. and Mrs. James E. Stanley, 1617 West Clark; Mrs. Hazel M. Huber, 1626 West Clark; and Mr. and Mrs. George H. Nance.

The Farm Program: A National Asset, Not a Liability

EXTENSION OF REMARKS

OF

HON. ODIN LANGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. LANGEN. Mr. Speaker, because of the wide amount of concern which has been, and continues to be, registered relative to the farm situation today, I would like to call the attention of my colleagues to a statement by Mr. Gordon Sprague, an economist for Land O' Lakes Creameries, Inc. It is my belief that this statement deserves the widest possible audience.

The statement follows:

THE FARM PROGRAM: A NATIONAL ASSET, NOT A LIABILITY

Commentators on our national economy recommend plans, procedures, and actions for the quick solution of our national farm price problem. They point out that the farmer is responsible, in part at least, for the increase in the cost of living. They say the cost of price supports exceeds \$5 billion a year. They say farmers are inefficient wards of Government. They say that farmers who produce products not price supported are just as prosperous as farmers who produce price-supported products; consequently price supports serve no purpose. They say that the farm price-support program is obsolete and should be junked.

The attacks on the present program are, at best, sketchy. At best, they are only partly true; at worst, they lack verification. The advice to junk the entire project, if followed, will create more and greater problems than those which might be partly solved.

The present farm program was an outgrowth both of the depression of the 1930's

and the war. In 1932, for instance, the realized net income of farmers from farming was less than \$2 billion, and the gross farm income for the same year was only slightly more than \$6 billion. That was at the depth of the depression following 1929. It was recognized then that creating higher farm purchasing power was necessary to restore national prosperity.

What is the present situation? Gross farm income for the 3 years, 1947-49 (the years most usually selected as a basis for comparison using Government statistics), show the average realized gross farm income from farming as exceeding \$33 billion. For 1957, the gross farm income was \$34.3 billion, an increase of less than 2 percent over a period of 10 years, which, for the rest of the economy, were years of vigorous national growth. But during this same 10-year period, farm production expenses increased from \$17.9 to \$23.5 billion or more than 30 percent. Obviously, therefore, net income for farmers declined, and the reduction was from \$15.7 billion in 1947-49 to \$10.8 billion in 1957 or a decline of 31 percent. In 1957, farmers' net income, at \$10.8 billion, was less than one-third of their gross income. These basic data are shown in the table following. They show that more than \$20 billion per year of farm income is disposed of as payments to others in the economy.

Responsible, qualified people seem agreed that without price supports, prices of farm products would again, as in the early 1930's, decline to very low levels. If this is true, the accumulation of losses would soon go far toward destroying the present purchasing power of farmers. This would sharply reduce the payments from farmers to others in the national economy.

Realized gross and net income of farm operators from farming

	1947-49 average	1957	Percent change
	Million dollars	Million dollars	Percent
Realized gross farm income....	33,696	34,330	+1.9
Production expenses.....	17,979	23,400	+30.7
Realized net income.....	15,717	10,930	-31.0

THE FARMERS' CONTRIBUTION TO NATIONAL PROSPERITY

What are the farmers' production expenses? They amounted to almost \$18 billion 10 years ago. In 1957, however, they amounted to over \$23 billion. These production expenses are payments to others (largely nonfarm people) for the machinery, fuel, labor, repairs, fertilizer, and the like used by farmers in producing crops and livestock. This particular area of relationship between farmers and the remainder of the economy is usually left out of the farm problem picture by those who would solve all problems by eliminating price supports. But this is an area in which the Nation is vulnerable to a reduction in farm income through lower prices. This is precisely one area in which the need for farm price supports was recognized at the depth of the prewar depression.

The gross national product in the third quarter of 1957 was at the rate of \$445.6 billion per year. For the first quarter of 1958, it declined to \$427 billion. During this period, national unemployment was increased and there was general alarm that the decline in prices would begin to feed on itself and create a depression. The entire drop in gross national product from the highest quarter to the lowest was only \$15.8 billion. In other words, a reduction in gross national product of \$15 billion promoted a national depression scare within the United States. But \$15 billion is considerably less than the contribution of the farmers to the gross national product each year.

How long and at what level would the contribution of the farmers through their production expenses and net income be maintained without price supports? Obviously, some farmers could maintain their purchases for a period of time on the capital accumulations. However, there is no doubt that without price supports a reduction in the gross national product would result because of the contraction of payments to others in the economy from the farmers. In other words, it would be much more difficult and perhaps impossible to support prosperity within the United States without income supports of some sort to underwrite continued purchasing by farmers.

An investigation of some of the expense classifications, together with their change between the average of 1947-49 and 1957, throws a great deal of light on the contribution by farmers to the total economy. The table below shows one such classification. In 1957, for instance, interest was paid to the extent of \$468 million, an increase of about 100 percent over that of 10 years earlier. Taxes, at \$1,265 million, increased 57 percent. The entire list of categories of farm expenses shown in the table gives a very good indication of the amount of money contributed by farmers to the gross national product through production expenses. They also show that farm expenses increased by about 30 percent over this 10-year period. The gross income for farmers, we recall, increased only about 2 percent.

It is clear, therefore, that to a very large extent farmers do not retain the money received from sales of their crops and livestock, including money received from price supports, but serve as a relay point from which money is widely diffused throughout the economy.

Distribution of farm production expenditures

Item	1947-49 average	1957	Percent change
	Million dollars	Million dollars	Percent
Interest.....	233	468	+100.9
Taxes.....	804	1,265	+57.3
Net rent.....	1,311	1,080	-21.4
Feed.....	3,589	4,083	+13.8
Seed.....	546	534	-2.2

Operation of motor vehicles, machinery and equipment.....	2,053	3,122	+52.1
Machinery and equipment.....	567	1,195	+110.8
Motor vehicles.....	744	1,608	+116.1
Cash wages.....	2,903	2,872	-1.1
Miscellaneous.....	1,567	2,314	+47.7
Total.....	17,979	23,490	+30.7
Gross national product.....	250.6	440.3	+75.7

FEWER FARMERS EACH YEAR

The number of farms is declining rapidly. Estimates indicate that the current rate of consolidation removes almost 100,000 individual farms each year. This seems to be a very rapid rate of change in an industry which must produce most of the food used in the United States as well as a large portion of our exports. It would seem that those persons who search for a utopia without a farm problem might redefine their objective. Although reduction in the numbers of farms has been accompanied by some decline in prices, there is no apparent decline in acre productivity.

It also seems obvious that if farmers are wards of Government, then Government is a poor trustee, because only a few more years at the present rate of demise and there will be no more wards. This, of course, will not happen, but what is proposed to take its place?

PRICES RECEIVED BY FARMERS HAVE DECLINED

The index of prices received by farmers, based on the years 1947-49 as equal to 100, had, by 1957, declined to 89. The part of this index attributable to prices for field crops had declined to 94, whereas the part attributable to prices for livestock and livestock products had declined to 85. This shows, beyond any doubt, that the farm program, so far as nonfarm living costs are concerned, has contributed nothing to inflation or increased cost of food. The farmers have operated with increasing efficiency, producing larger crops and selling them for lower prices. This is in keeping with the longtime economic history of development of agriculture and industry in the United States. But within the 10-year period under consideration, agriculture was one of the few places in the economy where increased efficiency has been carried out in such a way as to benefit consumers and provide a surplus useful for foreign trade. This is one of the outstanding economic developments of the postwar period, and one for which the farmers should receive an accolade from the remainder of the American public rather than criticism.

FARM VALUE OF FOOD

Now, for a more direct evaluation of the cost of food for which farmers are so often criticized. This criticism simply is without justification. The farm value of food sold from farms at the 1947-49 level was \$18.3 billion. In 1957, it was \$19.5 billion. The increase was 6.6 percent. But what about the quantity that was sold?

POPULATION INCREASE HAS NOT INCREASED COST OF FOOD

During the years since 1947-49, the population of the United States increased from 146.1 million persons to 170.3 million in 1957, an increase of 16.6 percent. But with this increase of almost 17 percent in population, the gross farm income as we have seen, increased less than 2 percent. The farmers, therefore, did not contribute to any increase in the per capita cost of living either through food or clothing, and consumers, individually, were living much more economically at the farmers' expense in 1957 than they were 10 years earlier. There are very few spots in the history of the economy of the United States which show a comparable increase of efficiency during these inflationary years.

Retail cost and farm value of food produced on farms

	1947-49 average	1957	Percent change
	Billion dollars	Billion dollars	Percent
Retail-store cost of farm produced foods.....	37.8	50.4	+33.3
Farm value.....	18.3	19.5	+6.6
Farm to retail marketing bill.....	19.5	30.9	+58.6

In 1947-49, \$18.3 billion worth of food (farm value) fed 146.1 million persons. By 1957, the population reached 170.3 million persons, an increase of 16.6 percent. The increase in cost of food was at a lesser rate (6.6 percent) than the increase in population. But more important, an increase in cost of food at the farm level equal to the 16.6 percent increase in population would have justified a food bill of \$21.3 billion in 1957 and this without any allowance for inflation. It is obvious, therefore, that the price-support program has been a bargain to consumers in the United States because the advance in cost of farm produced food at the farm level has lagged as compared with the population growth and inflation.

WHAT PRODUCTS ARE PRICE SUPPORTED?

What about the notion that farmers are just as prosperous when they produce things which are not supported and have no surpluses? If this were true, what farmer would ever produce any wheat or cotton. This argument exposes poor thinking. The reason there is seldom a surplus of the products which are not price supported is simple. Farmers produce relatively little of these products. When the price of the unsupported product falls, farmers shift some of their production resources to price-supported products. So the surplus for all farm production accumulates in those products which are price supported. There are, therefore, no products which do not receive price support. The price supports for the basics carry the burden for all the others. The program was planned this way. It has worked as planned. In this respect, at least, price supports have not failed.

WHAT IS THE COST OF PRICE SUPPORTS?

How much money is lost to the Treasury for price supports each year; no one knows. It varies from year to year. It is far less than \$5 billion per year, because that number includes the total appropriation for the U.S. Department of Agriculture, more than half of which has nothing to do with price supports. In some years the cost is much higher than in others. Of these things, however, we are sure:

(1) The cost of food to consumers has not been increased by price supports. It has in fact been reduced by more than the cost of the price supports.

(2) The farmers are among the most efficient producers in the United States today, and are in no way to be considered wards of Government.

Because—

(3) The economy as a whole is responsible for farm price supports. High income for farmers is necessary for national prosperity. The farmer keeps only about one-third of his gross income for himself and his family. The remainder is paid out to others. Without these payments by farmers, the tempo of the economy would slow down.

There are men in the Congress who are diligent students of both the farm and national economy. It is wrong to try and create a situation of hysteria in which undue pressure is placed on these men. Their talents are great, but they need them all to lead the Nation toward the many complicated objectives of which farm prices and prosperity are only a part.

U.S. Position of Sovereign Rights in Perpetuity in Panama Canal Zone Supported by Queens County, N.Y., Chapter of Catholic War Veterans

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following letter of transmittal from Mr. Thaddeus Budzinski, vice chairman, Americanism Committee, Queens County, N.Y., chapter, Catholic War Veterans, and a copy of a resolution adopted by this chapter re-

garding U.S. rights in the Panama Canal Zone:

CATHOLIC WAR VETERANS,
QUEENS COUNTY CHAPTER,
Rogo Park, N.Y., July 29, 1959.

HON. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Your continued great interest in the sensitive case of the Panama Canal is greatly appreciated by us.

In this connection you may be interested in reading our resolution 14, adopted 6 months ago, a copy of which is attached.

It is reassuring to know that our Nation can depend upon outstanding legislators such as you, Mr. Flood, and we wish you well in your future patriotic endeavors.

Sincerely,

THADDEUS BUDZINSKI, OSS,
Vice Chairman, Americanism Committee.

RESOLUTION 14

Whereas the United States of America constructed the Panama Canal at its own cost and expense, as a consideration for the granting to it, under treaty with the Republic of Panama, of exclusive sovereign rights in perpetuity over the Canal Zone; and has always made available to the maritime traffic of all nations the use of the facilities of the canal without limitation, except in times of war, and any change in the present policy of control would be detrimental to the best interests of our country and would not serve any useful purpose, but would be a potential threat to our defense and security: Now, therefore, be it

Resolved, That the Queens County Chapter of the Catholic War Veterans of the U.S.A., Inc., in annual convention assembled, call upon our national department to petition the Congress of the United States to take immediate and effective steps to protect and maintain without impairment, the sovereign rights of the United States of America in the Canal Zone and to firmly resist any and all efforts to modify or alter the existing and established authority to control the Canal Zone and the Panama Canal.

Ignoring Some Monetary Facts

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. WALLHAUSER. Mr. Speaker, so much has been said and written about the desirability of allowing the Government to broaden the base of its monetary policies that I thought it would be interesting and informative if all Members of this august body carefully read and digested the import of the editorial that appeared in the New York Times under date of August 2, 1959. I therefore include it with these remarks:

IGNORING SOME MONETARY FACTS

When William McChesney Martin, Jr., Chairman of the Federal Reserve Board, appeared before the Joint Economic Committee of Congress, he found the Democratic members virtually united in criticizing one basic policy of the Reserve System. This was its so-called bills only policy, which means that in its conduct of "open market operations" it confines its purchases and sales of Government securities almost exclusively to those in the very-short-term category.

In short, they stood with Representative HENRY S. REUSS, Democrat, of Wisconsin. Representative Reuss is the author of an amendment to the administration's proposal for eliminating the prevailing ceiling of 4¼ percent on the coupon rate for Government securities with maturities of 5 years or over. The Reuss amendment would establish it as the sense of Congress that the Federal Reserve, while cleaving to its principal mission of conducting a sound monetary policy, should, when appropriate, buy Government securities as an alternative to the technique of reducing the member banks' required minimum reserves. The basic objective, when one removes the frills from this suggestion, is the always politically popular one of achieving cheap money by increasing the money supply.

Since this is what the proposal boils down to, nonparticipants in this controversy may be excused for wondering about a strange omission on the part of Mr. Reuss and his supporters. We refer to the fact, so spectacularly ignored by Mr. Reuss and his fellow advocates of cheap money, that Congress passed and sent to the White House only a few days ago a bill that would liberalize drastically the amount of reserves that member banks are required to maintain under the present law. This would be achieved by permitting the banks to count their vault cash in the form of currency and coin in computing their reserves. It would provide the banks with an estimated additional reserve of \$2,447 million (based on the figures as of the last week in June). This could permit a sevenfold expansion of bank credit, or roughly \$17 billion. Mr. Reuss and his colleagues seem to think that this legislation isn't worth mentioning. We doubt that many nonpolitically minded followers of this controversy would share their point of view.

Wheat

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. BREEDING. Mr. Speaker, I would like to extend my remarks in the CONGRESSIONAL RECORD to include Victor Murdock's famous editorial "Wheat," which first delighted Kansans in 1937 and is now presented to a new generation who love this golden land. Coming from this great wheat country, I thought I should bring this editorial to the attention of this distinguished body:

The sun is setting in the wheat country. The wind halts as the day dies, and the birds, after careening conclave in midair, wheel with much dispute and wing ruffling confusion of choice, to their final tree in the grove where as the rustling leaves grow still their greenery deepens into shadows and turns purple against the shafts of gold, lanced by the sun across the landscape. Along the damp edges of the hedge the crickets intone for the nightlong chorus and a hunchbacked yellow sunfish noses a single widening circle upon the blue-green mirror of the pond. Across the meadow, grass, flower, and weed from their drab day array brightened to translucent pinks and shining fibrous silvers, quiver, ripple, flush in the pageantry of leveled light.

Silence grows. The house, the barn merge into the tranquillity and thrust with strength from a window, back to the weak sun, a blaz-

ing bolt of his own light. The horses in their stalls, taking their respite erect, twitch the hay from the mow and grind and grind, in contemplative content and the cow, moved by some vagrant emotional unrest, offers an unavailing protest from her place, which, having begun weakly, she as incontinently concludes. The pullets fidget and fluff fussily and feebly along their perch. The swine contest for the single undesirable corner of the sty in repeated pyramids which at last collapse to a permanent repose. The dog, with an air of despair in exploration, makes final forage at the back door.

Silence grows. Down by the stream, with its trees which bend over it to look upon it and never tire, a moccasin evidences his presence on a log, by sliding from it, and a muskrat plunges from one hiding-place to another with a single splash and leaves no trace. A raincrow, alone at last with silence, mourns and prophesies. Between purpling east, house, barn, grove, stream, and the empty west, the wheatraiser stands before the wheatfield and its wigwam shocks, marshaled in farfing line as at attention. They and the bristling stubble are gold, dull, dead gold.

He and they have traveled long and far together. This is one of the thousands of resting places, of breathing places they have come to. The sweat, the vexations, the defeats, the depredations and deprivations of toil a little while ago were heavy enough upon him. But now as he turns and looks across the dull, dead-gold field to the empty west the burden of the day's work lifts, and the yellow twilight strokes his soul in benediction.

Savings Bond Rate Raise?

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. MULTER. Mr. Speaker, for some years now I have been introducing legislation which if enacted would provide for a better return on U.S. savings bonds. In this Congress the bill is H.R. 596. I believe that the passage of this bill would provide some inducement for our citizens to keep their Government savings bonds and to buy new ones.

In this connection I commend to the attention of our colleagues the following article by Sylvia Porter as it appeared in the Washington Evening Star of July 29, 1959:

SAVINGS BOND RATE RAISE?

Congress must pass a law this session permitting the Treasury to raise the interest rate on savings bonds.

If Congress does not pass this legislation, it must assume the risk of sabotaging the entire savings bond program.

These are facts:

The interest rate the Treasury is paying the 40 million owners of over \$42 billion of outstanding savings bonds has become painfully out of line as a result of the upsurge in the whole level of interest rates since mid-1958.

The interest rate has become glaringly unfair to the 8 million Americans now buying bonds under payroll savings plans.

It is far below what the Treasury is paying to other holders of its I O U's—the big institutional and individual investors who buy its securities in the open market.

It is far below what an individual can earn simply by putting cash in most savings banks or savings institutions.

Under the present rate, a savings bond will pay you 3½ percent interest if you hold it to maturity in 8 years, 11 months. It will pay you 3 percent interest if you hold it 3 years.

Most savings institutions will pay you 3½ percent, 3½ percent or even 4 percent interest on your funds. The Treasury itself last week put 4½ percent coupons on some new short-term notes.

This is not fair to the holder and new buyer of savings bonds. The Treasury freely admits that "in all fairness . . . some revision in interest rates is called for."

Savings bonds—as well as cash and insurance—do belong in the basic nest egg of the average American family. The purchase of the bonds under a payroll savings plan is a superb way to discipline yourself into saving regularly and conveniently in absolutely riskless securities.

But because the program makes sense for the millions who aren't and don't want to be sophisticated investors is no justification for penalizing the savings bond holder. While it can be properly argued that the savings bond buyer should not be paid as high an interest rate as the investor who takes the risks of buying bonds in the open market, it cannot be properly argued that the savings bond buyer should be at the bottom of the interest rate totem pole.

It was in recognition of these points that the Treasury on June 8 asked Congress to remove the rate ceiling on savings bonds so it could improve the terms. In essence, it proposes to pay holders of savings bonds 3½ percent if they keep their bonds to maturity in 7 years, 9 months, and 3 percent if they keep their bonds 2 years.

The improvement is modest enough. But the legislation is now stymied in Congress because the request was attached to another for removal of the present 4½ percent interest ceiling on new U.S. marketable bonds. This request has led to a squabble involving vital political and economic issues of tight money, the independence of the Federal Reserve System, etc.

No matter what Congress decides to do about the 4½ percent rate ceiling, though, it must raise the savings bond rate ceiling. The savings bond program is losing ground, is getting hard to defend.

Trinity Power—Again

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. WESTLAND. Mr. Speaker, on July 24 the House Interior Subcommittee on Irrigation and Reclamation considered the joint development proposal, supported by the Interior Department, of the Pacific Gas & Electric Co. to construct and operate the power facilities on the Trinity River in California. That morning the following editorial appeared in the Washington Post and Times Herald:

TRINITY POWER—AGAIN

We hope that the House Interior Subcommittee which today will take up once again the 3-year-old proposal for a partnership private-public power project for the Trinity River Dam in California will attempt to appraise the issue in fairly cold-

blooded economic terms. It is easy to run against the power company—in this case, Pacific Gas & Electric—and to allow partisan, emotional feelings about private versus public power to becloud the facts. Neither the partnership plan nor the alternative all-Federal power scheme considered for Trinity seems to us ideal.

Under partnership, the company would buy falling water at rates based upon the cost of steam-generated power, so that the consumer would realize no benefit from presumably cheaper hydropower. Under all-Federal development, municipal power systems would be given first chance at the dam's output at the subsidized Bureau of Reclamation rate—but these benefits would accrue only to customers of publicly owned systems at the expense of taxpayers generally. We do not know what a true cost-based price for the power from Trinity would be, but we suspect that P.G. & E. would be getting more for this energy than it's worth and the municipal systems, if they sold it, would be getting less—and running unfair competition with P.G. & E.

Why shouldn't the falling water be sold by the Government at what it costs to provide it—not for a figure arbitrarily tied to steamplant costs? And why shouldn't the energy thus produced be made available, whether through private or public intermediaries, to all consumers of the area, whomever they are served?

Mr. Speaker, the Post and Times Herald has taken a realistic approach in recognizing that the issue of Government construction versus private construction should be settled on its merits rather than on political considerations. The article correctly concludes that since all the taxpayers, under Federal construction, would be called upon to subsidize the so-called preferred customers, constituting only a few municipal systems in northern and central California, the great majority of the power users would not only be paying higher electric bills themselves but would, through their taxpayments, be making possible the subsidized rates of some neighboring communities which would receive the power at less than its cost of production.

As a member of the House Interior Subcommittee which heard the testimony I agree with the editorial's hope that my colleagues "will attempt to appraise the issue in fairly cold-blooded economic terms" and not "allow partisan, emotional feelings about private versus public power to becloud the facts." The company's joint development proposal should be permitted to stand on its own legs and be considered objectively and strictly on its merits.

State Participation in Emergency Feed, Seed, and Roughage Program

SPEECH

OF

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. SMITH of Iowa. Mr. Speaker, I want to compliment the committee for the good work they have done on this program to make it possible for us to use more milk.

Outlook for Constructive and Helpful Legislation as a Result of Hébert Subcommittee Hearings Into Employment of Retired Military Officers

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 22, 1959

Mr. STRATTON. Mr. Speaker, the distinguished Investigations Subcommittee of the House Armed Services Committee, headed by the able gentleman from Louisiana [Mr. HÉBERT], is currently looking into implications of the employment of retired military officers by defense contractors.

Thus far, Mr. Speaker, the information developed by the committee does not appear to justify some of the sweeping accusations against these officers that have been made on the floor of this House and elsewhere, but I do believe that the committee is performing a most useful job and I believe that there is every likelihood it will come up with positive and constructive legislation that will enhance rather than impair our defense program.

In that connection I was extremely pleased to read the editorial which appeared in the August 1 issue of the Army, Navy, Air Force Journal, indicating the constructive nature of some of the legislative recommendations which the committee hearing are likely to lead to.

Under leave to extend my remarks, I include the editorial:

HAPPY ENDING FOR CONGRESSIONAL RETIRED INQUIRY?

Although it will be some months—certainly not before January—until the Hébert subcommittee issues a final report, there is already good reason to hope that the investigation into the employment of retired military officers by defense contractors will have a happy ending. Such a forecast is possible, because of the outstanding manner in which Chairman F. EDWARD HÉBERT, Democrat, of Louisiana, has been conducting the hearings, and because of the forthright testimony of senior officers of all the services.

The hearings to date have illuminated the important contributions that are being made to the defense program by retired officers whose vital skills and talents are being retained on active duty. Representative HÉBERT and his associates are building a detailed record also of the need to unify laws and regulations pertaining to the post-retirement employment of service officers. The Journal in the issue of May 17, 1958, published one of the most comprehensive reviews of this problem ever assembled and said that the corrective action was essential.

The Hébert investigations subcommittee has brought to light the fact that many officers employed by defense contractors would have preferred to remain in Federal service in civilian status following military retirement. They were thwarted, however, by restrictive legislation dating back to the 19th century.

It can be anticipated that one of the most crucial results of the inquiry will be a proposal to liberalize the dual employment and dual compensation restrictions imposed on Regular officers. In past years, the Defense Department, in on-again-off-

again behavior, has proposed to Congress that the outdated and discriminatory legislation be changed. What will be required in order to capitalize on the situation that has been pointed up in the current hearings is the readiness of the Pentagon leadership to go before Congress next January with a fully documented case on the need for legislative action.

It is still too early, of course, to make a final assessment of the Hébert subcommittee hearings, but on the basis of the proceedings to date, there is good basis for anticipating that the report to be issued early next year will avoid any free-swinging charges such as were expressed by some ill-informed legislators. Instead, what can be anticipated—certainly what must be hoped for—is a carefully reasoned document which will insist that action is essential to clarify confusion and disparities in present legislation, and which will urge changes in restrictive legislation whose usefulness has been outlived and which now is harmful to our national interests and security.

The Hébert report undoubtedly will recommend that rules be spelled out explicitly in the matter of retired officers taking jobs directly involving sales. Possibly a 2-year or 3-year interval will be advocated. Actually, only a relatively small number of retired military officers retired within the past 3 years are engaged in direct sales to the services. The fact of the matter is that a 2-year or 3-year specified limitation, instead of restricting post-retirement employment, may very well broaden post-retirement employment opportunities.

There is no question that many firms today hesitate to engage retired officers for sales activities, no matter how long they have been out of uniform, for fear of running afoul of the complex and disparate legislation now on the books.

To sum up: What started out as an investigation prompted by shotgun efforts to cripple the utilization of retired officers may well conclude with a straightening out of discriminatory legislation against retired service people that has long needed forceful attention.

A New Wonderland

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. MOSS. Mr. Speaker, kilowatts used to be practically the end and purpose of public hydroelectric power projects in California. However, the incorporation today of comprehensive recreational facilities in the plans for these developments is adding immeasurably to the benefits the public derives from them.

In this connection, under leave to extend my remarks in the RECORD, I include the following timely editorial from the Sacramento (Calif.) Union of July 19, 1959, entitled "A New Wonderland":

A NEW WONDERLAND

Even though you haven't been bitten by the public power bug and your philosophies lie with private ownership, it is possible to take one of E. A. Combatalade's guided tours of El Dorado County and become ravingly enthusiastic over what Sacramento Municipal Utility District is accomplishing there.

Not alone will the benefits of this vast power-creating project be measured in kilowatts. Quite the contrary, because when the entire project is finished in probably 6 years, at a likely cost of \$175 million, the whole contour and the whole future of a ruggedly beautiful mountain country will have been changed.

El Dorado County will be dotted with new lakes and streams, its present hidden beauties will be opened by 80 miles of new road, its recreation potential will have been made available to millions.

It is in terms of recreation that SMUD will pay its real hidden dividend. Consider just this one tiny aspect: Enough increased water will flow in the South Fork of Silver Creek to create 10 new miles of trout fishing in place of a dried-up creek that now exists.

As for the new lakes, one so large it will have 45 miles of shoreline, consider these figures for persons using Lake Shasta for boating, fishing and camping: 33 percent come from the bay area, and 20 percent are all the way from Los Angeles.

The West is running out of such recreational facilities as Shasta Lake affords, but now comes El Dorado County to open new and isolated vacation territory, majestic in its timber stands, primitive and grand.

Mutual Security Appropriations, 1960

SPEECH

OF

HON. JOHN E. HENDERSON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 8385) making appropriations for mutual security and related agencies for the fiscal year ending June 30, 1960, and for other purposes.

Mr. HENDERSON. Mr. Chairman, once again the House of Representatives has before it a grave decision, one of far-reaching consequences to the American taxpayer, to the American Nation, and to the nations of the world. It is my feeling that we must, in the consideration of this as well as other legislation, give thought to the effect it will have upon America itself. Foreign aid, by whatever name it might be called, is a very expensive proposition. It does not make it less expensive to call it mutual security or mutual aid or any other of a dozen terms that have been applied to it.

It is costly to the tune of more than \$3 billion. At least the \$3 billion is this year's installment upon a legislative habit that America acquired quite a number of years ago. In the period from July 1, 1945, to June 30, 1958, the post-war period, our Nation has expended \$57 billion for foreign aid, \$20 billion of that for military aid, and the remainder for all other forms of aid. In addition to outright grants, loans to nations abroad have been made in that same period of time in the amount of about \$20 billion. One can readily see that it is no inconsequential sum that we are discussing when we talk about the foreign aid program of this country.

I will concede for the purposes of ar-

gument that there is some good to be obtained in our foreign aid program, that some of the funds win friends for Americans, that the expenditures on certain projects have helped nations immeasurably, that there are nations in the world today who might have turned their thinking toward the Soviet sphere had we not come to their assistance. I can also concede that there will be some military value to the guns and ammunition that we have made available to other nations in the event there is armed conflict on a worldwide scale. It may be true that the foreign aid program has, to some extent, kept the Soviet Union off balance by providing an obstacle to the uninterrupted course of that nation's plan.

Much of the utilization of the foreign aid program is couched in secrecy. We are told that such secrecy is necessary in order to keep from tipping our hand as to some military or security plans we may have. It has also been suggested that a secrecy cloak is necessary so that other nations will not know in advance what their fellow nations are receiving from Uncle Sam's largesse. But some secrets just cannot be kept. There are revelations now and then in the press which have caused great consternation in the minds of many, that have labeled the foreign aid program in pretty somber tones. Money is being wasted. Funds are being utilized for projects that do not accomplish a useful purpose. Some of America's money finds its way into the hands of scheming gain seekers of one type or another. All the while we are increasing our own national debt and paying a high rate of interest on the money that we owe. We are not only taxing our citizens and using about 4 percent of the tax for this program, but we are also borrowing money to help pay for it. I will concede, of course, that we cannot attribute the entire national debt to the foreign aid program, nor can we attribute all of the current deficit to the foreign aid program, but if 4 percent of our expenditures in the current year are chalked up to foreign aid then, of course, we must agree that 4 percent of any deficit is also a contribution to the foreign aid program to the indebtedness of the United States. The American taxpayer could well do with a little aid himself.

Much of what I read and what I learn from my colleagues who are in close contact with this program, convinces me that America's contribution is too great. The program itself, even if administered properly and without waste, is too extravagant. To sum it all up, I have reached the conclusion that I will vote in opposition to the current mutual security appropriations bill, just as I voted against the authorization bill earlier this year and just as I have voted against each and every such bill in the years past.

The arguments which have brought me to that conclusion can be summarized as follows: The expenditure is too great. The funds are being used in part in a wasteful manner. There is too much secrecy in the administration of the pro-

gram. Expenditures are not obtaining for this Nation enough benefits to justify them. The program is a drain upon the taxpayers and Treasury of the United States out of proportion to the benefit gained either by America or by the nations which receive the assistance which we foist upon them and which they have come to expect as a matter of right.

Mobilize American Medical Research

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mrs. DWYER. Mr. Speaker, it was my privilege this morning to introduce a distinguished constituent of the Sixth Congressional District to the members of the Subcommittee on Health and Safety of the Committee on Interstate and Foreign Commerce, Mr. John T. Connor, president of Merck & Co., Inc., of Rahway, N.J.

Mr. Connor testified in support of the International Health and Medical Research Act of 1959. As I pointed out in my introduction, he has an unusual background in the field of health and medical research, including service as General Counsel of the Office of Scientific Research and Development.

Because I believe his statement is of the utmost importance to the Congress and to all those who subscribe to the need for improved health services throughout the world, I include it herewith under leave to extend my remarks in the RECORD.

The statement follows:

STATEMENT OF JOHN T. CONNOR, PRESIDENT OF MERCK & CO., INC., BEFORE THE SUBCOMMITTEE ON HEALTH AND SAFETY, HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, AUGUST 4, 1959

Chairman Roberts and members of the committee, thank you for the opportunity of expressing to this committee my views in support of the International Health and Medical Research Act of 1959.

This measure should be, I believe most firmly, an essential component of America's health legislation, for two principal reasons:

1. It will give new vigor and new meaning to U.S. foreign policy in the currently developing and infinitely more complex phase of the cold war.

2. It will protect and advance the health of the American people by bringing new research knowledge to America's medical scientists, and by opening up new avenues for research discoveries under conditions not possible in the United States alone.

The program proposed in the bill will operate in three principal geographical areas—the free world nations of Western Europe and Japan, the Soviet Union, and finally, the newly developing nations. Each area represents a different potential and each calls for different handling.

We can expect a continuation and extension of the present cooperation between us and the industrialized nations of Western Europe and Japan. The National Institutes of Health currently make grants to medical

scientists in these countries, and many of our academic scientists have informal relationships for exchanging information with their scientific peers there. In addition, licensing arrangements have been worked out by many U.S. pharmaceutical and chemical firms through which our new drugs and chemicals are made available to foreign commercial manufacturing firms. Many of their new developments are made available to American firms for production and marketing in the United States and in other countries, thereby enabling U.S. medicine to benefit from discoveries by foreign companies and helping to bring our drug developments to people who need them throughout the world. Equally important, many American firms, such as the Merck, Sharp & Dohme international division of our company, carry on their own extensive production, marketing, and other operations throughout the free world.

Let me urge that this committee, as did the Senate Committee on Labor and Public Welfare in its report on the companion bill to your measure, Chairman ROBERTS, express its view that our Government should not use U.S. tax funds to subsidize foreign commercial firms in developing new pharmaceutical, chemical or biological products. In fact, I think that the contracting authority in this bill should be limited to contracts with nonprofit or governmental organizations. As a competitor of those foreign companies, I can assure you that they are fully capable, both financially and technically, of supporting their own programs for chemical, pharmaceutical and biological research and development. My motivation is, of course, to attempt to help preserve our private sector type of enterprise in this field to the fullest extent possible. Beyond that, however, the economic recovery of those countries is by now so complete that their governments can well afford to support medical research to the extent needed and desired.

The second area of possible medical research cooperation will be with Soviet Russia. As a practical matter, cooperation with the Russians can take the form of expanded person-to-person discussions through the greater exchange of research scientists, teachers, and students, as well as fuller interchange of medical and scientific literature. It's even possible that there might be joint projects with them in basic research or in clinical studies.

I earnestly hope for the growth of cooperative developments and the fair exchange of scientific and medical knowledge with Russia. Such cooperative effort might contribute to improved understanding and communications between the peoples of the United States and Russia. It might even encourage the progress of what Dr. Albert Sabin calls creeping capitalism within Russia as the Russians see the value of personal incentives and rewards, and apply them more and more, as they seem to be doing in their technical activities.

But I feel compelled to sound a note of caution, based upon my own personal experience as General Counsel of the Office of Scientific Research and Development and, later, as an official of the Department of the Navy during and right after World War II.

Any such cooperation with the Russians in the medical research field should be initiated on a small scale. It should be developed gradually, step by step. There should be safeguards that the plan is in fact reciprocal. Certainly we must not lightly trade away the important technical resources of our pharmaceutical and chemical industries. If we should bargain away our hard-won American research knowledge, technical skills and production know-how, we will be handing over to Russia a valuable national asset. We would permit the Rus-

slans to free thousands of skilled scientists, engineers and technicians for military development and economic warfare, instead of taking the sensible course of requiring them to expend their own time, effort and resources in developing pharmaceutical and chemical know-how, as we have had to do.

So much for the problems of cooperation with Soviet Russia. I want now to talk about competition with the Russians, the hard core of our relations with Soviet Russia today and certainly for some time to come.

Here we are projected into the third area in which the program provided in this bill would operate, the newly developing countries. It is the area which I feel demands priority attention. It is the area of desperate need for health and medical progress; the area likely to produce fresh answers to many age-old scourges of man, as well as to newly discovered or newly developing diseases; and the area of sharpest competition with the medical offensive of Soviet Russia.

The most powerful political force in the world today is the rising expectations for a better life among the peoples of the uncommitted and newly developing nations. To the people of these nations, the burdens of disease and pestilence are far more real and important than great power rivalries or even the threat of nuclear war. If their aspirations are to grow in the patterns of a free society it is clear the free society must offer practical solutions to their elemental problems of existence. When life itself is so precarious, ideology is not a pressing concern.

Medical scientists tell us that the coming field of medical research is environmental research, examining whole population groups in the context of their geographical surroundings, their nutrition and dietary habits, cultural practices and living conditions, occupations and progress in technology. As man is increasingly able to change and shape his environment, research dealing with geographical areas and entire populations becomes of increasing significance and urgency.

The disease belt that girdles the earth, largely in the tropical zone, creates a reservoir of disease that lies perilously close to our own shores and our own homes. The airplane carries its passengers between continents in far less time than the incubation period of many diseases. Yet we have lost much of the natural immunity to disease common to people who have survived to maturity in less protected environments.

The Soviet Union is fully aware of these facts. And we have new evidence, in the recent World Health Assembly in Geneva, of Russia's efforts to use health and medical research for the purposes of Communist propaganda.

In the World Health Assembly, Russia sought to gain representation in the region of southeast Asia, in addition to the European representation she now enjoys, and was surprised to find out she is not welcome there. Russia sought to gain undeserved credit for proposing an international health year, a plan in fact first advanced in the United States. From time to time Russia has called loudly for expanded medical research programs by the World Health Organization, but when confronted with the chance to support tangible action at the recent Geneva meetings, Russia voted against a sound proposal strongly supported by the United States.

In recent weeks renewed attention has been given to the use of live vaccines in the world fight against polio. Dr. A. A. Smorodinstev, of Leningrad, reported successful use of live virus vaccine among nearly 2 million Russian school children. If confirmed by WHO observers, the results of those tests can be very useful and can be a most helpful precedent of possible Russian cooperation.

But the real test is yet to come—in the areas of propaganda and international politics. The vaccine used by the Russians was developed by Dr. Albert B. Sabin, of the University of Cincinnati. Under Dr. Sabin's supervision and direction our Merck Sharp & Dohme Laboratories produced the "seed" material which Dr. Sabin sent to Russia for their experiments. Already the Kremlin is using the tests for propaganda within Russia. It will be interesting to see, should Russia make the vaccine available to other countries, how much of the credit for developing the live virus vaccine they will share with Dr. Sabin and the United States.

There are many other indications that Russia is moving into the important vacuum on the health front. We have word of Soviet health teams in north Africa and south Asia. We hear of a cobalt radiation machine sent to Thailand, hospitals for Ethiopia, and Burma, and Indonesia. Even poor Poland, not able to care for the sick among her own population, has to contribute to this Communist health export program.

Russia in 1958 had 25 percent more doctors per capita than the United States. She is now producing new doctors from the medical schools at the rate of well over 16,000 a year, much more than the 7,000 doctors graduated in the United States last year. What does the Soviet Union plan to do with this rising supply of doctors, many of them trained in the languages and cultures of Asia, Africa, the Middle East, and Latin America? Reports from inside Russia indicate that she is planning to send about 2,000 of them a year to the developing countries, primarily for political objectives, not humanitarianism.

To meet this Russian health offensive will require an aggressive, dynamic mobilization of all America's medical resources—the highly trained members of our private medical profession as well as the U.S. Public Health Service personnel, the medical schools and research institutes, the foundations, the voluntary agencies, and the pharmaceutical and medicinal chemical industry.

America's physicians have already expressed their active concern for this problem. Many of them have testified before this committee. Others have expressed their concern through the American Medical Association, and through voluntary groups such as Medico and the quite exciting Hope hospital ship project of the People-to-People program. It is my firm belief that the program provided for in this measure will be successful only as it enlists the support and utilizes the services of private medicine.

Another important asset in this competition with the Soviet Union is America's pharmaceutical and medicinal chemical industry, one of our strongest national resources. Through its research, the industry has accumulated a valuable store of knowledge and know-how. We are far ahead of Russia in our ability to develop and produce important new drugs. I have searched diligently and I have yet to unearth a single important development by Russia in pharmaceuticals. All the new discoveries and developments in modern drugs—diuretics, antibiotics, vitamins, sulfa drugs, antibiotics, hormones, mental health drugs—were developed among the nations of the West.

I would not want to close my testimony without commenting on one provision of the bill that I consider of critical importance, its administration within the National Institutes of Health.

The heart of this measure is its objective of advancing human health by promoting international medical research on a scientist-to-scientist basis. This objective must not be obscured by diplomatic policies or lost in government-to-government negotiations.

The National Institutes of Health contain the great range of scientific and administrative skills, the knowledge, and the experience essential to the successful operation of medical research programs. NIH has a fine record in the development and execution of research program in complex scientific areas, demanding sensitive relationships with public and private groups, universities, industrial companies, and scientific organizations. Its technical study groups and advisory councils assure that the criteria for evaluating projects will be solely scientific merit and scientific potential.

The broad programs of the proposed International Institute, dealing with multinational health problems and in areas of basic life processes, must be carried out in close cooperation and coordination with the categorical research programs of the existing Institutes.

The varied resources to fulfill the requirements of an effective international research program can be found only in the National Institutes of Health.

It is my conviction, Mr. Chairman, that medical research should be left in the hands of medical scientists.

This setting up the Institute of International Health and Medical Research in the National Institutes of Health, establishes the mechanism and provides the means for pooling the research knowledge of nations, for mobilizing a war against disease, for guarding the health ramparts of America.

The bill before this committee is primarily a research bill. It is my hope that you can provide in the bill for special attention to research, research training, and fellowships in the newly developed areas of the world where the need is so urgent.

I respectfully urge that the committee make provision in the legislation for the following functions and activities:

1. Research teams to survey the health problems of the newly developing areas, country by country, and establish priorities for the medical research and assistance that can be most fruitful in each country. Every effort should be made to enlist leading private physicians and research specialists as members of these teams. The research teams should secure the views and cooperation of the medical profession of the country in which they work.

2. Research in the science of public health in order to give added emphasis to the importance of public health and to encourage programs of public health education by the host countries. Fundamental needs for sanitation, pure water, nutrition and preventive medicine are problems of survival for the great mass of the peoples of the developing areas.

3. Expanded training of nurses, hospital and clinical technicians, and other members of an effective health team. Although trained primarily for research under this program, they would form a permanent cadre of medical and health personnel in their countries. They would provide essential supporting personnel made necessary by the greatly expanded training programs for doctors, research specialists and others provided for in the bill.

The foreign aid programs before the Congress have generally been directed toward development of resources. I urge that the committee favorably report this bill on the practical consideration that good health is a resource, indeed the most precious resource of any people. And through this measure not only can we nurture the good health and good will and friendship of the uncommitted billions in the developing areas, who look to us for support and guidance; we shall help build the health and strength of the United States.

Distressed Area Bill Deserves Better Fate From President

EXTENSION OF REMARKS

OF

HON. GEORGE M. RHODES

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. RHODES of Pennsylvania. Mr. Speaker, the problem of distressed areas in Pennsylvania and in many other States continues to be of major importance, despite the improvement noted in some sectors of the economy.

Pennsylvania has made some significant progress in attracting new industries to diversify its economy, but it is clear that area redevelopment legislation is needed to provide an overall coordinated attack on the basic causes of chronic unemployment.

Under leave to extend my remarks, I include an editorial on this subject from the Harrisburg, Pa., Evening News:

DISTRESSED AREA BILL DESERVES BETTER FATE FROM PRESIDENT

President Eisenhower's fellow Pennsylvanians cannot share in his joy over the unbroken string of vetoes he boasts.

One of them—last September's pocket veto of the aid to depressed areas legislation—still rankles in the Keystone State, which continues to have more chronically depressed areas than any other State.

Gov. David L. Lawrence has just returned from a flying visit to Washington during which he tried to rally the Pennsylvania congressional delegation to virtually unanimous bipartisan support of new depressed area legislation now bottled up in the House Rules Committee. And he paid a visit to House Speaker SAM RAYBURN to try to ease the way for the bill's consideration.

It's a familiar role for a Pennsylvania Governor. George Leader fought hard for the compromise \$275 million bill that finally passed last year, only to have the Ike veto kill it. And it's a role that merits full cooperation by Pennsylvania Republicans in Congress.

Pennsylvania hasn't sat on its hands through the years doing nothing about its depressed area problem. Local efforts have been considerable. And the Commonwealth's PIDA program to bring more industry into the hard-hit areas of the State has begun to pay off. But even this hasn't been enough. An extra push is needed by the Federal Government to really get those areas started on the way back to economic health.

The Eisenhower administration can point to general economic recovery if it wishes, but the good news never can apply to the depressed areas of Pennsylvania where unemployment constantly remains over the distressed limit set by the Government.

"Giveaway" is a word that doesn't apply to this legislation either. The vast bulk of the funds involved would be in revolving loans. There would be some grants for needed public facilities.

The Senate faced three bills when it took up the subject this year:

The administration's \$53 million bill, which hardly would take adequate care of Pennsylvania's needs alone.

A full-measure \$389.5 million bill, sponsored by Illinois' Senator PAUL H. DOUGLAS and 38 other Senators.

A compromise \$200 million bill, sponsored by Pennsylvania's Republican Senator HUGH SCOTT, who had criticized Ike's veto but wanted to come up with legislation that

might sidestep further Presidential disapproval.

In March, the Senate approved the Douglas bill. On May 14, a House committee trimmed the figure to \$251 million. It remains stymied in the Rules Committee.

There is every hope that the Governor's trip and the Pennsylvania delegation's pressure will break the logjam and aid to depressed areas will pass once more.

Another veto by the President is a possibility.

But President Eisenhower must realize by now that his \$53 million program would be hopelessly inadequate, that Federal aid to be matched by States and localities is needed to give these distressed areas an economic lift and that his veto can't help but rebound against such administration programs as foreign aid.

The domestic aid program for which Pennsylvanians are fighting again is too important to be killed by the House or by another ill-advised Presidential veto this year.

New Hospital: Community Cooperation at Its Best

EXTENSION OF REMARKS OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. DENT. Mr. Speaker, Sunday afternoon, July 19, my hometown, Jeannette, Pa., celebrated the answer to many years of planning, working, and sacrificing.

It was on this date that the Jeannette District Memorial Hospital was dedicated.

As the speaker for this occasion, I was prepared to join many leaders in religious, medical, political, business, and labor fields in giving credit where due and to impress upon my peoples the need for continued effort if the hospital was to be a success.

A short chronological history of this project shows the will of the people co-operating and achieving at its best.

HISTORY

In 1947, the movement for a hospital in Jeannette was started by Mr. Joseph Cononico, of Jeannette. He assembled a group of interested citizens of Jeannette and the surrounding area to initially start Operation Hospital. During 1948 and 1949, hopes and plans for the new hospital were conceived. When the city of Jeannette donated a 6½-acre site in Paruco Park, concrete plans for the hospital were formulated, and a drive for funds began. You demonstrated your desire for a new hospital by pledging \$435,000. Based upon the success of this first drive, the structure of the originally planned 70-bed hospital was erected, the main exterior work was completed, staircases were built in, and provisions were made for the installation of elevators.

In 1952, another drive for funds was conducted in order that the existing structure might be completed, and the drive resulted in additional pledges of \$60,000. This additional amount was

inadequate to complete the structure as a result construction remained almost at a standstill until 1955 due to lack of funds.

In 1955, interest was renewed, and plans were drawn up for the addition of an east wing to the existing structure which would increase bed capacity to at least 100. This addition was considered necessary due to the increased demands for hospital services in our growing area. But before going any further with construction, two great problems had to be solved. First, how could the community procure and retain the administrative staff necessary to maintain the high level of efficiency we desired for our hospital? Secondly, where were the necessary funds going to come from?

The Sisters of Charity came forth with the answer to the first problem, by agreeing to provide the administrative staff for operation. They would assume supervision, and the maintenance of the highest standards of efficiency would be definitely assured.

After provision was made for an administrative operating staff, the solution to the second problem was begun by conducting a third drive for funds in 1955, during which time pledges amounting to \$535,000 were obtained. The Greensburg Diocese also volunteered a gift of \$300,000 making a combined total of \$835,000. The association was aware that these funds were not sufficient to complete the job. Accordingly, through the untiring efforts of several members, they were successful in obtaining Federal funds to supplement the funds from the third drive. After bids were received, the association realized that increased construction costs required greater funds. It was at this point that with the aid of Hill-Burton Federal funds, the Greensburg Diocese volunteered additional financial assistance amounting to \$250,000.

These combined efforts have not been in vain, because our hopes and dreams of a new hospital have finally materialized. The total cost of the completed project is over \$2 million. Your hospital is a modern and up-to-date facility consisting of 100 beds and 28 bassinets. It is understandable that the demands of industrial and personal requirements in our fast-growing area will call for the many services which our Jeannette Hospital offers.

We can all be proud of our new hospital. Its completion has only been made possible by the cooperation, sacrifice, and many hours of hard work by many devoted Jeannette and area citizens. It is to these citizens we wish to express our heartfelt thanks for a job well done.

Now that we have its doors open in the name of Christian charity, this beautiful and practical structure has already given the community a much needed lift in community pride and feeling of security.

One cannot stress too much the work of the auxiliary made up of generous-hearted, inspired women from the surrounding communities as well as the city itself. It was their example and determination through the dark days of

dampened ardor and financial worries that—along with the bulldog tenacious courage of a few men—kept the project alive.

As a citizen of this community I cannot help but feel the pride that comes from living in a community where things can and are done by public-spirited cooperation.

We know our problems are not over and that the Sisters of Charity will need the continued unselfish help of all of us. This hospital is part of our town to be cared for, nurtured, protected, and serviced.

If we do this as a community, the good Sisters of Charity in turn will give us the care and protection our hospital is capable of producing.

Let us then rededicate ourselves to our original purpose "to build and maintain a hospital for the care and betterment of our community and its peoples."

Fiscal Condition of California

EXTENSION OF REMARKS OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 7, 1959

Mr. GEORGE P. MILLER. Mr. Speaker, Californians are genuinely proud of the record that the new State administration is making in our State.

Gov. Edmund G. "Pat" Brown, working with a friendly Democratic legislature, has accomplished more in the last session of that legislature than any Governor has accomplished since the turn of the century.

We of California are particularly concerned with the affairs of our State. The annual State budget is rapidly approaching the \$2 billion mark and expenditures must be carefully watched in order to keep it under control.

The State controller, Mr. Alan Cranston, who took office with Governor Brown, released a statement of the fiscal condition of California under date of July 13, 1959, showing that the State's general fund during the 1958 and 1959 fiscal year cash balance was approaching \$14 million.

I know that Mr. Cranston's report is of interest to all who are interested in State government and I am happy to make it part of these remarks:

SACRAMENTO, July 16.—The State's general fund ended the 1958-59 fiscal year with a cash balance of \$13,773,358. State Controller Alan Cranston reported today.

"But general fund expenditures still outran revenues by \$61,659,388—or better than \$5 million a month," Cranston said.

This, despite the fact that the State legislature advanced the collection of \$55,167,752 in insurance companies taxes from November to June.

Other factors which contributed to the healthy glow of the general fund were transfers from the last of the reserve funds and stringent governmental economies that saved an estimated \$5 million in the last 6 months of the fiscal year.

One of the transfers was a \$55 million shift that killed off the so-called rainy day fund created out of World War II revenues and left untouched until recent high-expenditure, low-revenue years.

"Total revenues for the 1958-59 fiscal year were \$1,211,682,245, an increase of \$104,487,456 or 9.44 percent over the 1957-58 fiscal year," Cranston said.

Total expenditures were \$1,273,341,633, an increase of \$98,824,139 or 8.41 percent over the prior fiscal year.

"The June 30 cash balance of \$13,773,358 compares with a balance of \$5,728,701 as of June 30, 1958," Cranston said.

Cranston said the foregoing figures, contained in the controller's preliminary annual report issued this week, reflect merely the cash position of the general fund as of June 30 and do not account for obligations incurred but not yet paid nor revenues accrued but not yet realized.

"The size of the general fund surplus must await the computation of transactions figured on an accrual basis," Cranston said. This, he indicated, would be done by August 15.

Major revenue sources for 1958-59 included:

Sales and use taxes, \$631,096,838; up 4.54 percent.

Bank and corporation franchise and income taxes, \$175,404,605; up 1.91 percent.

Personal income taxes, \$160,679,653; up 7.73 percent.

Insurance companies taxes, \$105,832,480; up 129.88 percent.

Inheritance taxes, \$42,009,037; down 1.61 percent.

Liquor taxes, \$41,799,498; up 8.14 percent.

Interest on investments and treasury deposits, \$13,041,740; down 13.26 percent.

"The greatest single cost item paid from the general fund was \$571,045,118 for apportionments to elementary schools, high schools, and junior colleges," Cranston said.

Support Grows for White Fleet

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. EDMONDSON. Mr. Speaker, on July 21 the gentleman from Massachusetts [Mr. BATES] and I introduced in the House, and Senators HUBERT HUMPHREY and GEORGE AIKEN introduced in the Senate, concurrent resolutions calling for the establishment of a Great White Fleet of mercy ships to carry American surplus foods, medical aid, and supplies to disaster and distress areas throughout the world.

This bright new concept for peace, the idea of an Oklahoma naval officer, Comdr. Frank A. Manson, of Tahlequah, has inspired a tremendous outpouring of commendation, good will, and support from the American people across the length and breadth of the land. As you know, the July 27 issue of Life magazine, with a striking cover picture and its lead story and editorial column, threw its full support behind the Manson plan for a Great White Fleet as a "bold proposal for peace," and had a strong followup story in its August 3 issue.

On the day the concurrent resolutions were initially introduced in both Houses of Congress, all types of news media in America immediately showed great interest in the proposal. Radio and TV networks, news services, and independent newspapers made many inquiries and followed up with stories. Great American newspapers have endorsed the idea editorially. For example, the St. Louis Post-Dispatch of July 23 in an editorial entitled "To Relieve Human Suffering," said in part:

It would be hard to do more good at smaller cost and we hope that Congress will look with favor on the proposal and that in turn it will be approved by President Eisenhower.

In an editorial entitled "Great White Fleet," the Christian Science Monitor of July 27 said in part:

As a dramatic, impressive, traveling advertisement of Americans' dominant desire to be helpful, not warlike, the idea has enormous possibilities. It certainly should be seriously explored and considered.

A much smaller newspaper, which I understand publishes twice weekly, the Franklin Times, of Louisburg, N.C., in an editorial on Tuesday, July 28, called Manson's idea the "boldest, most imaginative plan offered for world peace and good will we think since the Marshall plan. We highly endorse Commander Manson's plan and would like to see it put into operation with all possible speed."

The response of the American people to this proposal for a new Great White Fleet has been terrific and overwhelming, if the reaction received in my office by telegram, letters, petitions, postal cards, telephone call, and personal calls, is any indication. More than a thousand written communications, some of them signed by 20 or more persons, have already been received on this subject alone. One letter, received from Geneva, Ill., reads as follows:

A citywide poll was demanded and taken by the citizens of Geneva, Ill., for the promotion of the Great White Fleet. The results are as follows: Those in favor, 3,485; those against, 73; not voting, 2,345 (estimated).

The proposal of the Great White Fleet, if my mail is any criterion, touched a deep wellspring of American faith, vision, and desire to see evidence of the great American dream become more visible to the world. Of all the communications received, only a dozen were opposed to the plan at last count.

Several persons enclosed checks or cash with their letters as tangible evidence of their deep interest and strong desire to see the Great White Fleet go into action. Many, many more, including individuals, corporations, and associations, pledged financial support at the proper time. Some called for a "dollar crusade." At least one person wrote he would be willing to send \$100 a year for this purpose. Another person said he would pledge 5 percent of his monthly income and said:

With 12 to feed, it's all I can do—wish it was more.

Offers of help are being received from very strong and influential groups. Over the weekend, the initial sponsors of the resolutions in the House and in the Senate received a wire from George Killion, chairman of the Committee of American Steamship Lines, composed of major American flag steamship companies operating under contract with the Maritime Administration, offering to meet with sponsors of the project to discuss "ways and means of lending our shipping know-how to the advancement and operation of this inspired project. Our efforts would be directed to establishing experienced shipping organization on a nonprofit basis." We expect to meet with a committee soon to discuss this fine offer.

The Radio and Television Executive Society has strongly endorsed the Great White Fleet proposal. The American Board of Abdominal Surgery called the White Fleet "certainly a positive step," and offered to assist in any manner you desire to obtain the best qualified abdominal surgeons for the White Fleet, and also to provide space in the Journal of Abdominal Surgery to tell the story of the White Fleet.

The American Merchant Marine Library Association has offered its service in providing seagoing library units for the vessels of the Great White Fleet. Publishers, advertising agencies, civic organizations, and many other leaders in business and professional fields have endorsed the plan and offered help and support.

Offers to volunteer their own personal services in the Great White Fleet have been received from many persons in many professions. In addition to doctors and registered nurses, we have had letters offering personal volunteer services from dentists, medical photographers, chaplains, optometrists, licensed practical nurses, hospital dietitians, helicopter pilots, medical secretaries, teachers, physical therapists, and one licensed embalmer. Of great significance to me is the fact that many young people, in high school and in college, have written in connection with their desire to serve with the Great White Fleet, and they indicate they could let this plan be a significant part of their own planning for future education and training, and their own life's work.

Perhaps the strongest support has come from churches and church people across the Nation. Letters of strong support have come from Protestants and Catholics alike, and from people of the Jewish faith. One Buddhist group from a nearby State strongly endorses the proposal.

Because it is typical of the mail along this line which is being received, I should like to quote from a letter received from the pastor of a Congregational church in Iowa:

I am a parish pastor who wishes to commend you and thank you for supporting the idea of the New White Fleet. So long as the project continues to be a nonpartisan, unselfish effort to help peoples of the world who are in need for any reason, I shall be able to speak and work for it. Let us not

turn this into a political method but rather let the strength of America speak for itself in surplus given freely, medical and teaching abilities given kindly, and service to mankind as the single aim. A nation as blessed as we are can find a new value in life when it gives to others what it has so much of itself.

He goes on to say he has asked his parish to study the proposal—something many other ministers, Sunday school teachers, and church leaders have done.

The American people who have written to me from practically every State in the Union always provide provocative ideas and are a never-failing source of original thought, and great inspiration. In addition to the overwhelming sentiment in favor of the Great White Fleet, there is a strong overtone of the very profound and very urgent desire of the American people to promote the cause of peace and to be helpful to victims of suffering and disaster throughout the world.

A number of letters are concerned that the project might be considered a propaganda scheme and urge that careful precautions be taken to prevent such an eventuality. For example, one man from Illinois wrote me in part:

One reservation: The suggestion that a seventh ship might be added to exhibit U.S. culture and industry might be fraught with danger. It could give rise to the suspicion that the real reason behind the fleet is not true altruism but a desire to create good will for American industry. This would be disastrous to the fleet idea. One suggestion: If a seventh ship were to be added why not make it international in scope and have exhibits of some of the best cultural and most helpful scientific advances from all over the world? I have in mind exhibits of drugs to heal diseases, works of UNESCO, peacetime uses of nuclear energy, etc. This could do much to bind mankind together.

Other letters have suggested that the United Nations, the World Health Organization, or the Red Cross should be brought into the picture. Still others would like to see the ships of the White Fleet named for great names in medicine, for the great nurses of history, or for great scientists.

Many who write stress the urgency for immediate creation of the Great White Fleet and point out that now that it has been publicized "there would be unfavorable repercussions if it is allowed to lapse." Another concern in this connection is the fear that there is "nothing to prevent Russia from taking the idea and beating us to the field." One Tennessean wrote in part:

With all due respect, please hurry before this turns out to be another Aswan Dam and the Little Ruskie, Mr. K., get in on the act by beating us to it.

Excerpts from some of the many other letters received provide some examples of true Americana. One such letter starts with the sentence:

My husband and I just read the Life magazine article on the Great White Fleet.

And the next concluding sentence reads:

Damn the torpedoes, full speed ahead.

Another letter says:

The newly proposed Great White Fleet could be any color as far as I'm concerned. If this plan doesn't materialize, you'll not only disillusion the American people, but also those people who have long been waiting for just such a Great White Fleet.

The text of another letter follows:

I see no point in making my views known in terms of deathless prose. Here's my vote for the Great White Fleet—enthusiastically.

Mr. Speaker, at this point I should like to convey a message to one of our esteemed colleagues by inserting in the RECORD the text of a letter received from Point Lookout, Mo., which reads:

I am, not one of your constituents but would sure like to say that I am one of the many down here in these Ozark Hills who would back your bill or resolution favoring the New White Fleet completely. You might pass this letter on to our good friend CHARLIE BROWN and tell him we would like to see him back it, too.

Mr. Speaker, I might add that Mr. Brown introduced his House Concurrent Resolution 320 calling for the creation of the Great White Fleet on July 21, the very day the initial resolutions were introduced.

Before going on to a discussion of the response from my own Second District of Oklahoma, I should like to read a few excerpts from a self-styled teenager, also from Missouri, who said she had just finished reading about the Great White Fleet. She wrote:

I am only 14 years old, but I am as concerned in our Nation's peace as anyone. The world needs more Commander Mansons. The only thing fighting accomplishes is killing people, while a fleet of mercy ships would create a "good" feeling between those nations that are not as fortunate as the United States. This is just my point of view, but maybe other people have the same idea. This is a teenager's opinion.

Mr. Speaker, the mail I have received from the Second Congressional District of Oklahoma has been overwhelmingly in support of this proposal. Only one letter has been received at last count from my district in opposition; and, of approximately 65 letters received from Oklahomans outside my congressional district, only one was opposed. The letters of support are similar to those received from all over the country, and include offers of financial support, the volunteering of professional services by physicians, television personnel, dentists, and teachers, and general strong endorsement of the Manson plan.

I am proud to say that the first written message I received on the Great White Fleet proposal came from my district. On July 21, the officers and members of Veterans of Foreign Wars, Post No. 4877, in Muskogee, Okla., wired me through their commander, Clyde Neff, as follows:

The proposed resolution of sending mercy ships to the world's disaster areas is of a vital concern to the VFW Post 4977. This proposal would help promote peace and good will throughout the world. As one nation and one people under God, we should aid our fellow man in time of need. Therefore,

we fully endorse and support this proposal and trust that every effort will be put forth for its passage into law.

John Mahoney, of Radio Station KVIN, in Vinita, Okla., sent me "a short comment on the Great White Fleet proposal of fellow Oklahoman, Commander Frank Manson," and called it the "best constructive thinking, to encourage good will and further better American interest abroad since 'Willie and Joe'."

My old and cherished friend, Dr. J. R. Graves, of Westville, Okla., wrote me that he endorsed the Manson plan 100 percent, and added:

Now Ed, you may think I am displaying a false impression, but I believe I could get 500 signatures of endorsement and not cross the Barren Fork or the Illinois.

These are two Oklahoma rivers whose confluence is near Adair County where Dr. Graves resides.

Other persons writing letters of strong endorsement from my district include James Dunn, tSate service officer of the State Veterans Department in Muskogee; Dr. James H. Elliott, of Nowata; Mr. Robert E. Sattler, of Bartlesville, 1st Lt. Donald R. Adair, of Pryor; Mr. Jim Nevens, of Beggs; Mr. and Mrs. Ben Terry, of Henryetta; Mr. and Mrs. Virgil Fields, of Jay; Mr. G. N. Irish, of Muskogee; Mr. Marcel Lefebvre, of Okmulgee; Mr. W. H. Wilson, of Porter; Mr. Joe Kearney, of Henryetta; Mr. Charles L. Harris, of Muskogee; and Mr. Gentry Lee, of Bartlesville.

Mr. Speaker, the vast majority of the American people from whom I have heard in connection with the Great White Fleet proposal overwhelmingly endorse it, just as do the people from my congressional district and from my State. It is my understanding that there are 45 House concurrent resolutions already introduced calling for the establishment of this Great White Fleet, and that 34 Senators are now co-sponsors of the Senate concurrent resolution in the other chamber.

Mr. Speaker, I urge the earliest possible action by the Congress on these resolutions, and suggest that the President, with the authority already at his disposal, get things underway immediately so that the Russians do not, as so many Americans have pointed out they could, beat us by bringing this magnificent concept into actuality.

Mr. Speaker, as a final note and as an indication of the potential meaning to the world of this proposal, let me insert in the RECORD this one letter I have received from across our border to the north:

MONTREAL, QUEBEC, CANADA,

Tuesday, July 28, 1959.

DEAR MR. EDMONDSON: Being a young Canadian teacher I can offer you neither time nor money for the wonderful new white fleet which you are sponsoring.

The courage, ingenuity, and kindness of yourself and your fellow Americans will make this dream a reality. We are proud that the United States is our neighbor country.

In the coming season I shall explain your endeavor to my large class, and each child will offer prayers for its success.

May God bless you.

Sincerely,

ROSEMARY SAMSON.

Peoria Journal Star Editor in Russia

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the 10th, 11th, and 12th in a series of articles by Editor Charles L. Dancy appearing in the Peoria Journal Star:

[From the Peoria Journal Star, July 29, 1959]

SOVIET RESORT LUXURIOUS, BUT MEDICINAL
(By Charles L. Dancy)

SOCHI.—I finally got to swim in the Black Sea. I had tried to find and buy a swimming suit at both Yalta and Odessa, and at Sochi I finally succeeded.

Cost is 35 rubles (not bad, by my count). At 10 to 1, \$3.50. At 4 to 1 it would have been almost \$9. The suit is by checking here about a \$1.50 bargain basement type.

The Black Sea is quiet for one so big. Virtually no tides, no swells. It is cool and refreshing and not as salty as the ocean. The beach is a solid mass of round stones.

The Chaika (Seagull) Hotel in Sochi is a place of fabulous luxury—a long hike involving a half-dozen flights of stone stairs past fountains and through parks and by statuary to get through the grounds to the entrance.

One doesn't think of this kind of wasteful luxury in the Soviet Union, and the Chaika was built by the Communists. It was not a summer palace of the czar, like some others. But they imitated that kind of grandeur.

It would hardly be practical in the United States because of the fantastic job of keeping it up. However, in Russia, there are still many people with limited ability who are kept busy doing small, menial, and dirty jobs for next to nothing in pay.

In the evening I went to the summer theater, a big Grecian-styled amphitheater, open air, with Greek columns surrounding it. But the show was an Armenian troop in dinner dress offering an imitation-American show, with jazz orchestra, master of ceremonies, comedians, torch singer, and the whole business. Pretty dreary.

The big hit with the audience was a fat little guy with heavy eyebrows that were pinned to his hairline who sang American songs (in English) in a Dean Martinish voice with Frankie Laine gestures.

The following morning I went to a place that would open the eyes of any Pekinese, another palatial building with beautiful grounds—but this was a "sanatorium" known as the "heart of Sochi" where 5,000 people a day are treated for various ills with sulfur water.

The familiar odor of sulfur water, so plentiful at Pekin Mineral Springs Park, is everywhere, and lines of people are bathing, having arms dipped in swirling bowls of sulfur water, and sitting in rows with inhalators over their faces breathing sulfur water steam.

There are 46 sanatoriums in Sochi, almost all built "since the revolution," and channeling their patients to this spot for sulfur

treatment. They say they treat 2 million a year—and I believe it.

This is one of the big propaganda stunts, shoving millions through these palaces to get "health" treatments, and telling them how much the new regime does for the people—at 500 rubles a head from the worker (and the rest from his union). Doctors "diagnose" every case and "prescribe treatment" for every person getting this sulfur water series.

In one area everyone is getting a sulfur water shower. The Russians say: "It won't cure baldness, but it will arrest it."

From these luxurious surroundings I was to go to the other extreme that afternoon.

[From the Peoria Journal Star, July 30, 1959]

RAGGED PEASANT ARMENIANS, AT RESORT RUSSIANS

(By Charles L. Dancy)

SOCHI.—Professor Rai, an Indian associated with the University of Calcutta, Mr. Peoples, and Eugene (Sochi guide) took a drive of 75 miles through the Caucasus Mountains deep into Georgian S.S.R. to a high mountain lake called Ritz and a high mountain called Aghuna.

The professor has been in Russia 2 years on a grant from the government to "translate Bengalese poetry into Russian" and, I suspect, also get a very thorough Communist indoctrination. I haven't met a Russian as aggressive in following the party line as he.

Driving inland we had to stop the car four times because of herds of goats or donkeys on the road. Each time they were being guided by men riding weatherbeaten horses, and these men looked like pictures out of the dark ages. They wore greasy caps, ragged baggy heavy-cloth clothes, and were themselves lined and whiskery.

"Most of the peasants are Armenians here," said Eugene. They surely weren't Russians.

We passed an old woman, bent almost double under a load of wood on her back, trudging up the mountain.

We also passed an old-fashioned pack train. A few more ragged peasants on beat-up horses and a long string of horses and mules with gear stacked on their backs.

Coming back we were delayed for long periods by work gangs, made up mostly of women, who were busy shoveling tarry oil onto the road and then hastily throwing crushed rock on top with their shovels.

It is back-breaking work and people may say that the Russian women are muscled and strong like men, but they still look like women and work like women and handle shovels like women.

Yet, at the top, after passing through all these views out of the distant and brutal past, we came to this lovely lake with a beautiful blue restaurant built like a Swiss chalet, a dock, and a bunch of speedboats—all this against the background of the snow-streaked, cloud-crowned mountains.

I saw no "Armenians" here. Only Russians eating, drinking wine, and ripping about in the speedboats.

This helped make some of Professor Rai's comments harder to take than usual, and we argued a bit. Eugene was usually silent. At one point he interjected to say that Russia and America are both modern countries with much energy, and each has some good and some bad. If we could exchange knowledge, he said, we would both be better off.

(I note that Khrushchev denies any such thing. They are ahead in everything, says Khrushchev.)

At another point, Professor Rai remarked that we may both be off base, and China "may well be the country of the future."

At this point, I could see the steam coming out of Eugene's ears. All he did actually say, however, was "I don't think so. Their language is a handicap to mass education."

Later at the free market (most of the peasants again were Armenian) Rai asked if the prices are fixed. It was really more of a statement than a question, following Eugene's statement that it was a free market for peasants.

Eugene said, "No."

"You mean they change from booth to booth and from day to day?" persisted the professor.

"No," said Eugene impatiently. "They are fixed by natural law. You cannot sell for more than it is worth. No one will buy. You will not sell for less. Natural law."

The professor subsided, and mumbled: "Supply and demand."

[From the Peoria Journal Star, July 31, 1959]

SPECIAL SEATS AT RED CIRCUS A REAL JOKE

(By Charles L. Dancy)

SOCHI.—We went to a Russian circus, and it is quite a sight. They placed us (as usual) in a front row box. Behind us in the other row in the same box was a Russian couple.

"For some reason," said the woman, "they are being seated in the front row and we were seated in the second."

A little later when they learned Peoples and I were Americans they laughed out loud.

"Naturally," said she, "Americans—first row, Roosevelt, behind." Big joke. (Not the first time I have heard comment that Americans and West Germans get special, plush treatment.)

This couple were very friendly throughout the evening thereafter, and did not seem to resent the situation, but found it amusing—and interesting.

The circus acrobatics were pretty amateurish, and I don't know if the lion act was superbly professional or very amateurish. I know one thing, that the Russian circus keeps you on the edge of your seat. Whereas at home you know the pros can do what they set out to do, and add a few false moves for thrills—here they seem to be doing their best, and just barely getting away with it—so you don't know what is going to happen next.

Finally, they had a lion act where the lions rode around the ring on the backs of the horses. I've never seen this before.

However, I doubt if we ever will over here. The horses' heads are held low with a brutal bit in the mouth belted to the special lion saddle. I don't think the SPCA would go for this or for the vicious prodding of the lions with long spears thrust through the bar, or whacking them with said spears, to get them to perform as advertised.

The professor rode back with us, and again started the Red theme (which is supposed to sap our will) that a Socialist world is inevitable because of the superior planning of the party system.

He's a literary man and has quoted Burns at me, so finally I just reminded him: "The best laid plans of mice and men gang aft aglee."

He suggested we change the subject.

J. Hyde Sweet Has Been an Active Newsman for 50 Years at Nebraska City, Nebr.

EXTENSION OF REMARKS

OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 20, 1959

Mr. WEAVER. Mr. Speaker, on August 15 of this year one of the great men of

Nebraska journalism and a former Member of this House, J. Hyde Sweet, editor and publisher of the Nebraska City News-Press, celebrates his 50th year of active newspapering in Nebraska City.

I would like to take this opportunity to congratulate him on the excellent service he has rendered his hometown readers and the people of Nebraska through his astute observations on the passing scene carried daily in his own column and on the editorial page of his newspaper. He has made through his writings a major contribution to the people of his city and State.

It was on August 15, 1909, that Hyde Sweet came to Nebraska City as part owner and business manager of the old Nebraska City Press, the forerunner of the present News-Press. It was not long until he moved from the business office to the newsroom and began putting his writing talent and his ability as a shrewd observer to work. As a reporter he developed a flair for finding the right angle to a story and an ability to bring out the human interest in the happenings he observed around him.

Within 10 years he evolved into a columnist and began his Kick Column which has since become one of the most widely quoted news column in the Middle West. He has not, however, confined his writing ability to this column alone. He writes the daily editorial for his newspaper and I have always found these editorials to be composed of good writing, keen observation, and sound commonsense.

The people who work with him on the News-Press will celebrate his 50th anniversary with a dinner and open house on September 2. I would like to add to their best wishes my own congratulations on 50 years of past excellence and my hopes for many more years of the same kind of generous service rendered by a great and good spirit to the people around him.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the Record without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the Record shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the Record shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the Record style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

"Democracy Versus Communism," a Textbook for Everyone

EXTENSION OF REMARKS OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. REECE of Tennessee. Mr. Speaker, some years ago, I addressed the House and pointed out that there should be written and made available to the people and, especially the schools, a book on communism, analyzing the principles of government advocated by the Communists and, more or less in a parallel way, outlining the principles of government upon which democracy or a representative government is based.

The Institute of Fiscal and Political Education undertook to have such a book written. The responsibility for writing it was given to Prof. Kenneth Colegrove, of Northwestern University, in which he was ably assisted by other eminent scholars. The result was a book entitled "Democracy Versus Communism."

The publication and distribution of this book filled a vacuum in our educational system. It was written in such a way that it appealed particularly to primary and high school groups. The interest developed for this book has been astonishing.

In view of my long experience in the Congress and, as a former teacher, I readily saw the need for such a textbook and the impact it would have upon our young people. The reception given it has been gratifyingly astonishing.

I will not burden the RECORD with many of the favorable reviews and comments on the book but I do want to include a few.

There follow two quotations from Cardinal Cushing:

I have always been convinced that unless our people receive proper anticommunistic education they will be continually indifferent to this international conspiracy; they will be disunited in their opposition to it; they will be an easy prey for all those who are commissioned by Moscow to spread the communistic line.

In the fall of the year we will probably recommend the book "Democracy Versus Communism" to our school assistants with the hope that they will follow the example of the secretary of education of the Archdiocese of New York.

Also, the following quotation from Hon. Harold Hayes, Chief, Publications Branch, Department of Defense, which has given wide distribution of the book in its libraries at home and overseas, is not without significance:

Congratulations on the review in the New World Review. It was what you expected, to

be sure. When the Communists yell "murder," you know your aim is good. This review proves again the effectiveness of "Democracy Versus Communism."

Probably one of the best authorities on communism is Vice President Nixon, who writes as follows:

This is just a note to thank you for your letter of July 7 enclosing an article which Lyle Wilson wrote about your book "Democracy Versus Communism." I certainly agree with his statements and would greatly appreciate being able to take you up on your offer to send me another copy of the book. I would like to have several of the people who will accompany me to Russia read it before our departure.

The New York Daily News had a cogent editorial on the merits and importance of "Democracy Versus Communism":

THE NATURE OF THE ENEMY—I

Not enough Americans, President Eisenhower feels, are aware of the nature of communism and Communists, and of the fact that the free world is literally in a life-and-death struggle with this 20th century slave philosophy and its slave-driver practitioners.

The President voiced that worry of his at a White House dinner one evening last week for a few press representatives—a dinner which made headlines around the free world for the next couple of days. He went on to express the hope that the U.S. press would do what it could to acquaint all its readers with the nature of the Communist enemy and the scope of the worldwide criminal Communist conspiracy against human liberty.

General Eisenhower was not exaggerating the threat of communism, or overstating its savage hatred of Western civilization and its dealed plans for wrecking that civilization and taking the world into a new dark age.

Accordingly, the News begins today a series of editorials under the title "The Nature of the Enemy," in which we will do our best to explain this malignant growth which Karl Marx and Friedrich Engels planted in the world's body politic with their "Communist Manifesto" in 1848.

The editorials will appear about once a week.

WE'LL DO OUR BEST

They will go into every major aspect of communism—its naked military threat of world conquest if the West ever drops its guard, its plans for economic warfare, waged from its arsenals of slave labor, its achievements up to now along that line, the training of Communist conspirators, communism's hatred of religion and the reasons for that hatred, what a Soviet occupation of the United States would do to most Americans, and the ways in which the free world, with courage and sacrifice, can crush this octopus.

We'll start out by recommending what we regard as a great book on communism, which we believe ought to be in use in all high schools in this country, and which many an adult could read with great profit to himself or herself.

The book is "Democracy Versus Communism," by Kenneth Colegrove, published by D. Van Nostrand Co., Princeton, N.J., for the Institute of Fiscal and Political Education;

424 pages, numerous pictures, cartoons, maps, and diagrams.

VACCINATION FOR BRAINS

Dr. Colegrove's book has been in circulation about 2 years. It is now in use in some 1,000 schools around the country. We hope it may spread to all the other high schools—fast—as a basis for courses in communism to vaccinate young Americans' brains and souls against this plague.

Only by teaching communism's aims, methods and philosophy, as Senator KENNETH B. KEATING, Republican, of New York, said in Washington last week, "can the Soviet plan for world domination be exposed to our young people and their will to resist it and recognize it be sharpened."

The Colegrove book will achieve that result better than any other books we've seen, for young people of high school age. ("Protracted Conflict," surveyed in this space a week ago, is written in a style geared more to college students and adults.)

"Democracy Versus Communism" is divided into short, easily read sections throughout, and contains hardly a word that any high school student will have to look up in the dictionary.

It contains a short history of the Communist idea (first hatched by the ancient Greek philosopher Plato, so far as recorded history shows), then sets forth on a detailed account of present-day communism—how it operates and what its objectives are, and how far short it has fallen of delivering the heaven on earth which it promises.

Along with the detailed explanation of communism goes an equally detailed description of how the American free-enterprise system (which Colegrove frankly and proudly calls capitalism) works to deliver the highest living standards ever seen in the world.

We think Colegrove is a little too impressed by the United Nations, and a little too charitable toward such creeping Socialist things in this country as the Tennessee Valey Authority. But aside from that, we believe this book is a masterpiece which should become a milestone in the history of American education.

The following is also a review of the book in the Washington Daily News by its noted writer, Lyle C. Wilson, under date of July 6, 1959:

TEXTBOOK FOR EVERYONE

(By Lyle C. Wilson)

This essay is an unabashed plug for a textbook which is being used in about 1,000 U.S. schools but which should be used in many thousands more.

The book is "Democracy Versus Communism." It was prepared and published by the Institute of Fiscal and Political Education, D. Van Nostrand Co., Inc., Princeton, N.J., prints and distributes the book for the Institute.

It is simply written, well within the comprehension of high school freshmen or, even, eighth grade students. This book is recommended reading for interested adults, however, because it explains effectively what are the great basic differences between democracy and communism.

Too many adults, interested or not, are not sufficiently aware of these differences as to be able to explain to themselves or to others what these differences are. It

would be good for the United States if all citizens would read this book.

If you think you are a superior type who understands and can simply explain the basic differences between communism and democracy, then, friend, pause right here and have a go at it. If you are unable to state at least some of these basic differences simply, quickly and easily, then you owe it to yourself and to your fellow citizens to buy this book and to read it.

Vice President RICHARD M. NIXON is a knowledgeable fellow about communism. He could do worse, however, than to get a copy of the institute's book for airplane reading when he flies this month to Moscow. Perhaps John Marshall, who is president of the institute, will send a copy to the Vice President for free.

If so, Mr. Marshall might also send one to the White House. President Eisenhower flunked his biggest test on the difference between communism and democracy. Ike was frank enough to make a public confession. He told a news conference in 1957 that he and Soviet Marshal Zhukov had "many long discussions about our respective doctrines."

"I was very hard put to it," Ike confessed, "when Zhukov insisted that their system appealed to the idealistic, and we completely to the materialistic, and I had a very tough time trying to defend our position."

A student in any of the 1,000 schools where the institute's book is being used as a text would have represented the United States better than Mr. Eisenhower in those talks with Zhukov. Students in the multithousands of schools in which the book is not used, however, probably would be no better informed on this subject than Mr. Eisenhower. The President has some ideas on the subject and they are good ones. For example, he said in 1956:

"Competition for men's minds begins when they are students. This is when they must be taught to discriminate between truth and falsehood. Specifically they must be taught to discriminate between the American form of government and the Soviet form."

That is exactly what "Democracy Versus Communism" seeks to teach.

Another review is by Elizabeth Moos who writes a critical review in the New World Review of "Democracy Versus Communism," which by reason of the source and views of the critic in themselves constitute a strong recommendation for the book, in my opinion:

COLD WAR TEXTBOOK

(A review by Elizabeth Moos of "Democracy Versus Communism," by Kenneth Colgrove, D. Van Nostrand Co., Princeton, N.J., 1958; 424 pp.)

We have had during the cold war period, a spate of hate-Russia publications. This textbook, published for the Institute of Fiscal and Political Education, is one of the most elaborate and biased of any I have yet read. It is directed to the youth of our country and may make—may be making—a contribution to distrust, prejudice, and fear, essentials in war psychology.

It is slick, no expense has been spared to make the format attractive. It is full of pictures and drawings, tests to help teachers, summaries, etc. In the preface a number of educators, some of whom are well known for scholarship and objectivity, are mentioned and we are told that they have criticized the text. The implication, of course, is that they have approved it. Probably because of this "sponsorship," the text has been adopted by boards of education in 21 States in spite of the fact that the author is better known for his support of McCarthyism and his attacks on scholarly foundations than for his educational achievements. It is difficult to believe

that such informed educators as Dr. Howard Wilson and Dr. Richard Burkhardt, who are mentioned in the preface, have approved the book as published.

The book makes little pretense of being objective; the thesis is clear from the very beginning and no propaganda device however dishonest, is omitted in the effort to prove it. The thesis that everything Communist, i.e., Soviet, is wholly evil, that everything American is democratic and completely perfect.

There is some history, treated very tentatively in an effort to prove that revolutionary change is per se wrong and the Russian revolution not only wrong but unnecessary. The czar was making the necessary changes; "Many freedoms that the Russian people had under the Czar were swept away when the Bolsheviks seized power * * *" and "almost half the people could read and write * * *" (under the Czar). We know what the "rights" of the people were before the revolution and we know that, at most, 24 percent of the people were literate. But will the teachers or students who use this text know it?

In the effort to present a picture of our democracy as ideal, some statements are made that are rather more than merely misleading. Contrasting our treatment of minorities with the treatment purported to be given by the Soviets to their minorities we learn that "by 1957, integration was well on the way in the Southern States," that the Indians who are still trying to hold some of their land (granted by treaty) "have been gradually gotten off their reservations * * *" are becoming self-supporting useful citizens." Our democracy, writes Mr. Colgrove, rests on the principle of a vote for everyone, and now "one man, one ballot is the rule in the United States." Not a word do the students hear about the struggle now going on for this very right to vote of which millions of our colored citizens have been deprived.

Material on the Soviet Union, its government and the life of its people, is an amazing hodgepodge of bits of fact, pure fiction, generalization. There are no objective scholarly references quoted, no bibliography. Quotations are used out of context, usually with no source given, undated. Pictures are used in questionable ways. So we have a picture of Soviet children doing exercises with rods—an exercise often used in our gymnastics. The caption is "Russian children are being given special exercises to strengthen their arms and hands for factory work." No documentation is given for this. Cartoons, some obviously dating from the twenties, are printed with neither date nor source. The many drawings were done to illustrate the thesis, in comic-book style with crude representations of the Soviets as robots or monsters.

When it is necessary to admit something positive, the author always counteracts it at once. So when we read that now there are refrigerators, washing machines, TV and cars in the Soviet Union we read in the next sentence that "Communist visitors say that no one but high government officials, army officers, or factory managers can own such luxuries." What Communist visitor? When? Much of the most violent anti-Soviet writing is material quoted from stories told by refugees or some of the well-known anti-Soviet writers. Such melodramatic stuff is featured by being set in bold type, on a special page so that students who may not manage to read the dull text will surely get an emotional impression that may arouse hate and fear. This horror stuff is presented without background or date in most cases.

In every chapter, whether dealing with foreign affairs—treated from a point of view considerably to the right of John Foster

Dulles—or with the Communist Party of the United States of America, which is described largely by such notorious informers as Louis Budenz and Bella Dodd—errors of fact abound.

Let us illustrate with one or two from the section on children. (Much of this would seem to be taken directly from George Counts' "Country of the Blind"). Boarding schools that are being set up under the new law are for wealthy little Communists. The facts—these schools are particularly for parents who need help or for orphans; neither finances nor politics enter into the question of admission, fees, as usual, are small and according to ability to pay. The old story that children are taught to spy on their parents is repeated several times. Fact—the code of the young pioneers stresses the importance of respect for parents and older persons; there is no documentation for the spying story, and that is why none is given in the text.

"The Young Octobrists are similar to the Hitler Wolves." "Specially selected children are sent to Young Octobrist schools." Fact—there are no such schools. The Young Octobrists are a loosely organized group of youngsters from 6 to 10, something like our Cub Scouts, doing crafts, singing, etc., preparing to be Boy Scouts. Their code is on the wall of many elementary schoolrooms. I copied it, and it may be of interest to see what these little ones—Wolves?—must be like.

(1) Study well, love your school, respect your elders; (2) an Octobrist is an honorable, moral child; (3) an Octobrist must love work; (4) an Octobrist is a friendly child who sings and lives happily.

The economic picture is given without the use of any Soviet figures. A table is presented showing how many hours of work are needed in the U.S.S.R. and the United States to buy articles. It is meaningless, and no reference is provided. What is left out is almost as dishonest as what is left in. There is no factual material on the Soviet budget. This would show the truth about spending for welfare and education in relation to armaments. It is easier to make generalizations. There are no quotations from the mass of reports that appear in press and magazines by visitors to the U.S.S.R., official and unofficial. Most of the educators, scientists, medical men and businessmen have come away with an impression decidedly at variance with the picture this book aims to present. So they are ignored.

What will be the effect of such a dishonest book on students? If they do not have other sources of information, if they read it, they will know that they are expected to answer the test questions near the end with a clear negative.

The questions:

"Can a nation that rejects religious teaching come to agreement with a nation that supports freedom of religion?" (Note the dishonesty of the phrasing implying that a nation, read U.S.S.R. that rejects religion cannot support freedom of religion.)

"Can a nation that breaks treaties" (lengthy proof has been given that the U.S.S.R. is such a nation) "come to agreement with a nation that respects international law?"

"Can democracy and communism ever be reconciled?"

Following—logically—we find a section on atomic bombs. Some people, we are told, thought we should not have dropped bombs on Japan. The explanation is as follows: " * * * the people were weary of war * * *" and although the allies had assisted Soviet Russia to expel the Nazi invaders, Stalin delayed declaration of war on Japan. Accordingly President Truman consented to the use of the bomb."

The fact is that the U.S.S.R. declared war on Japan on August 8, just as agreed. Truman ordered the use of the bomb 2 days before this date.

Reviewing this book has been a tough assignment. Its incitement to hatred arouses anger—the kind that is aroused when we read about the strontium 90 in our children's milk. The only positive thing that can be said about "Democracy Versus Communism" is that its overstatements, simplifications, and bias are so crude that many of our students and teachers will be too sophisticated and have too much general information to be greatly affected by it.

The sponsorship of "Democracy Versus Communism" by the Institute of Fiscal and Political Education is a patriotic effort and in the long run will constitute a fine service towards good government, and while decorations cannot be given for such a service this patriotic organization deserves the profound appreciation and support of the people.

The book has disturbed the Communists and pro-Communists because it is a penetrating book which is reaching the young people.

If "Democracy Versus Communism" is adopted generally by the high schools the fight against communism will be won in the minds of the people.

The Cause of All Mankind

EXTENSION OF REMARKS OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, August 5, 1959

Mr. BRIDGES. Mr. President, Mr. Norman Knight of Boston, Mass., president of the Yankee Network Division of RKO Teleradio Pictures, operating the Yankee Network, WNAC Radio, WNAC-TV, and WRKO, recently made a speech in New Bedford, Mass., entitled "The Cause of All Mankind." It is an excellent speech in which Mr. Knight makes very constructive suggestions for stifling and annihilating communism in the United States.

I ask unanimous consent that this speech be printed in the Appendix of the RECORD.

Mr. President, I also ask unanimous consent that a very fine editorial from the Manchester (N.H.) Union Leader, commenting on Mr. Knight's speech, be printed in the Appendix of the RECORD following Mr. Knight's address.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

THE CAUSE OF ALL MANKIND

(Remarks by Norman Knight in accepting 1959 award from American Heritage Committee, New Bedford, Mass., June 5, 1959)

Were we pessimists, we might say it is unfortunate that so few people in this land of ours are aware of the dangers of communism.

Were we optimists, we might be inclined to feel that we are making great progress in fighting the Communist threat.

I like to believe, though, that we are neither optimists nor pessimists but that we are realists, and that we are constantly aware of the

traits of our Communist enemies and, conversely, that we are appreciative of the fine, decent qualities of those Americans who support true American traditions and are not apathetic to the Communist menace.

My remarks will be brief, and it is my wish to spend most of these few minutes discussing the words of wisdom of a man whose writings and whose actions as an American have always given me great personal pleasure and pride. He was first called the Father of his Country. As much as I admire George Washington, this is not the great American to whom I refer since some years before this title was passed on to Washington, a man was called the Father of his Country because of his work at the very beginning in establishing the independence of our country.

Of all the patriots, this man was the only one to sign all five of the great state papers that achieved our independence—the Declaration of Independence, the Treaty of Amity and Commerce with France, the Treaty of Alliance with France, the Treaty of Peace with England and, of course, the Constitution of the United States.

When I think of the work of your good committee, the American Heritage Committee, and of our own modest efforts in the field of promulgating American traditions, I always like to think first in memory of Benjamin Franklin.

It is particularly fitting as we attend this function in New Bedford, itself the scene of great American historical traditions, that we reiterate thoughts expressed by Benjamin Franklin because not only was he first called the father of his country but I believe it was Carlyle who later called him father of all the Yankees.

Were Benjamin Franklin alive today, he would not have need to philosophize any differently nor with greater depth or perception than he did during the 18th century were he able to guide us in our current struggle with communism.

Boston-born Franklin believed that an essential service of man to his fellow man was the free communication of ideas, and without this communication he felt there could be no real freedom and no universal peace. His first public act at the age of 16 was to start fighting for freedom of speech and the press. His last public act just before he died at 84 was an appeal for the emancipation of slaves, employment for freed Negroes and education of slave children.

Franklin was, above all else, a practical man, and his beliefs were backed with action.

His brother, James, was publisher of the New England Courant and was thrown into jail for criticizing British authorities in Boston. To save the paper, young Benjamin, then an apprentice, was named publisher and with rare courage under the pen name of Silence Dogood he wrote these words in the London Journal:

"Without freedom of thought, there can be no such thing as wisdom; and no such thing as public liberty without freedom of speech; which is the right of every man. * * * Whoever would overthrow the liberty of a nation must begin by subduing the freedom of speech."

Were Franklin here today, I am sure that he would say there are many ways to subdue the freedom of speech, and one of these would be apathy, doing nothing about something.

When I think of the Communist menace sometimes it occurs to me that next to creating frictions among religious, ethnic, and racial groups (which I still consider to be the foremost objective of the Communists in America) the most important target for communism is plain and simple apathy. From the day that our Founding Fathers signed the Declaration of Independence until this very moment, America has remained

great because of what her people have done. Our problems have been caused by the things that we did not do.

Americans must think and act to meet Communist aggression here and abroad. This is why I have insisted that our organization reprint and distribute materials that will better educate New Englanders to the menace of communism, this is why we have produced films and other visual materials that would show Communist leaders to be untrustworthy and that is why we have produced the only continuing network program in today's radio which pictures in depth the fanaticism of hard-core Communists and the need for grassroots opposition to communism by Americans everywhere.

It is fitting that we call this last described program—the dangers of apathy. It was made possible only by the resources that we have available to us, the determination of people like Jack Maloy and my other associates who have contributed so much to this task and most importantly by the dozens of men and organizations whose backbreaking work over the years has developed the storehouse of information which our communications media can distribute. The undercover agents who have worked voluntarily, the FBI, and other law-enforcement groups, the American Legion, and the American Heritage Committee, and other patriotic committees, the citizens who have moved forward to help us, all of these have made it possible for us to further our objectives in this work.

Now we must urge others to join us. There are many things we can do. Let us take courage from the words and deeds of Benjamin Franklin and other revolutionary patriots and find ways to do things to express our patriotism with action. Here are some of the things that all of us can do:

1. When we see communications media courageously fighting communism, be they magazines, newspapers, TV stations, radio stations, or any other type of media, write to them and encourage them to continue their work.

2. When articles concerned with American traditions are printed, order reprints and distribute them to more people.

3. When special TV and radio programs are scheduled, such as our "Dangers of Apathy," call friends and urge them to call more friends to listen to the program.

4. Order reprints of such statements as J. Edgar Hoover's recent one-page statement, "What You Can Do To Fight Communism," and mail them to your friends and neighbors.

5. Write to your Congressman, your Senator, and to members of the executive branch of our Government and praise them and encourage them when they stand up and fight communism at home or abroad.

6. Speak out against any act of bigotry or prejudice, because words that create friction among Americans aid the Communists' cause. Denounce as un-American any man or woman who spreads hate in any form, because, as Franklin once said, "Fools multiply folly."

7. Seek to find ways at the grade-school and high-school levels to encourage reading of American history and to stimulate forum discussion, contests, and other activities concerned with acts of American liberty and justice. A great fear of the Communists is that American children will gain a greater appreciation of American heritage and the great struggles that have won and maintained our freedom.

8. Demand honesty from public servants, union officials, and management men, all of whom have trusts, since it is proven that in many countries graft precedes confusion and confusion precedes communism.

9. Certainly be constructively critical where circumstances deserve criticism, but be alert to Communist-inspired criticism of Govern-

ment services and Government functions. Do not support demands for further expansion of governmental expenditures except where they are deemed necessary for national security, for it is an oft-repeated Communist statement that capitalistic countries are doomed by inevitable economic collapse. Our answer must be one of concerted economy, balanced budgets, and immediate planning to institute reduction in the national debt. Individual support by Americans everywhere is essential to the attainment of these objectives.

10. Be informed and urge others to be informed through a sincere desire to know all possible about communism's devious plans and maneuvers which change in execution (but never in long-term objectives) almost on a daily basis.

For all of us it is important to remember that our fight is not just the fight for New Englanders, nor is it the fight only for Americans. Our opposition to communism serves an even greater cause, best expressed in a statement made by Benjamin Franklin, whose foresight must have destined his remarks to be as appropriate today as they were the very hour that he expressed them. I have studied these remarks many times, and our finest statesman of the 20th century could not weld words in such a way as to do greater justice to our situation in the world today than did Franklin's almost two centuries ago:

"All Europe is on our side of the question, as far as applause and good wishes can carry them. Those who live under arbitrary power do, nevertheless, approve of liberty, and wish for it; they almost despair of recovering it in Europe; * * * 'tis a common observation here that our cause is the cause of all mankind, and that we are fighting for their liberty in defending our own. God grant that not only the love of liberty but a thorough knowledge of the rights of man may pervade all the nations of the earth, so that a philosopher may set his foot anywhere and say, 'This is my country.'"

[From the Manchester (N.H.) Union-Leader, July 24, 1959]

KNIGHT'S SOLUTION

Norman Knight, president of the Yankee Network, which includes WNAC radio and television in Boston, delivered a stirring address in New Bedford, Mass., recently in which he offered a 10-point program to stifle and annihilate communism from these United States. The occasion for Mr. Knight's remarks was his reception of the 1959 award from the American Heritage Committee.

This newspaper can only say "amen" to Mr. Knight's proposal along with the guarantee that we will most certainly continue to do our share toward this common cause—the elimination of communism here and elsewhere in the world.

Mr. Knight's 10-point program follows:

1. Encourage news media of all sorts in their courageous battle against communism.
2. Order reprints of articles dealing with American traditions and distribute them to your friends.
3. Urge your friends and neighbors to watch special radio and television programs dealing with the battle against communism.
4. Order reprints of such statements as J. Edgar Hoover's "What You Can Do To Fight Communism," and mail them to friends.
5. Write your Congressman, Senator, and to high Government officials encouraging them to battle communism.
6. Speak out against any act of bigotry and prejudice.
7. Seek ways to encourage the teaching of American history in grade schools and high schools, and stimulate forum discussions and like programs.

8. Demand honesty from public officials, union officials, and management men.

9. Be constructively critical when deserved but be ever alert to Communist-inspired criticism of Government processes.

10. Be informed and urge others to be so.

Mary T. Norton

SPEECH

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. WALTER. Mr. Speaker, I was deeply grieved and shocked to learn of the passing last Sunday, August 2, of our distinguished former colleague from New Jersey, Mrs. Mary T. Norton. This loss will be felt deeply by all of us who knew her and worked with her during her long years of service in the House. For the people of Washington, Glenn Dale Sanitarium stands as a fitting memorial commemorating her 7 years' work as chairman of the House District Committee. For Mrs. McCormack and me, the loss is that of a close personal friend. I shall always hold Mrs. Norton in high esteem as a conscientious hard-working colleague, as we defended the wages and hours bill against opposition in May of 1940, and when she served as cochairman with me of platform and resolutions at the 1944 Democratic National Convention.

Mary T. Norton would like to be remembered, I am sure, primarily as a wife and mother, as a devoted family woman. Born in Jersey City 84 years ago, she attended the public schools and had just graduated from high school when her mother died. Her family came first and she deferred any plans of her own for 5 years while she cared for her father and managed the home. Then she felt free to take a secretarial course at Packard Business College and worked as a stenographer until her marriage to Robert Francis Norton in 1909.

The great personal tragedy of her life, the death of her only child in infancy, started her on a long and distinguished career in legislative service. To overcome her despondency and grief, she began to work for the Queen's Daughters Day Nursery. Her qualities of leadership were soon recognized by local and State officials and in 1916 she became president of the Day Nurseries Association of Jersey City. From this office to higher State and national positions were only short steps for Mary Norton as she blazed the trail with a long line of firsts. In 1923 she became the first woman elected freeholder in Hudson County and the State of New Jersey. In 1925 she was sent to the 69th Congress representing the 12th New Jersey District, becoming the first Democratic woman to be elected to Congress, and the first woman Representative of any Eastern State. She became the first woman to head any House committee when she

served from 1930-37 as chairman of the House District Committee, earning the affectionate title of "Lady Mayor of Washington."

Some Members of the House will remember the gala occasion in 1945 when we helped Mary Norton celebrate her 70th birthday and 20th anniversary in Congress. Similar festivities 5 years later on her silver anniversary in Congress and her 75th birthday, were somewhat saddened when she announced from a hospital bed her plans for retirement in 1951. We were pleased, however, that she elected to remain in Washington as a special consultant on manpower to the Labor Department until 1953.

Wife, mother, businesswoman, legislator—her career was varied, her life was rich and full, her heart was big and kind. When she could no longer be a mother to her own son after his death, she turned, through welfare work, to being a mother for other people's children. Her horizons broadened and soon she was working for the entire Nation. Genial and unassuming, we shall all feel the loss of her wonderful presence. Our sympathy goes out to her two surviving sisters, Mrs. Joseph B. McDonagh and Miss Anne Hopkins.

Some Good Can Come From a Meeting Between American and Russian Leaders

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 5, 1959

Mr. YARBOROUGH. Mr. President, the better peoples of various countries understand each other; and the more communication there is between countries, the better the chances are for peace between those countries.

I believe some good may come from the proposed meeting of our President and Soviet Prime Minister Khrushchev. Whether any good will actually be realized from the meetings will depend principally on whether Mr. Khrushchev is actually interested in promoting peace between the two countries, or whether he will simply repeat empty slogans of peace, without taking any action to back them up.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a discussion of these meetings, in an editorial entitled "Washington and Moscow," published in the Washington Post for Tuesday, August 4, 1959.

In addition, I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "A Bid for Peace," from the New York Times for Tuesday, August 4, 1959.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

[From the Washington Post and Times Herald, Aug. 4, 1959]

WASHINGTON AND MOSCOW

When all the caveats are entered against expecting too much of the exchange of visits by Prime Minister Khrushchev and President Eisenhower, there remains cause for great satisfaction that the invitations have now been issued and accepted. A single exchange is unlikely to clear away all or even most misconceptions, much less to end the fundamental rivalry between the Soviet Union and the United States. But if there is a will to use the opportunity constructively, it can be helpful in reducing some of the more inflamed differences to manageable proportions. It also can point the way to fruitful cooperation in the future.

In a sense Mr. Khrushchev's trip to Washington next month and Mr. Eisenhower's trip to Moscow later in the fall will be substitutes for the elusive summit meeting. That this country's principal allies, Britain, France, and Germany, have consented to the procedure is an indication of their confidence that the United States will make no invidious deals behind their backs. It is nonetheless useful for President Eisenhower to go to Europe in advance to consult with Messrs. Macmillan, De Gaulle, and Adenauer so as to allay any misgivings and to arrive at a common understanding of essential Western interests.

There doubtless will be a few misgivings elsewhere amid the general jubilation that the leaders of the two largest powers are thus to talk face to face. Among some of the smaller countries there will be a latent fear that Messrs. Eisenhower and Khrushchev will somehow agree to a revival of the old Stalin formula for dividing the world into spheres of influence. That would be the complete antithesis of American policy and objectives, but the only meaningful reassurance will be in the results of the talks themselves.

The other likely center of concern will be Peking. Communist China may well look with extreme displeasure upon the prospect of any rapprochement between its benefactor but potential rival, the Soviet Union, and the United States. It is not beyond possibility that China will seek to create tension, as in a renewed Quemoy-Matsu crisis, in an effort to compel support from the Soviet Union and thus to queer the visits.

To a considerable degree the agreement to exchange visits represents an acknowledgment that the negotiations at Geneva have become futile. President Eisenhower has in effect abandoned his position that there would be no summit meeting without a showing of some progress at the conference of foreign ministers. This particular concession, however, involves no departure from basic principles—it in no way alters, for example, the Western stand on Berlin—and it is a concession that the administration is well advised to make. In view of Mr. Khrushchev's obvious desire for a visit and in view of his unique place in the Soviet system, it had become increasingly apparent that nothing substantial would be done through ordinary diplomatic means.

If any question of face is involved, the administration has the technical explanation that this will not be a summit meeting as such—although it could be the prelude, if it is successful, to a series of summits. Moreover, the concession is not without compensations. Mr. Khrushchev's acceptance of the invitation amounts to a de facto alleviation of the Soviet threat on Berlin. He cannot afford to cause new trouble if he has any real hope of improved East-West relations.

Unquestionably the Khrushchev tour of the United States will beget many problems, not the least of them security. Unlike the situation in the Soviet Union, where the Government turns demonstrations on and

off, in this country the Government cannot predict the behavior of crowds or of individual zealots. The seeming inability of the Soviet leaders to believe that anything is ever accidental is itself a cause of misunderstanding. In any event, there is now especial reason for Americans, and particularly new Americans who have enjoyed this country's hospitality, to behave in an adult manner. No one is required to admire or approve what Mr. Khrushchev represents; the essential reason for his visit is that he is the leader of this country's principal competitor nation in a world in which both nations must live.

From Mr. Eisenhower's personal standpoint, his schedule for the remainder of the summer and autumn will impose a heavy burden upon a man nearly 69 years of age. Vice President Nixon, a man of seemingly boundless energy, has shown the fatigue of a strenuous trip. It is a tribute to the President's renewed health that he feels able to subject himself to such strains. Perhaps one reason for his willingness to do this is that he sees the possible beginning of fulfillment of his fondest dream—the advancement of a just peace. This dream was interrupted by his heart attack after the Geneva Conference in 1955 and subsequently was frustrated by a long series of disillusionments.

It is important to guard against more of these disillusionments, and the best way is by avoiding naive or rosy hopes—and empty slogans. Mr. Khrushchev is not suddenly going to liquidate his empire or disengage or agree to Western terms on anything of substance. If he did, the agreement would automatically be suspect. Rather, the opportunity is in a much longer range adjustment.

If it is possible to isolate any single root of friction between the Soviet Union and the United States, that root is the Soviet philosophy of revolution for export. Americans dislike many things about the Soviet system—its repression of individual freedoms, its antireligious dogma, its slavish conformity, its subjugation of other peoples. But if these aspects affected only the people of the Soviet Union itself, it would be their business and the remainder of the world would have far less reason for concern.

To expect Mr. Khrushchev to renounce the ends and means of communism would be as foolish as to expect a true believer to renounce his faith. What is possible—no probable but possible—is that Mr. Khrushchev may find it expedient to change his tactics, and that such a change of tactics will over a period of years mean a metamorphosis of objectives. It is possible that in process of living together with the West in what Mr. Khrushchev calls coexistence, Soviet communism will lose some of its imperialistic aspects, not by design but by evolution.

This is to say that the Communist system may follow the pattern of the Moslem conquests and the crusades and, while continuing to proclaim its external aspirations and beliefs, may gradually turn inward. Indeed, a case can be made that with the remarkable Soviet economic advance, the rise in living standards and the demand for consumer goods—a process bound to be encouraged by trade fairs, cultural exchanges and even Mr. Khrushchev's visit—this is already happening. History may show that this is the principal change of the post-Stalin era.

Of course there is no guarantee that such an evolution will turn out to be more than wishful thinking. Even if liberalizing forces are at work, an accommodation with the Soviet Union will not be easy. Berlin and a host of other dangerous issues remain unsolved. Soviet technological advance has put Mr. Khrushchev in a cocky mood. He most certainly will take advantage of any Western weakness to get anything he can get. Western unity and strength were never more

necessary; and, paradoxically, more adequate military strength now is the essential prerequisite to any satisfactory reduction of the arms burden.

What lies ahead is an opportunity, the first of its kind since the cold war began 13 years ago. If we use the opportunity wisely, we may at the least dispel some of Mr. Khrushchev's unreasonable fears and at the same time persuade him of the enormous peril of miscalculation. At the best, we may succeed in opening a new vista of mutual tolerance for the two countries under the awful and wonderful potential of the atom.

[From the New York Times, Aug. 4, 1959]

A BID FOR PEACE

In a supreme effort to melt the ice that clogs relations between East and West, President Eisenhower invites Premier Khrushchev to make an official visit to the United States next month, and the Soviet ruler, who has publicly bid for such an invitation for months, accepted "with pleasure." In return the President proposes to visit Soviet Russia later this fall.

The projected exchange of top-level visits, prepared by lower level visits and prolonged negotiations in full consultation with our allies, has found general approval and even acclaim at home and abroad. But just to demonstrate anew the unshakable solidarity of the West and to discourage any Soviet attempt to sow suspicion among the allies the President also proposes, prior to Mr. Khrushchev's visit, to go to Europe this month to confer with Prime Minister Macmillan, President de Gaulle, Chancellor Adenauer and other Western statesmen to concert Western policies and iron out remaining differences.

In announcing these visits President Eisenhower has yielded not so much to Mr. Khrushchev's importunities as to Western pleas to use his personal authority and prestige to break the East-West deadlock, reaffirmed by the impending failure of the Geneva Conference of Foreign Ministers and the halting pace of the Geneva Conference on a nuclear weapons test ban. He has yielded with obvious reluctance, but he has always said that he was willing to go anywhere and do anything to promote a just and lasting peace, and the proposed visits are part of his search for such a peace.

Nevertheless, it is essential to keep the Soviet-American visits in proper perspective. However sympathetic the American people may be toward the Soviet peoples, and however much the latter may reciprocate this feeling, as shown during the visit of Vice President Nixon, Premier Khrushchev will come to this country as a decidedly unfriendly dictator who has vowed to "bury" us in a Communist world conquest. But as an official visitor and guest of the President he is entitled to and must receive not only adequate protection but also all the usual courtesies. And however bitterly resentful members of the captive nations may feel toward him there must be no repetition of the disorderly incidents that marred the visit of Mr. Mikoyan.

Furthermore, however much Soviet propaganda may try to represent them as such, these visits do not denote any Soviet-American summit conferences. They may pave the way to an East-West summit conference if they induce the Soviets to permit enough progress in actual negotiations to make such a conference worth while. But there will be no real negotiations during the visits themselves, certainly no deal to divide the world between the two superpowers at the expense of our allies, as the Soviets have been urging. Mr. Khrushchev will stay in Washington only 2 or 3 days, which is not long enough to resolve issues that have stymied the foreign ministers for nearly 2 months.

Indeed, the announcement specifically states that his talks with the President will be informal, and Mr. Eisenhower's return visit to Soviet Russia will be a personal one, during which he will make no attempt to speak for the West but only for the United States.

Despite these limitations, Premier Khrushchev's visit may yet prove beneficial to world peace. He claims to have abandoned the Marxist-Leninist dictum that communism can conquer the world only by war and is all for peaceful coexistence and competition. That may well be true as regards an atomic war with an atomically armed West. But it does not stop him from threatening war over Berlin or fomenting war in Laos in an effort to undermine the Western position at the risk that any war might get beyond his control. In that respect he is not only the prisoner of his own propaganda but is also deluded by his previous visits to smaller and weaker countries than his own and by his very real misconceptions about the United States, attested to by all his recent visitors.

Because of all this Mr. Khrushchev's visit to the United States should prove an enlightening experience for him. It should give President Eisenhower the opportunity to tell him to his face that the United States will neither abandon nor betray either its allies or freedom. It should also enable him on his tour through the country to get a firsthand view of both the real American way of life and of our industrial power. If both these factors help to keep him from reckless adventures that could lead to war and if they induce him to engage in genuine negotiations on terms the West can accept, the world will be the gainer thereby.

The Steel Strike Must Be Settled Without Adding Fuel to the Fires of Inflation

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, the current steel strike represents one of the most irresponsible acts on the part of those who have been entrusted with the interests of American workers. For many years, I have been concerned with the maintenance of competition between domestic producers and their foreign competitors. The continuance of the steel strike for any length of time will seriously affect communities throughout the Nation who will lose their competitive position in the world's steel markets.

Mr. Roger M. Blough, chairman of the board of the United States Steel Corp., in his statement issued on July 28 unequivocally stated that unless the United States Steel Corp. was forced through Government intervention to make an involuntary settlement, it would not increase the general level of steel prices in the foreseeable future.

Mr. Blough's statement is of such importance that I request leave to insert it at this point in my remarks.

STATEMENT BY ROGER M. BLOUGH, CHAIRMAN OF THE BOARD, UNITED STATES STEEL CORP.

For the sixth time since the end of World War II, the Steelworkers' Union has called a

nationwide strike to enforce its demands for an inflationary wage settlement.

Like all strikes, this one will be settled sooner or later—and we all sincerely hope it will be sooner. Like other strikes, this one involves differences over wages, fringe benefits, work rules, and similar issues.

But it also involves more. It is a test of whether the steel industry, or any industry in present-day America, can successfully resist the enormous power that has enabled our modern labor unions to exact—frequently with the aid of Government—inflationary wage increases from one industry after another, round after round, throughout these 14 years.

In the past when strikes have been settled, the settlement has been followed by an increase in the general level of steel prices where competitively feasible. This has been dictated by good business judgment as an attempt to recover the increased employment costs incurred and to provide revenues to offset the inevitable increase in other costs involved in operating a business.

Many people mistakenly believe that a steel wage increase would not be inflationary if it did not result in an increase in steel prices; and thus we hear much debate about whether the companies could afford to boost wages and benefits another notch.

But the fact is, of course, that whether steel prices rise or not, inflationary wage increases in construction, motors, steel, oil, or other major industries ripple out over the entire economy as other unions strive to catch up to the new, high level. And as these rising employment costs spread, they force higher costs and higher prices everywhere, for employment costs—direct and indirect—represent more than three-fourths of all production costs in American industry. Taxes, too, inevitably rise with other costs, for much of tax revenue finds its way into employment costs.

The ripple effect of rising wage costs is still in evidence. There have been a number of wage increases so far this year, many of which are of a catchup nature; and there are certain to be many more if the demands of the Steelworkers' Union prevail. This is because the average earnings of steelworkers are already about \$7 a day higher than the average earnings in all manufacturing industries. And any increase which widens this gap will tend to pull up wages, production costs, and prices in every other industry.

That is why we in the steel industry have sought and bargained for a settlement that would involve no increase in employment costs—or at least sustainable ones which could be met—in the end—by the elimination of wasteful practices arising out of various provisions in our old labor agreements.

And that is why 3 months ago I said that it was not the intention of United States Steel to change the general level of our prices in the foreseeable future and that I earnestly hoped future events would enable us to maintain this position.

Now we would like to go further. In the hope that removing any doubt as to the intentions of our company with respect to price will be helpful to the successful conclusion of the present strike-bound negotiations, we believe it is timely for United States Steel to make this further statement—a statement to which we intend to adhere in the absence of an involuntary settlement mandated by some public body or authority. And the statement is this:

"Whatever the length of the strike, and whatever the eventual outcome of the negotiations—so long as they are voluntary—we in United States Steel do not intend to raise the general level of our steel prices in the foreseeable future.

"We believe that competitively this is no time to raise prices. We know that employment costs abroad are but a fraction of our

own. We know that imports of foreign steel and products made from such steel are increasing. And we know the tough competition that steel faces from other materials produced domestically. These things alone would dictate a hold-the-line position on prices.

"We believe, therefore, that the long-range interests of all employees and our customers and stockholders will best be served by this policy.

"If events dictate a change in our situation next year, we will necessarily be required to take whatever steps are then indicated—but as of now we foresee no general increase."

We realize that this hold-the-line position has a direct bearing on the demands of the union because we intend to continue to negotiate in the context of that position.

We also realize that except in period of extreme demand, every company in an industry such as steel must meet the lowest price of its competition, and that the force of competition will thus deter other steel companies from seeking price relief.

Understandable as other attitudes may be, we believe that our Nation faces a number of serious problems today, not the least of which is wage inflation. All of us in United States Steel, stockholders, and all employees alike, share with our fellow Americans in every walk of life the responsibility to help to combat further inflation with the resources at our command. And we hope that by this action we may aid others in their desire to combat the seemingly irresistible pressure for ever-higher wages and prices.

JULY 28, 1959.

Goals of the International Typographical Union

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 5, 1959

Mr. NEUBERGER. Mr. President, the International Typographical Union is the oldest trade union in the United States. Through the years of its development, the ITU has been in the forefront of labor organizations seeking to establish democratic processes by which its members can direct and control the business affairs of the union.

Last week, the Oregon Typographical Conference maintained an Oregon industry booth at the Oregon Centennial exposition, which now is underway in Portland. As a part of the industry booth activities, members of the Multnomah Typographical Union distributed to all visitors a historical sketch about the ITU. The sketch was written by John K. Standish, of Portland, Oreg., and describes the operating procedures and goals of the International Typographical Union.

I ask unanimous consent to have Mr. Standish's historical sketch printed in the Appendix of the Record, with my remarks.

There being no objection, the article was ordered to be printed in the Record, as follows:

**INTERNATIONAL TYPOGRAPHICAL UNION, OLDEST
AND MOST DEMOCRATIC, MODEL FOR ALL**
(By John K. Standish)

PREFACE

The subject of the early civilized people is immediately associated with ancient history and classified in the category of tedious repetition by many. But in order to visualize and perceive the furtherance of our subject we review their developments so that we may form a contrast to our current era.

Those early people by laborious steps from storytelling, picture writings (hieroglyphics), cuneiform and crude alphabets, have done well to convey salient features of their life and culture to us through the scattered specimens of their work still available.

Although nature decrees our physical development, she leaves our minds to the influence of society we live in. Following the ever-changing status of the workers, from Egyptian times through the guilds and into the beginning of unionism in England, has taught us that individually the worker is very insignificant.

As the merchant guilds unfolded, the factory system came into being. As merchants became more wealthy, they came to be farther removed from the reality of the workers' conditions. Thus the craft guilds, predecessors of trade and industrial unions, were born from necessity.

The mechanical system of manufacturing, which refused to recognize the individual worker's right to happiness, developed conditions such as child labor, long hours, low pay, unsafe and unsanitary plants. This led directly to the revolt and attempt by labor to improve the workers' conditions. Thus, history repeated itself and unions (like the guilds) were born from necessity.

The real object of organized labor is the right to bargain collectively. Trade agreements stand for industrial peace and are the steppingstone to improved conditions. Arbitration is the governor of capital and labor relations and on it depends how peaceful the relations may be. The union label means that an object was manufactured under sanitary conditions, standard wages have been paid and good workmanship is in evidence.

From adequate and absolutely humane ideals came the control and organization of all unions. Future generations shall learn much from this era of unionism. Upon what may be the ultimate in unionism depends upon how well founded in its principles future generations may be.

THE INTERNATIONAL TYPOGRAPHICAL UNION

The International Typographical Union is the oldest union in America. Its local branch in Washington, D.C., was founded in 1815. Its local in New York City was founded in 1850 by Horace Greeley. In 1852 these and other locals merged to make the national union, which now has its headquarters in Indianapolis. Today this union has approximately 800 locals and more than 110,000 members and apprentices.

In towns of 7,000 and above, they set the type for over 90 percent of all newspapers and printing establishments.

Printshops used to be dark and dirty; the air in them was foul; the workday was 12 hours; tuberculosis was an accepted printer's ailment; the average age of printers at death was 28.

The union made up its mind to change this and lift that age. All local unions of the union formed committees on sanitation which pleaded with employers and health authorities, and pushed printshops into the forefront of early industrial sanitary progress. Then, in 1892, the union established the Union Printers Home at Colorado Springs—a sanatorium for tubercular members and place of retirement for aged ones. The union has spent more than \$9 million

on it. A union member, with 25 years or more membership may receive a weekly pension of \$22, and a \$500 mortuary benefit.

Work in a modern composing room is fast, intense, exhausting. The union has gradually brought the worktime of its members down from 12 hours a day to a maximum of 37½ hours a week—except for war needs and other emergencies.

The years added to the lives of its members cannot be a mere coincidence. The average age at death has been lifted from 28 to the following levels:

By 1900, to 41; by 1910, to 46; by 1920, to 53; by 1930, to 59; by 1940, to 64, and at latest report is 68.

This union has served life. Its success is unquestionable. So next: Has it won this success by dictatorship over its members and class war against its employers?

It has not. Among its locals there have been plenty of instances of hottheadedness and unreasonableness. The main point nevertheless remains that the Typographical Union is utterly antidictatorship and utterly anticclass war.

You start toward being a member of the Typographical Union by becoming an apprentice. You can become an apprentice at 16. Then for 6 years you study your trade by practice in the shop and by taking 149 printed lessons sent to you by the union's bureau of education. These lessons are so complete that they have been adopted by many school systems as official textbooks.

A special set of lessons tells you about unionism. You are taught that union men must sacrifice for each other in order to continue to have a union. You are taught that it will be your duty to attend union meetings and to vote on all union matters.

You are also taught about employers. You are taught that labor should not be unfriendly to capital; that capital and labor both are essential to efficient and economical production; that the union should insure high-class workmanship; that it should strive to reduce unit cost; that the employers of the Typographical Union have virtually never broken a contract with the union, and that no local should ever break a contract with any employer; that every local should regard itself as a partner with the employer in the production process; that every preacher of class war, every Communist, every Fascist, every Nazi, is an enemy to the union and should be eliminated from the whole labor movement.

On all these lessons the apprentice must pass examinations. Then he becomes a journeyman and a full member of the union and starts voting. He spends a lot of time voting.

The Typographical Union insists that its locals shall manage their own local affairs. Every local must hold a regular monthly meeting on a regular stated day. It must elect an auditing committee or employ a certified public accountant to examine its books every 3 months. It must vote on every contract with an employer; and the contract binds every member. It must vote on any proposed strike and get a three-quarters majority before striking.

In these circumstances no one-man rule is possible. The Typographical Union nourishes democracy's taproot: local self-government.

A democratic union has two advantages for the country. The first is that it tends toward relations with employers that are more human and intelligent and stable. But the second is even more important.

The whole democratic world, in order to meet the competition of the totalitarian world, has to perfect its democratic institutions. It has to democratize its daily business life 364 days in the year and then achieve democracy by going to a political polling place on the 365th.

If you visit a union composing room, you may see the compositors, in a lull of work, gathered into a quick huddle. They are holding a meeting of their chapel—a subdivision of their local. They are rapidly settling among themselves some point of shop technique or shop discipline. These little cells represent daily, hourly, practice in democratic living. They represent economic government by consent. They train men to detest autocracy and to desire democracy in all things.

Freedom needs such men. Free democratic business must learn that in order to survive against the totalitarian state it has to have such men. The final merit of the Typographical Union is that its institutions are organized to produce such men.

With the introduction of the typesetting machine about 1890 a great revolutionary change in the industry reached a practical stage of development. The International Typographical Union at that time had a membership including pressmen, bookbinders, stereotypers and photoengravers. By 1904 these latter groups had all withdrawn and established their own national organizations.

**Public Interest Can Best Be Served by
a Cut in Steel Prices With No Change in
Wage Rates**

EXTENSION OF REMARKS

OF

HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. BOWLES. Mr. Speaker, under leave to revise and extend my remarks, I include the text of a letter which I sent to President Eisenhower yesterday concerning the steel situation:

AUGUST 5, 1959.

THE PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: As wartime Price Administrator and Director of Economic Stabilization, I was deeply involved on a week-to-week basis with the complex interrelationship of prices, wages, and profits in the steel industry. Over the years since then, I have been increasingly disturbed in watching the operations of this key industry which has such widespread influence on employment and manufacturing costs throughout our economy.

In these 14 years, the steel industry has been shut down six times by labor-management differences. One hundred and ninety days of production have been lost. As a result, an estimated 45 million tons of steel production that might have been produced were not produced and, of course, the losses in wages and profits run into hundreds of millions of dollars.

The present impasse is now moving into its fourth week. Unless some agreement can be reached soon, the implications for our economy as a whole are decidedly disturbing.

We are now emerging from our third recession in 10 years. This series of setbacks has slowed our average annual rate of growth to the lowest levels in several decades.

Continued loss of steel production and steelworker purchasing power will curtail our prosperity still further. Moreover, as steel stocks dwindle, almost every industry in America will become affected. Bitterness between the workers and management, which

already is distressingly great, will become greater.

If a labor-management settlement is followed by a price rise, the adverse effect on our economy as a whole will be increasing still further. Already the price of steel has risen from the OPA ceiling of \$54 a ton in 1945 to \$155 in 1959. This is four times the increase in the wholesale price level in this 14-year period.

Of the 9 percent rise in average wholesale prices since 1953, 7 percent has been directly due to increases in steel and steel-using products.

If it had not been for a drop in the wholesale prices of farm products which have gone down 9 percent since 1953, the inflationary pressures generated primarily by the steel industry would have been even more evident. This means that sagging food prices have been balancing skyrocketing steel prices.

When asked to explain its repeated and extensive price increases, the steel industry has invariably pointed out that hourly wage rates have also tripled. Continued repetition of this explanation has led many people to assume that the blame for high prices belongs exclusively to labor. This, however, leaves out a critically important point—the relation between hourly wage rates and labor productivity.

Corporate profits are determined by many things. To the degree that labor cost is a factor, it is not the price of labor per hour but the cost of labor per ton of steel produced that is important. Although this precise figure is one of the world's best kept secrets, the external evidence indicates that the increase in wage rates has to a considerable extent been offset by the increases in labor productivity.

Mr. President, I realize that you have recently directed the Secretary of Labor to extend his one-man factfinding role to an 18-month study of the basic problems of the steel industry since the end of World War II. This study will be valuable in casting badly needed light on these complex cost-profit relationships.

However, the situation which now confronts us is urgent. Further drift will slow down our economy and endanger both jobs and profits at a critical point in our general recovery.

Viewed strictly as a contest between management and labor, it seems clear that steel wages, in view of recent increases in labor productivity, could and should be increased with no increase in prices. Operating at high capacity, the steel industry could continue to set record profits.

Yet I believe the public interest can best be served by a cut in steel prices with no change in wage rates. The evidence seems clear that the steel industry could take this important step and still maintain record profits.

Naturally such a proposal is not being pursued enthusiastically by either management or labor. However, there are times when we must all look beyond special group interests in the broader public interest. I deeply believe that we have now arrived at such a point in regard to the steel industry.

A reduction of \$10 per ton in steel prices could be reflected this fall in lower prices of automobiles, washing machines, refrigerators, and other home appliances. It could reduce the cost of our highway program, industrial construction, machine tools, and other essential items.

It could also help restore to our economy as a whole the vitality which can only come when our productive facilities are being used to capacity and when our people are fully employed. In regard to the steel industry itself, it could serve to increase sales, assure steadier and larger employment and improve our competitive position in regard to steel imports.

In recent months we have heard much about the danger of inflation, but in my opinion too little about economic growth. I submit that both problems are closely interrelated and that both could be partially met by a reduction in steel prices.

For this reason I respectfully suggest that you call on the steel industry to take this bold, creative action for the long-term good of our country and our economy.

May I add that no one should understand this need for such action better than former Secretary of the Treasury Humphrey, now president of the National Steel Corp. On many occasions Mr. Humphrey has called upon various segments of our economy—and particularly upon labor—to place the Nation's welfare before lesser group interests.

Although half of his steel corporation is not union-organized, and therefore still in production, Mr. Humphrey is now in a unique position to initiate moves for the general reduction in steel prices. I can think of no action which would be more helpful in reversing the inflationary pressures to which he so frequently refers.

I am therefore taking the liberty of sending Mr. Humphrey a copy of this letter.

With my personal respect and regards,
Sincerely,

CHESTER BOWLES.

Major DAV Effort Establishes Permanent Service Program for Veterans

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, August 5, 1959

Mr. PROXMIRE. Mr. President, a recent issue of the "Disabled American Veterans' Monthly," the publication of the National DAV organization, points up the success of a new and promising program for providing permanent financial support of the organization's outstanding veterans' service programs.

The program of perpetual rehabilitation funds is set up under the DAV Service Foundation. State and local DAV organizations are encouraged to receive special trust funds as a permanent memorial from DAV units and individual benefactors.

The DAV Service Foundation must retain the full perpetual rehabilitation fund intact as a permanent memorial. Only the earned interest is transferred at the end of each fiscal year into State and unit trust fund accounts, as designated by donors, to be made available to the DAV to support national rehabilitation service officers in their services to veterans.

This program is a noteworthy example of how an outstanding national service organization has set up the machinery to carry on its work program. Two Members of Congress, Representatives LEE METCALF, of Montana, and LAURENCE CURTIS, of Massachusetts, are recognized in the memorial honor roll of perpetual rehabilitation funds among the initial benefactors.

Mr. President, I ask unanimous consent that an article from the "Disabled American Veterans' Monthly" concern-

ing this program be printed in the Appendix of the RECORD.

There being no objection, the article was ordered printed in the Appendix of the RECORD as follows:

PERPETUAL REHABILITATION FUND PROJECT CONTINUES TO GAIN MOMENTUM—115 DONORS NOW ON ROLLS; JUDGE MCCLERNAN ISSUES APPEAL

WASHINGTON, D.C.—Perpetual rehabilitation funds, established with the DAV Service Foundation, were increased from 50 to 115 (130 percent) during the last fiscal year ending on June 30, 1959, according to Executive Secretary Millard W. Rice and the aggregate amount went up from \$7,550 to \$20,830 (175 percent), in amounts ranging from \$100 to \$1,300.

The names of the 115 benefactors, or of the individuals or organizations memorialized by them, together with the respective amounts of their special trust funds, appear on the DAV memorial honor roll, listed in the order in which they were received, as printed elsewhere in this issue of the monthly.

Under its master declaration of memorial trust, the DAV Service Foundation must retain each perpetual rehabilitation fund as a permanent memorial to the benefactor—or the person or organization designated by such benefactor. Only the interest earnings therefrom (4 percent per annum) are transferred, after the end of each fiscal year, into the respective State trust fund accounts, according to the States designated by the donors. Such earnings accumulate to become available for appropriation to the DAV for its use in maintaining its national rehabilitation service officers in each State.

Although only \$195.16 was so transferred as of June 30, 1959, \$536.38—an interest increase of about 175 percent—was allocated as of June 30, 1959. Several times that amount should become transferable as of June 30, 1960, depending upon the additional number of memorial funds received in the meantime. During the last 10 years, \$3,300,000 has been appropriated by the DAV Service Foundation to the parent organization exclusively for rehabilitation service.

GRASSROOTS IDEA

Since the inception of this grassroots idea, some three years ago, by concerned members of the DAV chapter in Butte, Mont., with their first \$1,000 check, special trust funds have come in from 30 States, at a gradual accelerating rate—11 in 1956, 15 in 1957, 44 in 1958, 45 during the first 6 months of 1959, with 25 of them during May and June.

Such special trust funds have been established by 40 DAV chapters, 3 State departments, 3 auxiliary units, and 6 other organizations, in their own names; by 3 DAV units as memorials to former officers, by 3 individuals (2 of them anonymous) in the names of DAV chapters, and by 60 individuals, in their own names or in memoriam of others, including 16 deceased husbands, wives, mothers and fathers, and two living persons—precedents which could well be followed by many DAV and auxiliary units.

Although most of the individual benefactors are DAV members, increasing numbers of other social-minded Americans have also enrolled, including one who started out with \$100, which, by monthly payments, has been increased to \$1,180, with his declaration that he intends to continue payments of \$110 each month for the rest of this year. Supplemental payments of \$100 or more have been made by 11 benefactors.

MONTANA LEADS STATES

Montana still leads all other States, with 22 enrollees, ranging up to \$1,100, with the aggregate total equivalent to about \$5 per DAV member in the State. If a similar record were attained in all States, the total would be more than \$1 million, according to

Judge John B. McClernan, the "tired old adjutant" of the Butte Chapter 106, and the originator of perpetual rehabilitation funds. The judge was appointed chairman of the DAV national perpetual rehabilitation fund committee by Commander Williams.

Pennsylvania, with 12 enrollments passed Minnesota with 10 during the month of June.

Seven special funds have been assigned as to Washington, D.C., although several of them originated from other States. Six are assigned to Florida, five each to California and Massachusetts; four to Indiana, Michigan, and New York; three to Colorado, Illinois, Louisiana, Maryland, and Ohio; two to Missouri, Nebraska, Texas, and Virginia; and one to Alabama, Arizona, Connecticut, Kansas, New Mexico, North Carolina, Oregon, Utah, Washington, and Wisconsin.

Having been directly responsible for the establishment of 33 special trusts by DAV units and others, 17 national service officers are now listed on the national commander's NSO honor roll.

DAV SETS EXAMPLE

"Once the DAV itself has set the example of having accumulated at least \$100,000 in special perpetual trust funds, then," according to Judge David B. Williams, "other social-minded Americans will be impressed by such sincerity of purpose and will be more likely also to establish such memorial trust funds, during their lifetimes, by bequests in their wills, and by designations in their insurance policies."

"If only 1,000 DAV members each provided in their insurance policies, or in their wills," continued the commander, "for the establishment of a \$1,000 fund eventually the service foundation would be entrusted with \$1 million, with annual interest earnings therefrom of about \$40,000. Thousands of DAV members could afford to so arrange. Thousands of others could probably also be converted to the plan, if DAV rehabilitation service enthusiasts would explain to them the essential vital factors involved for distressed claimants in future years."

VOLUNTARY DONATIONS MADE

Commander Williams says that during his travels throughout the country, his biggest thrills have been voluntary donations ranging up to \$1,000, from various DAV units toward these special funds, and that he was told of many more, in the planning stage. Recently he reported that the first individual to establish such a special fund, Howard E. Merhar, past department commander, of Butte, Mont., handed him a \$100 bill in the name of his wife, who is a past department auxiliary commander, as a unique way in which to celebrate another happy wedding anniversary; later, Mr. Merhar followed up with a \$100 check in the name of Howie's Supper Club, operated by Wilma and Howie Merhar.

According to DAV Service Foundation Chairman John L. Golob, an increasing number of individuals and DAV units have declared their intentions to establish such memorial funds, by making installment payments, which remain in reserve funds until \$100 has been accumulated—the minimum required—whereupon same is transferred into a perpetual rehabilitation fund, in accordance with the expressed wishes of each benefactor.

The memorial honor roll is also scheduled to appear, as a part of the DAV Service Foundation's annual report to the DAV, in the DAV's annual report to the U.S. Congress, which is then printed by the U.S. Government Printing Office as a public document.

PRF CHAIRMAN'S APPEAL

Judge McClernan, as the chairman of DAV Perpetual rehabilitation funds, has just issued an appeal, as follows:

"While there is but little time remaining before our national convention at Miami Beach, I am sure there is much that can be done toward carrying out our national commander's intention in appointing a DAV perpetual rehabilitation fund chairman.

"We all realize that the financial position of our units vary widely from one end of the country to the other, from creeping insolvency to munificent wealth; and none of us wish to work a hardship upon our financially disabled units. But the truth is—and we all know it—that many, many of our chapters and departments could come to Miami with \$100 in their hip pockets, to present to our national commander for the purpose of creating a perpetual rehabilitation fund in the name of their unit, or in memory of some revered member. Fully 90 percent of our chapters could raise, beg, borrow, or steal \$100 to present to him for the same purpose. If our splendid blind veterans national chapter can do the trick, then the rest of us can do it.

"This perpetual rehabilitation fund program has now spread into 30 States and is becoming better and better understood by our members. Seventeen national service officers have so far been directly responsible for enlisting 33 trust benefactors; theirs will be the first names to be inscribed on the new national commander's NSO honor roll. More and more of us are coming to realize that this plan of raising a large trust fund, the principal of which can never be spent but the income from which shall always be available for our service work, is the only safe and sure way to protect the future of our great organization.

"I am very happy to undertake this job, because I have confidence in our Disabled American Veterans. I believe that, in spite of the stormy conventions they put on, and beneath their rough exteriors, they have hearts that beat only for their organization. I know they will go down the line with Commander Williams and every future national commander to help build this memorial trust fund, and thereby help build the DAV.

"My comrades, this thing is not a service foundation program, it is not a national headquarters program. It was conceived and born at the chapter and department level. It will most certainly grow and prosper as our chapters and departments get behind it. I urge every DAV unit that is financially able, to join this memorial trust program, by bringing to Miami Beach, presenting to our national commander, your own perpetual rehabilitation fund.

"The perpetual rehabilitation fund march is on, and nothing will stop it, until the security of the Disabled American Veterans is guaranteed forever."

Small Cities and an Ill-Considered Veto

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. QUIGLEY. Mr. Speaker, under leave to extend my remarks I would like to insert a letter I have received from Joseph J. Bendel, Jr., executive director of the Redevelopment Authority for the City of York, Pa.

Mr. Bendel gives eloquent testimony to the importance of adequate housing

legislation for the small cities of America and highlights the tragic shortsightedness of the President's ill-considered veto of S. 57.

The letter follows:

THE REDEVELOPMENT AUTHORITY
OF THE CITY OF YORK, PA.,

July 31, 1959.

Re the future for urban areas, Housing Act, S. 57.

The Honorable JAMES M. QUIGLEY,
Old House Office Building,
Washington, D.C.

DEAR SIR: We in the city of York were stunned upon receiving word that the Housing Act, bill S. 57, was vetoed by the President. It amounted to a torpedoing of a renewal program which after 10 years has learned, not only what the objectives of the program are; but, more important, how to obtain results.

We are aware that you voted with the majority on the above bill. May we urge you to continue support of its minimum provisions. If an overriding of the veto appears logical, may we urge you to take that action.

Perhaps a brief explanation of our local program will help you in encouraging other legislators to support bill S. 57.

The city of York is located in south-central Pennsylvania and was the capital of these United States for 9 months during the Revolution (1777-78). Its present population of approximately 60,000 is squeezed into a saturated area of less than 7 square miles. The city is the nucleus of a metropolitan area of over 225,000 persons.

The core of this city reveals its old age (over 200 years) and has many ailments. It suffers from a declining tax base caused by unused office space and storerooms in the downtown area, congestion in streets designed for the horse and buggy, loss of old and inability to attract new industry, inadequate parking facilities, lack of open areas and finally, and most distressing, the pockets of substandard housing and blighted areas in and around the center.

In 1950 the city of York organized itself to take action and pinpointed its slum areas and prepared two projects; but unfortunately local conditions caused delays to each. By 1954 York had constructed 242 units of public housing and could almost immediately show the elimination 242 units of undesirable substandard housing. In 1957 the first redevelopment project, Wellington Redevelopment Area, commenced and it is interesting to note that this 20-acre area was an unsightly eyesore in a predominantly good residential neighborhood and that our reuse is not garden-type (high rent) apartments but 124 units of private resale housing to be sold at \$9,800 to \$11,000 and 72 units of low rent public housing. You can readily see that the reuse was aimed at the lower middle income bracket (\$4,000 to \$5,000 a year). This project will double the city's tax dollars, maintain the residential neighborhood, provide decent housing for lower income families, and rid the city of an unsightly eyesore. (NOTE.—City contributed \$144,000 noncash grant-in-aid site improvements and a cash grant from the Commonwealth of Pennsylvania, \$300,000.)

We have another urban renewal project in execution (July 17, 1959) which will employ clearance, rehabilitation, and conservation. The city planned this project without Federal assistance; the Commonwealth sharing the planning costs with the city.

The city is carrying out its workable program and is spending over \$35,000 of local funds this year, on planning for the future. A complete study of the problems of York's core is being prepared. It is our hope to schedule projects over the next 20 years. We

need assurance of a continuing Federal program of financial assistance.

We also have one project which is completely planned (loan and grant application), but cannot receive a capital grant reservation until we have bill S. 57 passed. The city used local funds for planning. We have two other projects which are presently being planned and are dependent on bill S. 57.

A SUMMARY OF PROJECTS

Wellington Redevelopment Area: Nearly completed.

Park Lane Renewal Area: Just started.

Center City Study: Nearly completed.

Cookes Renewal Area: Planning completed.

Gates House Renewal Area: Waiting for bill S. 57, planning underway.

North Spur Renewal Area: Request Federal assistance for planning, need bill S. 57.

We are not one of the large cities involved in the program. There are many more like us and we need help today. It will be difficult, if not impossible, to keep this program going without help. It is not necessary to remind you that the money asked for urban renewal is a drop in the bucket when compared with the foreign aid assistance, farm subsidies, and defense budget. What will we have to defend, if we do not work to make our communities a better place in which to live.

We urge you to stand behind bill S. 57. If we can provide you with information, please contact this office.

Respectfully yours,

JOSEPH J. BENDEL, Jr.,
Executive Director.

Tribute to Late Appellate Judge Joseph Weldon Hale, of Texas

EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 5, 1959

Mr. YARBOROUGH. Mr. President, the Waco Bar Association and McLennan County (Tex.) Bar Association has done credit to itself in the resolution it has passed honoring the late justice of the court of civil appeals there, the Honorable Joseph Weldon Hale.

Joseph Weldon Hale served with great distinction in the practice of law. From the time he was admitted to the bar in 1917, he was dedicated to the highest principles of the law.

After war service and some time in private law practice, he served with great distinction as associate justice of the Texas 10th court of civil appeals at Waco for many years.

Judge Hale also demonstrated his good citizenship and his deep interest in bettering his community, State, and Nation by his activities, such as managing the campaigns of gubernatorial candidate Lynch Davidson and former Gov. Pat M. Neff; active interest in the Baptist Church; leadership in the Waco (Tex.) Community Chest and Library Association; service as a trustee for Baylor University; and many other activities. He was a friend of mine, and encouraged me to strive for better government in Texas.

The State of Texas, our Nation, and the city of Waco lost a fine citizen and a very able jurist when Judge Hale died.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a resolution passed by a committee of the Waco-McLennan County (Tex.) Bar Association honoring Judge Hale.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

TO THE HONORABLE CHARLES F. KOEHNE,
PRESIDENT OF THE WACO-MCLENAN COUNTY BAR ASSOCIATION:

We, your committee appointed to prepare resolutions with reference to the death of the Honorable Joseph Weldon Hale, beg leave to submit the following:

Judge Hale was born in Jones County on May 29, 1891, and was the fifth of nine children born to John Henry Hale and wife, Drucilla Hale. The family moved to Coryell County in 1895, and later to Falls County in 1905, and in 1906 Judge Hale entered Baylor Academy and worked his way through the academy and the college department, graduating in 1915 with a bachelor's degree. Beginning in September of the same year he was elected superintendent of the Rockport schools, and served in that capacity for the years 1915-16, and while there he began the study of law, and after the school year had finished he came to the office of the late Pat M. Neff, and the Honorable Walton D. Taylor, where he studied law until he was admitted to the bar in 1917. His early law practice was interrupted by World War I, but after his discharge from the Army he entered the law offices of Messrs. Neff and Taylor, and later successfully managed Mr. Neff's campaign for Governor, and thereafter became secretary of the Democratic executive committee, and served in that capacity from 1921 to 1925. After Mr. Neff took his office as Governor, Judge Hale was made a partner in the firm of Taylor and Hale. This partnership continued for some several years. A short time after Mr. Neff was Governor, Judge Hale managed the campaign of the Honorable Lynch Davidson for Governor, and owing to the fact that he had managed the Neff campaign and the Davidson campaign, and having served as executive secretary for the Democratic committee for a period of 4 years he became widely and favorably known as a man of great executive ability throughout the State, and particularly with the leaders of the Democratic Party.

Judge Hale had been in the practice only a short time until his ability as a trial lawyer became well known to the members of the bar and the judiciary, and to insurance companies and other large corporations seeking the appointment of a highly trained and successful defendant's lawyer. Justice Hale's success as a defense lawyer brought to him a clientele of insurance companies, and his reputation as a defense counsel on insurance claims was widespread over this entire State. He was leading counsel in representing the insurance company's interest in the gas explosion that resulted in so much loss of the Liberty Building many years ago. Although Judge Hale was a very busy man in his profession he took time to take an active interest in the Baptist church and the affairs of Baylor University, and in the Masonic lodge. He was a member of the board of directors, and a member of the board of deacons of the First Baptist Church for many years. He was a trustee of Baylor University for many years, and during the time he was in the practice he was called to public service by the citizenship of Waco and was elected to the place of commissioner, and later became mayor of the city of Waco from 1935 to 1937. He was a director of the Waco Community Chest 1943-46, of Lake Waco Country Club 1944-47; of the Waco Public Library Asso-

ciation 1944-50. He was president of the community chest 1945-46, and of the library association 1949-50.

Judge Hale was appointed associate justice of the 10th court of civil appeals by former Governor O'Daniel on January 1st, 1941, to succeed the late James P. Alexander, who resigned to take the office of chief justice of the Supreme Court of Texas. Justice Hale had not been a member of the 10th court very long until he demonstrated that he possessed judicial ability, and it was not long until he was regarded as one of the outstanding appellate judges of Texas. He enjoyed that distinction throughout his judicial career of a little more than 18 years. The Waco-McLennan County Bar paid tribute to Justice Hale at a special session of the 10th court of civil appeals after he announced his retirement from that office, and Dean Abner McCall, of Baylor, was especially requested to make some remarks concerning the life of Judge Hale on that occasion. Dean McCall characterized Justice Hale as "a man who lived most abundantly, and has excelled in so many fields of service that his accomplishments seem almost incredible; that no appellate judge in Texas is more highly regarded for his judicial ability than Justice Hale." The Waco News-Tribune, on Tuesday, June 16, following the death of Justice Hale, had the following editorial:

"JOSEPH HALE, A PARAGON IN THE PEOPLE'S SERVICE"

"There is in the world today much discussion of whether a government of the people, by the people and for the people can endure. The case for the affirmative can be epitomized by citing the life of Joseph W. Hale, who died here yesterday.

"Other men, including some of his friends and associates, rose to higher station in the name of the people. None of them surpassed, and few equaled, Judge Hale's intelligent, selfless, devoted labors for the democratic system of government in Texas. At city, county, and State levels, Judge Hale proved himself a paragon in the public service.

"If our philosophy of government is to endure in the face of stresses and tensions complicated by today's technology, we must find more men of the caliber of Joseph W. Hale.

"The question is whether such men are born or made. We are inclined to think they come from a happy combination of the two. By nature, Joseph W. Hale was coolly intelligent, clear eyed, reserved, and alert. These qualities enabled him to put into practice the political philosophy in which he believed with all his heart and soul. It was a fortunate thing for the people of Waco and the people of Texas."

Surely, no finer tribute could be paid to a member of the judiciary by the press. Needless to say that Justice Hale enjoyed the confidence and respect of the membership of the bar, and all those who were fortunate enough to know him. His contribution to the bar will always remain outstanding in the judicial history of our State. He was an untiring worker and carried his part of the great load while he was a member of the 10th Court of Civil Appeals. His opinions are now recorded in the law books of Texas, beginning with Southwestern Reporter 147 2d page 846, and ending with volume 320 SW 2d 381. These opinions will remain there so long as our present system of government shall endure. Judge Hale's opinions have not only been cited by the appellate courts of our State, but they have been cited also by appellate courts of our sister States—this is no little compliment. During the period from 1941 to 1959, some of the most difficult cases that came to our court arose out of what is commonly called the field of domestic relations involving the custody of children of tender age. Certainly no greater question could present

itself to the court, because the disposition of a child of tender age involves the welfare and destiny of a human being, our most precious asset. We think one of the most important opinions written by Justice Hale during his tenure as a member of the 10th Court of Civil Appeals will be found in a child custody case styled: *Oldfield v. Campbell*, recorded in volume 191 SW 2d 897. We think this opinion illustrates the character and ability and the judicial thinking of Justice Hale more accurately than it is possible for us to express. This opinion illustrates what we are trying to say:

"The recently declared public policy of this State in dealing with dependent and neglected children is to secure for each 'such care, guidance and control, preferably in his own home, as will serve the child's welfare and the best interest of the State; and when such child is removed from his own family, to secure for him custody, care, and discipline, as nearly as possible equivalent to that which should have been given him by his parents.' * * * This unfortunate infant never had any semblance of a home or family of her own until she was graciously taken in by appellants. The tender, loving care which they are ready, able, and anxious to continue giving to this little girl is beyond any reasonable doubt, we think, more nearly equivalent to that which should have been given by the child's natural parents than any institution could possibly give at this time. This child is only 3 years of age. She needs a mother. She needs a home. She needs them now."

The foregoing pronouncement will remain a guiding light to the judiciary of Texas so long as our present estimate of human values shall prevail.

So, today, the Waco-McLennan County Bar, as well as the entire bar and judiciary of the State of Texas, stands indebted to Justice Hale for the fine life he lived so well, and the very fine way that he used his time and abilities to contribute to the general welfare of our city, county, State, and Nation. He will long be remembered: Therefore be it

Resolved by the Waco-McLennan County Bar Association, That in the passing of the late Justice Joseph Weldon Hale, we have lost a man of very great character, an outstanding lawyer, a great judge, and a very fine citizen, and that his family, which includes his widow, Mrs. Iva Hale, a daughter, Mrs. Tom Meredith, and his granddaughter, Laura Lee have sustained the loss of a devoted husband, father, and grandfather; and be it further

Resolved, That a copy of these resolutions be sent to his family, and a copy be spread upon the minutes of the Federal court, the district courts of McLennan County, and the Court of Civil Appeals for the 10th Supreme Judicial District, and the Supreme Court of Texas, at Austin.

Respectfully submitted.

JAKE TIREY,
Chairman of the Committee on
Memorials and Resolutions.
BEN R. SLEEPER,
W. R. DUNNAM,
HILTON E. HOWELL.

Trinity Power Facilities

EXTENSION OF REMARKS OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. GUBSER. Mr. Speaker, on page 5 of the House report accompanying the

1960 Atomic Energy Commission appropriation bill—

The committee notes that the Atomic Energy Commission is currently negotiating with the Duquesne Light Co., a private utility, to increase the electrical generating capacity and efficiency of the Shippingport Atomic Power Station at Duquesne's expense. Such continued cooperation by a private utility with the Government is encouraged and it is hoped that a successful agreement will be quickly worked out.

This excerpt from the Appropriations Committee report is illustrative of the advantages to the Government accruing from an electric company's participation in the joint development of Government projects. The proposal of the Pacific Gas & Electric Co. to construct the power facilities on California's Trinity River, if accepted by the Congress, would provide another case of the Government and business cooperating in a mutually successful enterprise.

The House has rightly refused to appropriate for needless Federal construction of the Trinity generators in view of the company's offer to spend its own money to do so; and the House Interior Subcommittee on Irrigation and Reclamation recently heard testimony on the proposed legislation to permit the utility to build and operate the plants, and pay the Government over \$4.6 million a year for the use of the Trinity falling water to turn the turbines.

The House conferees should not accede to the Senate on this item, presently included in the Senate public works appropriation bill; for, as quoted above, the same House Appropriations Committee stated on July 17 that "cooperation by a private utility with the Government is encouraged." Trinity now presents another splendid opportunity to encourage cooperation by a different private utility with the Government, which would then be spared the cost of constructing the powerplants and would receive over \$230 million in falling-water payments and \$83 million in taxes. The gain to the Government and to the taxpayers generally under joint development of the Trinity power facilities certainly justifies the company's participation in this project.

I submit, Mr. Speaker, that "such continued cooperation by a private utility with the Government" should be "encouraged and it is hoped that a successful agreement will be quickly worked out" in this instance also. There should be no appropriation for needless Government construction at Trinity.

India: the Glorious Gamble

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 5, 1959

Mr. HUMPHREY. Mr. President, on a number of occasions I have pointed out that the great country of India plays a key role in the world struggle precisely

because she is not militarily aligned to either side in the cold war. Japan has cast her lot with the democratic West. China has cast her lot with the Communist world. India, the largest uncommitted nation in Asia, is in a pivotal position.

In a current article, Walter Lippmann says:

What happens in India during the next 10 years will be of critical importance in the great conflict generated by the rise of communism.

Mr. Lippmann also points out that "the Indian economy is so appallingly poor that if it grows only at the rate of 4 percent a year, it will take 35 years to increase the Indian per capita income to just over \$2 a week. If that is the best that can be done, there will be a political disaster in India before the 35 years are over."

America faces a tremendous opportunity in India. This dangerous opportunity is spelled out in elegant language by Mr. Lippmann in his article, "India: the Glorious Gamble," which appears in the August 1959 Ladies Home Journal. Mr. President, I ask unanimous consent that this article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

INDIA: THE GLORIOUS GAMBLE

(By Walter Lippmann)

(A wise American tells us: Poverty will be conquered in India soon. If we don't help the Indians do it our way, the Communists will try it theirs.)

We have now been engaged in the cold war for some 10 years, and we knew many things today that we did not know when it began. One of them is the subject of this article. It is that what happens in India during the next 10 years will be of critical importance in the great conflict generated by the rise of communism.

Ten years ago, in the years immediately following the Second World War, the critical area of the world was Western Europe. Great Britain, France, Western Germany, Italy and the low countries were prostrated and exhausted, bankrupt and without defenses. Worst of all, they were unable by their own efforts to rebuild their ruins and to revive their economies, and thus they were without hope. This crisis—which threatened to bring about the downfall of Western civilization in Europe—was met in this country by two very great acts of statesmanship. One was the Marshall plan; the other was the organization of NATO. These two acts made it possible for Western Europe to recover from the war, and to become, by its own hard work and know-how, the second most productive area in the world.

But in the very years when we were making it possible for Western Europe to bring about its own recovery, the Western position and influence in China collapsed. Whether this could have been prevented has been hotly debated in this country. The fact is that China now is a Communist country, and that there is no practical prospect whatever that the Communists who rule China can be ousted from abroad or overthrown from within.

The Red-Chinese Government is working with a fierce and fanatical energy to overcome the immemorial poverty and backwardness of the Chinese nation. It is a terrible and awe-inspiring spectacle, which rests on this fundamental thesis: that in order to raise the great masses of Asia out of their primitive way of life, it is necessary to sacri-

rice the lives of many, and the comforts of most, of a whole generation of the Chinese people.

Is this necessary? Is this the only way? Must a backward people choose between remaining backward and submitting to an ordeal of tyranny and of cruelty in order to get over the hump and into the modern age? On the answer to these questions depends, we had better realize, the future of southern Asia, of the Middle East, and of Africa, and, it may well be, of a part of Latin America.

These questions cannot be answered by generalities; as, for example, by declaring that our democratic system of free enterprise is better than the Communist system. We must teach ourselves to understand that our system, which grew up on a rich and empty continent, cannot be duplicated in Asia. Because of that, though the picture of our material prosperity is admired and envied, it is in fact readily exploited for Communist propaganda. For what the Communists say is that in the overcrowded and backward countries they alone have a way of lifting the people within sight of an American standard of life. They point to Russia and say they can prove their claim by what has been done there in the past 40 years.

The influence of communism in the underdeveloped countries of the world lies, above all else, in the example of Russia—in the demonstration that in 40 years a defeated and backward country, which had to fight a civil war and a World War as well, has become one of the two mightiest powers in the world.

You cannot, as they say, beat a horse with no horse. We cannot beat the Soviet example by our example. For we are not an example that backward peoples can follow, and unless we can manage to create an example which they can follow, we shall almost certainly lose the cold war in Asia and Africa, and perhaps elsewhere.

There will be some, I know, who will say: "Why is it our business to create an example which the backward peoples can follow? Do we not have enough problems of our own to worry us without taking on any responsibility for solving the problems of the great masses of backward peoples?"

The answer to these questions is that we can no more withdraw from the world community than an American family can withdraw from the community in which it lives. Least of all, can a family withdraw if it happens to be, as we are in the world, the richest member of the community? It is impossible to say: "My children go to a private school. Why should I pay school taxes for the public schools?" It is impossible to say: "I go about in my private automobile. Why should I care about buses and streetcars and subways?" For the same reason, the United States cannot make itself richer and richer, and not care what happens elsewhere. We cannot do this because if we did those of us who have a conscience would have a bad conscience. And even if we did not have a bad conscience, it would be frightening to live in a world in which we had aroused the envy and had provoked the hatred of so large a part of mankind.

There is, however, so it seems to me, an even greater reason than these. It is that we have the opportunity—indeed, we may call it a privilege—of playing a leading part in a noble and fascinating and decisive human adventure. The age we live in, this 20th century, is the beginning of many things, and of these the most important is the awakening and the uprising of the submerged masses in the old imperial lands.

It is an uprising not only against foreign domination, but also against their own native feudalism or tribalism and above all against their abject poverty. We could not, of course, control this historic movement even if we tried. But what we may be able

to do is to assist in a demonstration for all the world to see of how, without the sacrifice of human rights, it may be possible to conquer poverty.

We come now to the practical question of where this demonstration can best be made, and of how it can be made.

It can best be made in India. Why in India? First of all, because the demonstration must be made in a big country. Russia is a big country and China is a big country. And what we have to do is to demonstrate that poverty can be conquered in a big country. We have already proved in Puerto Rico what can be done in a small country which has a rich friend. Puerto Rico is inspiring. But it does not prove the point that has to be proved: that the standard of life can be raised decisively in a very big and a very poor country.

The second reason for choosing India for this demonstration is that if India turns to communism, as almost surely it will if it fails in its present plans of development, Asia will be dominated by three Communist powers—the Soviet Union, China, and India.

As things are going now in India, the rate of progress is so slow that for all practical human purposes there is no progress at all. The Indian economy is at present growing at a rate of about 4 percent a year. We must not be misled by the fact that this rate of growth is in fact faster than our own. That is a statistical illusion. For the Indian economy is so appallingly poor that if it grows only at the rate of 4 percent a year, it will take 35 years to increase the Indian per capita income to just over \$2 a week. If that is the best that can be done, there will be a political disaster in India before the 35 years are over.

The third reason for choosing India is that India now has enough technical ability, enough competence in organization, in management and in administration. Enough for what? Enough to use successfully an amount of foreign aid that will make possible within the next 8 to 15 years India's transition from economic stagnation to a condition of sustained economic growth.

The aim of India, as for any of the industrially underdeveloped countries, is to reach as quickly as possible the point of "economic takeoff" from which point on it can sustain its own further economic growth through its own surplus of capital and the normal channels of international investment.

Until this stage of development has been reached, India will require outside aid. It is estimated that India's need will be for between \$8 and \$10 billion of foreign exchange before it can reach the point of economic takeoff.

As a first step toward this goal, India is now preparing a third 5-year plan which envisions a total capital investment of \$20 billion from 1961 to 1966. One-fourth of this amount—\$5 billion—is required in foreign exchange and must come from such outside sources as the private-capital markets of the Western World, the World Bank and foreign governments. It is this effort to obtain \$1 billion a year from outside sources that the United States will want to support.

The third 5-year plan is designed to develop the sectors of India's economy that are crucial to its further development. The capital investment will be in agriculture, chiefly to build dams to provide water, and factories to provide fertilizer. It will also be in the development of oil, in steel, in the nonferrous metals, in heavy machinery and in the further development of coal, electric power and transport.

If the 5-year plan can fulfill its objectives, India in 1966 will be within a few years of achieving self-sufficiency, of having become an independent, self-generating economy. It will be close to its goal. It will be close to that point in its development where it will

need no foreign capital beyond what can be obtained by normal commercial operations and private foreign investment.

This can be done, as I said above, because India already has the administrative capacity to carry out successfully a large and sustained program of economic development. India is a frightfully poor country. But it is not backward, as are many countries in Africa, for example, where the masses are still living in the Stone Age and where society is still tribal. In India there is an educated class in government and in industry which is quite capable, if, for the next few years, it has some material help from the outside, of accomplishing the takeoff from the ancient stagnant poverty of Asia toward a progressive, independent, modern economy.

This is what Russia has accomplished in the past 40 years. This is what China may be accomplishing now.

Nobody can guarantee that India will succeed. The honest thing to say is that the odds are not unfavorable, and that what is asked of us in money is not very much, considering what we and all the world may win from making the attempt. What is asked of us is the better part of a billion dollars a year for the next 5 to 10 years. This is less than one-ninth of our present investment in surplus crops which we do not know what to do with.

To be sure, a billion dollars is a lot of money and even the United States cannot afford to throw it away carelessly. But a billion dollars a year for a few years to help India make the takeoff may be, if the experiment and the demonstration succeed, as good a gamble as this country has taken since Jefferson made the Louisiana Purchase and Seward bought Alaska. For if India can rise out of the stagnant morass of Asian poverty without resorting to the totalitarian method, we shall see one of the very great moments of the age we live in.

It will have been proved to all the world that there is another way to conquer poverty than that which is now being used in Russia and in China. If there is such another way, a resounding blow will have been struck for the cause of freedom.

When I think of this glorious gamble which is offered to us, I think of what is the alternative to our taking this monetary risk. If we will not make the contribution, what then? The answer is that in all probability there will set in a great despair in India, and in this despair the Communist alternative will find little resistance.

By failing now to respond to India's need, to meet this stirring challenge, we shall deprive India of choice. We shall, in effect, be asking India to sacrifice a whole generation to the totalitarian alternative. We shall be saying that we cannot afford to demonstrate that a democratic solution is possible.

If that happens because we do not understand the issue, just what, I ask myself, will we have been doing with the dollars which we refused to spend on the great gamble?

All or Nothing

EXTENSION OF REMARKS OF

HON. ELFORD A. CEDERBERG
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, August 5, 1959

Mr. CEDERBERG. Mr. Speaker, dramatization of creative capitalism as the last, best hope of our Nation is emphasized by Raymond Moley in an article in the current issue of *Newsweek* maga-

zine. Mr. Moley condemns the all-or-nothing philosophy which we all too often see applied with respect to programs of the Federal Government.

Mr. Moley's comments are timely and appropriate and I submit them for the consideration of my colleagues.

ALL OR NOTHING

(By Raymond Moley)

It is a matter of real regret that this piece may not agree with the sentiments of many conservative friends whose confidence and encouragement, either directly or through epistolary channels, I value beyond measure. But it seems to me that certain extremely practical reflections should be expressed plainly, reasonably, and in good humor.

I refer to many conservatives who in the past and recently have expressed, either in print or personally, great unhappiness concerning political leaders whose views and votes have not completely and specifically met their own convictions. The vice of such irreconcilability is that it defeats the very objectives that most conservatives are earnestly seeking. This habit, it seems to me, is much more a threat to sound government than all the power and prattle of radicals. The all-or-nothing attitude means a house divided, which cannot stand.

A few specific examples will illustrate what I mean. There are those who would abolish, not reform, the income tax; or stop, not rationalize, all foreign economic and military aid; or smash, not regulate, labor unions. In one State an irreconcilable ran for the Senate last year and only succeeded in electing a radical over the moderate Republican. In Idaho, to be more specific, some businessmen insisted upon putting "right to work" on the ballot against the advice of wiser heads and almost defeated a good Republican Governor. I believe in "right to work" supported by law. But I also believe that when the die is cast the proponents should be prepared. These were not. At the moment, there is considerable growing about Vice President Nixon as a Presidential candidate: "He is too close to Secretary Mitchell, and Mitchell is too friendly to labor." "He is too hard on civil rights and too soft on welfare." Etc.

CAN'T PLEASE EVERYBODY

President Eisenhower has been "too soft" on many things during these years, they say, and sometimes their complaints have been well taken. Even Senator Robert A. Taft, some conservatives thought, was too compromising. And Herbert Hoover, before Democrats created him as an archreactionary, was too progressive for many Republicans.

There are many conservative propaganda agencies sending out bales of literature which convert only the converted. The country can't be saved with words. It must be saved by toil and sweat in the precincts, but this the complainers leave to those pros whom they likewise excoriate.

The all-or-nothing conservative must realize that unless a political candidate or official is a hypocrite, he cannot conform to all the views of millions. The election of a public servant under our system is a choice of alternatives. In reaching for the branches, one may miss the firm trunk of the tree. Finally, there is the political consideration that the expression of such ultraconservative views gives the radicals exactly what they need for ammunition.

NEW NATIONAL POLICIES

I yearn sometimes for the pastoral days when I was a little boy and McKinley was President and Mark Hanna was running the Republican Party. McKinley was vilified by the New York conservative press in 1896 because he had voted for a silver act in 1878. Hanna was Senator Lodge's idea of a mon-

ster. But McKinley espoused the tariff views since made a fetish by Presidents Roosevelt, Truman, and Eisenhower. Hanna was a real friend of labor and a humane and popular employer. And despite the all-or-nothings of the time, the 1896 promise of a "full dinner pail" was redeemed with interest.

Since then, certain issues have been settled as national policy: The vicissitudes of old age are a national concern; securities selling must be regulated; the farmer must be protected from periodic ruin, and big labor unions are here to stay.

I want to anticipate the liberals who may read the foregoing. I want no part of their present philosophy.

As for the taunts of "me-tooer" and "so-you-would-do-all-those-things-but-better," my answer would be that I would like to see most of "those things" done better, and some I would quit doing at all. But while doing so, I would dramatize creative capitalism as the last, best hope.

Ex-Gov. Charles A. Sprague Calls Attention to Modest Salaries of AFL-CIO Labor Leaders in Oregon

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, August 5, 1959

Mr. NEUBERGER. Mr. President, organized labor has come under much attack, during recent years, because of the unsavory activities of a relatively few leaders of that great body of American working men and women. Therefore, it is a pleasure and privilege to call to the attention of the Senate favorable observations about organized labor from a source of unimpeachable integrity and sincerity. As the annual convention of the Oregon AFL-CIO opened in Seaside on August 3, one of Oregon's most eminent editors and publishers, ex-Gov. Charles A. Sprague, discussed on the editorial page of his Oregon Daily Statesman the salaries paid to the top leaders of organized labor in our State. Members of the Senate will be interested to learn that James T. Marr, executive secretary of the Oregon AFL-CIO, is paid an annual salary of \$9,880. J. D. McDonald, president of the AFL-CIO in Oregon, is paid \$8,840; George Brown, director of the political education division, is also paid \$8,840. Mrs. Zoe Wilson, director of women's activities, is paid \$5,200.

And ex-Governor Sprague, a Republican, who served with distinction as Oregon's chief executive from 1938 to 1942, adds the observation:

Considering the capabilities of these employees we would say they are entitled to higher pay—and they shouldn't have to strike to get it.

Because the country has seen a few unsavory and unethical examples of labor leaders who profit inordinately at the expense of their members, I want to call to the attention of the U.S. Senate the fact that a former distinguished Governor of our State, a Republican, has called attention to the compara-

tively low salaries paid to the top leaders of the AFL-CIO in Oregon.

Mr. President, I ask unanimous consent that the editorial entitled "Labor Convention," from the Oregon Daily Statesman of August 3, 1959, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LABOR CONVENTION

The annual convention of the Oregon AFL-CIO is being held the first 3 days of this week at Seaside. It is the fourth convention since the merger of the two organizations. The older, AFL, has a much longer period of activity on a statewide scale.

Labor conventions are always serious business for those who attend, though in off hours there is time for fraternization—and there is a fraternal spirit among those active in the labor movement, the common form of address in meeting being, "Brother * * *

The convention opens Monday with the usual address by the president, J. D. McDonald, giving his review of year past and his recommendations for the future. The secretary-treasurer, J. T. Marr, has published his annual report giving information to constituent unions of the activities of the State executive. One feature is a detailed financial report both of receipts and disbursements. This showed for the last year total disbursements for all programs of \$229,862. The receipts were from per capita dues and contributions, mostly from member unions. Salaries certainly are modest: for Marr \$9,880, McDonald \$8,840, George Brown, director of the political education division, \$8,840, Zoe Wilson, director of women's activities, \$5,200. (Considering the capabilities of these employees we would say they are entitled to higher pay—and they shouldn't have to strike to get it.)

The labor movement has incurred deep hostility in its continuing battle for improved wages and working conditions. Some of it is deserved, for duress remains a tool which labor brings out for use on occasion, but the AFL-CIO in Oregon merits a great deal of respect for the quality of its leadership, and the cleanness of its operation, free from graft or scandal or selling out the interests of members. With growing experience in labor negotiations both management and labor will mature in their relationships, with less of strife and violence which have marred industrial relations in former years.

The Public Demands That We Stop Inflation

EXTENSION OF REMARKS

OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. SIMPSON of Pennsylvania. Mr. Speaker, responsible businessmen are showing increasing concern that excessive spending proposals before the Congress will add fuel to the inflationary fire.

Mr. Frederick R. Kappel, president of the American Telephone & Telegraph Co., has expressed his views in a statement which appeared in the Nation's Business press this past week. I ask unanimous consent that it may be printed as an extension of my remarks:

I have received a number of letters from men and women who are concerned about inflation. One A.T. & T. share owner asked, "Why in heaven don't you speak out on this subject?"

The letter went on to say, "If you would alert the 1,625,000 share owners and 700,000 employees to the facts about inflation, they would help spread the news."

I warmly agree that it is essential to alert more people to the dangers of inflation, and we in the Bell system are speaking up and speaking out at every opportunity.

In recent articles and bulletins to employees, the Bell system companies have discussed the threat which inflation poses to the purchasing power of the dollar and to savings, insurance, and pensions.

At the annual meeting of the A.T. & T. share owners, I pointed out that inflation has been a tough problem in the telephone business. But we have not just talked about the problem; we have developed more efficient equipment and introduced many economies of operation. It is worth noting that the price of telephone service has generally gone up less since World War II than most other things.

But we know that the forces of inflation are far too widespread and powerful for any one individual or business to stem them singlehanded.

This brings me to the question that I believe so many are asking, "How can I help?" In these ways, it seems to me:

By giving spoken and written support to those who are working for a strong, sound, and stable dollar.

By opposing unreasonable demands, excessive spending, and schemes that add fuel to the inflationary fire.

Your friends and associates, and especially your representatives in Congress, are entitled to your constructive views.

For our part, we will continue to fight inflation by pushing research hard and effecting economies in our business. And by speaking out against this threat to the people and the country.

The Invitation to Khrushchev

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, August 5, 1959

Mr. JOHNSTON of South Carolina. Mr. President, I send to the desk an article entitled "The Invitation to Khrushchev," written by Mr. David Lawrence and appearing in the Washington Evening Star of August 4, 1959. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star, Aug. 4, 1959]

THE INVITATION TO KHRUSHCHEV—FUTILE GESTURE SEEN AS BERLIN ULTIMATUM STANDS WITH VIOLATIONS OF 1955 ACCORD

(By David Lawrence)

President Eisenhower certainly deserves an "A" for effort in trying to maintain world peace—but his decision to invite Soviet Premier Khrushchev to visit the United States probably will prove, through no fault of the President, as futile a gesture as was the summit conference of 1955 at Geneva.

Memories are short, but only 4 years have passed since Mr. Eisenhower fraternized with the top leaders of the Kremlin, including Nikita Khrushchev, amid worldwide acclaim and enthusiastic comments in the West that this was the way to bring about an easing of tensions and a solution of the current controversies of the cold war.

But every pledge made at Geneva has since been broken by the Soviet Government. It became necessary afterward for the United States actually to take a military posture in the Far East to prevent a Soviet-inspired invasion of Formosa by Red China's forces. Also, the United States had to land marines in Lebanon and take other measures to forestall a Soviet conquest of the Middle East.

Not only has the solemn promise, made at the 1955 summit meeting at Geneva, to assure the reunification of Germany, been broken, but within the last few months the Moscow government has issued an ultimatum to the Western powers to withdraw their forces from West Berlin or face the threat of war.

For several weeks now it has been the American position that there must be some "give" on the part of the Soviets before there could be a summit conference. The Moscow government has refused to give an inch. Consequently, the conference of the four foreign ministers has been deadlocked and is ending in failure.

The President has said there would be no summit conference until developments at Geneva justified it. Nikita Khrushchev insisted that the foreign ministers couldn't settle anything, and that the summit was the place to do it. He hasn't yet had his way entirely on that point, but he will have a chance in a two-man summit meeting to indicate whether the Soviets mean to withdraw their ultimatum on West Berlin.

Meanwhile, the President will go to London and Paris later this month to canvass the views of Prime Minister Macmillan of Britain and President de Gaulle of France. Presumably, Mr. Eisenhower will reflect the views of the Western allies when he meets Khrushchev, though the President will, as he says, not be their authorized spokesman in a formal sense. Then, after Premier Khrushchev has visited America, Mr. Eisenhower will pay a return visit to the Soviet Union.

Two points of view prevail today about the exchange of visits between the Soviet dictator and the American President. One is that tension will be eased and the cold war will thaw out a bit. The other view is that Khrushchev will tighten his hold on the Soviet people and will tell them that America now accepts the leaders of communism as equals. With a controlled press, this would mean misleading propaganda inside the Soviet Union and within the countries occupied by Soviet troops. The impression will be cultivated that the United States no longer is hostile to communism and that all dissenters in Eastern Europe had better give up their battle.

Time alone will tell which view of the Khrushchev trip will turn out to be the correct appraisal. But the Soviets thus far have given not the slightest indication of any concessions or changes, nor have they exhibited any evidence that they will not break agreements again.

The President, himself, is under no illusions. He knows that Khrushchev is bent on world conquest. But Mr. Eisenhower is betting on the inevitable restraints that peoples themselves can exercise when their leaders go too far. He is hoping his own visit to the Soviet Union will furnish another opportunity, like that accorded Vice President Nixon, to convey certain truths to the Soviet citizens.

It's a gamble, and hereabouts the comment is often heard that the advantages of

a visit by Khrushchev outweigh the disadvantages, and that no harm can be done by trying to educate him.

This, however, ignores the effect on the peoples of the captive nations of Eastern Europe who yearn for freedom and who have hoped in vain that the leadership of the West will do nothing to enhance the prestige of their oppressors. It is not a happy augury for the peoples inside East Germany and Hungary and Poland, where the fighters for freedom took a chance just a few years ago and made a heroic effort to secure their liberty.

But within a few months the Soviet game will have been exposed. The Soviet Premier will have been to America and will have discovered that Americans are not afraid to make sacrifices when challenged on a basic principle of human liberty. If he miscalculates in the future, as he has in the past, there certainly will be less demand for summit conferences thereafter for a long, long time, and there may even be pressure for the cutting down of trade and further exchanges with the Soviet Union.

Hitler misconstrued Chamberlain's mission to Munich in 1938 as a sign of weakness. It is to be hoped that Khrushchev will not thus misconstrue Mr. Eisenhower's concessions currently being made in a spirit of good will and accommodation. For it must be admitted that the Soviet leader now has been given his way. He goes to a summit meeting with the President of the United States without having acceded to the Western demand that he withdraw his ultimatum on Berlin.

Khrushchev's Tender Nerve

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. DULSKI. Mr. Speaker, a few days ago a significant editorial appeared in the Buffalo Evening News, Buffalo, N.Y., discussing the proclamation "Captive Nations Week." Since Nikita Khrushchev has been formally invited to visit the United States, the proclamation should be repeated upon his arrival.

This editorial deserves much consideration and expresses the views of our people.

The editorial follows:

MR. K'S TENDER NERVE

When Congress approved a proclamation of "Captive Nations Week" it was intended as a reminder that we of the free world had not forgotten the countries and peoples enslaved within the Soviet imperial empire; that, while we couldn't do very much about it, we recognize the bondage in which they are held by the Soviet Union.

It could very well have gone virtually unheeded had it not been for Nikita Khrushchev.

It was coincidental that the week was timed to be concurrent with Vice President Nixon's first days in Russia and there has been much fear expressed that it would handicap him in dealings with Khrushchev. The Soviet ruler has commented bitterly time after time about the resolution since Mr. Nixon's arrival. He has succeeded in calling more world attention to captive nations than conceivably would have been attracted by the mere passage of a congressional resolution in Washington.

At one point in an exchange with Mr. Nixon, the Communist leader made a statement that must be recognized throughout the world as idiotic; as a bare-faced lie—that on one could find a single captive in the Communist empire. Does he think for a minute that savagery in Hungary has been forgotten; that informed peoples do not know that 3 million Germans have fled Communist domination in East Germany; that anyone is ignorant of the flight of Vietnamese from North to South; that North Koreans are still deserting communism in North Korea?

If Khrushchev was talking for home consumption, the captives in the satellite nations are not deceived. If he hoped to convince anyone beyond the Communist orbit, it was wasted effort. Out of sheer fury he succeeded only in reminding the slave states—and the free world—of their serfdom.

Is General Motors a Better Risk Than the United States?

EXTENSION OF REMARKS
OF

HON. WALLACE F. BENNETT

OF UTAH

IN THE SENATE OF THE UNITED STATES
Wednesday, August 5, 1959

Mr. BENNETT. Mr. President, in the August 1959 issue of *Fortune* magazine there was published a very challenging article entitled "Is General Motors a Better Risk Than the United States?"

I ask unanimous consent that this article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Is General Motors a Better Risk Than the United States?

A sobering, not to say humiliating, paradox of the times is that the credit of the U.S. Government these days appears to be a good deal poorer than that of General Motors or many a lesser enterprise. Last month the Treasury found itself in the extraordinary situation of paying 4.7 percent to sell 1-year bills, or something above the prime rate for commercial loans. The total national debt has now ballooned to nearly \$290 billion, much of it in short-term form. While the number of owners of private corporate securities has doubled since 1946, redemption of U.S. savings bonds has been running ahead of sales; long-term U.S. marketable bonds have recently been bumping bottom; and since early 1958 the United States has lost some \$2.8 billion of gold to other countries. Rarely has a rich and powerful nation, whose obligations should command universal respect both at home and abroad, found itself in such shabby and indeed foolish financial shape.

It is to the immense credit of the Eisenhower administration that it proposes to meet head on this loss of confidence in the American dollar and in dollar obligations. Its first and most important step has been its drive for Government economy, which, together with mounting tax receipts, may turn a \$12.5-billion budget deficit in the past fiscal year into a small surplus this year, and a very considerable surplus in fiscal 1960-61. Its second step has been to ask Congress for latitude to raise interest rates on U.S. savings bonds, and to eliminate the 4½ percent interest ceiling on U.S. marketable bonds that was imposed back in 1918 and is now wholly out of line with market realities.

This request, of course, should have been granted for the asking. Unfortunately, it has stirred up in Congress an angry debate about the policies of the Federal Reserve Board and led to proposals that the Board hold interest rates down by supporting the Government bond market. This is an irresponsible and dangerous idea, on which the administration should not compromise, even though it may mean foregoing legislation on interest ceilings at this session. Soon or late, however, Congress and the country must face up to the facts of life. The Government will never solve its debt problem by selling bonds to itself. It will do so only through fiscal prudence, maintaining the integrity and independence of the Federal Reserve System, and freely issuing long-term securities that can pay their way.

The fundamental case for so doing was powerfully argued by Secretary of the Treasury Anderson himself when he appeared before the House Ways and Means Committee in June. In his initial statement—a classic exposition of sound monetary principles—he pointed out that the difficulty with the debt is not just its enormous size. The basic difficulty is that with interest ceilings on long-term bonds the Government is forced more and more toward short-term financing.

ONE STEP FROM MONEY

Of the total debt of \$290 billion, some \$45 billion is in the form of special issues held by various Government trust accounts, including social security. Another \$50-billion-odd is in savings bonds. Most of the balance, the so-called marketable debt of \$183 billion, is a vast jumble of short-term bills, 1-year certificates, notes of under 5 years, and bonds of over 5 years. Since World War II the average maturity of this debt has fallen from about 9 years to something less than 5 years. And in the next 12 months the Treasury will have to refund and roll over no less than \$78 billion of obligations.

The dangers of this kind of floating debt are not just that it keeps the Treasury constantly running to the money market but that maturing obligations—whether they be short-term bills or maturing bonds—are in Secretary Anderson's phrase "only one step away from money," and give the economy a highly unstable liquidity. Hence the rational objective of the Treasury is to lengthen out the debt by placing new long-term issues with the public; and on coming to office in July 1957, Secretary Anderson himself made a substantial effort in this direction. The process was interrupted in the summer of 1958 when the bond market collapsed partly as the result of overspeculation, partly through fears of continuing inflation, and partly because the economy was swinging from recession to recovery with an inevitable tightening of interest rates as private borrowers returned to the market.

That tightening has gone forward rapidly, with the result that Government bonds, issued in a period of easier money, have remained well below par and yields on even medium-term bonds have ranged in some cases over 4½ percent. With an interest ceiling on marketable bonds of 4¼ percent, the Treasury is effectively blocked off from the medium- and long-term market. Meanwhile, an interest return of 3¼ percent on E and H savings bonds has proved insufficient to attract small individual investors. In this case, no less than in the case of the marketable debt, limitations on interest rates have proved to be a snare and delusion.

EXPLOSIVE PACKAGE

Thus Secretary Anderson had and has in logic an airtight brief for freeing the Treasury's hands. Indeed, so powerful was this case that it looked for a time as if the House Ways and Means Committee, chairmanned by the immensely able WILBUR MILLS, Democrat, of Arkansas, would give him about

what he wanted, with no strings attached. Thereafter, the combined pressure of congressional advocates of easy money, and the historic position of the Democratic Party against high interest rates, came into play. On July 8, the Ways and Means Committee tentatively agreed to a package deal that was far from satisfactory to the Treasury and that outraged the Federal Reserve. Under the deal, the President could at his discretion lift interest rates on Government marketable bonds above the 4¼ percent limit for only 2 years—an unsatisfactory grant of power at best. To this the committee appended a loosely worded proviso which, while making a bow toward sound monetary policy, nevertheless would declare that it is the sense of the Congress that the Federal Reserve System should bring about needed future monetary expansion by purchasing U.S. Government securities of varying maturities, rather than by other methods.

Whatever the eventual fate of this provision, it represents a powerful and dangerous congressional trend toward unsound monetary policies that should be opposed by the Treasury no less than by the Federal Reserve. Unfortunately, its implicit philosophy has become all too popular. In the House, Representatives including the indefatigable WRIGHT PATMAN, CHESTER BOWLES, and HENRY REUSS have argued that Reserve purchase of Federal bonds is the way to avoid high interest rates and facilitate Treasury financing. In the Senate, LYDON JOHNSON seems to feel that such rates are not the result but the cause of inflation. Meanwhile, so-called liberal intellectuals like Leon Keyserling have been asserting that high interest rates impede economic growth, a point that cheerfully overlooks the fact that that in the easy-money days of the thirties the United States had some 9 million unemployed. "The Federal Reserve System," intoned Mr. Keyserling last month in a new pamphlet, "should move toward supporting the Government bond market at par, and help to stabilize Federal borrowing at much lower interest rates than the current levels."

But this pronouncement of Mr. Keyserling gives the whole show away, and indicates clearly why present efforts to dictate and change Federal Reserve policies should be defeated even if this means deferring action on Treasury interest rates. Over the years, of course, there has been considerable technical discussion as to how the Fed should fulfill its primary mission of controlling the Nation's money supply; and so learned an authority as Allan Sproul, former chairman of the Federal Reserve Bank of New York, has argued that it should occasionally buy and sell long-term governments as well as short-term bills as at present. But what soft-money advocates in Congress clearly want is something quite different and much more dangerous.

Their idea is that the Fed return to its wartime and postwar practice of indefinitely pegging Government bonds to make them attractive to the public. This is to turn the Fed into an "engine of inflation," since, as it buys securities it creates new high-powered bank reserves. To argue, as some Congressmen have, that these can be extinguished by raising Reserve requirements is impractical and could end in a nationalized banking system. Finally, those who advocate bond pegging—overtly or covertly—have wholly misunderstood the role of interest rates in the free economy. Interest in simplest terms is the price of borrowed funds, and to try to hold this price down artificially is on a par with tinkering with the thermometer as a means of curing a feverish patient.

SYMBOL OF SECURITY

The high road to an expanding and healthy economy lies in a quite different direction. It is first to limit Federal spending and to

achieve not just budget balance but a budget surplus. Such a surplus would relieve the Treasury of some trips to the market for new money and would thus ease the present pressure on short-term money rates. But more, a substantial surplus would allow the Government to pay off part of its short-term debt, and to begin to issue bonds of longer term in far happier circumstances than today. This, however, would be only a beginning at getting the debt under control. In addition, the Treasury with a surplus in hand could begin to make advance refundings of bonds now nearing maturity, replacing them with much longer term obligations at interest rates in tune with the market, thus recasting the entire structure of the debt.

Such refunding was attempted with some success last summer by the Government of Canada, and the United States should be able to do better once it has achieved a surplus. Whatever may be said against Secretary of Treasury Andrew Mellon he did in the twenties manage to pay off debt, give respectability to Government securities, and incidentally reduce interest costs. Even more in point is the accomplishment of the British Government in the 19th century—the great century of expansion, currency convertibility, and prosperity. In this period Britain so managed its finances that the British consols (bearing no maturity and paying 3 percent or less) became a symbol of security and was avidly sought by investors throughout the civilized world.

There is no reason why, given time and persistence, the U.S. Government cannot issue obligations that will achieve equal distinction and renown. A national debt, said Alexander Hamilton, is a national blessing. It can be if securely held by people who trust the borrower. But such confidence must be earned. The United States will never earn this confidence by turning the Federal Reserve into an agency of printing-press money. It will do so as the Treasury puts its house in order, restores a surplus, and issues obligations that can meet the acid test of the market place. The proponents of easy money have nothing to offer but more inflation. It is just not good enough for a country that, as never before, should insist on maintaining the integrity of the dollar.

Labor Backs Turner

EXTENSION OF REMARKS OF

HON. ROY W. WIER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. WIER. Mr. Speaker, people in the field of labor are fully appreciative of the many difficulties that confront them in undertaking to get fair consideration of their positions in matters affecting the public interest and the welfare of the working people.

For this reason I am exercising my leave to extend my remarks and insert in the Record the following statement, which appeared in the Trades Unionist, publication of the Central Labor Council, Washington, D.C., Saturday, July 25, 1959:

LABOR BACKS TURNER

At this week's meeting of the CLC it was adopted with an emphatic unanimous vote that:

In the light of a local newspaper's statement, challenging the authority and accuracy

of the testimony before the House District Committee, July 9, of Mr. J. C. Turner, the president of the Greater Washington Labor Council, in support of an equitable unemployment compensation bill (H.R. 1378), the Greater Washington Central Labor Council should take the necessary steps to cause the record of said hearing to show:

1. J. C. Turner is the unanimously elected president of the Greater Washington Central Labor Council, the election having occurred in open session of that body on January 19, 1959.

2. The data presented and the position taken by Mr. Turner in his testimony had previously been unanimously approved by the Greater Washington Central Labor Council and by its affiliated organizations.

3. Mr. Turner is a man who, by his record of achievement in labor and other civic activities in the Washington community, commands the respect of his fellow citizens.

4. In view of the actual facts, the attack on Mr. Turner was wholly unwarranted and unethical and it merits the censure of all citizens honestly concerned with a good community program of public service.

Vernon Louviere, Respected Washington Reporter, Had Exacting Training

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, August 5, 1959

Mr. YARBOROUGH. Mr. President, Mr. Vernon Louviere, of the Bascom Timmons Agency, which is known to virtually all Members of the Senate, is one of the ablest, most intellectual, independent, and respected members of the Washington press corps. He is noted for his ability to probe to the heart of a subject and to interpret it to his readers. He is also known for the fairness and accuracy of his reports.

Mr. Louviere's journalistic abilities come from a wealth of experience which began in New Orleans and has included time on a Washington daily newspaper as well.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "New Orleans Beat 'Baptized' Vernon Louviere as Newsmen," written by Zarko Franks, and printed in the Houston (Tex.) Chronicle of July 24, 1959.

The article points out that Mr. Louviere's investigations included investigations of crime when he was in disguise. The article reads like a detective story when it discusses the things which Mr. Louviere uncovered. It states that he was taught in the school of hard knocks to go after the real story and to get the facts. The article pays great tribute to this able newspaperman.

There being no objection, the article was ordered to be printed in the Record, as follows:

NEW ORLEANS BEAT "BAPTIZED" VERNON LOUVIERE AS NEWSMAN
(By Zarko Franks)

A fire-eating editor once said:
"Give me a reporter baptized on the police beat. One who has seen first-hand death and suffering and scandal."

"He must be part confidence man, part bloodhound and part humanitarian."

"And let him be dedicated always to the great God Story."

His colleagues say that Vernon Louviere, Chronicle Washington correspondent, comes close to that high water mark.

HE'S SEEN IT

His background as an investigative reporter in jazz-loving, high-living New Orleans is testimony to his no-holds barred approach to a story.

Since then he has worked on several other newspapers (two folded) before he joined the Chronicle bureau in Washington.

Today, his job is keeping Texans informed of what's going on in the Nation's Capitol.

His chief concern, of course, is matters of interest to Texas.

This means keeping abreast of the Texas twins, Speaker SAM RAYBURN and Senate Majority Leader LYNDON JOHNSON.

APPRAISES JOHNSON

As far as JOHNSON is concerned, Louviere says:

"I think he's running for President. He's been making all the noises and, of course, denying it at every breath."

Covering the Nation's Capitol, to Louviere, is a far cry from the blood and tears of a New Orleans police precinct.

However, the basic requirements of good reporting, he says, are the same.

His most memorable newspaper story, he recalls, is a celebrated murder case in his hometown of New Orleans.

He was working on the New Orleans States at the time.

HERE'S STORY

The badly decomposed body of an unidentified man was found in a swamp. A knife was in his back.

A filing station attendant named Donald Easterwood was accused of murder.

The body was identified by a housewife as that of her husband.

She based her identification on a blue button on the khaki pants worn by the dead man.

She had sewn such a button on her husband's khakis, she said.

The little finger on the slain man's left hand was crooked. Her husband had such a twisted finger, she said.

Thus the corpse was identified as that of Sam Jones.

Louviere and a photographer slipped into the jail and had several minutes alone with the accused killer.

The police had beaten him to make him confess, he sobbed. He showed them his bruised body.

SUSPECT ACQUITTED

The camera clicked, and Louviere listened. At the murder trial, the defense introduced the pictures and Louviere's story repudiating the confession.

Donald Easterwood was acquitted.

"The Hitchcock punchline in this story," says Louviere, "came a year later. Sam Jones, identified as the dead man, was found alive in New Orleans."

The body with the knife in its back in the swamp? It was never identified, he says.

During his investigative hey-day in New Orleans he and a registered nurse, posing as a married couple, called on more than a score of midwives, suspected of performing abortions.

LAWS TIGHTENED

His series of stories led to tightening up of State laws governing midwives.

Louviere, a big, soft-voiced man, was educated in public schools in New Orleans and attended L.S.U.

For some 4 years he served as a member of an armed guard crew (U.S. Navy) aboard merchant ships during the war.

Louviere, 39, his wife, Jean, and their three children, Nancy 13, Adrian Ann 9, and Tommy 7, live in Arlington, Va.

Congress restores interstate aid to levels anticipated when the interstate program was originally established.

JOHN C. MACKIE,
State Highway Commissioner.

JULY 31, 1959.

Mr. JOHN C. MACKIE,
State Highway Commissioner,
Lansing, Mich.:

I have received your telegram of July 30 deploring action of House Ways and Means Committee in reporting slow-down financing plan for construction of the National Interstate Highway System. I agree that this would have serious effect on the several Michigan projects mentioned in your telegram and would regret any delay or slowing up of interstate program in our State. Since Ways and Means Committee, however, has rejected all other proposals for additional financing, I do not know what alternative remains at this late date in our session. It is too bad that members of your Democratic Party who control this committee as well as House of Representatives did not support alternative financing plan which would have permitted the program to proceed according to schedule. Now that we are apparently faced with this financing proposal or nothing, I am afraid we will have to support whatever the Ways and Means Committee brings before us.

Congressman ALVIN M. BENTLEY.

National Interstate Highway System

EXTENSION OF REMARKS OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following exchange of correspondence I had with John C. Mackie, Michigan State highway commissioner, concerning the financing plan for the construction of the National Interstate Highway System reported out of the Ways and Means Committee last week.

LANSING, MICH., July 30, 1959.

Hon. ALVIN M. BENTLEY,
Member of Congress, House Office Building,
Washington, D.C.:

Michigan will be forced to scrap its 5-year, \$1½ billion new highway program if Congress passes slow-down financing plan for construction of the National Interstate Highway System reported out of House Ways and Means Committee yesterday. The Department is stunned and dejected at the committee's action. The bill will reduce Federal highway aid to Michigan in 1960-61-62 \$141 million under levels anticipated when our program was announced. (From \$278.6 million to \$136.8 million.) Frankly, it almost amounts to a break in faith by the Congress with the various highway departments from amounts planned when the 1956 Federal highway bill was passed and the Federal gas tax increased from 1½ to 3 cents. We have been desperately gearing our engineering right-of-way and design schedules pointing toward a record 1960 construction year which would put Michigan far out front in highways. It seems incredible long hours of urgent labor we have put into gearing for 1960 may have been spent in vain. Michigan has already programed \$84 million in 1960 Interstate Federal aid with the Bureau of Public Roads, but the committee bill will allow us only \$58.6 million instead of the \$96.7 million we had been promised. The action amounts to penalizing States that have moved with speed to build roads. Grim reality of what proposed cutback means probably best illustrated by projects which will be slowed or indefinitely delayed, scheduled for 1960 and 1961. They include the following:

1. Walter P. Chrysler Expressway, Metropolitan Detroit, plus right-of-way and engineering on 12 miles of the proposed Fisher Expressway in Detroit, Wayne County.

2. One hundred and fifteen miles Detroit-Muskegon Expressway, U.S. 16 (Interstate 96) in Livingston, Ingham, Clinton, Kent, Ottawa, Muskegon Counties.

3. Forty-seven miles relocation U.S. 25 (Interstate 94) which calls for extension of the Edsel Ford Expressway through Macomb and St. Clair Counties to Port Huron.

4. Seventy-two miles of relocation of U.S. 27 and U.S. 2 (Interstate 75) in Crawford, Otsego, and Chippewa Counties.

5. Forty-four miles of relocated U.S. 10 (Interstate 75) in Oakland County from South Oakland County to connection with the Fenton-Clio Expressway in Genesee County. We will have to abandon our announced schedule for these and a few other projects unless

Help Wanted for the "40-Plus"

EXTENSION OF REMARKS OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. McDOWELL. Mr. Speaker, I am very pleased that the National Conference of 40-Plus Clubs of the United States considers both moderate and desirable my plan to create a Federal Interagency Committee on Federal Employment of its Older Workers. It is becoming increasingly clear that the Government itself must do more than grind out high-sounding releases on employment of the aging. In fact, the Government itself must take positive steps to preserve for such workers opportunities for Federal employment without discrimination.

There are more than 14 million people in the United States today over 65, and we are rapidly becoming an older population.

Labor Secretary James P. Mitchell and HEW Secretary Arthur S. Flemming have been calling for the employment of older workers and their retraining to make it possible for them to find new employment. Yet the Federal Government itself does very little to train or employ older workers. Without positive steps to enable older workers to find employment on a fair basis with other workers, the words of these Federal officials fall pretty flat.

My bill—House Joint Resolution 437—would insure that the Federal Government would set an example for private industry to follow in the employment of older workers, not just sit on the sidelines.

Dr. Harry J. Johnson, president of the Life Extension Foundation, points out that other countries do not have our type of mandatory retirement programs because other nations do not feel they can face the industrial consequences of shelving a large segment of their most productive people when they are still able to work.

The Chairman of the National Committee on the Aging, G. Warfield Hobbs, points out that half of the country's 9,000 scientists and 32,500 engineers over 65 are retired and he comments that—

We talk of educating youngsters in science but we overlook those we already have. A scientist in the hand is worth two in the cradle.

At the present time, even if a Federal employee wants to work past his mandatory retirement age and is capable of doing so, he finds that he cannot because of the narrow restrictions imposed by the very officials of the Federal Government who have been busily exhorting private industry to set an example in the employment of older workers.

I include here the text of a letter I have recently received from the president of the National Conference of 40-Plus Clubs of the United States, Mr. Henry Carter, in support of my measure, House Joint Resolution 437.

The Chinese Communists, So Extolled in the Past as Benevolent Liberators and Agrarian Reformers, Decide To Let Millions of Chinese People Die of Starvation Rather Than Receive Food From the International Red Cross

EXTENSION OF REMARKS OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Washington News of August 3, 1959:

[From the Washington News, Aug. 3, 1959]

RED CHINESE CRUELTY

Red China continues to turn down offers of assistance even though hundreds of thousands of Chinese are suffering from record floods and droughts.

The International League of Red Cross Societies in Geneva asked that unarmed cargo planes be permitted to fly over areas in south China to drop supplies. But Peiping scornfully rejected the idea.

The reason is clear. The Communist regime has made fantastic claims of rising food production and to accept help would be to admit it had few or no reserves for an emergency.

Obviously, too, the commune system is failing and any confession of inadequacy would hasten the demoralization of the Chinese forced to live under its rigorous rules.

Viewing people as mere pawns of state politics, the Communists would rather let the mainland Chinese starve than admit they can't feed them. This cruel indifference will not be lost on millions of overseas Chinese aware of the relatives' suffering, or on the neutral nations around the rim of the Communist tyranny.

I also include the text of House Joint Resolution 437, as well as an article from the Reader's Digest regarding the obsolete employment policies which are causing a huge waste of valuable talent and skill:

NATIONAL CONFERENCE OF FORTY
PLUS CLUBS OF THE UNITED STATES,
Washington, D.C., July 20, 1959.

HON. HARRIS B. McDOWELL, Jr.,
House of Representatives,
Washington, D.C.

DEAR MR. McDOWELL: I have received your letter of July 15 and have noted with interest your proposed bill for the establishment of a Committee on Governmental Employment of Older Workers.

It would seem to me that your proposal is both moderate and desirable, and might well serve as a step toward more concrete measures toward the same end in respect of employment of older workers in business and industry. Certainly, if the Federal Government is showing itself to be an enlightened employer with respect to older persons in Federal employ, it will be in a far more effective position to urge analogous employment policies upon private employers.

Necessarily, reeducation in this field is not a thing which can be arrived at overnight or by executive fiat, and it would seem to me that the step by step approach exemplified in your resolution is the wise and proper way to proceed.

If I can be of any assistance in this matter, please let me know. You are of course at liberty to use this letter in whatever way seems to you appropriate in the premises.

Sincerely,

HENRY CARTER,
President.

HOUSE JOINT RESOLUTION 437

Joint resolution providing for the establishment of a Federal committee on the employment of older workers in order to preserve for such workers opportunities for Federal employment without discrimination because of age

Whereas it is the policy of the United States Government that equal opportunity be afforded all qualified persons, consistent with law, for employment in the Federal Government; and

Whereas this policy necessarily excludes and prohibits discrimination against any employee or applicant for employment in the Federal Government because of age; and

Whereas it is essential to the effective application of this policy in all civilian personnel matters that all departments and agencies of the executive branch of the Government adhere to this policy in a fair, objective, and uniform manner: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That there is hereby established the Committee on Government Employment of Older Workers (hereinafter in this joint resolution referred to as the "Committee"). The Committee shall be composed of seven members as follows: (a) one representative of the Civil Service Commission, to be designated by the Chairman thereof, (b) one representative of the Department of Labor, to be designated by the Secretary of Labor, (c) one representative of the Office of Defense Mobilization, to be designated by the Director thereof, (d) one representative of the Department of Defense, to be designated by the Secretary of Defense, and (e) three public members to be appointed by the President. Not more than two alternate public members may be appointed by the President as he may deem necessary. Four members of the Committee shall constitute a quorum: *Provided*, That at least

one public member (or alternate public member) and one nonpublic member are present. The President shall designate the Chairman and the Vice Chairman of the Committee, and each member of the Committee shall serve at the pleasure of the President.

SEC. 2. The Committee shall—

(1) advise the President and the Congress periodically as to whether the civilian employment practices in the Federal Government are in conformity with the nondiscriminatory employment policy with respect to employment of older workers, and, whenever deemed necessary or desirable recommend methods of assuring uniformity in such practices;

(2) at the request of the head of a department or agency consult with and advise them concerning nondiscriminatory employment policies with respect to employment of older workers and regulations of such department or agency relating to such policies;

(3) consult with and advise the Civil Service Commission with respect to civil service regulations relating to nondiscriminatory practices with respect to the employment of older workers;

(4) review cases referred to it under the provisions of this joint resolution and render advisory opinions on the disposition of such cases to the heads of the departments or agencies concerned;

(5) make such inquiries and investigations as may be necessary to carry out its responsibilities under this section.

SEC. 3. The head of each executive department and agency shall be responsible for the effectuation of the policy with respect to the employment of older workers in connection with all civilian personnel matters under his authority.

SEC. 4. The head of each executive department and agency may refer any case coming within the purview of this joint resolution to the Committee for review and an advisory opinion whenever he deems necessary.

SEC. 5. The Civil Service Commission shall issue such regulations as may be necessary to implement the policy of this joint resolution.

[From Reader's Digest]

HELP WANTED FOR THE 40-PLUS

(By Ronald Schiller)

Forty-seven-year-old Harry Davis boarded his usual commuter train in a pleasant suburb. There was nothing in his appearance that set him apart. But the appearance was a mask, for Harry Davis was a man in desperate trouble. After 23 years with the same firm, he had lost his \$11,000 job as office manager when his company merged with a larger concern. And despite a year of heroic effort, he had been unable to find another position—because of his age.

When the train reached the city, Harry strode purposefully down the station platform. But instead of boarding a bus or taxi to his office, as did the other passengers, he went into the waiting room. This was the moment when that feeling of despair and panic invariably assailed him. He waited for it to subside, then telephoned the three employment agencies where he had applications on file. He got the usual answers: "Nothing interesting for you today, Mr. Davis." Next he opened his newspaper to the employment section (he didn't like to read it on the train where friends might see him) and scanned the long columns, skipping those ads which specified "under 40" or "under 45," circling others which required personal letters. Most of the rest of the day he spent sitting in offices waiting to be interviewed by personnel managers, most of them younger than he, who had answered his letters regarding previous ads.

Harry's interviews usually went well. He is capable, intelligent, and well-qualified for

the positions he has sought. But he cannot hide the damning "age: 47" on his application blank. He is on the wrong side of that mysterious, senseless 40-year age barrier which, in the American labor market, separates the employables from those considered "too old" to hire.

Among Harry's worst enemies are the pension and retirement plans that many firms have instituted to protect their employees. To hire a man Harry's age a company may have to pay twice as much in premiums as for a man in his thirties. When Harry has offered to waive his pension rights or pay the additional premiums himself, he has usually been told that it is "against company policy" or that it would "mess up the bookkeeping."

A big problem to a man in Harry's position is to maintain his morale. A dozen times a day he has to remind himself, "You're in fine health, you're in the prime of life, you've had valuable business experience. You may land the very next job you apply for. Just keep plugging."

But these self-administered pep talks cannot stay Harry's rapidly deteriorating financial condition. Like many white-collar workers, he has never been able to save much money. There has been a family to raise—two sons—and his position has required that he maintain a good standard of living. He received 2 months' severance pay when he was discharged, and State unemployment compensation helped while it lasted. But, outside of a little money in the bank, his only assets are a 3-year-old car, some life insurance, and a \$16,000 house on which there remains a \$10,000 mortgage.

I do not know what is going to happen to Harry and his family. When I last saw him he was on his way to another interview, for a job as supervisor of a shipping department for a small firm that would pay him \$4,000 a year. "It's a young company," said Harry hopefully. "With my experience there should be plenty of room for advancement."

Everything related here about Harry Davis is true except his name. But whatever we call him, he is important to us. He is representative of a growing reservoir of unemployed American men over 40, and women over 35. I have interviewed many such men and women, ranging from factory and office workers to professionals and executives. Their stories differ in detail from Harry's but they all share three things: frustrated lives, shattered hopes, and fear of the future.

Age bias in employment is an increasingly serious matter in the United States, because the proportion of middle aged in our population is rocketing upward. Fifty years ago the average life expectancy of American men was 47 years; today it is 67. Moreover, people today stay young longer. Their normal useful working life has stretched considerably. Yet employers continue to set age limitations in their hiring policies that might have applied in the 1890's.

The Department of Labor recently made an extensive survey of employers to find out why they don't hire older workers. The reasons were difficult to pin down. But the general feeling was that older people were too slow to meet production requirements, too set in their ways, less creative than younger workers, harder to train, more prone to absenteeism, and that their physical condition was not as good.

The latter charge is undeniably true; if a job involves heavy physical work, a young man is apt to be better. But the other "reasons" have turned out to be myths. A survey of 3,313,000 employees made by the National Association of Manufacturers showed that in work performance 93 percent of the older workers were equal or superior and only 7 percent were not equal to younger workers. A more detailed study by the University of Illinois revealed that rates of absenteeism and

lateness are actually lower among older employees, and that their loyalty, sense of responsibility, and morale are higher. They are also less prone to accidents.

On the white collar and executive level a common myth is that serious morale problems develop if older men are put to work under executives younger than themselves. In cases where circumstances have forced the issue, this theory has failed to hold up. Two years ago, for example, a New Jersey electronic concern, needing executive help, violated its own employment age policy by hiring two men in their fifties. They turned out so well that last year five more were hired. "From now on older men get preference here," the young president of the firm told me. "They've upgraded the whole level of work."

"Actually," states the NAM report, "older workers are the cream of the crop."

As a result of such findings, a few large concerns have begun to reexamine their employment practices, with good results. One department store now makes it a policy to hire older workers. "Hiring employees over 40 is good business for us," reports a Chicago manufacturer, adding that any slowing of speed among older workers is more than made up by higher quality work. An insurance company, disturbed by the fact that many girl officer workers quit work after a short time, now makes it a policy to hire older women.

The Forty-Plus clubs, composed of older unemployed executives who have banded together in several cities to help each other find jobs, were among the first agencies to dramatize the situation, and over a period of years report some remarkable successes. The New York club has placed so many of its members in the past 2 years that it has had to advertise for new job seekers. The Boston club reports it return to employment "83 out of every 100 men" within 8 to 28 days. The San Francisco club's roster has dropped by two-thirds.

Meanwhile, to help women over 40 find employment, San Francisco businessmen last year established an organization called Careers Unlimited. It has placed more than 50 women in jobs each month. Similar organizations have been springing up in other cities.

But hopeful as these activities are, they have not yet succeeded in skimming off more than a fraction of the middle-aged job seekers who report to Government employment agencies each month. The tragic fact revealed by the Department of Labor survey is that half of all employers still have age restrictions, and that between 50 and 60 percent of the job openings are still not available to men over 40 or 45, or to women over 35.

Federal and State Governments have not been idle. Two years ago the Federal Government took the initiative by abolishing age restrictions on Federal jobs. Five States—Colorado, Louisiana, Massachusetts, Pennsylvania, and Rhode Island—have passed laws forbidding age discrimination against workers, by either government or private employers.

But employment experts now place their greatest hope in a new concept: special job counseling for workers over 40. The Department of Labor plans to help install trained counselors in all 1,700 of its employment offices this year. The program is based on the highly successful experiences in Canada and New York State, where special advisers have succeeded in raising job placement of older workers by as much as 400 percent.

The job counselor's task ranges from helping an applicant to recast his whole plan for the future down to such simple advice as telling a woman to use less lipstick. Sometimes the counselor's most obvious advice requires the most persuasion, such as convincing a job seeker to be more realistic

about pay demands, or to look for a job on the fringes of a city where younger people are often reluctant to work, or to retrain himself in a skill that is in greater demand.

In analyzing an applicant's qualifications the counselor also searches for hidden employable talents the job seeker may not himself know he possesses. Examples: a 55-year-old textile salesman, unemployed for 16 months, found satisfying work as a proof-reader; a 59-year-old former Army paymaster won a position as head of the research department of an advertising agency.

Persuading employers to drop their age bars is the toughest part of the counselor's job. It takes missionary zeal, diplomacy "and sometimes a touch of honest guile," says Joe Nawn, special counselor to the 40-plus job seekers at the Newburgh, N.Y., State Employment Office. Once an employer phoned Joe asking if he had a receptionist—"under 30, of course." Joe knew a widow who qualified in everything but age and badly needed the work. He talked so fast and enthusiastically about the lady's experience, ability, and charm that the question of age never arose again. A month later the employer called to say how pleased he was with his new receptionist. "Did you know she was over 50?" asked Joe. "Gosh," exclaimed the shocked employer: "I forgot to ask her age."

"No community today can afford to be without the services of a special job counselor for the 40-plus," says Senator Thomas C. Desmond, chairman of New York State's Legislative Committee on Problems of the Aging. "But the counselor cannot do the whole job. He needs the community's help."

Desmond's plan for community action consists of four steps: (1) Organize a steering committee of members from the local chamber of commerce, service clubs, and other civic groups; (2) make sure a special job counselor is appointed to the local employment agency; (3) utilize the local schools' vocational and adult-education services to retrain the unemployed when necessary; (4) enlist the community's biggest guns to help break down local employers' prejudices against older workers.

Any suggestion that older workers should be hired as a charitable gesture, or as a civic duty, infuriates Senator Desmond. "It should be no such thing," he explodes. "Employers should hire them because it's to their own economic self-interest to do so. Older workers earn every dollar paid them."

The crisis that confront the 40-plus right now, in an era of almost full employment, will seem minor compared with what we may expect in the 1960's, when the World War II baby crop enters the labor market. Unless business changes its attitude soon, warns Secretary of Labor James Mitchell, the growing number of middle-aged unemployed could become "the most potent group this country has ever known and force some kind of public program for its own survival."

The fact is, as President Eisenhower has stated, "We cannot afford to squander our manpower through a prejudice which obscures the values of maturity, responsibility, and constancy found in older workers."

Verrazano Bridge

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. CELLER. Mr. Speaker, it is difficult to understand the hubbub about

giving the bridge across the Narrows the name "Verrazano."

The Staten Island Chamber of Commerce questions the honoring of "a foreigner who made a navigational mistake." The name "Verrazano" should not be strange or foreign to the American people. He did contribute to the navigational and geographical progress of his times and is worthwhile honoring. We have named a bridge Kosciuszko. It may be that some people cannot spell it—that is just their misfortune. Many cannot spell Tappan Zee, the bridge across the Hudson. No one would change the name "Tappan Zee" for that reason. If Staten Islanders cannot spell the name "Verrazano," giving the bridge this name would be a good way for them to learn how.

As to the doubts about Verrazano's discoveries, there are grave doubts concerning many navigators and their exploits. Furthermore, the name "Verrazano" is held in highest esteem in Italy, and the naming of the bridge would be another link in the chain forged between our country and the forefathers of Verrazano. Throughout the Nation bridges have the names of distinguished men of the past.

National Citizens Committee for Columbus Day Planning Conference

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. RODINO. Mr. Speaker, more and more, free governments are learning to recognize the need for building bridges of mutual understanding and friendship between peoples in order to bring governments and free nations together in their common quest for peace.

Many years ago, a fearless navigator of immense spiritual faith and indomitable courage sailed the seas to link the Old World with the New. His bold historic act has served as an inspiration for men of ideas and vision, and the name Columbus is a symbol for all of the Americas.

Because there is so much ferment in the world today, and especially in the Latin Americas where our brothers feel so fiercely the surge for freedom it is my hope that the symbol of Columbus and the theme "Americans All" may be significant factors in establishing closer ties between the peoples of the Americas.

As national chairman of the Columbus Foundation, it was my privilege to convene a planning conference of the National Citizens Committee for Columbus Day at the Press Club on June 30, 1959. Among those who addressed the conference were, U.S. Senator WAYNE MORSE, of Oregon; Representative THOMAS MORGAN, of Pennsylvania; and Representative ARMISTEAD SELDEN, of Alabama.

Since all of these distinguished gentlemen have dealt with Latin American

affairs, their remarks are particularly noteworthy. It is important to point out here that Senator MORSE serves as chairman of the Senate Subcommittee on Latin American Affairs, Representative MORGAN is chairman of the House Foreign Affairs Committee, and Representative SELDEN is chairman of the Subcommittee on Inter-American Affairs of the Foreign Affairs Committee.

Under leave to extend my remarks, I wish to include herein the speeches of Senator MORSE, Representative MORGAN, and Representative SELDEN:

SPEECH OF SENATOR WAYNE MORSE BEFORE NATIONAL CITIZENS COMMITTEE FOR COLUMBUS DAY PLANNING CONFERENCE AT THE NATIONAL PRESS CLUB, JUNE 30, 1959

Mr. Chairman, it is a real pleasure and honor for me to be here with you today to participate in this 1959 Columbus Day Planning Conference.

Jack and Ruth O'Brien, through their very active work with the National Citizens Committee for Columbus Day, are fulfilling the role of true citizenship. Too many times, people with good ideas and good intentions think that only government can carry out some worthwhile program, particularly when it involves international relations or policies. It is easy to forget that in a free country, government policies often follow, as well as lead. Here is one instance where a group of private citizens, acting on their own behalf, are giving leadership to the U.S. Government in an area where leadership has been sadly lacking, and the progress you are making is in no small part due to the vigor and public-spirited manner which Jack and Ruth have displayed. They have been of great assistance to me, too, in my work as chairman of the Latin American Affairs Subcommittee of the Senate.

POTENTIAL VALUE OF COLUMBUS DAY

Columbus Day celebrations and observances could become the instrument for a rebirth of the good-neighbor relationship which characterized our policy toward Latin America in the 1930's and 1940's. Columbus Day is, after all, the common heritage we share with our neighbors to the south. It does not depend for its existence upon an artificial act of government; and even if it were never marked or celebrated anywhere, it would still exist in history as the common denominator of all the people of the New World, the Western Hemisphere.

That is why Columbus Day has many advantages. It presents us with an opportunity we should not miss. It unites people of varying races, religions, and national origins as no declaration of any government or national official can do. It is our common heritage, and in marking it, we have a great opportunity to stress and emphasize the many other heritages we share with the people of Canada and of Central and South America.

It is even more appropriate that we should do so when we are seeing in Latin America a steady rise in the tide of freedom and liberty and a steady decline in the domination of human beings by dictatorships.

RISE OF FREEDOM IN WESTERN HEMISPHERE

The force of freedom in Latin America is not a transitory thing. True, it began a long time ago and has languished from time to time, even during its modern phase which began about the turn of the century. Yet when one contemplates the record of the past 7 years, it is truly remarkable. No less than eight countries—Argentina, Bolivia, Colombia, Cuba, El Salvador, Honduras, Peru, and Venezuela—took the long step toward democracy, mostly by revolution. The combined population of these countries is about 55 million—and I wish to remark, parenthetically,

that if we fully understood the significance of the struggle for freedom of this huge sector of humanity, we would put aside 1 day in all of America, call it the "Day of Liberty," and forever commemorate the acquisition of freedom by the people of America.

The number of men and women who so recently gained their freedom represents the crescendo in freedom's force in Latin America. But it is not alone the number—striking as it is—which tests this force of the surge of freedom. The test is found in two facts, often overlooked. One is that the tyrannies which were overthrown were not isolated tyrannies. They constituted a system, a network, a sinister apparatus aiding one another, so that what was destroyed and put to rout was an international system of despotism. The second fact is that the people who won their freedom, won it by their own efforts, by their own sacrifices. Thus, while the extent of the force of freedom is signified by the numbers involved—and this number can be increased if we go back a few years before 1952—the strength of the force of freedom is revealed by the international strength of the apparatus it has destroyed, and the durability of the force of freedom is revealed by the fact that it was achieved by the people themselves. I know that the people of the United States applaud this effort, and that in their achievement the people of Latin America have won a position of lasting dignity in the minds and in the hearts of the people of the United States.

Let me turn now to the future and to the question of how we can improve on what we have done, and how we can devise among ourselves more friendly acts which will match the friendly words which one still hears around the hemisphere and also drown out the unfriendly words which have come in increasing volume in the last year.

What is the significance of freedom's powerful surge for the future of Latin America? The consequences I see for the future are deep and overwhelming in their impact.

First, is the now inevitable trend toward democracy. What has been revealed during the past decade or so is the instability of dictatorship, which is another way of saying, the instability of governments not founded on the will and consent of the people. I may be accused of excessive optimism, but instead of a past in which occasional experiments in democracy interrupted a general practice of dictatorships, in the future I see dictatorships, if they reappear at all, as momentary interruptions in the inevitable and irresistible growth of democratic government.

Second, the force of freedom carries with it a profound popular will for economic development. When economic and business activity is in the hands of a dictator supported by a small aristocracy, the rhythm of development is slow, erratic, and incomplete. Where people are free, the will to develop is comprehensive and strong. Economic development is inevitable for Latin America, at a faster pace than ever before and on a broader scale.

Third, the fruits of economic development are bound to be better distributed. Economic development requires careful planning, the proper selection of objectives, the training of people and the exercise of self-discipline. In the free community, the support of the people must be solicited for the Nation's program. It can only be done by giving the people a permanent stake in the community's welfare. The people of Latin America have already demonstrated that their struggle for liberty has been won in the midst of widespread poverty. They will not again easily surrender their liberty for bread alone. But the demand for economic development which originates with the people must promise a rise in the standards of

living. It must promise widespread education and technical training. It must promise the increased application of modern science and technology in all avenues of life. When it is the popular will from which development springs, the riches of development must return to the people in increasing measure.

FREEDOM WILL LEAD TO FRIENDSHIP

Finally, I foresee an eventual development of a new level of friendship and understanding between the United States and Latin America. Friendship between nations must ultimately rest upon the deepest sense of dignity, of self-respect, which nations feel about themselves. As freedom is acquired, as development occurs, as stability and progress are achieved, a nation's self-respect grows. The extremes of popular nationalism, so widespread at the beginning of the journey of progress, are converted into self-confidence as nations acquire the mastery of self-government. And when self-confidence begins, so does the possibility of friendship and understanding. I foresee, thus, as the product of the present surge for freedom, a new level of friendship—a friendship between the United States and its neighbors based upon equality in freedom and equality in our confidence to master and employ for the good of all, the instruments of progress.

These are the possible future products of the force of freedom. They constitute altogether a vast change in the New World, from the pessimism of Simon Bolivar about the possibilities of freedom in America, to the optimism of freedom's own conquest. There are many obstacles yet to be overcome, but the people of this hemisphere will conquer these obstacles. Communism is one of them. At this very time the forces of communism are attempting to link themselves to Latin America's march to freedom. But what has communism to offer? It offers this hemisphere a formula on how to lose freedom. Whichever way one looks at communism, at bottom its fundamental doctrine is revealed: That the only way a community can progress is to surrender its freedom to a dictatorship of self-styled pundits—the so-called leadership of the proletariat—who arrogate to themselves the final wisdom about the laws of mankind's development. Dictatorship is the heart of the Communist matter; but Latin America already knows more about freedom and how to acquire it than does Soviet Russia.

The whole question of inter-American relations and its role in all these areas is currently the subject of a thoroughgoing study by a subcommittee, of which I have the honor to be chairman, of the Foreign Relations Committee of the U.S. Senate. This subcommittee has been diligently at work for almost a year; it has another year's work still ahead of it. We have called in some of the outstanding universities and research institutions in the United States to study various aspects of the problem and report to us. Those reports, which are not yet complete, will be followed by hearings and further exploration by the subcommittee itself. We are determined to do a thoroughly objective, nonpartisan job, and we hope that we can make useful, constructive recommendations. It would be premature at this point for me to try to anticipate what those recommendations will be, and I shall not do so. I think I can, however, lay down certain general principles.

I want to speak particularly of economic development which is the modern expression for Roosevelt's freedom from want and which is by all odds the major problem of inter-American relations.

There are, it is said, many ways to skin a cat, and there are also many ways to achieve economic development. I am distrustful of anybody who picks out one way, and says this is the only road to salvation.

I do, however, have some suggestions to make regarding economic policy for all the American countries, my own included.

ECONOMIC NEEDS OF LATIN AMERICA

There are three elements in economic development, and each is as important as one of the legs on a three-legged stool. These elements are people, resources, and capital.

Much of the current discussion of inter-American economic problems, I think, centers too much on the need for capital to the neglect of the development of human resources, but I do not underestimate the need for capital, so let me talk about that first.

At this particular point in time, it is in the national interest of the United States to export capital, just as it is in the national interest of most of the other American Republics to import capital. And this is exactly what has been happening to the tune of several million dollars a year. It has occurred largely in the private sector, and on balance, it has made a great contribution to economic growth.

But it is mainly equity capital, looking for a profit. There is nothing wrong with this, as far as it goes. The trouble is it doesn't go far enough. It doesn't go into the kind of nonprofit development which is essential to economic growth. A great many developments of this kind have been financed through the International Bank for Reconstruction and Development, the Export-Import Bank, and the Development Loan Fund. I hope more will be done through the forthcoming Inter-American Development Bank. But I wonder if all of this is being done in the most effective way possible.

Better results would follow, in my judgment, if greater use were made of line-of-credit arrangements under which credits are established and drawn on, as needed, for a variety of specific projects. In certain circumstances, it might even be possible and desirable to work out provisions for these lines-of-credit to revolve—that is, for repayments automatically to replenish the total amount of credit that could be drawn.

Greater use of such line-of-credit arrangements, it seems to me, would make it easier for all the peoples of this hemisphere to develop their own resources in their own way.

I think it must be frankly realized that all of the investments and all of the technology of the United States will not by themselves bring about the kind of economic development which we are seeking in the American Republics. That can only be done by the people of these Republics themselves. We in the United States can help, but we cannot do the whole job.

If it is fundamental that people have the right to develop their own resources in their own way, it is equally fundamental that they are the ones who must do the developing. A 20th century economy cannot exist in an 18th century social structure. Education is of paramount importance in this respect, and so far as I am aware, not a single country in the Americas is making a sufficient investment in its own people.

It takes capital to develop resources, but it also takes people; and the people come first. This is a field in which the activities of Columbus Day and the Organization of American States could well be expanded.

POSSIBILITY OF COMMON MARKET DESERVES STUDY

Another field for great OAS concern is that of economic cooperation. In considering the economic problems of this hemisphere, we ought, in my judgment, to pay more attention to Adam Smith's doctrine of natural advantage. That is, each of us ought to concentrate on doing that which we can do best. No nation of this hemisphere, not even the United States, is big enough to be a self-

contained economic unit. If any nation tries to become self-sufficient, it is not only doomed to failure; worse, it wastes resources which are more badly needed in other lines of endeavor.

From this, it follows, in my judgment, that we should think more along the lines of moving toward economic unity just as we have moved toward political unity. I realize that this will be difficult, that it will involve some possibly painful adjustments for all and that it cannot be done overnight. But I think its benefits will make all its difficulties and adjustments worthwhile. I am hopeful that the Central American Economic Union will point the way toward larger groupings.

An American common market would not only lead to more efficient use of resources; it would also contribute to the formation and growth of the institutions which are indispensable to economic development. It would, for example, make possible larger financial institutions and more extensive markets for securities.

HEMISPHERIC DEFENSE AND DISARMAMENT

Finally, it seems to me that the OAS could make a historic contribution in the field of intra-hemispheric defense. We have seen how the OAS has already made great and encouraging progress in the pacific settlement of disputes among its members. I suggest the time has come to build upon this progress and explore the possibilities of arriving at a regional agreement, within this hemisphere, for the reduction, or at least the limitation, of armaments. Such an agreement would have several obvious and immediate advantages.

For one thing, it would at once free very considerable resources which are now going into armaments and which are more badly needed for schools and other aspects of socio-economic development.

For another, it would tend to diminish the influence of the military and increase the influence of the civilian branches of Government. This would have a very salutary effect, especially in those few countries which still suffer under military or quasi-military dictatorships.

Finally, it would, I think, set a good example for the rest of the world.

As many of you know, I hold to the position in the Senate of the United States that the United States should not grant military aid to dictatorships anywhere in the world, including Latin America. I am willing to support some military aid to free nations in Latin America for hemispheric defense, but even here I think it is preferable to develop a hemispheric police force under the jurisdiction and direction of some international organization such as the Organization of American States.

I am a strong supporter of increasing economic aid programs for Latin America, preferably on a line-of-credit loan basis related to specific economic projects that will help bring direct economic benefits to the people of Latin America.

A distinguished Brazilian pointed out a few months ago that the relations between the United States and Latin America are perturbed, on both sides, by the prevalence of psychological behavior complexes. As a consequence, he added, the instrumentality of inter-American cooperation has increasingly become a mechanism for juridical and political coexistence rather than a system for mutual understanding.

Our biggest piece of unfinished business is to repair our mutual understanding. This is what the members of this audience are peculiarly well equipped to do. Whatever your vocation may be, I ask you to make this your avocation. I ask you to take it seriously.

REMARKS OF REPRESENTATIVE MORGAN, OF PENNSYLVANIA

Mr. Chairman, I appreciate the opportunity to meet with representatives of the National Citizens Committee for Columbus Day. My distinguished colleague, PETER RODINO, has kept me informed of the committee's past activities, and I welcome the opportunity to be brought up to date concerning its future program.

It is particularly appropriate for the committee to undertake to broaden the traditional observation of Columbus Day to emphasize the heritage which all of the nations and peoples of the Western Hemisphere share in common as a result of the discoveries of Christopher Columbus.

Columbus Day has in the past been celebrated in part as a reminder of our indebtedness to the older nations of Europe and of the ties which continue to bind us to them. It seems to me to be highly desirable that in addition to looking back across the Atlantic toward the Old World, those of us in the United States as well as those in our sister Republics should look around us within this hemisphere. If we pause and look around us and remember how much the date 1492 means to every one of us, it will bring home to us again the unique relationship which exists between the peoples of our hemisphere.

There is a tendency for nations as well as for individuals to become so preoccupied with their own day-to-day problems that they give too much emphasis to their differences. Anything we can do to reemphasize the things we have in common and our obligations to each other should make things better for us all.

Rather than taking more of your time, I am very happy and fortunate to be able to call on the Honorable ARMISTEAD I. SELDEN, who is chairman of the Foreign Affairs Subcommittee on Inter-American Affairs. I am glad to be able to transfer to him responsibility for further discussion of the relations of the American Republics with each other. I am sure that you will find that he understands the problems of our hemisphere and that he is very much interested in the work of your group.

Chairman SELDEN and his subcommittee have recently issued a "Report on U.S. Relations with Latin America" which has been widely read and has received many favorable comments. He is a thoughtful and well-informed observer of the Latin American scene. It gives me the greatest pleasure to present to you the Honorable ARMISTEAD I. SELDEN, of Alabama.

REMARKS OF REPRESENTATIVE SELDEN OF ALABAMA

Mr. Chairman, as has been pointed out, last May the Subcommittee on Inter-American Affairs of the Foreign Affairs Committee (of which I am chairman) issued a report on U.S. relations with Latin America. In our examination of inter-American relations prior to the report, we were particularly concerned with the climate of misunderstanding which we found. Bitterness and antagonism were showing up as unwelcome guests even at inter-American conferences.

As long as the atmosphere is charged with grievances and recriminations, we will make little headway in resolving the very real conflicts of interest which are bound to crop up among nations of dissimilar stages of development and of wealth.

In the past, serious problems have confronted us without straining the entire fabric of inter-American relations. The difficulties brought about by the depression of the thirties and by dislocations due to World War II were probably greater than those which confront us today. We asked our-

selves why it was then possible to reach friendly understandings, even to disagree on issues, without engendering intense antagonisms; and why today, on the other hand, even minor irritations seem to give rise to downright hostility.

The subcommittee's conclusions and recommendations are set forth in a 10-page report. Dr. MORGAN and I brought along a handful of copies for those of you who might be interested. Other copies are available from the House Foreign Affairs Committee. Also, the committee has authorized the printing in Spanish of a number of copies of the report, and it is hoped these copies will be off the press by the end of the week.

In our report, you will find no discussion of such substantive problems as what might be done about the instability of Latin America's markets, or ways to promote economic development. Rather, the subcommittee concerned itself in this report with underlying misunderstandings which are impairing efforts to work out solutions to such questions.

I have been deeply impressed by the efforts of the National Citizens Committee for Columbus Day and the Columbus Foundation. Their work has been directed toward creating the very atmosphere of inter-American understanding that the subcommittee found to be indispensable to effective Hemisphere cooperation. There is no better road to inter-American respect and understanding than by individuals' getting to know each others problems and aspirations.

The Columbus Foundation's initiative in setting up its sister-city program is exactly the kind of approach the subcommittee had in mind when it recommended, and I quote from our report:

"We believe that nongovernmental contacts between people of all the American Republics are an essential avenue toward better understanding. Such organizations as the Inter-American Bar Association, the Inter-American Press Association, and the Inter-American Regional Organization of the International Confederation of Free Trade Unions have contributed enormously toward the basic component of strong inter-American ties—an appreciation of each others' problems and aspirations. Moreover, personal contacts between private citizens remove any lurking suspicions of ulterior motives which sometimes attach to a Government-instigated program, no matter how altruistic might be the intention.

"We urge more professional and other groups to undertake similar relations with their Latin American counterparts."

One final word from the congressional point of view. It is extremely gratifying to find groups of private citizens making foreign policy their business. Previously we have noticed tendencies which might be described as "leave it to the State Department" or "leave it to Congress." These are mighty poor substitutes for the kind of strong inter-American bonds that can be forged when a growing circle of Americans, north and south of the Rio Grande, join hands to make the new world the land of peace and plenty our Founding Fathers envisioned.

Mr. GALLAGHER. I yield to the gentleman from Massachusetts.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I was deeply grieved yesterday to see in the paper a picture of, and a notice of the passing of, the late Mary Norton, Member of Congress from New Jersey, one of the handsomest, finest women I have ever been privileged to know. She was elected to Congress a few months before I was, and I found inspiration from her in our close congressional service. She was a fine and true friend.

Before coming to Congress, Mary Norton had a fine record of accomplishments, and as a Member of Congress she became a highly respected politician and national figure. She added luster to her name. She was thoroughly loyal. I do believe the cause of women never had a finer friend than she. She believed in their having their place in the sun. Mary Norton was warmhearted and strong, loyal to her family, loyal to party, loyal to her country.

Although she was a Democrat, when she went to Boston she often spoke of me. There was no party line in her friendships. We who served with her here—and there are not many left here now—know of her tremendous fight for every cause she thought was right. She wanted to help the underprivileged. Her battle for improved labor conditions will receive the gratitude of children yet unborn. It was not a political gesture in any way. She was a great patriot, always fighting for national defense. She always pushed onward and upward. She was a very religious woman, a power in her church, a power in the country.

We cannot spare women like Mary Norton. In my opinion, we cannot replace her.

My deepest sympathy goes to her sisters and brother and their children, and to the family she loved and helped so much, and to her countless friends.

The following is an article that appeared in the New York Times on Monday, August 3, 1959:

MARY T. NORTON, 84, LEGISLATOR, DEAD—JERSEY U.S. REPRESENTATIVE, 1925-50, HEADED LABOR COMMITTEE 10 YEARS

GREENWICH, CONN., August 2.—Former Representative Mary T. Norton, of New Jersey, died of a heart attack today in Greenwich Hospital. She was 84 years old.

Mrs. Norton was stricken yesterday at her home here at 52 Lafayette Place. She had moved here 3 years ago from her former home at 2400 Hudson Boulevard in Jersey City.

Surviving are two sisters, Mrs. Joseph McDonagh, of Greenwich, and Miss Anne Hopkins, of New York.

DEAN OF WOMEN IN CONGRESS

Mrs. Norton held the record for length of service by a woman Representative when she announced on her 75th birthday in March 1950 that she would not seek reelection to Congress. She served for 25 years in the House.

She was induced to enter politics by Mayor Frank Hague, of Jersey City, in 1920. Her district, the 13th of New Jersey, formerly the 12th, comprises Bayonne and part of Jersey City.

Mrs. Norton was the first woman elected to Congress by the Democratic Party. She was chairman of the House Committee on the

District of Columbia for 5 years, being the first woman to head a congressional committee. She also was named to the House Labor Committee and in 1937 became its chairman. She held the chairmanship until 1947, and then became a member of the House Administration Committee.

Her interest in labor affairs never waned, however, and when the Taft-Hartley bill was being discussed in Congress, she said:

"The labor baiters and the labor haters at long last are having a field day."

In 1945 she had met opposition from labor groups when she introduced a House bill seeking to implement President Harry S. Truman's request to Congress for authorization to set up fact-finding boards in industrial disputes.

FETED BY COLLEAGUES

In both 1945 and 1950 fellow Members in the House feted Mrs. Norton. On her 25th anniversary in Congress and her 75th birthday, Mrs. Norton, in a hospital with pneumonia and influenza, issued her announcement of retirement.

Mrs. Norton was a staunch New Dealer and helped to guide the late President Franklin D. Roosevelt's wage and hour legislation as well as to defend it later. She also championed the Fair Employment Practices Act and was instrumental in raising the minimum-wage level from 40 to 75 cents an hour.

Mrs. Norton served as State Democratic Committee vice chairman from 1921 to 1932, and as chairman in 1932 to 1935 and again from 1940 to 1944.

In 1923 she became the first woman elected a freeholder in Hudson County and the State. Mrs. Norton was named delegate-at-large to the Democratic National Conventions from 1924 through 1940 and in 1944 was a delegate serving on the platform-drafting committee. In 1944 she became a member of the Democratic National Committee. Four years later she was the convention chairman of credentials.

ALWAYS BACKED HAGUE MACHINE

She maintained her support of the Hague machine throughout her career and at the time she announced her retirement was instrumental in retaining Mr. Hague on the New Jersey State Executive Committee by outmaneuvering his enemies.

During her early years in Congress, Mrs. Norton introduced the first resolution to repeal the 18th amendment and spoke widely for repeal of prohibition. She also opposed the Gillette bill, fostering dissemination of birth-control information.

She was born in Jersey City on March 7, 1875, the daughter of Thomas and Marie Shea Hopkins. After attending public schools and a business college and working as a stenographer and secretary she was married in 1909 to Robert Francis Norton, a businessman. He died in 1934.

After the death of her infant son, Robert Francis, Mrs. Norton became active in day nurseries and was president of the Day Nursery Association of Jersey City. She received an honorary doctor of laws degree from St. Elizabeth's College in 1930 for constructive humanitarian work in welfare and politics. In 1937 she received a similar degree from Rider College.

In May 1947, she was named the outstanding Catholic woman of the year and received the Siena medal of Theta Phi Alpha, National Society of Catholic Women, at ceremonies in Norwood, Mass.

Mrs. Norton was a member of the National Business and Professional Women's League, the Queens Daughters and the Catholic Daughters of America.

The Late Mrs. Mary T. Norton

SPEECH OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mrs. ROGERS of Massachusetts. Mr. Speaker, will the gentleman yield?

Nixon Scores Behind Iron Curtain

EXTENSION OF REMARKS OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article by the well-known columnist, Gould Lincoln, appeared in the Washington Star of August 4.

Mr. Lincoln analyzes the visit of our Vice President, RICHARD M. NIXON, behind the Iron Curtain in an intelligent, calm, and thoughtful manner.

The Vice President has shown himself a man of stature; he has made no mistakes in a most difficult situation. While his visit will not bring about the millennium that some expect, it has done no harm, and certainly will do nothing but good.

NIXON SCORES BEHIND IRON CURTAIN

(By Gould Lincoln)

Vice President RICHARD M. NIXON has done a great service to the American people—and to the people of Russia. This may, or may not have won to himself votes for the presidency next year. The good he has done goes beyond that. The service he has rendered in his 10-day visit to the U.S.S.R., and particularly by his final speech, carried by radio and television to millions of Russian citizens, has set an important precedent. It should increase the probabilities of world peace.

It seems unthinkable that any people should believe that the United States is bent on aggressive war of conquest. Certainly, it is incredible. The Russian people, however, have been told over and over again that the purpose of our Government is to overthrow the Communist Government and force upon the Russians the American brand of democracy.

And now Mr. Nixon has conveyed to the Russians the plain and simple fact that the United States wants peace—not war. President Eisenhower has stated this time and time again. But the statements of the President have been withheld from the people of Russia. The Iron Curtain was pulled aside to permit the Vice President to tell the Russians the truth. This, in itself, is a hopeful sign.

President Eisenhower has now announced that Russia's Prime Minister Khrushchev has been invited to visit the United States, and that he, Mr. Eisenhower, will visit Russia later. Having allowed the Vice President to speak directly to the Russian people, it would be strange, indeed, if the President is not accorded the same privilege when he goes to Moscow and other parts of the U.S.S.R. Mr. Khrushchev, of course, will be free to talk to Americans when he comes here in September.

These interchanges of visits of the heads of the two most powerful nations in the world may lead to better understanding, to better relations, and to a more easy peace.

CITES DRIVE AGAINST NATIONS

Mr. NIXON's address to the Russians included a frank invitation to the Russian Communists to lay aside their announced program of world communism and world domination, the ultimate result of that program. He told the people quite flatly that as long as their leaders persist in this drive for communizing the world, including the United States, they must expect the United States and its allies of the free world to

maintain their military bases within easy striking distance of the U.S.S.R. Further, he said that this country will continue to increase its military strength. Mr. NIXON's whole tone was firm, but distinctly he engaged in no saber rattling. His warm appreciation of the Russian people and their hospitality to himself and Mrs. Nixon was a strong, overlying theme.

To those who have followed the Russian Communist drive to engulf and, indeed, to enslave the peoples of Central and Eastern Europe, it seems almost hopeless that U.S.S.R. leaders will accept Mr. Nixon's invitation to give over their ideas of world domination. But there it is, as Mr. Nixon laid out the proposition for a real world peace. Thinking Russians, as they come better to understand the real purpose of the United States and its people—which is to live and let live, to allow each people to select their own form of government—may take a new look.

GRASPS ESSENTIALS

Mr. Nixon has again shown himself a master at grasping the essentials of the most vital problems which confront the United States, the U.S.S.R., and the whole world. His whole bearing during his momentous visit to Russia at a tense moment, with the East and West in virtual deadlock over the problems of West Berlin and all of Germany, was a credit to himself and to his country. Whether he was engaged in rough and tumble debate with Russia's Khrushchev, or whether he was being heckled by persons in the throngs which greeted him, Mr. Nixon never lost his dignity, and he was never at a loss in meeting the situations as they developed.

The United States has engaged in four wars since the closing years of the 19th century, two of them world wars. It has opposed world aggression by a conquest-mad emperor. It has fought world conquest by Fascist and Nazi leaders. Finally, it has fought a war, the Korean war, against Communist aggression. In none of these wars has the United States failed in its objectives. But it seized no territory of other nations and made it its own. This is the simple truth, and Mr. Nixon used it effectively in his argument to the Russian people they need fear no aggressive action by Americans against their people, their government, and against their progress to better and better living.

If Mr. Nixon has been able—as it seems he must—to remove this mote from the eye of the Russian people, to disprove the teaching of their leaders, he has done incalculable good. The price of peace for the Russians is not their own freedom. It is the abandonment of world aggression.

Significance of Vice President Nixon's Speech to the Russian People

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mrs. BOLTON. Mr. Speaker, the speech delivered by Vice President Nixon to the Russian people last week was an event of enormous significance. For the first time since the cold war was launched some 13 years ago, the Soviet Government has permitted a high American official to address its people directly over governmental facilities without

prior censorship. As such, the speech constitutes a major breakthrough the Iron Curtain and marks an important development in Soviet-American relations.

Writing in the Washington Star of August 3, David Lawrence describes the Vice President's speech as a "phenomenon unparalleled in the history of diplomacy." Believing that Mr. Lawrence's article contains an excellent analysis of the impact of the speech on world affairs, I include it with my remarks, as follows:

U.S. SPUTNIK IN THE COLD WAR—NIXON'S TV SPEECH TO RUSSIANS HAILED; WILL KHRUSHCHEV REPLY ON U.S. TV?

(By David Lawrence)

A phenomenon unparalleled in the history of diplomacy has just occurred. It is of transcendent importance in the struggle for world peace—a sputnik, it might be called, in the progress of international relations.

For, in the midst of the cold war, a leader of one Nation has spoken in criticism of a hostile government directly to the people of that country. It was an address as tactful and yet as argumentative as a diplomatic note.

The speech made by Vice President Nixon to the people of the Soviet Union contained little that had not been said before in the formal and informal exchanges of views among the foreign ministers of the two sides at Geneva and through their ambassadors for several years past. But it was of tremendous significance because these words were transmitted directly over television and radio to the Soviet people inside their own borders and over their own governmental facilities.

It was something that could not have been arranged without the sanction of the Soviet Government itself, which hitherto has maintained a strict censorship of what might be said to the Soviet people either through the press or over the air.

The Vice President didn't mince words. He made pointed criticisms. But they were couched in earnest, polite, dignified and reasoned phrases. He didn't pull his punches, but he handled himself without giving offense. Ever since his college days, when he was a prize debater, RICHARD NIXON has known how to argue persuasively in competition with adversaries before big audiences.

The Vice President himself worked 6 hours on his speech. He chose his words carefully and covered every vital issue. It was a masterpiece of diplomacy, yet it was an effective appeal over the head of a government to the people—something that President Woodrow Wilson first enunciated as a principle in his war address of 1917 when he said "We have no quarrel with the German people, but only with their autocratic government."

It is most unfortunate that inside the United States so much press speculation by supporters and opponents of Mr. Nixon has been devoted to the question of whether the trip enhances his political prestige for the presidential contest in 1960. This detracts from the true importance of the Nixon visit to Russia and Poland.

For today it is the impact of the Nixon address on the course of the "cold war" that is alone important. His mission was authorized by President Eisenhower and is therefore associated with the conduct of our foreign relations.

Did the Nixon trip help toward world peace? Did it advance the cause of the West in its indefatigable endeavor to find a common ground for "getting along" with the dictatorship in the Kremlin?

These questions are difficult to answer because Khrushchev is a ruthless man who has

been guilty of ordering mass murders in Eastern Europe, where he holds many countries as his captives. He is fanatically wedded to the idea of world conquest by threats of military action, by spreading communistic ideas and then by infiltrating other governments and taking possession of them.

Should Khrushchev be invited to come to America, and when? This is a subject for diplomacy's experts to work out. The whole thing started with a belief on Khrushchev's part that a summit conference would enhance his prestige with his own people. The West thought it better to have a foreign ministers' conference first to ascertain if the Berlin crisis could be solved by such a meeting. President Eisenhower said he would go to a summit meeting only if the results at Geneva justified it.

Now Geneva is acknowledged to be a failure. Cleverly, no doubt, Khrushchev figured that by opening up doors for Vice President Nixon and giving him a chance to visit Russia and Poland he could get a two-man summit conference anyway. For President Eisenhower has insisted there must be some give on the part of Khrushchev before a general summit conference is held, so that the West would not seem to be negotiating under the duress of the recent ultimatum to us to get out of Berlin. The demand and accompanying threat have never been withdrawn.

The Soviet Premier says he would like to come to the United States when "the time is ripe." The President told the press last week that such a trip might come about eventually when the American people have been conditioned to it.

How can this happen? Overnight the Soviet leader could withdraw his ultimatum. Maybe that's why he issued it—eventually to get an invitation to come to the United States. If he comes, he can have television and radio audiences to listen to him but he also will have persons in all parties answering him and interrogating him.

When this appeared to be the way things were shaping up in Scandinavia, Nikita Khrushchev backed away through he had been officially invited. The time, he felt, was not ripe. Maybe Khrushchev wants only an invitation to visit the United States, and then might decide that in this case also "the time isn't ripe." Lots of Americans would agree with him.

The Volunteer Fireman

EXTENSION OF REMARKS

OF

HON. WILLARD S. CURTIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. CURTIN. Mr. Speaker, under leave to extend my remarks, I desire to include the following editorial which appeared in the Star, a newspaper of Southampton, Bucks County, Pa., on July 29, 1959, and which calls attention, and gives well-deserved credit, to a fine group of public-spirited citizens:

THE VOLUNTEER FIREMAN, AN HONORED CITIZEN

One of the interesting facets of American life is that the average individual has a great deal more spare time than he is willing to admit. Men usually find spare-time interests that provide a keen interest or something entirely different from their vocational pursuits. Since the war, many men have be-

come active as auxiliary policemen, firemen, little league coaches, managers, or have become involved in other activities.

We know of no other spare-time interest that brings greater satisfaction than serving as a volunteer fireman. Here an individual is devoting his spare time protecting lives and property from the ravages of fire.

Firefighting brings out good physical coordination in a man and sharpens the senses to accept danger with the knowledge that fire can be controlled and extinguished by tested and scientifically proved measures.

A volunteer fireman is following in the footsteps of many famous citizens who served in this role and distinguished themselves. It is a proud and honored activity.

Look at the volunteer firemen when you next meet them and you'll find they are a hardy breed of men, willing to sacrifice several hours a week for the good of the community and their neighbors. True, there is no pay, but the reward comes in knowing that when a fire emergency arises, they are the men who with fortitude, using training and good commonsense, can render a fire harmless.

Your township fire company needs men—good men—who are willing to devote a few hours each week to the job of becoming a firefighter. A man can lift his head a little higher and command the respect of his neighbor because he belongs to that band of picked men—the volunteer firemen.

Award Winning Essays in My True Security Contest

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. SCHWENGEL. Mr. Speaker, it was my privilege and pleasure to be present at the My True Security national awards banquet in Washington, D.C., on July 21, when the national winner and the two runner-up winners delivered their essays. This contest was sponsored by the U.S. Junior Chamber of Commerce and the Mutual Benefit Life Insurance Co., of Newark, N.J.

These young people impressed me with their sincerity and wisdom. I liked all three essays, and, had I been a judge, I would not have known in which order to rank them. The first place was awarded to Miss Martha Reynolds, of 111 Margaret Avenue, Marietta, Ga. She will receive a \$1,000 scholarship to the university of her choice. One runner-up was Herbert S. Edwards, 2040 South Fillmore Street, Denver, Colo. He wins a \$500 scholarship. The other runner-up was John R. Williams, of 1212 4th Street North, Fargo, N. Dak. He will also receive a \$500 scholarship.

Under leave to extend my remarks, I am having printed in the Appendix of the RECORD the essays which were judged the three best in the United States in this contest. In doing this, I wish to pay tribute to the sponsors and all participants for taking part in a project, the objectives of which were most worthwhile and which did a great deal toward

stimulating constructive thinking about the values of our national heritage.

The essays follow:

MY TRUE SECURITY

(By Martha Reynolds)

I am a teenager. I could be almost any teenager living in almost any of the growing cities in the United States. I go to school and to church; and, with the exception of Elvis Presley, I like the things most teenagers like—hamburgers and french fries, Rock Hudson, football, Dick Clark, crew-neck sweaters, and crew-cut boys. Recently, I've become aware of the necessity to think seriously about my life. Teens everywhere face this problem of making important decisions about the future.

My generation lives in a stimulating age and has much to anticipate, for our modern advances point the way to a better life for all. In my own lifetime I've seen the wonder of color television, the near extinction of the polio menace, and a submarine that can safely travel under the virgin Arctic ice. I've heard America's wish for peace on earth broadcast to all the world from outer space, and probably in my time I will see man at last reach the moon.

In the height of this wonderful age, however, I find that I cannot ignore the hazards of a moving world. A cold war as deadly as any battle now exists. An ICBM could destroy in a few moments the life I know. Modern revolutionists, practically at my own doorstep, fight to preserve and extend freedoms, I, too often take for granted. Today is a time when both young and old must be continuously struggling to preserve the dignity of the individual.

The omnipresence of such turmoil and confusion certainly tends to make any plans for jobs, further education, or future homes and families seem insecure. A small child can find security in the reassuring glow of a light in the dark, in the touch of a familiar hand, or in the comfort of a mother's kiss. But how can we teenagers find this needed assurance of safety when this atmosphere of unrest is like the grin of the Cheshire cat, always with us? Youth discovers this assurance in the democratic principles on which our country rests—basically, respect for the worth of the individual and a supreme loyalty to God.

America is one nation under God, indivisible, with liberty and justice for all. And because its Government was instituted to promote the general welfare, I know that even I am guaranteed an opportunity for developing my initiative and achieving my dreams. Free enterprise is another form of my security, because the individual can achieve personal goals through working with others by the organization and division of labor.

Thomas Jefferson once said, "As long as we think as we will and speak as we think, the condition of man will proceed in improvement." So as an American citizen, even though my rights are assured, to be truly secure, I must accept these rights and the responsibilities that accompany them. When I go to the polls soon to vote for my first time in a city, State, or nationwide election, I will face the responsibility of using my individual discretion. So I'll be guaranteeing my security by active participation in the affairs of my government, and industrial self-government.

Myriads of people inhabit this United States, each an individual, each important because he has his own abilities, his own goals, and his own ambitions. And yet, as President Eisenhower has said, "One basic opportunity unites us: to promote strength and security, side by side with liberty and opportunity." The American way of life enables adults and teenagers to advance the

true promise of human progress and dignity—freedom—my true security.

MY TRUE SECURITY

(By Herbert S. Edwards)

In this age of unrest and uncertainty, security is foremost in almost everyone's mind. I believe we have placed too much emphasis on the material aspects of life, security being one of these. It seems to me that my true security is not tangible. Material security is always in danger from fire, flood, decay, and all other means of destruction. Thus, I think a person who depends for his security on material bases such as wealth or physical strength has no true security, for he has only temporal resources to cope with loss, defeat, and disaster. Lasting security cannot be guaranteed. If material and physical security are so important, what would happen if one should lose them? After all, is a guaranteed, secure future really as safe and important as so many think? Prison inmates have complete economic security.

One's self-reliance will be built up only by forcing himself to take the initiative and become a nonconformist in the sense of standing by what you believe in the face of criticism. Today's desires to belong to a group and to follow the crowd certainly relieve a person of self-reliance and the need for initiative. Many people place themselves in a clique for security, only to find themselves lost in the group. A person who balks at following the crowd or questions its authority, may find himself on the outside, looking in. A group can take away security just as fast as it can give it. A person who has depended upon a group for all his security, and has either been rejected or become separated from his group is certainly without any means of self-assurance. To belong to a group may give one temporary security, but to become detached may result in permanent insecurity and disappointment. Where, then does true security lie, and how can one find it?

I believe that my true security is in the realm of the mental and spiritual phases of life. True security is not attained except when one relies on himself and his own resources of character and the spirit for his future. We can build up our resources if we can develop self-reliance and self-confidence in ourselves and our work. Self-reliance, in turn, may be developed by relying upon our own initiative. Progress is made because of insecurity. Complete material security may discourage initiative and self-reliance. Therefore, I believe that if one's true security is placed in self-reliance, initiative and resourcefulness, he has a lasting security which will assist him in overcoming or effectively dealing with adverse circumstances whenever they arise. My true security, then, is not to be found outside myself in the temporal things of life, human or otherwise, but can be built up only within myself.

MY TRUE SECURITY

(By John R. Williams)

To me, "security" is a dirty word. I do not seek it and would not accept it were it offered me. Unlike so many of my fellows, I am searching for something better than what I presently have. Unlike many young people today, I wish to be the master of my own fate, the captain of my own soul. I cannot and will not blindly follow the herd plodding blissfully toward an uncertain goal in the comfortable rut of mediocrity which so typifies "security."

Today Americans are eagerly searching for security. If and when they find it, man will be able to count the remaining days of our civilization on the fingers of his two hands. This great Nation and the way of life it has come to represent were not created by

men seeking security. They were hammered and chopped and carved and dug and plowed out of the wilderness by steel-hearted men who sought but one thing—opportunity.

For 7,000 years mankind groped in the darkness; then in 1776 a new nation was born, and the people of the earth knew that at last they had found the promised land. There was no security here, and everyone knew it—yet from all corners of the earth they streamed to America—the land of opportunity.

When America's early pioneers first set their eyes to the west they had only their two hands and the soil. There was no TVA out there, no social security, no minimum wage—there was only freedom, but that was enough. Some failed again and yet again to succeed, so there was poverty, too. But every man was free to rise just as high as his own feet could carry him, and because his success or failure was determined solely by his own abilities and willingness to work, he realized the only true security possible in a government of, by, and for the people. Our forefathers knew that there is no short cut to the promised land, and it is time their descendants were becoming aware of the fact also.

There is, to my way of thinking, but one hope for the preservation of civilization as we know it—that mankind learn once more the beauty and dignity of honest labor. Businessmen, farmers, and laborers alike must learn to solve their own economic problems instead of running, hat in hand, to Uncle Sam. They must realize that the mad merry-go-round of bread and circuses—all in the name of security—will destroy this Republic just as surely as it destroyed ancient Rome. There is very little security in a grave. It is time for Americans to realize that the best kind of security is insecurity, and that hard work is not only the best thing for them, but is in fact the hope of the world.

Blacklisting

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. DENT. Mr. Speaker, in these days of labor-leader hate-mongering and antiunionism near hysteria on the part of some diehard predatory profiteering organizations and persons, it is important to sane and sensible legislation to know the real truth about matters of such grave concern as the article that appeared in the CONGRESSIONAL RECORD repeating a Twin Falls, Idaho, newspaper editorial.

This reported item charged bluntly that organized labor's political action committee was operating a blacklisting operation within its official activities.

First of all, the word "blacklist" brings to me one of the most dreaded and disgusting memories of my youth.

I was born in a coal-mining community and have a bitter and blind opposition to the use of the term on the practice of blacklisting.

Recently, during our subcommittee hearings on the ill-disguised antilabor bill parading as a reform measure, we heard the story of a young retail clerk.

This worker lost her job through a series of company-engineered court and

NLRB rulings. Her dismissal was and is clearly and irrefutably traced to her union activities in trying to help form and maintain a union in one of the all-too-many places of employment who profess to like unions; but the point I am leading up to is that by the simple expedient of having all other cooperating employers in the Duluth area demand a letter of recommendation before hiring, this girl has been blacklisted for life.

She has two alternatives—move away, change her name, find a reasonable employer—and you can hardly find this kind around here anymore—or become antilabor—shout it from the house tops and be welcomed back into lower standard working conditions employment.

Now, Mr. Speaker, you can understand partly my deep-seated opposition to blacklisting and especially resent its use by labor unions, the members of which have too many times been its victims.

I am happy to be able to put into the RECORD correspondence between myself and the director of COPE, a long-time friend, James McDevitt, formerly president of the Pennsylvania Federation of Labor.

In passing, I would like to say that Jim McDevitt is a respected and respecting union official, and any insinuations to the contrary are false and unfair.

The letters follow:

JULY 29, 1959.

Mr. JAMES L. McDEVITT,
National Director, Committee on Political
Education, Washington, D.C.

DEAR JIM: In reading the CONGRESSIONAL RECORD for July 23, page A6395, I note an extension of remarks by the Honorable H. H. BUDGE, of Idaho.

He included in his remarks an editorial from a local newspaper from Twin Falls, Idaho, dated July 15, 1959. In case you missed his remarks, I am enclosing same.

It appears to me as though the extension is a direct charge that COPE has prepared, and is preparing, a "blacklist" on Members of the Congress based upon their voting records. Having known both yourself as a person, and COPE as an institution, I am disturbed by this allegation. I have always believed in the fundamental right of any organization to publish its views on the voting records of members of any legislative body. This right, to me, is fundamental and, needless to say, one of the privileged rights of our Constitution.

Personally, I do not see it as this article attempts to make it appear as a threat, nor do I see it as any violation of the prerogatives enjoyed not alone by COPE, but by all other free institutions in this country.

I do not believe that charges such as those should go unchallenged or unannounced, and I would appreciate it very much if you would give me, at your convenience, the story behind COPE's listed analysis of voting records.

With kindest regards, I remain,

Sincerely yours,

JOHN H. DENT,
Member of Congress.

COMMITTEE ON POLITICAL EDUCATION,
Washington, D.C., August 3, 1959.

HON. JOHN H. DENT,
House of Representatives, Congress of the
United States, Washington, D.C.

MY DEAR CONGRESSMAN: I thank you for your inquiry concerning the insertion in the CONGRESSIONAL RECORD of an editorial from the Twin Falls (Idaho) Times-News, of July 15, 1959. Certainly, if editorial writers and others were as scrupulous as you are in sec-

ing information, the labor movement would not now be subjected to the calumny that is being heaped upon it.

The Times-News editorial is based on a completely twisted account, distributed to its clients by the United Press International News Service a few weeks ago. UPI, on the basis of an article appearing in our weekly publication, Political Memo From COPE, dated July 6, 1959, stated COPE had issued its first blacklist of the 1960 campaign. In truth and fact the article merely reported three rollcall votes in the Senate on amendments sponsored, respectively, by Senators McCARTHY, CLARK, and DOUGLAS, which related to the tax laws.

As you are well aware, taxes are a subject of utmost concern to all citizens these days and particularly to those in the middle and lower income groups who bear the heaviest share. We felt, and still feel, that they are entitled to know which Senators voted for these amendments, which, in our view, would have plugged some gaping loopholes in the tax laws, and which Senators voted against these amendments.

To say that this reporting of a vote constitutes a blacklist is the most arrant nonsense comparable only to the statement in a recent article by Paul Martin of the Gannett News Service straight-facedly reporting, "It is estimated unions spent \$510 million on political activities in the 1958 congressional campaign."

I can tell you categorically and without qualification that COPE has no blacklist or purge list or anything remotely resembles these items. It never has had and, so long as I am its director, never will have.

My feelings on this subject of a blacklist are strong, because I have known too many honest union men and women who have trudged from employment office to employment office, in search of work, only to be told that there was none for them because they were union members. You know, I am sure, of the blacklists that were so prevalent in the coalfields and steel mills of our Commonwealth of Pennsylvania in the pre-Wagner Act days. No more despicable instrument was ever devised nor was there anything so destructive of men's dignity.

COPE has published and will continue to publish the voting records of the elected representatives of the people both at the time of the vote and in summary form at the end of the session. Our parliamentary system is unique among the world's parliaments in that such a vote is provided for in the rules of Congress and published in the official RECORD of Congress. Certainly it must have been the intention of our forefathers to give the widest currency to the votes cast there, and I have always been puzzled by the reluctance of some to have their votes made known.

Sincerely yours,

JAMES L. McDEVITT,
National Director.

Nixon's Tour Reveals Weaknesses in Soviet Position at Home—We Must Constantly Keep the Spotlight on Them

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr.

Edgar Ansel Mowrer. This was written before the President announced the invitation to Khrushchev to visit this country, but the basic weaknesses in the Soviet position still remain and we must be on guard not to help Khrushchev out of them. Acceptance by the United States, without any change in his position, will only make him stronger at home and abroad, and thereby increase the danger of war.

The article follows:

NIXON TOUR SPOTLIGHTS SOVIET FEAR OF TRUTH

(By Edgar Ansel Mowrer)

Vice President NIXON has shown himself as much a master of "people-to-people politics" in the U.S.S.R. as at home. Unquestionably, however, the benefits of popular contacts, the gain for peace by "getting to know each other," the results of insisting that Russians are "like Americans" (something those familiar with Russian literature will question) are much overdone. The Russian people have not now and will not for some time to come, have anything to say about their government's foreign policy and they can at any time be dragged kicking into any sort of war the Kremlin may desire.

(How well they would fight such a war is another matter. Millions would have helped Hitler if he had shown any desire to rescue them from their servitude.)

Perhaps the Vice President's chief accomplishment has been to illuminate the psychological weakness of the Bolshevik regime. Communists flatter themselves that they are masters of propaganda, and most people will admit that they are. What Nixon's visit demonstrated is their almost pathological fear of exposing their subjects to counter-propaganda, especially when backed by anything as real as the American exhibition in Moscow. I suspect that Khrushchev underestimated the effect of that exhibition upon those Russians who saw it, underestimated the Russian people's distaste for any new conflict and did not expect to find in Nixon the skilled counterdisputant which our Vice President turned out to be.

PROPAGANDA PUT TO TEST

Unquestionably, the Soviet propaganda machine has had to work overtime trying to counter the effects of both the American exhibit and Nixon's incessant talk of peace and friendship.

In reply, the Soviets launched what the New York Times called a "massive propaganda effort to make the Vice President look like a fool, an incompetent and a liar. It is impossible to believe that the Soviet leaders had any real desire to let Mr. Nixon ease present tensions when one reads what the controlled Soviet press and radio said about him." (Whoever thought they had?)

To counter both Nixon and the effects of the American exhibit Nikita Khrushchev himself took to the radio on July 28. In a speech to factory workers redolent of Mussolini at his worst, Nikita asked if they did not have bread enough, if they lacked vegetables, if they are short of housing. (One can imagine their answers.) He announced that he had challenged Nixon to show whether capitalism or socialism would provide more of the good things of life, and then he got tough about Berlin and the possibility of war. At the end he yelled:

"As a result of World War I, Russia became a Socialist country.

"As a result of World War II, 12 other countries became Socialist countries.

"As a result of world war III, should it ever be launched by the imperialists, capitalism will be eliminated." (And Soviet communism as well.)

SERIOUS EFFORTS

Meanwhile, numerous other Soviet radio and TV speakers tried to undermine the American exhibition. For instance, Vishnevsky (July 26) emitted the following comment: "We cannot see any photographs of one-sixth of the American population which, according to Senator HUMPHREY, still lives in poverty. . . . Chairman Butler of the Democratic National Committee stated that over 15 million Americans live in slums."

After admitting the attraction of American commodities, Vishnevsky asked: "Where is the machinery? Where are the achievements of U.S. science?" Then followed a number of imaginary conversations between keen-witted Russian visitors and bumbling American guides in which the former demolished the latter and showed up the hollowness of American claims of prosperity and of the exhibition's honesty.

Obviously not since almost a million Russians under General Vlasov voluntarily took part in German attacks against their own country has anything so shaken the self-confidence of the Soviet rulers. In fact, far from inaugurating a stepped up series of political exchanges I suspect that Nixon's tour may have persuaded the wily Khrushchev to limit exchanges in the near future strictly to a visit to the United States by himself—if only he can wangle an invitation.

University of Oregon Teachers Kindle Nepal Flame of Learning

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following story describing the work of a University of Oregon team of educators who have been working in Nepal since 1953 to help the citizens of that nation improve its educational system. The contract between the University of Oregon, the Kingdom of Nepal and the International Cooperation Administration ends September 30.

I have talked with some of the Oregon educators who have been responsible for the success of this program. They have, from time to time, stopped by my office when they came through Washington, D.C., en route to or from Nepal. I have found them encouraged with the progress of the program, encouraged with the way in which the people of Nepal have responded to it.

This story by Ralph Olive touches well on the highlights of the program. Olive points out that according to Dr. Charles D. Byrne one of the strongest dividends has been the training of Nepalese students in the United States. Dr. Byrne believes they will form a nucleus of trained educators who will pass on their new ideas to their countrymen.

This sort of work, sponsored by the countries involved and directed by responsible men from responsible institutions of higher learning and elsewhere build toward peace and better understanding. Mr. Olive's article which ap-

peared in the Eugene (Oreg.) Register-Guard of August 30, 1959, follows:
UNIVERSITY OF OREGON TEACHERS KINDLE NEPAL FLAME OF LEARNING
(By Ralph Olive)

Nepal has been described as "a little country with a big problem."

More accurately, that would read many big problems. Nepal, a kingdom, is now under democratic rule. With the new freedom, have come many needs—one of the greatest is education for the people.

Since 1953, a University of Oregon team of educators has worked in Nepal to help solve one of those problems—widespread illiteracy and a complicated and inadequate educational system.

Nepal lies between Tibet and India, a rectangle roughly 500 miles long and 90 to 100 miles broad.

The country has a varied population of 10 million people.

In the book, "Education in Nepal," prepared by the Nepal National Education Planning Commission, this statement appears:

RICH HERITAGE
Rich in cultural heritage, proud of her incomparable mountain peaks and scenery, here reside an industrious, eager, willing people, who have only recently gotten a hold on their own bootstraps and are now pulling themselves out of the mire of the Dark Ages of the recent centuries. The mud is thick, the pull is long, and the load is heavy.

The University of Oregon already has done much to lighten Nepal's load, and provisions have been made for Nepal to help itself in the years ahead.

A contract between the University of Oregon, the Kingdom of Nepal, and the U.S. International Cooperation Administration will end September 30, Paul B. Jacobson, dean of the university school of education, has announced.

Some financial aid will continue, from the U.S. Government, and Nepalese students will go on studying in this country. But most technical advice will end, and University of Oregon faculty members in Nepal will come home.

FACULTY MEMBERS
Hugh B. Wood, professor of education, is now in charge of the program in Nepal to revise and improve the country's educational system. Wood first went to Nepal in 1953, later returned to Oregon for a brief period, then again went to Nepal. He has been director of the program except for 2 years, when Charles D. Byrne, professor of education, and former chancellor of the Oregon State System of Higher Education, took over those duties.

Other Oregon faculty members who are, or have been, in Nepal, are Francis E. Dart, of the physics department, Thomas Ballinger, assistant professor of art and education, and Clarence Hines, professor of education, and former superintendent of Eugene Public Schools. W. W. Olson, formerly with the university school of education, now at the University of Florida, and James Tuley, a Washington architect also took part in the planning. Tuley was placed on the university staff temporarily for this work.

The International Cooperation Administration provided \$840,000 to help Nepal rebuild its educational system, and that amount was matched by the Government of Nepal. A contract was signed for a 5-year period—and the work began.

The Oregon educators found the members of the Nepal National Education Planning Commission and other government leaders in Nepal willing and anxious to build a good system of schools, from the primary grades through the university level.

PROBLEMS OVERWHELMING
But the problems were overwhelming. Facilities were inadequate. The literacy rate was estimated at 2 percent, and only a small percentage of school age children were actually in the classroom.

On the other hand, Nepal had a rich cultural heritage, and the people did want education. They wanted it badly.

Among other things the Oregon team members had to accustom themselves to a new land, and a different way of life. Language, fortunately, was not a great barrier. Most government officials and educators in Nepal speak English, at least well enough to understand, and to make themselves understood. When necessary, interpreters are available.

In the villages, language was another matter. There it was quite likely that most of the residents did not even speak Nepali. There are many dialects in Nepal, adding to the difficulties of a standard system of education. From the beginning, the Nepal Education Planning Commission decided to stress Nepali as the national language, with all instruction to be given in that tongue.

When necessary, classes are conducted in a local dialect, while Nepali is being learned, but the change to the national language is made as soon as possible.

PROGRAM OUTLINED
A many-phased program was outlined by the planning commission, with the aim of putting the country on its feet educationally quickly. Here are some of the main points:
Establishment of a teacher training center for primary school teachers.

An adult education program: Adult literacy classes at the village level.

Addition of primary schools. About 1,400 new classrooms have been opened.

Training of eight Nepalese educators at the University of Oregon. These administrators returned, after 1 year's study, to plan a 4-year degree-granting college of education. The college was in operation within a month after their return to Nepal.

The college of education, in addition to a regular curriculum, has sponsored workshops, seminars and laboratory schools. It has a bureau of publications and a bureau of research.

A general improvement of existing colleges has been part of the overall program. Demonstration teaching was provided to improve instruction; additional staff members were employed when needed.

A central library of 5,000 volumes has been established to serve the several colleges.

MAJOR ADVANCE
A major advance in higher education has been the development of a charter for a national university. A university commission was appointed to draft the charter, develop the administrative structure, and plan other details of the university. Organizational plans are complete, and the university is officially established.

Architect James Tuley, Fulbright student in India in 1956, developed a master campus plan, and is designing the first buildings. Construction is scheduled to start this fall. The institution has been named Tribhuvan University.

Byrne believes one of the greatest benefits of the program is the provision to train Nepali graduate students in this country. To date, 37 students have been sent here, and seven more will come in the fall. Of the 37, some have completed their training, and returned to Nepal. Others are still in the United States.

Most of these students have studied at the University of Oregon. Four are now at Oregon State College, for subjects offered there, and one is at South Dakota State, which has a complete printing program.

"The training of these teachers will pay strong dividends in Nepal for years to come," Byrne noted. He believes they will form a nucleus of trained educators, who in turn will pass on their new ideas to their countrymen.

A beginning has been made. It will take years more, but Oregon educators, and members of the planning commission in Nepal, believe the kingdom has taken a big step toward lifting itself out of the mire of the dark ages.

America's Veterans
EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, August 4, 1959

Mr. HOLT. Mr. Speaker, I would like to call to the attention of my colleagues a speech given by Comdr. Ferdinand Mendenhall, USNR, at a Memorial Day service. Commander Mendenhall is the editor of the Van Nuys News & Green Sheet, Van Nuys, Calif., which is in my congressional district, and is well known in the Los Angeles area for his many community and charitable undertakings. He was also selected to attend the recent National Strategy Seminar held at Fort McNair. I find the subject matter of this speech a constant reminder of the price of peace, and the importance of keeping America strong spiritually, economically, and militarily.

The speech follows:

Men of the Jewish War Veterans and B'nai B'rith, and fellow Americans, I stood in the midst of a military cemetery that lay on a gently sloping hill. Far to the left and far to the right and up to the crest of the hill and beyond were row on row of white crosses, each cross standing like a guard of honor for the man whose name it bore.

You can read about men dying in battle, about one, or a score or a hundred being killed in this place or that and it's just another story. But you can't stand in the presence of those stars of David and Christian crosses—those many, many stars and crosses—and not be appalled at the fruits of war.

Who were these young men? Where did each one come from? What were their hopes, their ambitions, their goals in life? Where did each one meet his tragic fate, and why, why did he have to die?

Questions, but no answers. An emptiness inside and nothing to ease it. Then a prayer for peace, a real peace, a lasting peace, springs to the lips. But no words are spoken. Peace can be prayed for but this alone is not enough. It must be worked for. And as never before the individual responsibility for peace surges within. The promise to live better, to strive harder for a better world, fills the heart. These men must not have died in vain.

And they will not, if in your heart and mine that promise be kept.

And because we, as the living exponents of the creed of freedom and dignity for mankind, gather here today in honor of Americans who have advanced on the battle-grounds, who have flown into the skies to turn back oppressors, and who have gone down to the sea in ships, believe that these men must not have died in vain, so stand we united and pledged to the principle that

in your heart and mine, that promise be kept.

Memorial Day, considered as the most beautiful and sacred of our patriotic days, has been an annual observance since 1868. It was first proclaimed for the decoration of the graves of soldiers who fought in the Grand Army of the Republic and was known as Decoration Day. With the passing of years, it has come to embrace the lost men of all our wars, and with this widening of scope has been designated Memorial Day.

And as we are gathered here this morning in Beth Olam Cemetery, countless like observances are taking place throughout the United States and in far corners of the lands overseas where Americans paid the supreme sacrifice for the principles of mankind in which they believed.

To those of us who have been closely engaged in these theaters of war, these resting places can only be considered as hallowed ground, with the grave marks echoing the horrors, the waste, the toll of the dead, and the terrible needlessness of war.

At this moment we are in essence a part of the ceremony today in Arlington National Cemetery across the Potomac from Washington, D.C., for gathered there is a multitude paying homage at the Tomb of the Unknown Soldiers, and reading on that tomb the engraved, timeless inscription so powerful in its simplicity: "Here rests in honored glory an American soldier known but to God."

Down through the years, parents and families of American soldiers forever reported as missing in action all like to think of the Unknown Soldier, no doubt, as their son, brother, or husband. But who would know?

He may have come from the fields of our farms; he might have been a storekeeper, a lawyer, a man of letters, or a laborer or student. He may have answered the call to colors, or he may have been drafted. This man may have been of the Jewish faith, or a Catholic, or Protestant, or again, one without religious ties. His might have been from a family of wealth, or he may have been very poor. All these conjectures can only remain just that. We shall never know this, or anything else about this man as an individual.

But we do know this: That he was an American infused with the spirit of 180 years ago running full and red in his veins, that he went down on the field of battle to protect and preserve the ideals of this Nation which have made it at once humble and great. For he knew the need for defending these principles as surely in World War I as did the thousands of his companions who also died in that holocaust, or in the Second World War, or in Korea.

Thus, the Unknown Soldier has become a symbol of America. In death, he is the Eternal Light as his monument inspires our past and present generations, and those in all the future to come, with the dignity among nations we enjoy as Americans. His sacrifice is the eloquent reminder of our rights and privileges of living and accomplishing, of working, of our American family hearth, and of the freedom of worship, and of the freedom of speech and thought. By his example are our youth inspired to go forth and uphold these tenets when the aggressor would turn upon us, so that all the precepts of these freedoms written in blood and toil by our forefathers may be kept secure for us.

And because we have advanced sturdily through the decades with unswerving allegiance to these principles espoused by our forebears, just as surely do we become the target for dictatorships and false "isms" which would seek to uproot and destroy us, that they might feast on the bounty of this land and this populace, wresting from us without conscience that which Americans have carved from the wilderness and have

bled to preserve. Within the present lifetimes of many of you before me, have we engaged in two giant world wars, and in a more recent—but equally vicious—conflict to turn back the forces of a treacherous foe who enslave millions of human beings, a ruthless power devoted to crushing human rights and dignity under the heel of oppression. A foe bent upon world conquest and dedicated to a policy of half-truths, false promises, distortion of facts and use of brute force where necessary in endeavors to capture the minds of men and to corrupt the circle of free nations within this world.

As these insidious forces are pressed against America and its sister nations, we continue to face an era fraught with clouds of threats and martial danger which can be met only with strength in fact on our own part. We have come to integrate the production and maintenance of such strength in arms with our domestic output to the end that defense and normal economy expand mutually in a manner possible only in a land as resourceful, gifted, and well endowed as the United States.

Earlier generations knew these problems in their own times, when your ancestors and mine were faced with tyranny and chose to break apart from such ties and to form a nation conceived under the proposition that all men are created equal, and with equal rights to life, liberty, and the pursuit of happiness. We have learned through the ages that eternal vigilance is the price of liberty. No doubt George Washington had this in mind when, on the eve of his crossing the Delaware, he called his commanders together and said, "Let none but Americans stand guard, tonight."

In his ranks stood our forefathers—yours and mine—men dedicated to the principles for which they were willing to fight and to die—refugees, perhaps, from another and oppressive pattern of life. But refugees in a glorious and determined sense of the term, fashioning the firm foundation on which a new republic was born.

This, in essence, constituted the brotherhood of man, in justice and understanding. Broadly conceived, is this not the guiding beacon for which our men have fought down through the years, even as good men have gone forth to fight the cause of right against might since the beginning of time?

And is not the spirit of this brotherhood as alive and vital today among men of goodwill as we could find it a century, or 5 centuries, or many centuries ago? Do you remember when the troopship USS *Dorchester* was torpedoed February 3, 1943 in the Atlantic Ocean? Do you remember that hundreds of young Americans were aboard, bound for the war overseas, and that there were not enough lifebelts for all? Do you remember that four chaplains handed their own lifejackets to four enlisted men, then locked arms, joined in prayer and went down with their ship? These gallant men of the cloth were the Reverend C. V. Poling, the Reverend George L. Fox, Rabbi Alexander Goode, and the Reverend John P. Washington. And do you remember that one was a rabbi, another was a Catholic priest, and the others were Protestant clergymen? In that one act, they memorialized the truth of the brotherhood of man, carried on the escutcheon of honor for all time to come.

One other example: When the drive was going forward during 1944 to recapture western Pacific island strongpoints from the enemy, I was assigned as naval gunfire officer with one of the most gallant, hard-fighting Marine Corps regiments in leatherneck history. As we stormed ashore to lead the attack on one particular island, one morning, vicious opposing fire made inroads in our front ranks, and I could see the boys go down even as we charged by them. Three days later, when the fighting had moved in-

land and the beachhead was firmly established, I came back to the shore for a brief conference. At the precise place where we had ripped through the sand and undergrowth only 72 hours before, there were fashioned three crude but proud markers—the Star of David and two Christian crosses—placed close together where these three young fighters and companions died together even as they had lived together—brothers in principle and brothers in deed.

Some weeks later, when the Stars and Stripes unfurled to proclaim the objective won, we buried our dead—and there were many who had answered the final call—on a small island not far from the main ground. Where each man had fallen, it seemed to me that that was a precious bit of American soil, because he had fallen there. And as I would look over this new cemetery, even as you can look about you at Beth Olam—this house of sweet stillness wherein we gather to pay tribute in the name of Jewish war veterans, and of all our heroic dead—the realization would come to me as I voiced it to you in the opening: "You can't stand in the presence of those Stars of David and Christian crosses—those many, many stars and crosses—and not be appalled at the fruits of war. . . . The promise to strive harder for a better world, fills the heart."

These men must not have died in vain. . . . And they will not, if in your heart and mine that promise be kept.

May God grant that we can gain inspiration from the heroism of our fallen war dead whom we honor today, an inspiration which will carry us through any dark hours which may beset our Nation.

It was the Great Emancipator standing on the hallowed ground at Gettysburg who said, "We here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that the government of the people, by the people, and for the people, shall not perish from the earth."

Under the guidance of the Almighty, then, shall we keep faith with these dead, with our country, and with mankind by exemplifying the virtues of justice and brotherhood in thankful realization that the price they paid for liberty—gaged by the measure of history—was not, after all, too high.

Mrs. Mary T. Norton Beloved "Aunt Mary"

SPEECH
OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. RODINO. Mr. Speaker, as one of those who had the pleasure of knowing "Aunt Mary" during her term of service here in the House of Representatives, I feel a keen sorrow over the news of her death.

I remember vividly this gracious woman, the late gentle lady from New Jersey, Mrs. Mary T. Norton. Generous of nature and character this unassuming and unpretentious, fine lady who held such a high place for many years here in the House and performed in such a distinguished manner, came to be looked upon by many of us as "Aunt Mary."

Still vivid in my mind is the memory of her help to me as a freshman Member of the House and her sincere and honest

counsel and advice. For this I am and shall ever be grateful to our beloved "Aunt Mary."

Mrs. Norton was a champion of human rights and an ardent advocate of the cause of human welfare. Her service in the Congress was studded with brilliant accomplishment and worthwhile achievement. And despite the awesome responsibilities she never failed to give of herself unselfishly to many charitable endeavors, winning many awards and honors for her work in this area.

Although she retired from the Congress in early 1951, "Aunt Mary" never retired from the cause of helping others. I kept in touch with her over the years during her retirement, and from time to time learned of her continued good works.

It is sad to know that "Aunt Mary" has left the scene, but she has earned a lasting place in the lives and hearts of many whom she has helped and in the history of our country as a great humanitarian and a great public servant. She was truly a dedicated person who served her fellowman and country with a full measure of devotion.

Nixon More Than Holds His Own

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. SCHWENGEL. Mr. Speaker, the entire world has watched with interest and has been impressed by the conduct of Vice President Nixon on his tour of Russia. His firm, but polite discussions with Russian leaders have shown that America is resolute in standing up for the principles of peace and understanding which mark our relations with all countries.

Significant of some of the fine reviews he has received, I wish to call attention to an editorial which appeared in the Davenport (Iowa) Daily Times on Monday, July 27, entitled "Nixon More Than Holds His Own." Under leave to extend my remarks, I include the editorial in the Appendix of the Record:

NIXON MORE THAN HOLDS HIS OWN

Time must elapse to gauge the effect of the sharp exchange between Vice President Nixon and Premier Khrushchev and the succeeding conversations which were minus the bitterness.

A first observation is that the attitude of Khrushchev throws grave doubt upon the value of a summit conference and seriously raises the question of whether President Eisenhower should put himself in position to be verbally assaulted by the brawling Soviet dictator.

The cordial dinner and a night at Khrushchev's home for the Nixons cannot erase the venom of Khrushchev's attitude in his first meeting with the Vice President.

Nixon answered Khrushchev's thrusts at the opening of the American exhibition aptly—so aptly that the Soviet applied censorship to the exchange.

Furthermore, the Soviet did not want its people to understand Vice President Nixon's formal address. While the Russian radio carried the 3,000-word speech, no interpretation was given. In his address, Nixon described life in the United States and our high standard of living.

The Russian press is belittling the American exhibition.

Khrushchev ran smack bang into the type of encounter his deputies Mikoyan and Kozlov have reported to him.

Perhaps Nikita wasn't satisfied with the way the deputies countered blasts at Russia when they were in the United States and decided he'd show them. He didn't get away with anything. Nixon was more than his match.

Three immediate happenings are coincidental with Khrushchev's outburst. They are:

Proclamation of Captive Nations' Week by President Eisenhower following a resolution by Congress: This was a direct slap at Russian aggression set forth in legislative and executive action.

Accusation by the United States of attempted murder by Red China and North Korea in the June 16 attack on a Navy patrol plane over the sea of Japan.

Visit of Secretary Herter to West Berlin to bolster morale there as useless Geneva conference seemed near its end.

Those events can represent intent of the United States to take the offensive in the cold war and to use every opportunity to expose Russian perfidy.

Support is lent this interpretation by the fact that Vice President Nixon had the advice of President Eisenhower when he left for Russia and it could well have been agreed that the Vice President would use no soft answers if Khrushchev opened up on him.

Washington has reacted favorably to Nixon's handling of Khrushchev. It is recognized generally that the only way to treat the Russians is by forthrightly upholding the position of the United States. One effect of the Nixon encounter with Khrushchev should be the stiffening of the spines of the British who are obsessed with the idea that even if concessions are necessary a summit conference must be held.

Retired Military Officers' Influence on Defense Contracts

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. SANTANGELO. Mr. Speaker, last June 3 I introduced an amendment to the defense appropriation bill which would deny funds to defense contractors who employed retired general officers who are on active service within the last 5 years. By one vote, the House rejected it, but the chairman of the Defense Appropriation Subcommittee assured the members that an Armed Services Subcommittee would investigate influence peddling by general officers in procurement contracts.

The subcommittee under the chairmanship of Congressman F. EDWARD HEBERT, Democrat, of Louisiana, has been investigating this matter. I had the privilege of testifying before the commit-

tee and was interrogated by the chief counsel and the members. I made no accusations against particular officers, but highlighted the inherent dangers of general officers obtaining employment with defense contractors and the possible added cost to our defense appropriation bill. It appears that I have stepped on the toes of a "sacred cow," the military officers, and the great defense contractors. Their apologists and protectors in various magazines and newspapers are disparaging my attempts because I dared to criticize this relationship between our retired general officers and defense contractors.

It must be remembered that our annual appropriations for national security totals \$45 billion this year and approximately \$14 billion goes to aircraft and procurement of military equipment. Financial reports indicate that profits of these aircraft companies and electronic companies are soaring. These companies, through their magazine editors, are seeking to belittle my attempts and congressional attempts to find the facts and eliminate the influence in defense contracting.

If the President of the United States would end the authorization for negotiated and letter contracts and would have the Defense Department grant defense contracts through competitive bidding, we could eliminate in a large measure the military influence on defense contracts, reduce our cost, and retard inflation. However, our President, our Commander in Chief, and a military general, seems disinclined to interfere with his former colleagues, and the Defense Department, which is under his jurisdiction, continues to negotiate contracts without competitive bidding and on a negotiated and on a letter basis.

Several attempts to belittle the Hébert investigation and to "pooh-pooh" my efforts have come to my attention. In the August 1959 issue of the magazine, Air Force and Space Digest, the senior editor of the magazine, which is published by the Air Force Association, has attempted to ridicule my testimony before the Hébert committee. The Navy News, in a screaming headline by a feature writer, claims that the investigation by the Hébert committee is a waste of time, that "I am an expert in wasting time," and that the only result of the committee hearings would be to rebut my claim of military influence on defense contracts.

Of course, these magazines and newspapers fail to mention supporting testimony, such as that of Adm. Hyman Rickover, who indicated that there were pressures put on him by military men, but it did not influence his decisions. To an extent Admiral Rickover agreed with me that there should be a timelag between retirement from military service and employment by a defense contractor. Other witnesses have indicated that a timelag is necessary. Others have suggested a code of ethics and a requirement to report overtures and attempts to influence.

The San Francisco Chronicle, which is interested in protecting California defense industries, in a July 10 editorial,

has come to the defense of the military officers and takes serious issue with me.

What the Hébert committee has found out will be reported in due time. I have given the Congress and the Armed Services Subcommittee the benefit of my views. I am not in charge of the investigation, but will give information as it comes to my attention. I know that the Hébert subcommittee is acting in a responsible manner, is not destroying reputations, and is trying to extract facts from embarrassed and reluctant officers who receive lucrative salaries while enjoying retirement benefits.

In this morning's Washington Post, August 5, 1959, Marquis Childs in his column made some discerning observations. I submit this article as a partial answer to those magazine critics and military apologists who are belittling me in order to defend a system in which they are peculiarly interested. I am sure my colleagues and readers will find this article interesting and informative. It follows:

OLD SOLDIERS FIND IT PAYS TO RETIRE
(By Marquis Childs)

Why do firms with huge defense contracts from the Government hire retired admirals and generals at five-figure salaries? Is it because they know the right people in the Pentagon and can lobby through big contracts? Are they merely front men? Or do they have real ability worth \$50,000 or \$75,000 a year?

These are questions which a House committee, headed by Representative F. EDWARD HÉBERT, is trying seriously to answer. Behind the inquiry is a supercharge of resentment and frustration not only in Congress but, judging from congressional mail, in the country as well.

One source of resentment is the fact that if the ordinary citizen, trying to live on his social security retirement pension, to which he has contributed throughout his working life, makes more than \$100 a month, he loses the pension. Yet an admiral or a general, retiring with a pension of \$12,000 a year, to which he has not contributed, can take a salary with private industry up to any amount, including the bonanza of stock options in the company, and still keep his Government pension.

Reflecting this resentment, the House came within a few votes of adopting an amendment which would have forbidden officers to take defense jobs for 5 years after their retirement.

HÉBERT frankly admits that his committee finds it difficult to pin down just what it is that the generals and admirals do for their salaries. But he says, too, that in trying to get the facts he is also trying to be fair. Inevitably, the inquiry spills over into the munitions lobby and the part played by the admirals and generals.

Last week the committee looked into the Aerospace Industries Association, maintained by the companies producing aircraft, missiles, and rockets. Eighty percent of their business is with the Government and they contribute in proportion to their sales to a fund that last year totaled \$1,419,115. The biggest companies, such as Douglas, Boeing, Convair, and Lockheed, contributed \$75,000 each.

Orval R. Cook, a retired Air Force major general, is president of Aerospace at an annual salary of \$49,999.92. He testified that besides research and educational projects, Aerospace does some lobbying. One goal was the contract renegotiation act, with Aerospace undertaking, as Cook tactfully put it,

to clarify the "definition of excessive profits. This effort, which failed, would have meant millions in cold hard cash to the big contractors."

What startled HÉBERT and the other committee members is that Aerospace is listed, for income tax purposes, as a nonprofit organization. In questioning Cook, it developed that the company's \$75,000 contribution is charged to the Government as a contract expense and then the company, on its income tax return, deducts it because it goes to a nonprofit organization.

"In other words," said HÉBERT commenting on Cook's testimony, "the taxpayer is paying to fight himself under this setup, and paying it two ways. The taxpayer has to pay for that contract against which \$75,000 is charged. So it is an expense item. The company is then allowed a tax deduction because it has contributed to a nonprofit organization and the nonprofit organization takes that money to advance the interests of the contract."

Asked how he thought he would come out if he were playing poker with a man who was using his money, Cook laughingly replied, "I would lose." He stressed in his testimony that lobbying is only a small part of the function of Aerospace, some of whose members have 100 percent of their business with the Government.

Pressure looking to big headlines has been on to subpoena Gen. Douglas MacArthur, whose salary as chairman of the board of Sperry-Rand is \$68,000. MacArthur was given five-star rank during World War II under a special act providing that five-star generals and admirals remain on active duty for life at a total compensation of about \$20,000 a year.

It is hardly necessary to add that these are the exceptions. Down below the generals and the admirals the great number of retired officers live frugally on relatively small pensions they justly feel they have earned. But they will also come under provisions of the legislation almost certain to come out of the inquiry.

Dedication of Maj. Frank M. Parker Army Reserve Training Center, Chambersburg, Pa., August 1, 1959

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. VAN ZANDT. Mr. Speaker, it was my privilege to participate in the ceremonies in connection with the dedication of the Maj. Frank M. Parker Army Reserve Training Center, Chambersburg, Pa., Saturday, August 1, 1959, and to deliver the principal address.

The dedication ceremonies were attended by hundreds of citizens from Chambersburg and vicinity as well as the military Reserve units who will use the new center for training purposes. The program was interesting and revealed the great admiration and respect that the community had for Maj. Frank M. Parker who lost his life in Korea, as well as the "citizen soldiers" who comprise the Army Reserve units in Chambersburg.

My address follows:

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, 20TH DISTRICT OF PENNSYLVANIA, AT THE DEDICATION OF THE FRANK M. PARKER ARMY RESERVE TRAINING CENTER, CHAMBERSBURG, PA., AUGUST 1, 1959

It is a pleasure to be here in Chambersburg, with my wife and son, taking part in a ceremony of such great significance, both local and national, as the dedication of a new Army Reserve Training Center.

I appreciate the invitation and I share wholeheartedly in your satisfaction that the Army has honored Chambersburg, both by selecting the city for this center, and by naming it for Maj. Frank M. Parker, Jr., whose life and death reflect such glory upon his native city.

The sturdy and dignified memorial, serving so practical a patriotic purpose, and a purpose so suited to the character and career of Major Parker, must be gratifying to all who knew and loved him, and most of all to his parents, Mr. and Mrs. James M. Parker, to his wife, Phyllis, to his son, Frank M. Parker III, and to his daughter, Phyllis Kim Parker.

It is good to think that the children of Major Parker, who gave his talents and his energy, his enthusiasm and talent for leadership, to the service of his country, will live here in his city, with—ever before their eyes—this substantial evidence of the honor in which their father's name is held by his grateful country.

On this occasion, I should like to salute the Reserve organizations that are presently assigned to this Reserve training center; namely:

1. The 439th Engineer Company (float bridge), Company A, Third Battle Group, 12th Infantry, 79th Division;
2. Company C, 279th Transportation Battalion (armored carrier) 79th Division;
3. The 920th Ordnance Detachment (technical intelligence);
4. Headquarters and Headquarters Company, 2375th Engineer Group (combat) (reinforcement training).

As some of you have undoubtedly heard me say before, I look upon the work of the military Reserves as an essential patriotic duty, a sacrifice of time and effort which good citizens gladly undertake in order to do their part toward keeping their country alert and strong.

The Frank M. Parker Army Reserve Training Center is one of thousands of similar installations throughout the country authorized by the Congress of the United States to provide our Reserve forces with the necessary training facilities.

This Reserve training center will enable the local Army Reserve to continue to maintain their proficiency in the complicated art of modern warfare in this day and age.

Speaking of our Reserve forces as a whole they have not always been in the favorable position of having available adequate training facilities that the Chambersburg units will now enjoy.

Frankly, prior to World War II and also for a period of 4 or 5 years after World War II, our Reserve forces were sadly neglected, however, at that time the Congress recognizing the deplorable state of our Reserve forces enacted into law the National Defense Facilities Act of 1950.

Under the provisions of this so-called basic law—which is the keystone upon which our Reserve facilities programs operate—Congress indicated it would underwrite the construction of permanent training facilities throughout the country so as to insure the maintenance of an adequate Reserve program.

Under the provisions of the National Defense Facilities Act of 1950 armories are constructed which are 100 percent federally

owned and authority is also given to contribute to the individual States for the construction of new National Guard training facilities.

In the latter case, the Federal Government contributes 75 percent of the money required for the development of the Reserve training facilities in conformance with Federal requirements.

For a moment I would like to review the actual status of the Army Reserve training program which includes at the present time nearly 2,000 Reserve training centers scattered throughout the Nation and our Territorial possessions yet only 458 of these training centers are considered by Army commanders to be adequate for continued long-range use.

As a result in the case of the Army Reserve the Department of Defense with the permission of Congress has initiated a vigorous and accelerated program of construction designed to replace existing inadequate facilities.

Thus, during 1958 there were 112 new centers under construction and 80 additional centers were programmed for fiscal year 1959 and 1960 thereby resulting in a total of more than 465 newly constructed facilities for the Army Reserve by the end of fiscal year 1961.

In referring to the Army Reserve program I am not unmindful of the Reserve components of the other branches of our Armed Forces who are likewise benefiting from the National Defense Facilities Act of 1950.

These Reserves of the Air Force, Navy, Marine Corps, Coast Guard, and our National Guard play indispensable roles along with the Army Reserve in defense of this Nation in time of war.

The readiness of our Nation's military Reserves is a vital part of our national security and is best indicated by the recent assignment to the National Guard of concurrent responsibility with Regular Army forces for the manning of Nike batteries located throughout the United States.

This sharing of military responsibility is indicative of not only the state of readiness of various Reserve components but likewise reveals the new mission of the Reserves in modern warfare.

The overall program which involves the National Guard Reserve calls for the deployment of 33 Nike battalions at 116 sites by June 30, 1962.

All 24 of the Nike batteries scheduled to go "on-site" this summer have key personnel currently training at the Army Air Defense Center at Fort Bliss, Tex. The remaining members are actually training at Nike sites under the supervision of the Active Army.

Final transfer of the responsibility of manning the Nike sites from the Regular Army to National Guard units will take place following 2 weeks of field training this summer of the National Guard personnel concerned.

My purpose in referring to the National Guard and its new role in manning Nike battery sites is to emphasize by example the constantly changing requirements of a military reserve in this missile age.

Continuing to use the National Guard Reserve as an example it may be of interest to state that these National Guard missile sites are operated in much of the same way as a volunteer fire department.

In other words, a nucleus of full-time technicians man the equipment around the clock, keeping it in constant readiness and capable of initiating effective fire on the enemy without additional help.

The remaining members of the Nike missile unit are citizen soldiers in their communities and keep up on their military skills by attending weekly drills with their units.

In the event of an emergency these members report immediately to their unit and augment the full-time technicians already manning the equipment thus providing ade-

quate personnel to man and operate the missile unit.

This readiness of our Nation's military Reserves as exemplified by the National Guard Nike missile battery personnel is indicative of the degree of readiness that is to be found in the Reserves of the Army, Navy, Air Force, Marine Corps, and Coast Guard.

In addition the changes in the mission of the National Guard reflect similar changes in military tactics and tables of organization applicable to all Reserve components.

What I am trying to say is simply this: Historically we have had both time and space advantages after the initiation of hostilities in which to expand our forces and provide for their support.

The advent of nuclear weapons in combination with swift means of delivery has denied us these time and space advantages in the event of a general nuclear war.

These changes in military tactics and tables of organization are not only affecting the mission of the Reserves but our military forces in general.

While some may disagree with my views I can see future wars being fought from continent to continent with guided missiles carrying nuclear warheads.

This means that the type of our present-day military machine will be obsolete in a few years unless we keep abreast from day to day with the development of nuclear weapons and the resulting revolution taking place from day to day in the technique of prosecuting war.

As we pass through this transitional period, Congress will be called upon to make momentous decisions affecting military manpower and equipment together with the roles and missions of our Armed Forces.

It has been said many times that without a strong economy the military might of our Armed Forces is imperiled.

Therefore, as we face decisions in the field of national defense, we must protect our economy by getting the most for our Armed Forces out of every dollar spent for national security.

As a member of the House Committee on the Armed Services, which has legislative jurisdiction over the reserves of our country, I wish to take this opportunity to commend the officers and men of Chambersburg's Army Reserve units and at the same time congratulate and thank the citizens of this area for the support they have always given our civilian soldiers, sailors, and airmen who, in the final analysis, are the bulwark of our Nation's defense.

In conclusion it is fitting that on the occasion of the dedication of this Army Reserve training center that we recognize it now and for posterity as a monument to the career and qualities of Maj. Frank M. Parker, a military Reserve who gained undying fame in rendering service to his country as a citizen and a soldier.

Maj. Frank M. Parker will long be remembered, with grateful affection and admiration, by the people of Korea whom he aided and defended, and by the people of America, to whom he stands as an example of stalwart patriotism, untiring energy, and industry, and friendly good neighborliness.

His memory is fittingly symbolized by the Bronze Star of valor; his outstanding service in Korea; symbolized by the sturdy bridge erected in his honor over the Imjin River; and by the loved and honored family that he has left behind him here in the Chambersburg area.

Major Parker will be remembered, too, from this day forward, as his spirit is enshrined in this building and in the organizations identified with it.

May his example be honored and followed by all who are privileged to know and to use the Frank M. Parker Army Reserve Center.

Comments on Proposed Amendment of Section 315 of the Federal Communications Law

EXTENSION OF REMARKS

OF

HON. ISIDORE DOLLINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. DOLLINGER. Mr. Speaker, it is expected that the House will shortly act on a bill which would amend section 315 of the Federal communications law to exempt various types of radio-TV newscasts from that law.

The American Civil Liberties Union, in a communication to me, presented a general discussion of the problem, which they believe would be of interest to the Members of the House.

Under leave to extend my remarks, I am including the statement in the RECORD:

On June 30 the American Civil Liberties Union filed a statement concerning the various proposals before the Senate and House Committee on Interstate and Foreign Commerce to amend section 315 of the 1934 Federal Communications Act. We have now read the text of the bill approved by the Senate committee on July 15.

The key section of the bill is this paragraph: "Appearance by a legally qualified candidate on any newscast, news interview, news documentary, on-the-spot coverage of news events, or panel discussion shall not be deemed to be use of a broadcasting station within the meaning of this subsection."

At first glance, this would appear to eliminate the kind of problem created by the Federal Communications Commission in its decision in the *Lar Daly* case, by removing the handicap from which radio-TV networks and stations suffer with respect to the fullest presentation of news. As we said in our June 30 statement, we heartily endorse legislation which would exempt bona fide newscasts from the equal-time requirement of section 315.

However, the inclusion of "panel discussion" in the exemption presents the question whether such programs really fall within the bona fide news category or are in the area of speeches, for which, under section 315, equal opportunity must be accorded. As we said in our June 30 statement submitted to the committee:

"Our next comment has to do with the other bracketed portion of S. 1858, section 315(e)—'panel discussion, debate, or similar type program.' We recognize that there is some resemblance between such broadcasts and newscasts, news documentaries or news commentaries strictly defined; but we believe that there is also a dissimilarity, which may cause such broadcasts to be more properly treated as outright speeches of a candidate are treated. So, we urge that such broadcasts not be included in any exemption from the application of section 315 until a more thorough study can be made, particularly in the context of how outright speeches are to be treated."

We now again emphasize the need for the most careful consideration of what types of news program should be covered in the proposed exemption from section 315. In properly dealing quickly with the problem raised in the FCC's *Lar Daly* decision, which could interfere with real radio-TV news coverage, it appears to us that a more fundamental revision of section 315 is proposed without

sufficient guidance to the industry and the FCC on definitions.

For example, in last fall's gubernatorial campaign in New York State, the Republican, Democratic, Socialist Labor, and Independent Socialist parties took part in a discussion of the campaign issues. Would it be permissible, under the proposed new wording, to exclude minority party candidates from such a discussion? Also, minority party candidates have heretofore received some time for candidates' on-the-spot acceptance speeches at conventions. Would it be permissible, under the proposed new wording, to exclude them—even though such acceptance speeches by major party candidates were put on the air?

The desire to give a fair hearing in the presentation of campaign views on the air, which underlies section 315, is not basically a problem affecting the networks. Their news programming is so exposed to public review that any unfair treatment would be prevented by sensitive and experienced network executives. However, the situation at the local station level is different, where the understanding of section 315 and the local station management's responsibility is not as keen as on the network level. Thus, the real harm in failing to expose the public to the views of all candidates comes in the area where discussion and thought is most needed—the local community.

We hope that you will give careful thought to the problem we have raised above and that the Senate and the House will—pending further study—avoid broad changes in section 315.

Poison in Your Water—No. 151

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD an article appearing in the Wilkes-Barre (Pa.) Sunday Independent of June 7, 1959, entitled "Health Problem Created Over Sewage Facilities":

HEALTH PROBLEM CREATED OVER SEWAGE FACILITIES

The inadequateness of sewage facilities in the rapidly expanding Dundee area has created a health problem for both Hanover Township and Nanticoke, a municipal official has revealed.

Some of the buildings of the section are equipped with sumps, while others have cesspools. Even so, the overflow is emptying into Black Creek which passes through Nanticoke on its way to the river.

Hanover Township police recently investigated a stench at Dewey Park and found it was due to sewage in the creek. The stream was running unusually low, due to lack of rainfall over a 4-week period, and contained little more than sewage, the investigation revealed.

The installation of sanitary sewerlines at Dundee and Loomis Park has not been planned by the Hanover Township Board of Commissioners, incidentally. Members say it would be too costly to pump sewage uphill to the sewage disposal plant located at Lyndwood. It would be better and more economical, they say, to run it through Nanticoke's lines—if and when the city establishes sewage disposal facilities.

Meanwhile, Dewey Park residents can do nothing but hope that Black Creek will run high for the balance of the spring and summer with a good mixture of sulfur water from mine operations in the Ashley-Sugar Notch area. Newport Township is allowed to dump its sewage into Forge Creek because of the high acid content of water fed into the channel daily by the mine at Wanamie.

Resolution Honoring Dr. Max Nussbaum

EXTENSION OF REMARKS

OF

HON. JOE HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. HOLT. Mr. Speaker, I should like to call to the attention of my colleagues a resolution passed by the California State Legislature honoring Dr. Max Nussbaum of Temple Israel of Hollywood, Calif.

The resolution follows:

HOUSE RESOLUTION 224

Resolution of Assembly, California Legislature, 1959 regular session, relating to Dr. Max Nussbaum

Whereas the life and achievements of Dr. Max Nussbaum are so extraordinary as to have been the subject of the nationally televised show "This Is Your Life," on April 22, 1959, the eve of Passover; and

Whereas the eve of Passover was appropriately chosen as the occasion for honoring Dr. Nussbaum in view of his participation in a modern-day exodus from Nazi Germany that in some ways paralleled the great Biblical exodus which preceded the first Passover; and

Whereas Dr. Nussbaum was born . . . with a rabbinical heritage, for his father, grandfather, and other forebears were rabbis; and

Whereas he followed in their footsteps, studying for the rabbinate at the rabbinical seminary in Breslau, Germany, and earning his way through the Universities of Breslau and Wurzburg, and receiving the degree of doctor of philosophy; and

Whereas Dr. Nussbaum was ordained a rabbi in 1936, and gave aid and comfort to his people in that capacity at the risk of his life during the period of Nazi persecution and oppression in Germany; and

Whereas he was instrumental in assisting many of the oppressed and persecuted in escaping from Nazi Germany; and

Whereas after many harrowing experiences and under threat of arrest and death, Dr. Nussbaum himself escaped the Nazis and migrated to the United States, where in 1942 he was appointed Rabbi of Temple Israel in Hollywood, Calif.; and

Whereas Dr. Nussbaum was the cornerstone in the establishment of the Hollywood Inter-Faith Forum, which has done much to increase understanding and cooperation among various religious groups; and

Whereas Dr. Nussbaum has performed a leading role in raising funds for and serving in various ways the people of all faiths; and

Whereas in his own faith Dr. Nussbaum became chairman of the national executive council of the Zionist Organization of America, the national vice president of the American Jewish Congress, and a director of the United Israel Appeal: Now, therefore, be it

Resolved by the Assembly of the State of California, That Dr. Max Nussbaum is an outstanding example of the type of citizen of which this State can be justly proud and

that this body commends Dr. Nussbaum for his outstanding career as religious leader, humanitarian, and spearhead of interfaith understanding and cooperation; and be it further

Resolved, That the chief clerk of the assembly is directed to transmit suitably prepared copies of this resolution to Dr. Max Nussbaum of Hollywood, Calif.

Signed:

RALPH M. BROWN,
Speaker of the Assembly.

Attest:

ARTHUR A. OHNIMUS,
Chief Clerk of the Assembly.

It Isn't Too Much To Hope

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. LOSER. Mr. Speaker, under the unanimous-consent rule, I wish to call to the attention of the Congress a rather timely editorial appearing in the Nashville (Tenn.) Banner of a day or two ago.

It is now apparent that the head of the Government of Soviet Russia will visit the United States soon at the invitation of the President.

It seems to me that it is manifestly in the national interest that our No. 1 basic industry get back into production of steel before Nikita Khrushchev arrives in this country for his tour of the United States.

America's greatest industry is at a standstill—steel. Its smokestacks are smokeless, and thousands of men are on strike. Unless this controversy is settled soon thousands of others not involved in the controversy will be idle.

Such a dilemma will furnish fuel for Mr. Khrushchev's "mill" when he returns to Russia and reports to his people on the visit.

Secretary of Labor Mitchell has criticized the contending parties for the slowness of the collective bargaining, and I am not now informed as to what progress is being made. I have no opinion as to the merits of the claims of either party to the dispute. My point is that this controversy should be settled as soon as is practicable, and certainly before our visitor from the Soviet Union arrives.

The Banner editorial poignantly points up this situation, and expresses the hope "that when Nikita Khrushchev arrives for that visit he will not be treated to the sight of smokeless smokestacks." May I express the hope that the contending parties will amicably and equitably settle the controversy, and that the might and strength of America—its steel production—will be presented to Mr. Khrushchev in a most favorable light.

I commend the reading of this fine editorial to Americans everywhere. It follows:

[From the Nashville Banner]

IT ISN'T TOO MUCH TO HOPE

It isn't too much to hope, surely, that when Nikita Khrushchev arrives for that

visit he won't be treated to the sight of smokeless smokestacks—the symbol of shut-down—atop America's basic industry.

That is, of course, steel. It is another production line in which this Nation leads the world; but it is paralyzed right now—the fires out; closed by strike, for failure to reach contractual terms acceptable to both sides. And worse than that, some related industries crippled, with the further threat that if the controversy is prolonged many of these likewise will grind to a halt.

That isn't a picture of solidarity calculated to enlighten the Soviet Premier on facts of national strength. On the contrary, it could suggest to him the exact opposite of that, and indulge his own exaggerated ideas of weaknesses and paralysis of democratic methods in the pinch.

And if, in addition to smokeless chimneys, he is treated to the glimpse of picketing—with placards of accusation, and signs of dissension; if he hears the hubbub of furious assault and counterassault, Americans assailing Americans—the picture he will get is of disunity. That won't convince him of oneness. It would, in fact, gratify him as substantiation of his false premise that capitalism is hanging on the ropes, just ready to be pushed over by the Communist thrust he has been ready to supply.

America has the opportunity of showing its best face—its true face—to this official guest; and by a demonstration of its capacity for good sense and self-discipline accomplish something that conceivably could shape world events toward peace. The responsibility is not the President's alone, or the Government's; it is shared by all.

It is in America's interest in every way, to get those production lines turning again—and on a basis that will not whip up the forces of inflation.

It is not too much to ask that this settlement be speeded.

Let's get the smoke pouring again and those furnaces going, before Mr. Khrushchev comes calling. It would be downright embarrassing to have to tell him about harmony when there were signs all around at testing to the contrary.

The Late Honorable Mary T. Norton

SPEECH

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. ADDONIZIO. Mr. Speaker, it was with profound sorrow and a sense of deep personal loss that I learned of the death of the Honorable Mary T. Norton. Like all who had the privilege of knowing her, I had the greatest respect and admiration for this wise and gracious lady who made such a tremendous contribution to our national welfare during her long public service.

Mrs. Norton combined great ability and breadth of vision with a strong and courageous will. As a Member of the House, especially as chairman of important committees, she was instrumental in the enactment of numerous important measures that have been of lasting benefit to the whole country. Mrs. Norton's name will always be associated with progressive, humanitarian pro-

grams. She had deep compassion for the poor and weak, and was a staunch advocate of social welfare measures.

Mrs. Norton had many memorable firsts in her distinguished career. She was the first Democratic Congresswoman, the first woman to head a congressional committee, and the first woman chairman of a major House committee. Her accomplishments were great, and she has earned a unique place in American history.

The American people have much reason to be grateful to this dedicated public servant. She was a great lady, and her passing is keenly felt by all who knew her. I join my colleagues in expressing to her dear ones my deepest sympathy.

The Doctor's Dilemma Is Our Dilemma

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. PORTER. Mr. Speaker, our Nation faces an increasing shortage of doctors. Reasons for this shortage and what can be done to solve it are set out in "The Dangerous Decline in Doctors," by Senator RICHARD L. NEUBERGER. This article appeared in the Progressive magazine for August 1959. Senator NEUBERGER believes in medical research and the other aspects of the field. He has good reason to. As he states in the article, "It has taken at least four such individuals—trained physicians—to save my life."

The article follows:

THE DANGEROUS DECLINE IN DOCTORS

(By Hon. RICHARD L. NEUBERGER, of Oregon)¹

As a recent cancer patient, I have a keen personal appreciation of this country's urgent need for an adequate supply of trained physicians. It has taken at least four such individuals to save my life.

There was the specialist in internal medicine who detected the tumor in its early stages, before it had begun to produce overt symptoms. A surgeon removed the tumor. A pathologist studied the tumor carefully and then revealed that it was of a cell-type responsive to destruction by radiation. For 5 months a radiologist administered cobalt 60 rays to the customary spread area of this particular malignancy.

In addition to these doctors, I could also list the famous cancer specialist who came from the East to consult on the case, the physician who administered the anesthetic, the assistant surgeon who participated in the operation, and an associate of the radiologist who assisted in the cobalt therapy. There were two other pathologists who concurred in the diagnosis regarding the type of tumor involved.

¹ Hon. RICHARD L. NEUBERGER, U.S. Senator from Oregon, has been a leader in health and medical research legislation since he entered the Senate in 1955. He was the successful sponsor last year of bills providing additional salary protection for the skilled researchers of the National Institutes of Health.

This is a total of 9 or 10 skilled physicians who were necessary at one stage or another of the case. And mine was only one of the 450,000 new cases of cancer diagnosed in the United States each year.

Are we as a nation producing enough physicians to handle this and other medical problems of equal or greater magnitude? The answer to so crucial a question is not especially encouraging. Two decades ago 133 doctors ministered to the sick needs of each 100,000 Americans. Today the figure has dropped slightly to 130 doctors. By contrast, in the Soviet Union, which had a 1940 ratio of only 73 doctors for every 100,000 Russians, there are now 164 doctors to serve this many people. Even though American medical training is more thorough and of longer duration than its Soviet counterpart, these comparative figures are a challenge to the entire American Nation—particularly in their clear demonstration that our country is not training enough physicians.

The good health of any population is dependent upon the quality and quantity of its doctors. At least in the latter respect, the United States is falling short. A panel of distinguished consultants has recently reported to the Secretary of Health, Education, and Welfare that "it would not be in the public interest for the number of physicians per 100,000 population to fall below 132. . . . Yet, in order to sustain such a ratio, the production of doctors would have to expand by the year 1970, according to the Federal constants, to 8,700 annually from medical schools in our own land and 750 additional from foreign schools. This compares with the output of only 6,800 physicians in 1956. Our domestic production of doctors will have to increase by at least 27 percent. As many as 20 new medical schools may have to be built if the current number of doctors per 100,000 Americans is not to drop, and a medical school requires many millions of dollars for the building, equipping, and staffing of its elaborate facilities.

"And," adds the report submitted to the Secretary of Health, Education, and Welfare, "to meet this need, construction would have to begin in the immediate future and be completed within a few years." Not even 20/20 vision can detect any such activity. Few new medical schools are on the drawing boards or in the blueprint stage, and a medical school rarely graduates a class earlier than 10 years after its construction has started.

Why is the United States, a nation wealthy enough to spend \$15 billion on liquor and tobacco and some \$25 billion on motor cars, confronted with an alarming dearth of the trained men and women required to keep Americans well?

To begin with, medical education in the United States is running an annual operating deficit of between \$10 million and \$20 million at the present time. Despite this fact, the cost of becoming a doctor is virtually prohibitive for the average family. Medical tuition fees have been raised constantly, but they have failed to keep pace with medical school budgets which rise still faster. Many medical students end their training heavily in debt. Worse yet, some of the best qualified of these students often must quit for financial reasons before they receive their medical degrees. There is a paucity of funds for scholarships and other assistance. The National Defense Education Act, despite all its good intentions, has made only relatively small sums available. Balancing the budget has become a higher goal than meeting national health needs.

Four years in medical school may cost a minimum of \$10,000—perhaps a good deal more. Besides, it must be remembered that medical education follows chronologically

after at least 4 earlier years in undergraduate work, when other debts may have accumulated. The typical patient in the United States looks at his doctor bill and then decides that doctors literally coin money. This unquestionably is true during a doctor's peak earning period. But many lean years have preceded this affluence.

Before he can practice on his own, a doctor spends some 3 or 4 years in residency at a hospital or institution. The New York Times has pointed out that salaries for interns rarely exceeds \$100 a month; they may be as low as \$70. What does this mean, the Times has pertinently asked, for doctors who have committed the folly of getting married and acquiring children? I know personally some interns who do not earn enough to feed and shelter their families. Unless their wives worked—and worked hard—they would be literally destitute. I remember some of my discussions with wives whose jobs made it possible for their husbands to continue at the fine medical school of the University of Oregon. One of them, who worked as a waitress because the tips gave her better pay than most opportunities open to a woman, said:

"When my husband finally treats his first private patient, we and the children will have behind us about 8 years of mushy breakfasts, canned soup lunches, and macaroni dinners. We don't even have a car of our own. If my husband ever becomes a successful doctor with two big cars in the family garage, I think we will have really earned it. Most people don't know about the sacrifice which goes into a medical career."

But need training for a doctor be as prolonged as it is now? Dr. Willard C. Rappleye, dean of the Columbia University Medical School, is one of those who doubts this is necessary. Dean Rappleye has observed: "There is no really good reason why youngsters interested in medicine could not be permitted to complete their preparation for medical schools earlier, either by letting them enter college sooner or by letting them take some of the needed work in high school. If they are not bright enough to do the work sooner, they do not belong in medicine. In Europe, medical training begins at 20. It should here, too."

Because justice cannot be done to an intensive scientific curriculum if the student himself is holding down an outside job, most medical students must depend upon financial assistance from parents at home or upon the earnings of their wives. Yet, in spite of the heavy burden upon the student, a medical school in America generally collects only about 20 cents of every dollar of its basic operating budget from tuition payments. The student is strapped financially, and so is the medical school. In the fiscal year of 1955-56, a total of only \$160 million was available to all the medical schools in the Nation. This was far less than Americans spent for chewing gum or permanent waves during the same period.

Many citizens believe that medical schools are extravagant and wasteful. Yet how many of these citizens want sketchy or skimpy training for men and women who will be licensed to cut with surgical knives into the human body, to administer dangerous drugs and strong medicines? Robert M. Cunningham, Jr., editor of Modern Hospital, has written in a public affairs committee pamphlet that "medical school budgets have already been trimmed to a point where any further reduction would endanger the quality of the program—that is, of medical teaching and research, and eventually of medical practice and medical care. Faculty time per student today is already 7 percent lower than it was 10 years ago; some schools have had to reduce teaching staffs to bare minimums * * * current

deficits now make it difficult to retain capable faculty members. Any further retrenchment, at a time when medicine is moving forward swiftly, is unthinkable to those who recognize our medical schools as a national resource."

Dr. Howard A. Rusk, medical editor of the New York Times and himself an international figure in the field of human rehabilitation, has emphasized that we shall need a net increase of about 5,250 new doctors each year in order to treat adequately the 230 million people who will be living in the United States by 1975. Our current rate of increase, however, is only 3,000 doctors a year. Nor does the imminent shortage of doctors take account of the other personnel shortages in realm of health, which Dr. Rusk lists as 70,000 more nurses [needed], 8,000 more occupational therapists, 3,500 more medical social workers, 6,000 more physical therapists, 2,200 more dietitians, 10,000 more clinical psychologists, 3,000 dental school graduates.

I referred earlier to the far higher proportionate increase in the number of doctors in Russia than in our own Nation. One explanation for this is that 76 percent of all Soviet physicians are women. The Russians have learned that medicine is a profession equally suited to females and males.

Have these Russian women doctors guarded successfully the health of their people? One answer has been supplied by John T. Connor, president of Merck & Co., one of the great American pharmaceutical manufacturers, in an analysis of Soviet medicine. While conceding that the average American doctor has 22 years of education behind him as compared with 16 for a Soviet physician, Connor recently noted the fact that, in 1927, life expectancy for the typical American was 58.5 years as contrasted with only 44 for the Russian citizen. By 1956, the average American lived to be 69.5 years of age, but the Soviet citizen was up to 67. "The Soviets have made this remarkable record by cutting their mortality rate 75 percent since the revolution," said Connor. "They have made most of their progress in fairly recent years."

In Russia a female medical student receives her whole education from the state. She pays no tuition and her keep is furnished by the government. In turn, she sacrifices much freedom. She can be sent to minister to the workers in a certain factory, to the students at a particular college, or even to the inhabitants of a fishing village on some lonely river in far-off Siberia. No American doctor would tolerate such servitude to the state. Yet we pay some penalties, too, for our complete individualism. Senator ERNEST GRUENING, of Alaska, a graduate of Harvard Medical School, has observed that "large areas of Alaska are almost totally lacking in medical services. Many of their people live and die without benefit of therapy."

While there may be plenty of doctors in a fashionable, high-income area like Beverly Hills, the shortage can doom to earlier deaths than necessary sharecroppers on the Mississippi Delta or unemployed loggers in the Oregon hills. American doctors, being completely human, seek out locations in which the likelihood of prompt payment of bills is fairly promising. Who can blame them, in the light of our acquisitive culture? Furthermore, we have made relatively little use of a great reservoir of potential skill and talent in our Negroes who aspire to be doctors. Their opportunities for medical education are so scant and difficult as to be practically nonexistent. Yet, why should they not have the chance to treat and care for their people? In the comparatively rare instances where Negroes have gone to medical school, they often have become practitioners with a high degree of skill and knowledge.

What shall we do in our country? Once again, the answer can be found in prompt, generous, and effective action at the Federal level. The panel advising the Secretary of Health, Education, and Welfare was headed by Dr. Stanhope Bayne-Jones, former dean of the Yale Medical School. It included many other illustrious figures in modern medicine. Most of these people were conservatives in their economic approach. Yet they concluded that the total medical effort of the Nation would decline "unless a large construction program designed to expand markedly the facilities of the Nation's system of medical and related schools is undertaken in the immediate future." And they added:

"The consultants find that unless construction funds become available on a much larger scale than has heretofore been contemplated, the output of physicians will not keep pace with population growth and the needs of the Nation for research workers will not be met. Unless there is a marked change in social philosophy leading to private gifts or State appropriations on an unprecedented scale, large Federal appropriations will be required." The consultants, most of them doctors, recognized that only the U.S. Government possessed the resources to do the job.

Three steps are urgently needed to protect the health of the American people:

1. There must be \$500 million in Federal funds appropriated soon for the construction of medical teaching and research institutions. A good beginning has been the \$30 million annually provided for health research facilities in legislation sponsored several years ago by Senator LISTER HILL, of Alabama. The Bayne-Jones report has warned that "even if funds in the order of \$500 million to \$1 billion were made available immediately for construction of new medical schools, it seems certain that the number of physicians per 100,000 population will decline between now and 1970." We must remember that it calls for a capital investment of about \$50 million to erect a new medical school, to say nothing of the cost of its day-to-day operation.

2. Adequate scholarships must be provided for all young men or women of talent who aspire to be doctors, and these must be offered without any restrictions, as to race, creed, religion, political affiliation, or color.

3. Extra incentive must be furnished to induce gifted medical students and other scientists to enter medical research. The family doctor would have only aspirin tablets and a clinical thermometer unless there had been people of genius in research laboratories over the years. I have introduced an amendment to the Federal Scholarship Act providing 10-percent forgiveness on any student loan from the Government for each year spent in medical research—up to a total of 50 percent. This is only a frail and modest beginning, but it firmly establishes the principle of Federal encouragement of additional participation in medical research.

Taxpayers interested in a balanced budget will ask how these things are to be paid for. I agree with them that we cannot continue indefinitely shoving off our burdens on the citizens of the future. They will have plenty of problems of their own. Therefore, I have introduced four bills to increase Federal revenues by a total of some \$3.2 billion. They are:

1. Raising the Federal gasoline and motor-fuels tax by 1½ cents a gallon.
2. Restoring the excess-profits tax of the Korean war on the manufacturers of armaments and weapons of war.
3. Reducing the special depletion allowance for oil and gas companies from 27½ percent to 15 percent.

4. Permitting the U.S. Post Office Department to set its own postage rates, based on sound fiscal and cost-accounting methods.

These proposals may call for sacrifice. Yet can such pocketbook sacrifices begin to compare with the agony, suffering, and even death we may be inflicting upon future generations of Americans if we do not provide sufficient facilities to train the doctors needed to protect them?

United States Has Road Fund Obligation

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the Record, I include an editorial from the Sunday, August 2, 1959, State Journal, of Lansing, Mich., putting the finger on one of the many and major faults in the Ways and Means Committee proposal for the highway trust fund.

If there has been a single laudatory comment upon the recommendation to slow down the interstate highway program and to earmark part of the automobile excise tax to pay off a revenue bond issue, it has escaped my notice.

I strongly recommend that the committee give this problem additional study, and come up with a more acceptable answer.

The State Journal's editorial follows:

UNITED STATES HAS ROAD FUND OBLIGATION

News of a prospective slowdown in the interstate superhighway building program came as something of a thunderbolt to State highway planners during the past week.

Justifiable indignation was voiced immediately from many States at the unexpected recommendation of the House Ways and Means Committee. Michigan, as one of the States whose programing has been energetically pushed, seems likely to be a major victim of the cutback if it materializes.

What the planning experts know but few average citizens realize is that diversion at the Federal level of funds collected from America's motorists is primarily responsible for the present lack of money to carry through the multibillion-dollar program on the basis of the original Federal pledges to the States.

It is a little-publicized fact that less than 60 percent of Federal automotive taxes goes into highways. The remainder is channeled into the Government's general fund and is used for nonhighway purposes such as foreign aid and new post offices, to cite only two examples.

Federal gasoline and diesel fuel taxes and levies on tires and tubes go into the highway trust fund, but excise taxes on automobiles, parts and accessories and the tax on lubricating oil, amounting to a combined total of more than \$1.5 billion yearly, go into the general fund.

If the recommendation of the House committee prevails and the interstate highway program is drastically slowed, the Federal Government will not be keeping faith with the States which have moved forward to meet previous commitments for expressway construction in the next several years. For

that matter, the Federal Government will also be reneging on an implied promise to motorists that the tax increase on gasoline voted in 1956 would provide the funds necessary to complete the 40,000-mile interstate network by 1972.

The plan, as advanced by the House committee, is to drag the project out at least four more years, with particularly sharp cutbacks scheduled for 1960, 1961, and 1962.

Michigan, for instance, already has programmed \$84 million in 1960 interstate highway construction out of a total of \$96.7 millions that had been promised the State for the fiscal year. The House committee's proposed slowdown would cut back Michigan's program in 1960 to only \$58.6 millions. Further cutbacks are indicated for 1961 and 1962.

Comparative accident statistics already show that the safer superhighways can be the means of saving thousands of lives now needlessly sacrificed. Even so, the lengthening by 4 years of the period during which the entire 40,000-mile interstate highway system would be completed, as now proposed by the House committee, would encounter fewer violent objections if the Federal Government did not waver on commitments made for the early years for which plans already are well advanced.

Highway construction, as every motorist realizes, involves a lot more than simply bringing in a paving machine to lay a ribbon of concrete. It takes months of advance planning, in engineering, in right-of-way purchases, in alerting the highway construction industry to impending needs, and in accumulating vast stores of materials.

As a case in point, the Michigan highway department, accepting the Federal Government at its word, proceeded in good faith with preparations for the big construction program outlined for 1960. If the program is cut back as now proposed much of the effort, time and money spent in preparation for the Michigan interstate construction program in 1960 will have been expended prematurely and hence wastefully. It might better have been used for other phases of the State highway program. Michigan, in fact, only last week sold \$50 millions in highway bonds at a high interest rate to provide funds for the building program.

President Eisenhower had recommended that the Federal gasoline tax be increased an additional 1½ cents per gallon, to a total of 4½ cents, to provide more funds for the Federal aid program. Motorists generally were not in sympathy with the President's recommendation, and Congress declined to accede to the request.

The logical view of motorists that all automotive taxes be used for highway construction before new taxes are added for this purpose, was not supported, however, by the House committee, which instead recommended that the program be slowed down but suggested that a \$1 billion bond issue be created to cushion the blow. The bond issue is opposed by the administration, as inflationary.

In view of the potential savings represented by the House committee's recommended cutback in foreign aid, it would seem only reasonable for Michigan to expect its full 1960 Federal allotment for interstate road building.

Unlike many of the Federal Government's other expenditures, the highway construction funds are a commitment amounting virtually to a contract with the States. Since Michigan has proceeded in good faith in the direction pointed out by Washington, certainly there is an obligation now for Congress to seek and find ways to make good on its end of the bargain.

The 115th Tactical Fighter Squadron, Air National Guard

EXTENSION OF REMARKS

OF

HON. JOE HOLT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. HOLT. Mr. Speaker, I would like to call to the attention of my colleagues the splendid record of the 115th Tactical Fighter Squadron, 146th Tactical Fighter Wing, of the California Air National Guard. This squadron and wing is located in the 22d Congressional District of California, which I represent, and has earned not only honors for its safety record, but the high regard of the community for its cooperation and civic endeavors.

In addition, I should like to point out that the wing has won a total of six awards within the past year; three of these awards were won by the 115th Squadron. First, the wing was presented a trophy for the best operational readiness of any wing on the west coast for the 6 months, April to October 1958; second, the 115th received a flight safety award for an accident-free record for July 1 to December 12, 1958; third, the 115th received the coveted Spaatz trophy from the National Guard Bureau for the best tactical squadron; fourth, the 115th won the Air Force Association outstanding unit trophy for the past year; fifth, the 146th won the Continental Air Command certificate of meritorious achievement in flight safety; sixth, one of the members of the 146th has been named the outstanding airman in the Air National Guard. Col. Robert D. Campbell, commander of the 146th Tactical Fighter Wing, and the men of the wing, deserve our commendation and congratulations.

The following article appeared in the July 1959 issue of Flying Safety magazine, published by the U.S. Air Force:

When a fighter squadron flies in bad luck for years, then wins a flight safety award for an outstanding accident-free record, there's more to it than a change of fortune. Other units can profit from the measures employed by supervisors to make the 115th Tactical Fighter Squadron a credit rather than a debit to the Air National Guard and the U.S. Air Force. The question is, What did they do right?

For years the 115th Tactical Fighter Squadron had either led the accident parade or been right in there pitching for the runner-up honors. Bad luck seemed to dog the footsteps of each succeeding commanding officer and operations officer. Standing operations procedures were rewritten. Pilots were harangued, grounded, or hanged as befitted their offenses. Corrective action was always promptly initiated, after the fact, after the bent or charred F-86 or T-33 was assigned to the base fire detachment for practice drills. Letters were written and conferences held to explain the discouraging succession of accidents. But none of these measures filled the bill. Accidents seemed to keep right on happening, and the hole in the dike was always plugged after the hangar was afloat.

Then suddenly, 2 years ago, mid-March of 1957 to be exact, the grim parade of accidents stopped. Missions were flown as briefed, and the birds came back unbent and unbroken. Month after month went by without so much as a scratch except for the fairing around the landing gear when the barrier caught a couple of strays. Deservedly, the 115th was nominated for the flight safety award and proudly accepted the honor. Here was news in capital letters. News on the positive side for a change. Not the kind of news that makes the front page, of course. But the kind of news that makes commanders and supervisors all up and down the line happy, contented, and ulcer free. But more than the surface news that all was well, there must be a story underneath. Why had the 115th become the model unit instead of the black sheep? What had this outfit done right?

Col. Robert D. Campbell, commander of the 146th Wing, ANG, at Van Nuys, Calif., and former commander of the 115th Squadron, had the ready and obvious answer to the why of the change. "Improved supervision at all levels has brought the 115th out of the woods," was his brief comment. Nothing startling here, of course, and yet it is the unarguable answer to the question of why any unit makes progress in efficiency and flight safety. Of course, this is easy to say. The details of how this improved supervision came about, just what steps were taken to improve supervision, are more to the point. So with the thought that other organizations might profit from the hard-won lessons of the 115th, Colonel Campbell decided to call together all the supervisors involved in the rags-to-riches story of the 115th and put on paper the actual day-by-day measures taken to do the job.

Looking back to the period just before the accidents stopped, the assembled supervisors agreed that the first step in the right direction came from a basic policy change within the 146th Wing. At that time it had been the policy of the wing that all rated staff members be current in the tactical aircraft assigned. This means that the 115th and the other squadrons assigned to the wing were carrying an insupportable load of attached pilots. The 115th itself had 81 assigned or attached pilots to fly in the 25 assigned F-86's, and two T-33's. Simple mathematics, a little multiplication in this case, showed that there just wasn't enough time to go around. If the available time were prorated, none of the pilots could comply with the minimum 60-2 requirements. Furthermore, the tactical or seat pilots had not the least chance of flying the 110-plus hours required annually by CONAC Training Directive 10-12. The result was, of course, that pilots would come out to fly time after time and find no airplane available. This in turn meant that rechecks were needed for those who did not maintain currency. And the IP load on the two full-time flying training supervisors became ridiculous.

Therefore, the first step, a policy change by the wing, was the decree that only the assigned tactical pilots, their commanding officers, "ops" officers, group and wing commanders, two flying training supervisors and the Air Force adviser would fly the unit's aircraft. In the case of the 115th this brought the pilot load down to a workable 39 total. The admittedly loose supervision now had a chance to tighten up.

The order then went out to weed out all the unlucky pilots, and all those who were not fully participating in the program for one reason or another. A review of the records was made and check rides the grand scale. Heads started to

roll of weeding out pilots, flight qualifications now came under And changes were made

here. Higher qualification standards were set up and the new flight commanders had to measure up to some pretty exacting requirements. When the smoke cleared, all the flight commanders appointed had been through Nellis gunnery training, or had been instructors at Nellis; had had Korean combat experience, and had been through, or instructed at, the Air Force Instrument School at Moody Air Force Base, Ga. It goes without saying that the flying training supervisors were also of comparable experience.

An analysis of the past accident records showed that 60 percent of all major mishaps had occurred on cross-country flights. Pilots had, in the past, been authorized flights beyond their individual capability and as a result had been dotting the landscape with smoldering heaps of F-86 aluminum. Poor weather flying technique turned out to be the main cause factor, and cross-country flying was suspended for all pilots until they were put through a complete instrument training program. For 4 months the squadron pilots stayed close to home and flew hood and Link until things shaped up.

The briefing guides and methods now came in for their share of attention. The guides were revised, the PIF brought up to date, and flight leaders were retrained to brief according to a strict and comprehensive method.

Next, the squadron standardization board was rejuvenated and the old double standard days were gone. The older pilots now no longer flew according to the old 8th or 5th Air Force rules. As the commanding officer, Maj. Charles Nelson says, "The boys found out that they were no longer going to fly according to Hoyle or Goren. They were going to fly according to me."

For the reader who knows little about Air National Guard operations it might be wise to digress for a bit and review the bidding on Guard operations and the men who fly with the Guard. Contrary to the opinion of some, the Air National Guard is a full-time operation and is assigned operational duties by the Air Force, through the major commands. These duties augment the overall operations commitments of the Air Force. The standards of training set up for the Air National Guard through CONAC are fully as demanding as those set up for regular units. The individual pilots fly as many hours annually as the regular Air Force pilot and all this in spite of the fact that almost all of them have outside civilian jobs. Only two pilots, the flying training supervisors, are assigned full time duty to a guard fighter squadron. In the last 6 months of 1958 the 115th flew 2,455 F-86 hours, 352 T-33 hours, 275 C-45 hours and 173 C-47 hours.

The planes are maintained according to the same tech orders the Air Force uses and the average guard squadron maintenance records compare very favorably with those of the Air Force in such things as in commission and AOCIP rates. As Colonel Campbell says, "I've never had any kick about the maintenance done by my Guardsmen. Our troubles were always primarily in the operational field. But just to tighten up everywhere along the line, we looked into the maintenance-operations relationship. Maintenance now, in effect, schedules operations in that planes are flown according to inspection schedules and with this better planned inspection program we get better quality control. There's no pushing of maintenance by our ops people. Furthermore, the maintenance supervisors are always included in our flying safety meetings and contribute greatly to the safety effort."

The Guardsman pilot must spend most of his otherwise free time in ground and air training at the various sites and many of them commute well over 100 miles to their stations. In the Van Nuys setup, the average commuting distance is about 25 miles.

Naturally, this creates problems at home because the little wife takes a dim view of the absentee husband routine. Recognizing this, Colonel Campbell has suggested that the guardsman keep his guard pay separate and show the little woman just what it will buy. Anything from a mink coat to a washing machine, bought solely with guard pay, is a real persuader, according to him.

To go on with the operational changes, a hard minimum of 10 hours per month was set up for the tactical pilots. A pilot can miss this 1 month but the second month will see him getting the fish eye from the commanding officer, and his days in the guard are numbered. A recheck is automatic if for any reason the pilot gets less than 2 hours per month.

A full-time air officer is on duty at any time the planes are in the air. At a drome such as Van Nuys where the runway is only 6,000 feet long and the surrounding area is well built up with residences and factories, it is especially important that airplanes do not attempt any get-home heroics. When an emergency exists the air officer generally orders the pilot to another airdrome. It must be noted here that there is no radio landing aid at Van Nuys airport. Furthermore, their fine record has been made in an area of poor visibility and high air traffic density.

The flying safety officer duties were given to one of the full-time flying training supervisors, Capt. Henry J. "Jack" Williams. According to Jack, "There's no such thing as a part-time flight service officer and the practice of having one of the part-time pilots carry on this job had to stop."

With the short (6,000-foot) runway at Van Nuys, special operational restrictions were put into effect. The F-86 would no longer be flown with external tanks when the temperature climbed to 80 degrees or over. The T-Birds were cut down to 100 gallons maximum in the tip-tanks, and the barrier was raised on every approach. Two saves of '86s have been recorded so far and served to preserve the safety record.

A special operational problem arose when a USAF policy change resulted in Guard units getting new pilot trainees direct from basic flying school with no F-86 time under their belts. Fifteen of these young pilots came to the 115th during the past 2 years, and five of them were eliminated through the stringent training requirements which were imposed. These five, though badly needed by the squadron, were potential accidents and had to go. The other 10 are today fully operationally ready with fine gunnery records. And this in spite of the fact that the 115th cannot at any time schedule gunnery missions from the home drome. Most of the missions were flown from George and Williams Air Force Bases, the latter 300 nautical miles away.

The 115th has set up a comprehensive quarterly exam on emergency procedures. In addition to this the daily flight briefings include one or more questions on emergency and normal procedures. Furthermore, attached to every clearance, local or cross-country, there is a mimeographed emergency procedure question which the pilot must answer and the air officer must check, before the pilot takes off.

The training folder system on each pilot has been closely watched. In this way the flight commanders or check pilots have access to all mission reports, the standardization mission profiles, the ops readiness certificate, all exams and questionnaires, and the Link trainer grades. Nothing in a pilot's record is left to the memory of the supervisor. A bad trend is thus quickly spotted and a check ride scheduled.

On cross-country flights, the F-86's are not allowed to fly alone. Two or more aircraft are always scheduled. The T-33's have two

pilots aboard unless the mission is transition solo. The tactical pilots are required to be current in the F-86 only. The IPs and supervisors are the only pilots required to be current in more than one aircraft. Further than this, since the squadron has had the F-86A, E and F models at one time, a pilot flies only the A or the E and F. One checklist at a time is enough, according to Capt. Jack Williams.

Supervisors tightened up on the boring holes method of flying. Every hour was made to pay off in solid training with specific mission assignments. Individual instrument minimums were placed on each pilot of the organization according to his ability. One pilot might be allowed to fly into an away-from-home airport with the published minimum weather prevailing. Another might be required to sit on the ground until the weather picture improved. This one requirement has caused a lot of hurt feelings but no hurt flesh.

Two years ago the wing commander requested a visit by the Operations Safety Survey team of the Directorate of Flight Safety Research. Within 3 months of the team's visit all recommendations made had been complied with. Colonel Campbell is enthusiastic about the help given him by the specialists who accompanied General Caldarone on this visit.

In a high-density area such as Van Nuys the midair collision is always a threat. To combat this, special corridors for approach and departures were set up locally in cooperation with Burbank and the Federal Aviation Agency. Today, near-miss incident reports are infrequent. And the pilots at Van Nuys fly from an airport which lies under two Victor and three low frequency airways.

To wrap it all up, according to the supervisors at Van Nuys, the safety award came as a result of making every pilot a flying safety officer, aware at all times of his individual responsibility toward an accident-free record. To be a flying safety officer the pilot of course had first to know how to fly and to take pride in his individual ability. In June of 1957, the 115th had only one pilot qualified ready, according to AFM 335-25 and CONAC Training Directive 10-12. Today, 29 of the 31 assigned seat pilots are so qualified. The other two are now at Air Force schools receiving additional specialized training. The 115th is now a firm unit of competent, responsible pilots, average age 26, who are prepared to join the Regular Air Force on an equal basis when the need comes.

Interesting Views on Cooperative Bill

EXTENSION OF REMARKS

OF

HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. QUIE. Mr. Speaker, there has been widespread comment on a bill introduced in the other body, which would relieve agricultural cooperatives from certain restraints of the antitrust laws.

I am sure that my colleagues will be interested in reading the editorials on this legislation by the Dairy Record, of St. Paul, and the Washington Post:

[From the St. Paul Dairy Record, July 29, 1959]

BILL TO EXEMPT CO-OPS FROM ANTITRUST LAWS RAISES STORM OF PROTEST—SENATE RETURNS MEASURE TO AGRICULTURE COMMITTEE ON MONDAY OF THIS WEEK

WASHINGTON.—Approval of a bill by the Senate Agricultural Committee, without hearings, to exempt agricultural cooperatives from antitrust laws raised a storm of protest here last week.

Action by the Senate was scheduled last Friday, but the bill was skipped over on the Senate Calendar, after objections were raised from both sides of the aisle. Senator LYNDON JOHNSON, Democrat, Texas, majority leader, said the bill might be brought up again later.

However, the bill was returned to committee on Monday of this week, and observers here feel certain that there will be no further action on the measure. A similar bill has been introduced in the House by Representative WATKINS M. ABBITT, Democrat, Virginia. The Senate bill was sponsored by Senator RUSSELL B. LONG, Democrat, Louisiana.

WOULD OFFSET COURT ORDER

The measure is receiving major attention because it would counteract a court order directing the Maryland-Virginia Milk Producers Association to get rid of Embassy Dairy here. The case is now pending before the Supreme Court (Daily Record, July 22).

In a letter sent to each Member of the Senate, officials of Chestnut Farms, Thompson, Harvey, and High's Dairies stated that the proposed bill would give cooperatives sweeping and retroactive immunity from antitrust prosecution which no segment of the economy should have.

"The bill," said the four firms, "can be a terrible assault on the entire business community." The dairies suggested that a close study be made of the position taken by the Justice Department, whose antitrust lawyers strongly advised against passage of the measure.

JUSTICE ATTACKS BILL

Included with the letters went copies of a statement to Senator ELLENDER, Democrat, of Louisiana, chairman of the Senate Agriculture Committee, from Deputy Attorney General L. E. Walsh, which outlined the Justice Department's position on the measure.

Walsh stated that the proposed bill could amount to virtually complete exemption of cooperatives from the antitrust laws.

He added that "we are aware of no reason why the exemption from antitrust prohibitions which cooperatives already enjoy should be further increased." He pointed out that the Capper-Volstead Act has always been considered to include the right of cooperatives to own and operate marketing facilities.

MAY HURT COMPETITION

But acquisition of such facilities by a cooperative in a particular instance "may run afoul of the antitrust laws because it may seriously imperil competition or tend to create a monopoly," Walsh noted.

Farmer cooperatives themselves may be harmed by the proposed legislation, he warned. "If the bill were to effect complete exemption of cooperatives from the antitrust laws, a cooperative injured in its business by unfair business practices on the part of another cooperative would be left without a remedy," he said.

"Under such circumstances, individual farmers would be at the mercy of cooperatives in competing for markets and small cooperatives would exist at the sufferance of the larger ones," he claimed.

CITES POSSIBLE CASE

Under this proposed law, said Walsh, an association or associations of agricultural producers might be free to purchase a supermarket chain, with no basis for antitrust scrutiny, and afterward the acquired company could engage in predatory pricing—to drive out competitors—with no fear of antitrust laws.

Also announcing its opposition to the measure last week was the Milk Industry Foundation.

Late in the week, cooperative leaders here were reported to be viewing developments on this bill with alarm. They fear the unfavorable publicity will bring on renewed and stronger demands for repeal of the present cooperative tax exemptions.

[From the St. Paul Daily Record]

CO-OP BILL STINKS

One of the most vicious pieces of legislation to come before this session of Congress is that introduced by Senator RUSSELL B. LONG, Democrat of Louisiana, and Representative WATKINS M. ABBITT, Democrat of Virginia, which would make cooperative organizations practically exempt from antitrust action and could, conceivably, make it possible for giant cooperatives to take over the entire food industry.

The bill has been introduced in the Senate by Senator LONG, and one of the startling things about it is that approval was given to the highly controversial measure by the Senate Agriculture Committee without hearings. It is a bill that should have been shelved summarily in committee.

According to the Long bill, an activities, contracts, and practices of cooperatives would be subject to, and within the exclusive jurisdiction of the Secretary of Agriculture.

The Department of Agriculture has indicated that it is opposed to Congressional action at this time because of the action now pending in the Supreme Court on the Embassy Dairy, Maryland-Virginia Milk Producer Association case. However, a spokesman for the USDA, who was not identified, did waver on the subject by stating that it might favor something along the lines of the bill in the future.

The Department of Justice, however, is taking a firm stand on the matter, for Deputy Attorney General Lawrence E. Walsh told the Senate committee in a letter that the measure radically revises existing law and would have the effect of cancelling the Justice Department's lower court antitrust victory that requires the Maryland and Virginia Milk Producers Association to divest itself of the Embassy Dairy that was acquired by that Cooperative in 1954.

He pointed out that the language of the bill could very well be interpreted as granting the cooperatives of practically blanket immunity from antitrust prosecution. Mr. Walsh stated that the farm cooperatives now are immune from antitrust prosecution when they organized to establish uniform prices, to operate processing and distribution facilities and to jointly buy farm equipment and other supplies.

However, it did point out that under existing law, a farm cooperative is just like any other corporate entity and is subject to antitrust restrictions against predatory conduct such as blacklisting, boycotting, and monopolization.

The bill has all the earmarks of sponsorship by the Maryland and Virginia Milk Producers Association which apparently is fearful that the case will meet the same fate in

the Supreme Court that it did in the lower court. The association has refused to admit or deny sponsorship of the bill which probably gives more credence to widespread reports that it is the moving spirit behind the proposed legislation.

The bill is manifestly unfair to private business that must abide by the monopoly laws. It conceivably could make an octopus of giant cooperatives, for it would provide them with such power that it would be possible for them to absorb heavily taxed private business and, carried to the extreme, it would mean a long step toward a more socialistic state.

Looking at the measure from a standpoint of the cooperatives, themselves, the proposal stinks to the high heavens. Not only would it be possible for the giant cooperatives to absorb private businesses, but it also would be possible for them to lay down an ultimatum to smaller cooperatives to merge or to be squeezed out of business. Fantastic as it may seem, it is in the realm of possibility that 10 or a dozen large cooperatives could take over the entire dairy industry or, for that matter, the entire food industry.

It is such legislation as this that brings increased demands from private business that tax exemptions which have been granted to cooperatives be eliminated. If the Maryland-Virginia Association is the sponsor of the bill, it is doing a tremendous disservice to the entire cooperative movement. It is bound to be repugnant to far-sighted cooperative leaders who want to see the cooperative movement grow and prosper on merit and not by legislation.

All we can hope for the Long-Abbutt measure is that it be so overwhelmingly defeated when it is presented to the Senate and the House that no group again will have the effrontery to make such a proposal, ever.

[From the Washington Post, Aug. 1, 1959]
CO-OP MONOPOLY BILL

The Senate squeezed out of a very embarrassing situation the other day when it sent the co-op monopoly bill back to its Committee on Agriculture. Its embarrassment arose out of several factors. First, the measure had been quietly taken to the floor without any public hearings. Second, no one seemed to know precisely what it means. Third, it would apparently have reversed three important court decisions which have applied the antitrust laws to prevent the consummation of restrictive or monopolistic practices.

In these circumstances, the Senate might well have blasted the bill clear out of the legislative ballpark. Instead it merely returned the measure to the committee that had previously ignored its defects.

Though the Agriculture Committee has not yet scheduled hearings, it is expected to do so, and the co-op bill may soon be back on the floor. Perhaps it will then be better understood than it was last week, but this is by no means certain, for the committee is inclined to look at the bill as it affects the co-ops, and the chief question about this measure is the effect it would have on food monopolies extending far beyond the farm and farm marketing agencies.

The Department of Justice fears that this seemingly innocuous bill would enable a cooperative to buy all marketing outlets in an area and force all farmers to participate or be denied a means of getting their crops to market. Persons owning farms might also buy up the big grocery chains and engage in predatory pricing practices without running afoul of the antitrust laws. These fears do not seem to be exaggerated in view of the blanket immunity to the antitrust laws

which the bill would give to "farmers and/or associations of farmers, planters, ranchmen, dairymen, nut or fruit growers, and producers of other agricultural products." Any measure which threatens to open so enormous a gap in the laws against monopoly and restraint of trade should at least be scrutinized by the Judiciary Committee before going to the Senate.

It seems to us obvious, too, that no measure of this sort should have any bearing on antitrust cases already in litigation. Congress should be most reluctant to upset decisions of the courts already rendered or to interfere with decisions yet to be handed down. This suggests that if any bill should survive scrutiny by the Agriculture and Judiciary Committees, it should be made specifically inapplicable to existing cases before the courts—a provision that might substantially lessen interest in it.

Why the Public Needs Some Help in Analyzing the Contentions of the Parties to the Steel Strike

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. REUSS. Mr. Speaker, the following letter, which appeared in yesterday's New York Times, contains a very clear discussion of how the public would benefit from an analysis of the wage-price controversy in Big Steel from the standpoint of the public interest:

TO THE EDITOR OF THE NEW YORK TIMES:

The public relations offices of the steel companies and the steel union, whose advertisements appeared periodically in your paper since May, are performing a real disservice to the public by so distorting and burying the facts as to make informed public opinion on the merits of the respective sides virtually impossible.

The union has made some good points in its advertisements. But much of the merit has been lost in a myriad of half-truths—for example, it argues that a wage increase is justified and can be paid without increasing the cost of steel to the consumer. To bolster this position they assert that the present wage of \$3.03 an hour is misleading because steelworkers seldom work a 40-hour week. The union argues that workers averaged 40 hours a week only 1 year in the past 13.

This is an important consideration but does not tell the full story. No mention is made of the number of times when workers have been able to work overtime at time and a half. Ignored also is the fact that irregularity of work is not peculiar to the steel industry alone but is a characteristic of automobiles, construction and in fact much of heavy industry. No evidence has been presented to indicate that the irregularity of work in steel is greater than present wage differentials compensate for.

COMPARING WAGES

The union also maintains this irregularity of work has meant that 70 percent of the workers do not earn enough money to support their families decently. It is always difficult to argue with the man who claims he

needs more money since most of us find ourselves in this deplorable position regularly. The fact remains that one-sixth of the steelworkers earn over \$6,200 a year. Averages are always misleading but the union would be in a sounder position if comparisons between steelworkers wages and averages elsewhere were made.

The union's position is that an increase in wages can be paid out of profits without increasing the price of steel. To support its position the union cites the fact that 1958 was the fourth best year for steel profits despite the fact that the industry only operated at 60 percent of capacity. Certainly the recent announcement of steel profits has done nothing to weaken the union's case.

Rather a different story, however, is found if yearly profits are computed on rate basis as a percent of sales or investment. Total dollar profits in steel have risen sharply; as a percentage of sales and investment the rise has been much less pronounced or even negligible, depending upon what base year is selected for comparison.

In this connection one of the most flagrantly misleading advertisements of the union is one comparing the years 1952 and 1958. The point is made that labor costs were only 42.1 cents of each sales dollar in 1952 and 42.8 cents in 1958, while profits had increased from over \$143 million to \$301 million. Obviously what should have been compared for the 2 years is total wages—\$2,085,014,889 (1952), \$2,405,994,652 (1958), and total profit—\$143,678,740 (1952), and \$301,555,231 (1958), or profits as a percent of sales, in which case the rise of the profit rate would be sizable, 5 to 6.3, but would not carry the gross distortion implied in the union's figures.

PRICE LEVEL

Nor have the steel companies been innocent of misrepresentation in their advertisements. Thus they have said that steel wages have already risen more sharply than inflation, implying that the steelworkers have kept well ahead of the game. While this is true, it ignores the fact that the general level of wages has risen more than the price level (which of course it must do if workers are to share in any of the benefits of increased productivity).

In presenting the inflationary effects of past wage increases, the companies have advertised the relation between a rise in wage rates and the rise in costs per man-hour of input. Costs per man-hour of output are then identified with the costs per ton of steel. The fact is that the two are greatly different and it is likely that treating the two as identities may overestimate the increased cost of producing a ton of steel from a wage increase by several dollars.

Nor would we ever know from the steel companies' advertisements that irregularity of work accounted for any of the high hourly wage or that from 1954 to 1958 there has been a decline of nearly 50,000 in the number employed. Union advertisements have supplied these figures, however, and it is perhaps too much to ask the companies to substantiate the union's case.

No attack upon (or defense of) either position has been intended in the above analysis. Both sides seem convinced of the importance of securing a favorable public opinion. The achievement of this goal might mean more in the long run if readers were given the necessary information to render an informed judgment.

HOWARD D. MARSHALL,

Associate Professor of Economics and
Chairman of Department at Vassar
College.

POUGHKEEPSIE, N.Y., July 29, 1959.

Appendix

Commentary on Hon. Allen J. Ellender,
of Louisiana

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. JOHNSON of Texas. Mr. President, one of the most distinguished, alert, and perceptive of our Washington commentators is Tris Coffin, a man who is known to practically all of us.

In his broadcast last night over station WWDC, Mr. Coffin referred to the work that has been done by one of our ablest and most tireless Senators—the distinguished Senator from Louisiana [Mr. ELLENDER].

Mr. Coffin described at length the hard work that Senator ELLENDER has done in traveling around the world to dig up facts which Congress can use. He specifically went into the hard travels of Senator ELLENDER in the Soviet Union.

To Senator ELLENDER, such a trip is not a pleasure jaunt. He avoids the fine hotels and the luxuries and comforts of the great cities of the world. Instead, he goes into the back country—into the small towns and the rural areas where the people live and work. And the information that he has gathered has made him one of the best informed Members of Congress on the daily life of the Soviet people.

Mr. President, the commentary by Mr. Coffin is in his usual style—readable, interesting, and factual. I ask unanimous consent that excerpts from this broadcast by a distinguished commentator about the contributions that have been made to the Senate by one of our most alert and distinguished Senators be printed in the Appendix of the Record.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

For 3 years, a short, amazingly energetic man with eyes as keen as a hawk's has been traveling the length and breadth of Russia with a pencil, note pad and camera. No press secretary, no mob of reporters, no arguments. Just looking around and finding out what's what. His notes are a gold mine that the President might well read.

This remarkable traveler is Senator ALLEN ELLENDER from the southern bayous of Louisiana. He is a 68-year-old widower and farmer, and he likes to travel alone and off the beaten paths. He has a great eye for the significant detail. I dare say no American has a greater personal and practical knowledge of Soviet Russia than ALLEN ELLENDER.

He started out in 1955, and then again in 1956 and in 1957. He went places and saw things permitted no other man from the West. In the greying light of early morning, he sat in sheds in remote Siberia waiting for

the small plane to take him to the next stop. He tramped through acres of grain and cotton land, feeling the soil and touching the plants. He walked among the machines in factories and talked to workers. He saw the thrilling, roaring drop of water over giant new dams. He rode on distant rivers. He conversed with Russians of almost every imaginable type.

Senator ELLENDER was not doing this for publicity, for he got very little. He wanted to find out for himself what Russia looked like, what it was doing, and what its people were thinking. He knew how to easily shrug off propaganda. He wanted facts. And he wanted them for a very good reason.

The rate of Soviet progress in turning its great untapped resources to man's use—he thought—would set our own pace. Should we stroll along casually and sit down for a rest on a park bench? Or should we step ahead briskly. Resources is Senator ELLENDER's special balliwick. He is chairman of the Senate Agriculture Committee, and chairman of the Appropriations Subcommittee handling water development.

In one of his reports, Senator ELLENDER told the Interior Committee, "The traditional concept of the Soviet Union as a backward, semideveloped nation is incorrect. I visited several hydroelectric power stations that were more than 1½ times as large as anything we have in this country. I saw foundations poured for turbines and generators which will have a rated capacity of 300,000 kilowatts each—much larger than anything we have. These projects were designed, constructed, and all component parts built within the Soviet Union. As a result of my inspection of Russian installations, I am convinced that in water transportation and hydroelectric power development, they are inching ahead of us, and in some areas of the tooling industry they are very close to our standards. There is absolutely nothing we can do about such developments in Russia," the Senator said. "They are doing it with their own resources to meet the needs of their own expanding economy. . . . However, we can provide funds for the execution of an adequate resource development for America. This is needed to strengthen us as much as an army."

After Senator ELLENDER's 1957 trip he reported again to the Senate, "Almost uniformly I found improvements in Russian conditions as contrasted with my impressions last year and the year before. As a matter of fact, some of my previous estimates, particularly about Russia's agricultural potential, had to be modified in the light of my trip through Siberia. This enormous area which," he said, "most of us consider the world's icebox—a huge prison camp—a vast waste of barren land—is actually becoming Russia's breadbasket."

"While the climate is somewhat more severe than our own upper Middle West," the Senator explained, "the area has proven itself capable of producing some fruits, considerable livestock and dairy products, and a large variety of root crops and grains. Yields of grains are high, although methods of planting, cultivating, and harvesting are obsolete by our own standards."

This busy, curious Senator went deep into the virtually unknown land of Siberia and reported in his notes, "Visited the Novo-sibirsk branch of the Academy of Science. Staff increased from 20 to 700 in 1957.

Siberia and Krasno-yarsk areas represent 2 percent of the earth's surface, have 10 percent of the world's electric power potential."

One of the most fascinating out-of-the-way spots Senator ELLENDER stopped was Irkutsk. This is across the towering mountains from the empty deserts of Mongolia. Here on a mountain plateau is the legendary Lake Baikal. It is 360 miles long and at some points almost a mile deep, crystal clear from snow melt. Songs have been composed of this area, for even way in the days of the Czars political deportees walked hundreds of miles across the Ural Mountains and southern Russia to this lake. When Senator ELLENDER saw, as he noted, was a huge hydroelectric power center, a booming aluminum industry, housing project, schools, a hospital, a cultural center, kindergarten, stadium, and stores. The immense project was begun only in 1951.

Perhaps the most startling information Senator ELLENDER gained was that there was no deep rebellion smoldering against the Soviet state. (This was confirmed last week by the American Governors in their report to the President.) True, as ELLENDER discovered, there were complaints—the factory managers objected to getting so many orders and counterorders from Moscow, the women wanted cosmetics to look prettier, students wanted more literature from the outside world, but these were gripes and not the sparks of revolution. Senator ELLENDER found, too, in Siberia the pride and vigor of pioneers.

As ALLEN ELLENDER is himself a sturdy man, a man of the soil, this struck him as important, perhaps more important than all else he saw and heard in these three trips. For there can be fertile ground, but unless the human spirit has the will to plow it, it is of no value.

The President could well look over Senator ELLENDER's journals, and learn about Russia.

Importance of Exchange Visits at Every Level

SPEECH

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. LINDSAY. Mr. Speaker, I should like to voice my complete approval of the decision made by President Eisenhower to exchange visits with the head of the Soviet Union, Mr. Khrushchev. I am a firm believer in the importance of exchanges at every level. The difficult and vital problems which have confronted the United States and the other free nations of the world in dealing with the Soviet Union can only be resolved by the exploration of every possible avenue of negotiation. Our foreign policy must unceasingly be directed toward the

establishment of areas of agreement and understanding between leaders of the Soviet Union and our leaders. The arrangements made for the visit of Premier Khrushchev and the return visit of President Eisenhower may possibly prove to be important preliminaries to such agreements. There are many matters as to which Premier Khrushchev is misinformed, or about which he does not want to be properly informed. Let us hope his visit here will open his eyes to our way of life, and our goals. Such an exchange as is proposed by the President can do no harm, and may do some good.

We must make it clear, of course, that the United States contemplates no retreat from its firm opposition to the ruthless expansion of the Russian Communist Empire. As I understand it, one of the principal purposes motivating the President in arranging this exchange is to make abundantly clear the firmness of our resolve to support freedom-loving and freedom-seeking peoples everywhere. At the same time the President recognizes that mutual exchange of ideas and the exploration of every area of agreement may narrow down areas of disagreement and possibly lay the groundwork for a genuine peace.

Student Loan Program a Success

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. JAVITS. Mr. President, the 85th Congress enacted, upon the President's recommendation, the National Defense Education Act wherein provision is made for loans to deserving college and university students. It shows the program to be widely acceptable and utilized. Much has been said as to whether students would seek after and would assume such debts to be repaid after their studies have been completed at a time when they are commencing their careers. The fact that American young men and women are eager in such numbers to undertake these obligations in order to secure an education which might be otherwise unobtainable is an encouraging index of our national vigor. Hon. Arthur S. Flemming, Secretary of Health, Education, and Welfare, made a statement at his news conference on July 28, reporting on the status of the student loan program under the National Defense Education Act:

I ask unanimous consent to have this statement printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY ARTHUR S. FLEMMING, SECRETARY OF HEALTH, EDUCATION, AND WELFARE

On the basis of a preliminary review of loan fund applications made to the Office of Education, colleges and universities across

the country expect nearly 121,000 students to apply for loans under the National Defense Education Act during the 1959-60 school year.

These students represent about 5.5 percent of the total anticipated full-time enrollment of approximately 2,200,000 at the participating institutions, and they are expected to apply—on the average—for loans of about \$500 to help them continue their education during the forthcoming school year.

The estimated number of student borrowers and the amounts they are expected to apply for are taken from loan fund applications received by the Office of Education from 1,372 colleges and universities planning to participate in the student loan program this year.

This will be the first full year of operation for the student loan program, since the bulk of the money appropriated for the 1958-59 fiscal year was not available until last May 20.

Institutions applying for loan funds this year—180 more than participated last year and representing nearly 88 percent of the total full-time college enrollment in this country—have estimated that their student loan needs during 1959-60 will total about \$60.5 million.

These institutions have on hand about \$15 million from the \$30.5 million distributed last year, thus leaving an additional requirement of about \$45.5 million this year. The institutions are required to contribute one-tenth of their total student loan funds under the National Defense Education Act.

Thus, of the \$45.5 million estimated to be needed this year, the institutions would be required to contribute \$4.5 million. This would leave \$41 million to be provided by the Federal Government.

The pending appropriation for student loans this year is \$30 million, thus leaving a possible deficit of \$11 million.

In this connection, however, it should be borne in mind that the applications have not yet been reviewed for reasonableness. Also, our experience so far would indicate that the actual need for loans will be less than the estimated demands. Taking these two factors into consideration, I am confident that the pending appropriation will meet, or come close to meeting, the actual needs of students for the coming academic year.

It is too early to say, of course, with any certainty what the actual situation will be. We will have a much clearer picture by the latter part of this year. If, during the course

of the first semester, the Federal appropriation turns out to be inadequate we will consider submitting a request for a supplemental appropriation at the beginning of the next session of Congress.

I should like to call particular attention to a new procedure which has been worked out for reviewing applications from individual institutions which is designed to improve distribution of funds within the State.

Funds are allotted among the States on the basis of their share of the total college enrollment and proportionately within each State on the basis of the amounts requested by the individual institutions.

Under the new procedure developed by the Office of Education with the assistance of leaders in higher education, an amount equal to \$20 for each full-time student enrolled has been adopted as a guide for determining the reasonableness of applications.

Institutions requesting more than \$20 per full-time student enrolled have been required to submit detailed justifications. These justifications will be examined critically by a recently appointed panel of college administrators.

When the necessary reviews have been completed, funds will be prorated within each State against the State's total allocation.

The student loan funds are administered by the colleges and universities. College students and high school graduates must apply directly to the institution for a loan.

The loan repayment period begins 1 year after the student has completed full-time study. The loan carries interest of 3 percent on unpaid balances over a 10-year period.

Student borrowers who teach in public elementary and secondary schools will be eligible for cancellation of up to 50 percent of the loan if they teach full time for 5 years or more. The cancellation is at the rate of 10 percent per year based upon the amount of the loan outstanding when they begin teaching.

The National Defense Education Act requires that special consideration be given to students with superior academic backgrounds who intend to teach in elementary or secondary schools or those whose academic backgrounds indicate superior capacity or preparation in science, mathematics, engineering, or a modern foreign language.

Attached to this statement is a table with additional details, by States, on the student loan program for 1959-60.

Applications for student loan funds for 1959-60 under the National Defense Education Act

State or Territory	Number of institutions participating	Full-time enrollment	Estimated number of borrowers	Estimated average loan	Funds now on hand	Federal funds requested	State allotments
Total	1,372	2,195,173	120,644	\$501.22	\$15,064,706	\$41,127,586	\$30,000,000

Red Doubletalk Helps Fool United States

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks I include a splendid article entitled "Red Doubletalk Helps Fool United States," written by His Eminence Richard Cardinal Cushing, archbishop of Boston, and appearing in the Boston Sunday Advertiser of August 2, 1959, an article which should be as widely read as is possible. There is no person in the world who understands more clearly the evil mind and the evil work of the Communists:

RED DOUBLETALK HELPS FOOL UNITED STATES
(By Richard Cardinal Cushing)

There is no end to Communist propaganda. We are forced to gaze in wonderment at the dynamic and expanding activities of the international Communist conspiracy.

Not the least of these is the current Seventh World Festival of Youth and Students, the first of such festivals to be held outside the Communist world. To this festival have come 15,000 to 17,000 young people as delegates. Advance announcements by the press of the Young Communist League of Soviet Russia declared that it was to be attended by delegates from 130 countries, the largest and most universal international youth assembly ever held.

The Institute for the Study of the U.S.S.R., located in Munich, Germany, warned the free world on the eve of this congress in these words: "Its aim is to manipulate the youth of non-Communist countries in the interest of Soviet foreign policy. Particular emphasis will be placed upon influencing the youth of Asia, Africa, and Latin America. The Soviet regime hopes to facilitate its future actions on the international scene by gaining full or partial support for its foreign policy from the youth of the non-Communist world."

The Communists admit this purpose when they proclaim: "The World Youth Festival will break the barriers separating the outstretched hand of friendship of one people for another." In Soviet-spawned lingo, this "friendship" always means the penetration of non-Communist minds with Communist ideas, leading at least to a widening acceptance of the Communist line in free world countries.

PEACE HELD OUT AS GOAL

As was to be expected, the Communists in our country are making good use of the World Youth Festival to win an increasing number of young people, and also adults, to accept the idea that concessions to Soviet Russia are necessary to win peace. They also draw on distinguished non-Communists, known in industry, education, and literature, followers of the Communist line, to praise and hail the Youth Festival. Thus they impress our own youth with the idea that surrender to Soviet Russia becomes more and more necessary and proper.

Among many other projects of Red initiative, there is the widespread agitation and education among youth directed all over the country by the educational director of the Communist Party. He caps this off in the June issue of Political Affairs, theoretical organ of the Communist Party, with an extensive report on party youth work.

He shows the great opportunity that now lies before the Communist conspiracy in the youth field in this country, since the comrades have been able to emerge successfully from the years of cold war and McCarthyism, during which they were also handicapped by relative prosperity in the United States.

TOOK FIFTH AMENDMENT

But when this educational director was called before the House Committee on Un-American Activities, he hid from the American Nation the true extent of these Red activities by constant appeals to the first and fifth amendments. He went to the extent of refusing to answer what his occupation is, although he is acclaimed in many Communist documents to be the educational director of the Communist Party.

By this appeal to the first and fifth amendments, he prevented publicity for seditious efforts among the youth of the Nation. There have been so many appeals to these amend-

ments by racketeers and Reds that there is no longer any news in them.

The Communists have also founded a faculty of social science to train Communist-minded youth in subversion among their fellows, and initiated similar training schools in summer camps. The director of this new national Communist school conducted a series of radio broadcasts over a Berkeley, Calif., radio station, preparing American young people with the idea of the justification for the overthrow of our Government by a Socialist revolution.

These lectures in pamphlet form, "On the Nature of Revolution," are being widely distributed by the comrades here in the United States. It is one measurement of how bold sedition has become in seeking to justify itself for the eventual destruction of our Republic.

REDS COUNT ON APPEASEMENT

Little wonder, then, that the United States was treated so roughly by Soviet Russia at Geneva that it was actually belittled and belabored by the Soviet Foreign Minister, Andrei Gromyko. For the Kremlin constantly counts on the spread of appeasement in the United States and, therefore, the spread of paralysis as to what we should do as its chief means to win our final acquiescence in one form or another to the expansion of Soviet dominion.

We cannot forget that while Gromyko acts so sullenly and stubbornly, his followers are forwarding Red infiltration of Latin America, and Moscow is giving them directives as to how they shall pursue this infiltration.

This thrust through Latin America is directed at placing the banner of communism at our back door. As long as we pursue our complacent attitude toward the Communist conspiracy in this country, represented by the letting down of almost all the bars on subversive activity, we can be of little influence in offsetting Red advance to the south of us.

If we wish to prevent communism from taking over the world, with resulting slave labor camps and catacombs over the face of the globe, there must be much more alertness to our duties as citizens.

EVERY AMERICAN CAN HELP

There are certain things that every one of us can do in the battle against communism, and it is to these that I wish to direct your attention. There is no one, no matter how lowly, who cannot make his contribution to the defense of American freedom. From first steps, many can go on by study to know more fully how to perform our duties at this critical hour.

The first of these first steps which commend themselves to us is this: Let us arm ourselves, each one of us, against any possibility of being deceived by those Soviet upside-down words that have played such havoc with our thinking and actions in the past. After all, when we note the history of the past 25 years, we will understand that communism's power to take over so much of the globe was the fruit of its partly successful attempt to conquer the American mind by infiltrating our thought processes.

We were regaled constantly with propaganda from without and from within America, containing words which meant a different thing to the Soviet mind than to our own.

THREE ACES IN RED HANDS

The three words which we might master as a start are "peace," "democracy," and "spirituality."

These are aces in the hands of the Soviet propagandists, smuggled into our country by the Communist fifth column and from thence into the minds and on the lips of non-Communists. They are a part of that famous (or infamous) Aesopian language, which Lenin introduced to the comrades in the preface to the Russian edition of his

study on "Imperialism, the Highest State of Capitalism."

As defined by the Moscow editors of his works, this is the roundabout, allusive language to which conspirators are forced to resort. Today, it is widely used by the Communists in order to cover illegal incitations by legal terms and to deceive us as to the true contents of Soviet policy.

The Steel Strike

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. THURMOND. Mr. President, on August 6, 1959, the Nashville Banner published a most enlightening, informative editorial on the subject of the steel strike. I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

It isn't too much to hope, surely, that when Nikita Khrushchev arrives for that visit he won't be treated to the sight of smokeless smokestacks—the symbol of shutdown—atop America's basic industry.

That is, of course, steel. It is another production line in which this Nation leads the world; but it is paralyzed right now, the fires out; closed by strike, for failure to reach contractual terms acceptable to both sides. And worse than that, some related industries crippled, with the further threat that if the controversy is prolonged many of these likewise will grind to a halt.

That isn't a picture of solidarity calculated to enlighten the Soviet Premier on facts of national strength. On the contrary, it could suggest to him the exact opposite of that, and indulge his own exaggerated ideas of weaknesses and paralysis of democratic methods in the pinch.

And if, in addition to smokeless chimneys, he is treated to the glimpse of picketing—with placards of accusation, and signs of dissension; if he hears the hubbub of furious assault and counterassault, Americans assailing Americans—the picture he will get is of disunity. That won't convince him of oneness. It would, in fact, gratify him as substantiation of his false premise that capitalism is hanging on the ropes, just ready to be pushed over by the Communist thrust he has been ready to supply.

America has the opportunity of showing its best face—its true face—to this official guest; and by a demonstration of its capacity for good sense and self-discipline accomplish something that conceivably could shape world events toward peace. The responsibility is not the President's alone, or the Government's; it is shared by all.

It is in America's interest in every way, to get those production lines turning again—and on a basis that will not whip up the forces of inflation.

It is not too much to ask that this settlement be speeded.

Let's get the smoke pouring again and those furnaces going, before Mr. Khrushchev comes calling. It would be downright embarrassing to have to tell him about harmony when there were signs all around attesting to the contrary.

How Much Is Public Power Costing the People of Your State?

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article:

HOW MUCH IS PUBLIC POWER COSTING THE PEOPLE OF YOUR STATE?

Every American is taxed to pay for Federal public power, and the cost to people in your State has run into the millions.

Federal Government electric power systems have already cost the Nation's taxpayers \$5½ billion. The list below shows about how much of this has been collected in each State.

If the public power lobbyists succeed in their plans for getting the Government still deeper into the electric business, the cost will soar to \$15½ billion. The cost to your State will be almost tripled.

Yet this spending for more and more public power is completely unnecessary. America's hundreds of independent electric light and power companies are ready and able to provide all the low-price electricity the Nation needs—without depending on taxes.

These companies have doubled the supply of electricity in the past 10 years, and will double the present supply in the next 10.

Federal public power keeps growing because most people don't realize they are paying for it. But informed Americans can stop it.

Will you help spread the word?

National Future Farmers Leadership Conference

REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. CARLSON. Mr. President, following the National Future Farmers Leadership Conference, which was held in Washington July 21-25, many editorials have been written regarding the splendid work of this organization.

Mr. Jerry F. Ringo, a former national officer, sent me an editorial from the Menifee County Journal of Frenchburg, Ky., entitled "National FFA Leadership Conference Should Be Annual Event" and an article entitled "National FFA Officers Give Quality Talks," and I ask unanimous consent that they be made a part of these remarks and printed in the Appendix of the Record.

There being no objection, the editorial and article were ordered to be printed in the Record, as follows:

NATIONAL FUTURE FARMERS OF AMERICA LEADERSHIP CONFERENCE SHOULD BE ANNUAL EVENT

Demonstrations of youthful self-reliance, faith, and competence are rare enough today that when they occur effort should be made to continue their success. The recent National Future Farmers of America Leadership Training Conference, held in Washington, D.C., was such a demonstration.

It was indeed an inspiration to watch boys from every corner of our Nation, each a leader in his field, join on common ground to give united support to a common cause—the advancement of farm leadership.

These 250 plus farm-boy members of the Future Farmers of America are the elected officers representing the 380,000 members back in their respective States. They present a front as solid and as dynamic as any youth organization in America today.

Such was their impact that the Menifee County Journal goes on record as supporting a thought to make the Future Farmers of America national leadership conference an annual function. It could not be more fitting than to be held in the Nation's Capital, where Americans look for their own governmental leadership.

As conducted, the conference would enjoy a new group of State leaders each year. In addition to giving the Nation a look at the Future Farmers of America the boys would have an opportunity to investigate firsthand the historical and actual scene of their country's Government.

In the Future Farmers of America lies the farm future of America. The qualities which are brought out and developed today will be the guiding force of the agrarian progress of tomorrow. These boys are taught

to think, act, and create progress. They are prepared to employ the latest technical and labor extending methods available.

Future Farmers of America has and needs no better media for getting its story to the people than it has in its own members. Every member with which we have come in contact has been an impressive public relations interpreter of the Future Farmers of America.

We cannot improve upon a definition of the philosophy of the future farmer than as stated in the first line of the Future Farmers of America creed, "I believe in the future of farming, with a faith born not of words but of deeds * * *"

Such faith is evident in the deeds of the organization.

NATIONAL FFA OFFICERS GIVE "QUALITY" TALKS

"Almost all men are lazy. This makes it fairly easy for a hard worker to succeed."

Such was the quality of thought found in speeches delivered by the 1959 national officers of the Future Farmers of America in their addresses at the Donor's Banquet in Washington 2 weeks ago.

The above statement brought a mid-speech round of applause for Bryan Hafen of Mesquite, Nev., a vice president of the national FFA. Other speakers of the evening were equally competent in providing the audience with fast moving talks containing bright new thought.

A high quality organization at all its levels, the Future Farmers of America strives to raise its standards and improve its membership by affording them the guidance and opportunity to make the most of their potentialities. No one who has been fortunate enough to see in operation can doubt that the organization has been effective.

The next nationwide convention of the group will be in October at Kansas City, Mo., when 12,000 farm-boy members and their adult advisors meet.

Judging from past experience with FFA conventions it must certainly be another vindicating testimonial to the youth of today.

Labor Reform Legislation

EXTENSION OF REMARKS OF

HON. FRANK W. BURKE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. BURKE of Kentucky. Mr. Speaker, in the Louisville Courier-Journal of August 5 there appears an editorial entitled "A Brighter Outlook for Labor Reform in the House." The simple clarity of expression and the graphic analysis of facts made in that editorial make it worthy of consideration by every Member of this body. Under leave to extend my remarks, I include that editorial at this point:

A BRIGHTER OUTLOOK FOR LABOR REFORM IN THE HOUSE

The ill-starred labor bill, which has been rewritten under pressures from every side in the House Labor Committee, is due to emerge this week and face the critical scrutiny of the House membership. It will also face some rivalry. At least two other groups, one with the official blessing of the administration, the other with the smiles of organized labor, are planning to introduce bills either tougher or softer than the one the committee has approved.

The committee bill has gained some prestige this week from its endorsement by the House's stern taskmaster, Speaker SAM RAYBURN. Mr. RAYBURN thinks the bill does a "splendid job" of controlling racketeering. He has long been an opponent of bills presented during debate or written on the House floor, and he is critical of both bills now being pushed as substitutes for the committee measure.

His opinion carries considerable weight. Chances for the committee bill, which is admittedly a compromise between the severity favored by the administration and the wrist slap preferred by undercover spokesmen for the Hoffa-led Teamsters, begin to look brighter than at any time since the House took over the Senate's final version of the Kennedy bill.

If the bill actually can fight its way through all the assorted hazards waiting for it in debate, it will become something of a landmark. It will be the first bill of its kind to overcome the pulling and hauling of tough labor and reactionary management since the Taft-Hartley Act. It does not remedy all of the admitted flaws in that law, but it clears up one or two of the more vexing ones. It prohibits hot-cargo coercion, by which the Teamsters have sought to forbid any common carrier to carry goods the union designates as "hot." It curbs picketing of the racketeering variety and imposes punishment on thieves and hoodlums misusing union funds and functions.

It will face one final hazard in the possibility of a Presidential boycott. But there are reasons why Mr. Eisenhower, in spite of his expressed dissatisfaction with both Senate and House bills, may be inclined to sign it. It is not a money bill, carrying appropriations of which he disapproves, and it is much better than no bill at all. A veto would make the President directly responsible for the fact that crooked unions may continue in business and that good unions would remain under the stigma imposed by the evil few.

Death of Michael L. Benedum

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. JOHNSON of Texas. Mr. President, a living symbol of America's spirit of free enterprise was lost to the Nation in the recent death of Michael L. Benedum.

As "king of the wildcaters," and a pioneer of the oil industry, he displayed throughout his career an unquenchable faith in himself and in the future of our Nation.

His contributions were many. Some of these contributions are noted in an editorial carried August 1, 1959, in the Houston Chronicle. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

[From the Houston Chronicle, Aug. 1, 1959]
**BENEDUM DEATH DEPRIVES OIL INDUSTRY OF
OUTSTANDING SYMBOL**

The death of Michael L. Benedum, at 90, deprives the oil industry of a living symbol of values which the American industry needs to preserve if it is to meet successfully the problems it faces. Benedum, as all-time "king of the wildcaters," represented above all an aggressive faith in himself and in the

American economy, to the degree that he numerous times risked his fortune to explore for more oil.

Benedum maintained an optimistic viewpoint, which is healthy for the industry. Twenty-one years ago, when he was 69, Benedum boasted that before he died he would discover more oil than he had in all his previous career. He made good the boast. At the time he made the statement, the economic and governmental factors so disturbing to many oilmen already were existent or foreseen.

Every legislator, whether at the State or national level, should note how Benedum's career helped the Nation. This Nation might have suffered a severe oil shortage in World War II had it not had the oil that Benedum discovered or inspired to be discovered. He might never have had such a successful career if the tax-and-spend advocates, who want to knock out the oil depletion allowance, had been successful 50 years ago. He would not have had the capital to put into the wildcat wells, on which many millions of dollars were lost while he searched for new reserves.

Benedum's zest for his work set a good example for American industry.

The Commune System and Its Dilemma

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks I include a report made by Chu-Yuen Cheng, expert on Communist China's economy at the Sino-American amity, and published by the China Tribune, New York City, and translated for me by Stephen C. Y. Pan, Ph. D., expert on American relations with the Far East.

The gist of the report is as follows:

I. BASIC CONCEPT OF COMMUNE

The commune system in Red China was established in April 1958. This was not sensational news to the free world, although it was a new attempt by Communist countries to destroy the private property system so that eventually the whole world could be communistic or communized. Its basic concept is to destroy the property system, the family system, etc., and to create a Communist world in its fullest sense.

1. In 1956 the 750 cooperatives had a series of setbacks and failures because many members wanted to withdraw. In Kwangtung Province alone, according to the Communist official report of 1956, there were 160,000 households who wanted to withdraw from the cooperatives. Of this number 80,000 were approved. Then the Communist regime wanted to eliminate the difference between the poor and the better-off peasants and tried to force them to join the communes so that everything would be shared by all, and all was for the communes.

2. In March 1958 the Chinese Communists launched a movement called Big Leap Forward. This movement mobilized 100 million to engage in irrigation projects, and some industrial plans for 3 months. Sixty million people were mobilized in the steel and iron industry. This produced a shortage of farmers to do actual farming. In order to meet this shortage of agricultural production, the Red regime tried to centralize every kind of production and distribution to its populace. They also tried to mobilize the people, to

give them military training, and to train them to live like military units rather than on individualistic levels. They also drafted 90 million women from 120 million peasant families to engage in production.

3. Mao Tse-tung himself declared: "If the communes were successful, communism becomes a reality and not a utopia."

Mao and his followers have endeavored to destroy the Chinese family system and the old farming system of China in order to make all the able hands (men and women) become militant citizens in order to help the advance of the program of world revolution.

There is a great difference between the cooperative system in Soviet Russia and the Chinese commune system. The Chinese Communist leaders claim they are more advanced in communism than the Soviet Union. Here are a few characteristics of the Chinese commune:

(a) The Chinese commune is far more extensive and more powerful than the cooperative form in the Soviet Union: In 1957, the Chinese Communists declared that collectivism of farming was successful. At that time there were 752,000 cooperatives, consisting of 120 million peasant families. On an average each cooperative consisted of 158 peasant families, but the commune averages consists of 4,800 peasant families. This means they are 20 times larger than the cooperatives.

(b) Commune members come from all professions: The former cooperatives were mainly of peasants, but the present commune compels the workers, the farmers, merchants, students, soldiers, as well as members of every other profession to become a member of the commune regardless of sex and age (except infants under the age of 14 are exempt from joining the commune.)

(c) The commune is all-powerful: The former cooperatives allowed each member to possess 5 percent of the land which he tilled, to raise his chickens and hogs and to engage in certain small businesses. In other words, under the cooperative system, small amounts of property were allowed. But under the present commune system, it does not allow anyone to own any land, timber, or real property or tools or poultry. Everything belongs to the commune and the members are only allowed to receive the bare necessities of life.

(d) The commune has the full power of distribution: The cooperative would pay each member according to his work and would give him either money or food, according to each family unit. But the commune system pays half in money and half in food—called half supply and half wage system. Each member goes to a public dining room, at a stated time, for each meal. Besides the food supply, each member of the commune gets about U.S. \$1 monthly wages. The wage of each member is based on his loyalty to the Communist Party and his physical strength.

(e) Daily life of the common laborers: The former cooperative system in Communist China simply practiced collective production and the peasants were allowed to have a family life. But the commune system has practically destroyed the family system on the farms and daily life is governed by two ideas: collectivism and militarism.

(f) Labor and militarism: Each commune is organized like a military unit and each member is required to do some sort of labor. They are under military and political discipline. The commune emphasized: (1) Political discipline; (2) military training; and (3) manual labor.

The communes also have their auxiliaries—such as production group, farming district, or unit. They are organized on a military basis—such as a squad, platoon, company, division, army, field troops, and military supply units. In other words, the commune is

the governing body, military group, production and distribution unit. It is indeed all-powerful.

II. LIFE IN THE COMMUNE

Since the commune has been established the daily life of each member is regimented. He eats in a public dining hall, he sleeps in dormitories, and he works in factories and training camps. This system applies to all women, including peasant mothers. Small children of the commune are sent to either a nursery or kindergarten (according to age), and old men and women are placed in old folks homes where they must work, such as washing dishes, sweeping, sewing, and other manual work.

It may be interesting to describe these public dining halls, nurseries, kindergartens, schools, and household teams.

(1) Public dining halls: Generally each dining hall holds 15 to 200 persons. Each commune obtains the necessary food for each member, who eats in the dining hall at a designated time and place. According to 1958 statistics, there were 2,650,000 public dining halls. Eighty-six percent of the farmers in the villages have to eat in the public dining halls. The small stoves in the homes of the farmers have been destroyed.

(2) Nurseries, kindergartens, and old folks homes: From 1 to 3 years old, children must be sent to nurseries and from 4 to 7 years old, children must be sent to kindergartens. From 7 years on children must start to work.

People over 65 (men and women) are sent to old folks homes, but are still required to do a great deal of manual labor. There were 4,750,000 nurseries and kindergartens in 1958. Eighty-five percent of all children under age 5 must go either to a nursery or kindergarten. There are over 100,000 old-age homes.

(3) Student dormitories: All students must live in dormitories and are not allowed to live with their families.

(4) Sewing, shoemaking, and laundry teams: Those over 65 are ordered to work in these areas. This also includes frail, aged women.

(5) Public dormitories: In order to force the populace to live under collectivism the commune has torn down millions of small houses and moved the original owners to the public dormitories or apartments. The scrap materials from the demolished houses are used to build these dormitories so that they could be concentrated in one place and easily controlled.

The above is only a sketch of how the people in the China mainland, under the commune system, actually live.

III. THE DILEMMA OF THE COMMUNE

Since the Chinese Communist imposed the commune system on the Chinese people, there has been much passive and even some armed resistance by the peasants and students. Officials of Soviet Russia have expressed their displeasure and disapproval. When Khrushchev himself spoke at the 21st plenary session of the Communist Party of the Soviet Union, he indicated his displeasure and disapproval of the communes launched by the Chinese Communists. As a result of the peasants' and students' opposition and resistance together with the Soviet disapproval of the commune, the Chinese Communists were compelled to place the commune question into the agenda of their conferences at Chengchow, Honan Province on November 2, 1958, and at Hankow, Hupei Province on December 10, 1958. Finally, certain modifications and changes about the communes were decided by those meetings. The basic decisions, which have been followed in principle by the Chinese Communists, include the following:

(a) Expansion of the communes in the big cities has been temporarily halted;

(b) The people's communes are considered by the Chinese Communists as a phenomenon of socialism but not communism;

(c) Members of the communes may now be, to a certain extent, allowed to possess some houses, personal belongings, such as clothing, furniture, and a few other daily necessities;

(d) Separation of military organizations and control of productions.

However, the above modifications and changes cannot satisfy the demands and desires of the people, especially the peasants. Thus, the Communist Party has not and cannot claim to have successes in their communes. Consequently, since May this year, the Chinese Communist Party again relaxed certain regulations governing the communes. For instance, since then the peasants have been allowed to own small areas of land, and to possess some personal property including poultry, pigs, timber, and a few other items. In some districts, peasants have been permitted to obtain rice to do their own cooking. In others, the scope and activities of the communes are somewhat limited.

From what is stated above, it is evident that the communes in the China mainland have met many obstacles and the Communists have been forced to make more and more concessions to the people. It is possible without accepting or reusing the old name, cooperatives, the so-called communes in the China mainland may be forced to abandon the essential characteristics of their original plan of the commune system. Otherwise, the Chinese people may be forced to revolts in much greater scale than they have previously occurred at various places in China.

Closing of Geneva Conference

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. WILEY. Mr. President, yesterday we witnessed the closing of the Big Four Foreign Ministers Conference at Geneva.

Unfortunately, the Conference did not yield any substantial progress toward resolving East-West differences.

The significance of the Geneva meeting, however, should not go unnoticed.

During the 65-day Conference—broken by an interim recess—Secretary of State Christian Herter, his associates, and representatives of our allies, carried out their duties in a dedicated manner—under extremely difficult circumstances.

We recognize, however, that success in such a Conference depends upon readiness to obtain agreement by both the participating parties. Unfortunately, the Soviet delegation—under direction from Moscow—of course were unwilling to engage in the kind of negotiations which would result in resolution of problems. However, this should not unfairly reflect on the statesmanlike work of our representatives at the Geneva meetings.

Rather, it again reveals the adamancy of the Soviet delegates against any kind of agreement that would do other than serve their own aims of Communist expansionism.

In wrapping up the Conference, however, the door has been left open—as I believe it should be—for further sessions if deemed advisable. As often noted, it is better to be exchanging words than bombs. As yet, no date for reconvening has been agreed upon.

I ask unanimous consent to have the Big Four communique published in today's Washington Post and Times Herald printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN MINISTERS' TALKS COMMUNIQUE

GENEVA, August 5.—Text of the concluding communique of the Big Four Conference:

"Communique of the Geneva Conference of Foreign Ministers, 1959.

"The Conference of Foreign Ministers met in Geneva from May 11 to June 20 and from July 13 to August 5, 1959.

"The Conference considered questions relating to Germany, including a peace treaty with Germany and the question of Berlin.

"The positions of the participants in the Conference were set out on these questions.

"A frank and comprehensive discussion took place on the Berlin question.

"The positions of both sides on certain points became closer.

"The discussions which have taken place will be useful for the further negotiations which are necessary in order to reach an agreement.

Furthermore, the Conference provided the opportunity for useful exchanges of views on other questions of mutual interest.

"The Foreign Ministers have agreed to report the results of the Conference to their respective governments.

"The date and place for the resumption of the work of the Conference will be settled through diplomatic channels."

White House Conference on Aging

EXTENSION OF REMARKS

OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. OSMERS. Mr. Speaker, on September 2 of last year, the President signed into law a White House Conference on Aging Act which had been passed in the closing days of the 2d session of the 85th Congress. In passing this legislation, the Congress felt that public interest required the enactment of legislation to formulate recommendations for immediate action in improving and developing programs to permit the country to take advantage of the experience and skills of the older persons in our population, to create conditions which would better enable them to meet their needs, and to further research on aging.

Since the enactment of that law, the White House Conference on Aging staff has been appointed and is working with the Department of Health, Education, and Welfare special staff on aging to plan and prepare for the Conference to be held in January 1961.

I am happy to point out that a former colleague of ours, the Honorable Robert W. Kean, of New Jersey, has been named Chairman of the Advisory Committee for the White House Conference on Aging.

In recent weeks the public has become more and more aware of the responsibilities toward our rapidly growing population of older people. Wide press coverage has been given to the recently completed House hearings on the Forand bill, and also to the present hearings in the Senate before the McNamara committee. Life magazine at present is concluding a four-part article dealing with the field of aging.

Last week I had the occasion to read a report to the people from the gentlewoman from New Jersey's Sixth District, Congresswoman FLORENCE P. DWYER, which I feel painted a most complete picture of some of the things which are presently being done in the field of aging and some of the things which are in the planning stage. Certainly, we will all agree that one of our major concerns in the Nation today is the question of how best to meet our responsibilities toward our older people.

Since I feel that Congresswoman DWYER's report was so complete in the field of aging, I would like at this time to insert this report in the RECORD and to commend its reading to my colleagues in the Senate and the House of Representatives.

The report follows:

WHITE HOUSE CONFERENCE ON AGING

(By FLORENCE P. DWYER)

This past week has been a particularly significant one in a field of the highest importance—the question of how best to meet our responsibilities toward our rapidly growing population of older people.

Among the events that made it significant were these: The opening of hearings on the Forand bill, a proposal to include medical and hospital insurance for retired persons through the social security system; reconsideration of the vetoed housing bill with its proposed new program of low-interest loans for housing for the elderly; continued progress in arranging for the huge White House Conference on the Aging scheduled for 1961; and introduction of a bill to liberalize the restrictions on earnings of people receiving social security and for widowed mothers who must work.

Coincidence is not the only explanation for so much attention in one week to the needs of our older people. Consider these facts, for instance. Within 10 years the number of Americans over 65 years old will reach 10 percent of the total population. During that same period of time, the key productive age group—those from 20 to 65 years, from whom almost all the working force is drawn—will be reduced to only one-half our population. This represents an increase for the over-65 group of twice the rate for the population as a whole.

DEPRESSION AND WAR

It is also true that our senior citizens have lower and often declining incomes, with less opportunity than fully employed people to meet the higher costs of the care and services they need. Then, too, our present older generation was severely handicapped in preparing for retirement years by the worst depression and the most expensive war in our history. The collapsed incomes of the 1930's and the debased dollars of wartime and postwar inflation left very little for their futures.

The fact that a minority of our population will shortly be supporting the majority poses several difficult questions:

How can the income produced during their working lives more adequately support the needs of retired persons—the need for housing, medical care, recreation, and living conditions generally, at a level above that of bare subsistence?

How can senior citizens retain the sense of being needed, the feeling of accomplishment and of participation in the life of the community—in other words, how can they be spared the devastating impact of neglect in their advanced years?

What changes should we make in our educational system to prepare younger people for the sometimes unexpected demands of older age?

What practical improvements in our social security, employment, housing, and welfare laws can be made to help relieve old age of insecurity, boredom, neglect, and disillusionment?

CONFERENCE ON AGING

These and related questions will soon receive the most extensive consideration in history, as the planning and organization proceed for the nationwide White House Conference on the Aging. I was reminded of this the other day when I saw an old friend of Union County, former Congressman Robert Kean, of Livingston, here in Washington. Congressman Kean, you may remember, was recently appointed by President Eisenhower as Chairman of the White House Conference. In that capacity, he is a frequent visitor here, meeting with his national committee, establishing State committees, and preparing to mobilize available talents and experience so that the White House Conference in 1961 can offer the Nation an effective program of action.

Meanwhile, Congress has certain immediate responsibilities in this field. One of them is housing for the elderly. While the President unquestionably had good reason to object to certain provisions in the housing bill he vetoed, there is very reason to hope that any compromise housing bill will include at least the \$50 million program of direct loans for low-rent, specially designed houses for older people. This is a field where private financing has not been able to do the job at rents retired people can afford. Conventional financing of these houses, for example, require monthly rents about \$20 higher than would be true of units built under the proposed new program.

EARNINGS LIMIT UNFAIR

Another immediate obligation of the Congress—and one I consider especially urgent—is to lift the unwise and unfair ceiling on the amount of income which people receiving social security are permitted to earn without forfeiting their social security benefits. The present limit is \$1,200 a year or \$100 a month, completely inadequate for people who cannot live on their social security alone and yet who cannot earn enough more to afford to sacrifice their old-age benefits.

This is a terrible dilemma for older people forced to live on the edge of subsistence. To help remedy it, I introduced a bill last week which would raise the earnings limit to \$2,400, and for widowed mothers of children under 18 to \$3,600 a year.

To my mind, this is simple justice. Since the \$1,200 limit was first imposed, prices have greatly increased and purchasing power, especially for those on fixed incomes, has diminished. Furthermore, this limitation discriminates against those who do not have large savings or extensive investments, since income from these sources is not subject to the limitation. In recent years, too, medical authorities have come to recognize that part-time employment is of positive value for

the health and emotional welfare of many older people. The present earnings limit discourages such employment.

CHALLENGE TO DOCTORS

Closely related to this is the question of medical care for the elderly, on which subject the House Ways and Means Committee last week opened public hearings. While there are major objections to the solution proposed by the Forand bill, there is no escaping the fact that a very real and serious problem does exist.

In an extensive study last year, the Department of Health, Education, and Welfare found that older persons have two-and-a-half times as much need for medical and hospital care as have persons under 65, and yet have only 40 percent as much private health insurance to pay for it.

These circumstances, I believe, constitute a tremendous challenge to the medical profession and to all those concerned with preserving the private nature of medical practice in the United States.

These are not isolated matters. They are interrelated and given high priority by the value we place on age. The mature years of our people can enrich and vitalize our whole society—if we take steps now to free our elders and learn to use their judgment, experience and invincible spirit.

Self-Service Post Offices

EXTENSION OF REMARKS

OF

HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. CARLSON. Mr. President, the Post Office Department is to be congratulated on the proposed innovation of self-service post offices.

Postmaster General Arthur Summerfield is entitled to much credit for many modern improvements in our postal operations and this new service is certainly most useful.

The self-service post office will maintain regular postal service in many post offices that are present closed after office hours, and is further evidence of improved mail service that our people are getting.

An excellent article on this was written by Julius Duschka and appeared in the August 5 issue of the Washington Post.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MACHINE WILL BE YOUR POSTAL CLERK AT SELF-SERVICE SUBURBAN STATIONS

(By Julius Duschka)

Self-service post offices planned for suburban and rural areas will do everything but write a letter.

The first such post office will probably be built in the Washington area early next year.

Deputy Postmaster General E. Q. Sessions said yesterday that the customer-operated substations will include automatic equipment for selling stamps and postcards, for weighing and mailing packages as well as letters, for purchasing money orders, for registering letters and for making change.

They will even sell writing paper.

No clerks will be needed. Sessions expects the post offices will have to be restocked with change and supplies once a day. He thinks regular postal employees can do this. The offices will be open 24 hours a day.

The mechanical heart of the stations will be vending machines which the Post Office Department hopes can be produced in quantity by January 1.

These machines, which also will be used in large post offices and at airline, railroad, and bus terminals, will provide automatic postal facilities for everything except packages and money orders. Separate machines are being developed for those.

The Post Office Department has had machines in operation for several years to sell stamps and postcards and make change, but has never used automatic machines for weighing, mailing packages, or selling money orders.

Sessions hopes to have a model of the vending machine in Washington soon after September 1. The prototype is being built by Electric Vendors, Inc., of Minneapolis. Sessions thinks the machines can be manufactured in quantity for about \$1,000 each.

Sessions said he will call for bids on a prototype self-service substation within a week.

Richard Nixon, Statesman

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. DAGUE. Mr. Speaker, no one—not even the most rabid partisan—could have experienced anything but swelling pride as the Vice President and his charming helpmate came down the ramp at National Airport yesterday afternoon. Here were two returning Americans who a few days previously had sallied forth to meet on his own heath the man who has threatened to bury us. Here were two plain Americans with as humble backgrounds as any among us and yet who by the very persuasiveness of their charm had melted the hostility of people behind the Iron Curtain and perhaps in 10 short days had contributed more to the cause of peace than has any other person in the last decade.

Over the past several years we have seen many Western diplomats, including some of our own legislators, try to beard the Russian bear in his den and in nearly every case they have come slinking home to tell us the Communists are 10 feet tall and invincible. Well, Dick Nixon in a few short hours dispelled that myth and standing toe to toe with Mr. K. handed him back better than he gave. As a matter of fact, I surmise that by talking up to the Soviet boss and showing him that Americans have the courage of their convictions, and that bluster and bluff are not potent tools with which to turn aside truth and logic, Mr. Nixon has caused Mr. K. to reevaluate his previous estimates of just how far he can go before running up against the solid wall of American determination.

In his televised address to the Russian people the Vice President laid it on the line and firmly but without rancor re-

affirmed the basic desire of all the West; namely, that we have no aggressive designs on anybody and that all we want is to live at peace with all nations and races. A much-admired columnist, Mr. Gould Lincoln had this comment in Wednesday's Evening Star:

Mr. Nixon's address to the Russians included a frank invitation to the Russian Communists to lay aside their announced program of world communism and world domination, the ultimate result of that program. He told the people quite flatly that as long as their leaders persist in their drive for communizing the world, including the United States, they must expect the United States and its allies of the free world to maintain their military bases within easy striking distance of the U.S.S.R. Further, he said that this country will continue to increase its military strength. Mr. Nixon's whole tone was firm, but distinctly he engaged in no saber rattling. His warm appreciation of the Russian people and their hospitality to himself and Mrs. Nixon was a strong overlying theme.

And then Mr. Lincoln sums up in these words:

Mr. NIXON has again shown himself a master at grasping the essentials of the most vital problems which confront the United States, the U.S.S.R. and the whole world. His whole bearing during his momentous visit to Russia at a tense moment, with the East and West in virtual deadlock over the problems of West Berlin and all of Germany, was a credit to himself and to his country. Whether he was engaged in rough-and-tumble debate with Russia's Khrushchev, or whether he was being heckled by persons in the throngs which greeted him, Mr. Nixon never lost his dignity and he was never at a loss in meeting the situations as they developed.

Mr. Speaker, the American people have the right to be proud of this great American and we should humbly thank an all-wise Creator for having blessed our side in this cold war with this ablest champion of the course of freedom. Indeed, we might well echo the warm-hearted cheers of the Polish people as they pelted him with flowers and shouted, "Thank you, thank you, thank you, Mr. NEEKSON."

How Integrated Operation of Missouri River Dams Works

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Great System," which was published in the Pierre (S. Dak.) Capital-Journal. The editorial explains how the integrated operation of the Missouri River dams works.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pierre (S. Dak.) Capital-Journal,
July 22, 1959]

A GREAT SYSTEM

At the end of June the five large reservoirs on the Missouri River under control of the Corps of Engineers had 28,214,000 acre-feet of water in storage. This is the equivalent of about 1 year's total flow of the river at Yankton, S. Dak., during the period when there was no control of the river flow by the big dams.

The figure represents a gain of 1,790,000 acre-feet during June and an increase of approximately 3 million acre-feet over the amount in storage on the same date in 1958.

Substantial runoff from the mountain headwater areas during June, and substantial rainfall in the lower basin permitting reduced reservoir releases, accounted for the additional water in storage. Power generation at the four operating plants rose to 388 million kilowatt-hours, and a new high peak hour generation rate of 706,000 kilowatts on June 26.

Commercial barge traffic on the lower river, in the meantime, continued at a record-breaking level. The unofficial tonnage estimate for the first 3 months of the 1959 season, April through June, was 350,000 tons.

The Missouri River operating system is unique. Nowhere else in the world is so large a volume of water in so long a river under anything approaching the degree of control that exists on the Missouri. When the Oahe and Big Bend Reservoirs come into the system at full scale the degree of control will be even greater.

Currently the reservoir at Oahe, which held 502,000 acre-feet at the close of June, is being lowered 7 feet. This water will be captured in the Fort Randall Reservoir, where it will be passed through power turbines, and then will pass through turbines again at Gavins Point.

The result, of course, will be to permit the generation of more electricity at the dams downstream this summer. At the same time it will provide storage space in the Oahe Reservoir for the recapture of the water to be released through power turbines at Garrison and Fort Peck.

It is a great system.

Political Courage

EXTENSION OF REMARKS OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. ARENDS. Mr. Speaker, under leave to extend my remarks I am inserting an editorial that appeared in the Peoria (Ill.) Journal Star on August 4.

It is entitled "Political Courage" and commends my distinguished colleague, Bob MICHEL, for having that kind of courage. I have known Bob for many years. There is no question but that he has the courage to resist pressure from any group seeking something that is special to them. He is indeed a man who thinks independently, seeking always to do that which is best for his district and the country as a whole. He serves no man, no group, but all the people.

The editorial follows:

POLITICAL COURAGE

Let's face it, a lot of politicians, especially from communities as highly industrial and

organized as ours, simply hide when a labor issue comes up.

This is not unnatural, for too often labor leaders refuse to respect independence, or to admit that there is any middle ground where the general public and general welfare ought to be considered. Too often, they insist that a representative be a slavish stooge virtually 100 percent of the time—or else blast him as anti-labor. Nobody is allowed to be neutral or mildly pro-labor.

Hence, the slightest difference of opinion can bring out union organizers and union funds against any officeholder.

This, however, did not deter Representative Bob MICHEL from taking a frank and fair position on the labor reform issue, and sticking hard to the Eisenhower reform requests. Nor did he do so on the quiet.

He took his position to the people by press and TV, openly, honestly, and asked for reaction to see where he stands.

This is an unusual act of political courage these days.

However, we are not surprised at this quality in Representative MICHEL. When he was a fledgling Congressman, we had some strong feelings about U.S. TV policies. He did not agree with us. He could have dodged the issue entirely, but he didn't. He told us openly exactly how he felt and where he stood.

Although we thought him wrong at the time, we have respected his independence and his frankness and his courage ever since.

Now he simply cannot swallow as representative of what the American public wants and needs, a new House labor bill written in a large part by 13 Democrats on the committee who are indebted to unions for campaign funds, three former labor organizers, and three former union attorneys.

Such special interest legislation is bad for the country, and in the end bad for the people who cause it—because historically, there is an inevitable reaction to such abuses—the pendulum swings.

Bob MICHEL deserves every expression of support this community can give him in his effort to do the right thing.

He deserves it from responsible union men, who want to protect their present position and preserve the support of millions of non-union people, by curbing the arrogance, violence, and ruthlessness of the few who seem bent on reversing the attitudes of the American people toward unions.

The World's Refugees

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. JAVITS. Mr. President, this is World Refugee Year. Now, 14 years after the end of World War II, the displaced and homeless still fill the camps of Europe, dislocated by new violence, new persecutions and new disorders which have followed in close sequence the finish of the conflict which engulfed the world. The refugee problem has long been with us, so long, in fact, that we think of it as just that, "the refugee problem", sometimes overlooking the human factors involved. For the refugee, to lose hope is to become submerged and to lose life's purpose.

The New York Daily News recently ran a series of articles written by Kitty

Hanson on the European refugee problem, stressing not the statistics with which we are all too familiar, but the very human problems to which we unfortunately sometimes become inured due to the passage of time and the interposing of other, more urgent considerations. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Daily News,
July 20, 1959]

WEST BUNGLES REFUGEE PROBLEM

(By Kitty Hanson)

The free world is failing the enslaved peoples of all Iron Curtain countries and the Communists are beginning to win the propaganda war by default.

This is the inescapable conclusion that strikes home again and again as one visits the border countries of Western Europe, tours their squalid refugee camps, talks with their officials and with representatives of the several international agencies struggling to cope with the steady stream of fugitives.

There are two kinds of refugees in Western Europe's "asylum" countries—Austria, Greece, Italy, and Germany—the "old" and the "new."

The old are displaced persons who refused to return to their Communist-dominated countries after the war. They have been waiting many years in camps for some free nation to accept them.

MANY HAVE ESCAPED REDS SINCE WAR

The new are those who have escaped from Communist countries since the war—for the most part, about 11,000 Hungarians left over from the revolution and Yugoslavs who have been pouring across the borders in great numbers ever since the revolution.

In country after country, in dreary camp after dreary camp, I met and saw and talked with refugees. Some of the "old" were teenagers who have spent all the formative years of their lives in camps. Some were children who were born in camp and know no other life. Many were adults who had seen their friends, and sometimes their families, move on to a new life while they continued to sit and wait.

All these men, women, and children had fled their homes in Hungary, Yugoslavia, Rumania, Albania, Czechoslovakia to find freedom in the West.

The freedom they have found is the freedom to subsist in camps or to starve in unofficial camps and slums. The new life they have found is a life of waiting and idleness—a life that saps their initiative, ravages their morale, and slowly sucks many into drunkenness and immorality.

Everywhere, in every country, the refugee is a source of friction.

There is friction between the countries that have given refugees political asylum and the rest of the West. There is friction between one asylum country and another. There is friction between political parties within a country, making the refugee problem a campaign issue. There is friction between the refugees and the citizens of the country that shelters them.

I came away from camps, officials, citizens, refugees, and agency workers with one picture of the refugee situation in Western Europe today:

It is an unholy mess; a bewildering tangle of red tape, restrictive rulings, conflicting interests, emotions, and politics.

It would be even more of a mess if it were not for the work of the agencies—international, local, religious, and nonsectarian—which work at the heart of, and in spite of, this tangle. Their efforts range all the way

from providing a sheet for a mouldy mattress to chartering a ship to move several hundred people halfway around the globe.

Chief among these are the office of the United Nations High Commissioner for Refugees, the U.S. escapee program, and the Intergovernmental Committee for European Migration.

NOT ALL FREE NATIONS OPEN THEIR DOORS

The latter was set up 8 years ago by 28 free nations of the West to even up the populations of overcrowded and underpopulated countries by transferring people who could not move without international assistance. The committee now is geared to transport people all over the world as fast as the free nations open their doors, but there is one major obstacle:

The doors are not open wide enough.

This is the crux of the refugee problem and it is creating most of the friction among the free nations.

In essence, the West has said to the people behind the Iron Curtain: "Come out. Reject communism. Freedom awaits you."

Then, the West has said to the free border countries—primarily Austria, Italy, Greece, and Germany: "In the name of the free world, give these people asylum."

ASYLUM COUNTRIES LEFT HOLDING BAG

As a result, these asylum countries have become reception centers not only for thousands displaced by the war, but also for a steady stream of men, women, and children who find life under communism intolerable.

The asylum countries must house, clothe, and feed these refugees, with varying degrees of international assistance. When it comes to taking some of the surplus human beings off the hands of the asylum countries, the rest of the world has been dragging its feet.

In fact, the major receiving countries—those that accept refugees for resettlement within their borders—go about it like housewives at a vegetable market.

Coldly and suspiciously they pick over the supply, selecting only the young, the healthy, the strong, and the productive; rejecting the old, the ill, and the handicapped as well as those considered possible security risks.

(In Austria, I met a former Hungarian diplomat who fled with his family to the West only to learn he could never be welcome in any country because his small son is paralyzed on one side.)

(In Greece, a family of four is waiting for the youngest child to die so that they may leave the country. The child suffered meningitis just days before they were to leave and thus disqualified the family for emigration. When he dies in a year or two, he will release his family at last for the new life they had sought.)

The selections commissions of some countries actually have felt the muscles and examined the teeth of the applicants for admission to their country. In one country, all women over 35 and men over 40 are rejected as "too old."

Almost all countries refuse admission to anyone with a TB scar, even though he does not have active tuberculosis. Active cases, of course, may not emigrate to countries where TB can be cured, but remain in camps, prime breeding grounds for TB.

REDS AIM PROPAGANDA AT FORGOTTEN ONES

As a consequence of these and many other restricting qualifications, there are in Western Europe today hundreds of thousands of refugees—most of them escapees from Communist slavery—living in misery and squalor, chafing at the red tape which keeps them from starting new lives in free countries and trying to ignore the Communist

propaganda that whispers that they have been "forgotten by the West."

This propaganda line is part of a highly organized Communist redefection movement. Its aim is to lure escapees back into the Iron Curtain countries by playing upon their homesickness, disillusionment, and anxiety about loved ones back home.

In Greece, for instance, I saw photostatic copies of 33 cablegrams sent to one Rumanian refugee which purported to be from his family. The series of vague messages built up his anxiety to the point where he finally slipped back across the border to reassure himself that his family was all right.

ARE SUCH PERSONS WORTH SAVING?

Then he escaped once more into Greece. Immediately the cable barrage was resumed. Finally, the man's will broke, and he returned to Rumania.

"If the Commies are willing to spend that much time and effort to get one refugee back," said a U.S. escapee program representative in Greece, "maybe the free nations ought to figure it's worth something to save them."

The long days, weeks, months and years during which a refugee waits for acceptance by a free country give the Commie redefection agents a clear and fertile field.

Adding still further tension and anxiety to the situation is the fact that the countries of asylum are getting tired of having to keep the discards while the rest of the West skims off the cream of the refugee crop. They feel that the other nations ought to take a fair share of the "humanitarian cases" as well as the strong and productive.

As a result, Yugoslavs have been getting a cold reception for nearly 2 years. Since June of this year, the chill has extended to the Hungarians.

The welcome mat is being hauled in. Refugees are being sent back across the border they crossed at such peril.

That peril is quite apparent to anyone who sees the border. I visited the frontier between Austria and Hungary about 40 miles from Vienna, where the free world ends in a tangle of barbed wire.

Concealed in a small grove on a wooded strip of no man's land, I stood with an uneasy Austrian gendarme watching the Hungarian border guards patrol the Iron Curtain—two parallel fences of barbed wire separating the free world from the slave.

The 5-foot strip of ground between the two fences conceals a murderous mosaic of mines triggered to maim or kill.

THEY'RE DESPERATE ENOUGH TO GAMBLE

Along the inner fence runs a strip of earth freshly plowed to trap the telltale footprints of men, women and children who dare to make the desperate bid for freedom.

The guards had seen us move past the official barricade. One came down into the wheat field only 100 feet away to look for us. The other scanned the countryside through field glasses from the narrow balcony of a watchtower 200 feet away. These watch towers, set on 60-foot-high steel skeletons, are placed about every 500 yards along the border.

"At night," said the gendarme in a low voice, "you can hear the dogs they use to hunt down the refugees."

Yet almost every night not only Hungary's Iron curtain but the locked borders of every other Communist-dominated country are pierced by someone desperate enough to gamble life itself on the strength of the free world's promise of freedom and a better life.

Some are shot. Some are caught. And those who win the gamble soon learn that the promises is not being kept.

The International Poker Game

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. McCORMACK. Mr. Speaker, the invitation by President Eisenhower of the Soviet dictator, the head of the worldwide Communist conspiracy and also Prime Minister of the Soviet Union, Mr. Khrushchev, to visit the United States, has been received with sharp discussion and much concern by our people and properly so.

An objective appraisal of this concern is stated in a well considered article written by David Lawrence, and appearing in the Washington Star of August 5, 1959, which article I include in my extension of remarks.

It is my opinion that time will show that President Eisenhower made a serious mistake. It will be interesting to note "the law of natural and probable consequences" operating as a result of the President's invitation and the coming visit of Mr. Khrushchev.

The article follows:

THE INTERNATIONAL POKER GAME—MANEUVERS BY UNITED STATES AND SOVIET OVER GENEVA AND VISITS ANALYZED

(By David Lawrence)

A fascinating poker game has been going on for several weeks now, and the big question is: Who won—Khrushchev or Eisenhower?

The reasons behind the invitation by the President to the Soviet Premier are by no means clear, and it is not yet possible to say which one was outmaneuvered.

But these facts are known—that the Soviet Premier wanted a summit conference, and the United States didn't, though Britain was favorable and France was somewhat indifferent. The plan for a foreign ministers conference to be held at Geneva was devised on the theory that, if any substantial progress were made, this would justify a summit conference.

But Nikita Khrushchev is a stubborn man. He didn't want a foreign ministers conference. He sent his foreign minister to Geneva, but with instructions to make no agreements there. Gromyko complied 100 percent. The idea was to force a summit meeting on the pretense that only the heads of government could negotiate agreements.

Then the Western allies recessed the foreign ministers conference. President Eisenhower decided on another approach. He thought that maybe an exploratory consultation might be held between him and the Soviet Premier. If Mr. Khrushchev wanted to come to the United States on a visit—it had been said that this was his real reason for pressing for a summit conference—then an invitation to him alone to come to America might serve the broad purpose. At least, it would feel out the situation for the United States, and then it could be determined whether any progress sufficient to warrant a summit conference had been made.

Corroboration of this analysis is to be derived in part from the President's press conference on Monday of this week, when he was asked:

"The impression has somehow been received, Mr. President, in considering a possible visit by Mr. Khrushchev to the United States, that before you would issue an invitation to him, there would have to be some evidence of 'give,' in the sense of 'give and take' on the part of Mr. Khrushchev, on Western principles. May we take it that there has been such indication?"

The President replied as follows:

"No; I can't—I don't think you can say that, Mr. Belair. This is what I have said—that the holding of a summit meeting and negotiation, that that would be, to my mind, absolutely impractical and, as the State Department says, unproductive unless we could count on some positive results. But I would say these, so far as our discussions of mutual problems, are exploratory rather than any attempt at negotiation."

Mr. Eisenhower revealed that "some time back" he had suggested to the State Department that he believed, "in the effort to melt a little bit of the ice that seems to freeze our relationships with the Soviets, that possibly a visit such as I now have proposed would be useful, and we studied this thing and, in early July, I initiated the correspondence that finally brought about an agreement."

Under the circumstances, it now is apparent just why Foreign Minister Gromyko wouldn't agree to anything at Geneva. As long as a consultation with the President of the United States was being planned, the Soviet Government felt that nothing further need be done for the present. Conversely, it is possible that Mr. Eisenhower hoped his gesture might eventually have a beneficial effect. Apparently he still held to that view, even in his special conference with the press this very week, when he said:

"The visit itself (between Khrushchev and the President) has no direct connection with any possible later summit meeting. I, of course, would hope that the mere announcement would inspire the foreign ministers to a greater activity, and probably some greater effort at conciliation, so that there might be results before Wednesday, when they temporarily adjourn—at least that would justify the scheduling of such a later meeting, at what time I don't know. But in any event, even if they have to reassemble, I would hope they could do that, if they found it reasonable and proper."

"Now I merely want to make clear that this is a personal visit for the purposes that I have outlined, and are given in the statement, but with the hope that it will do something to promote understanding and possibly progress toward peace in the world."

The key phrases in that comment are those that say there is "no direct connection" with the later summit meeting and that "this is a personal visit." But the impression is inescapable that the President tried hard to assuage the Soviet Premier with a promise of an exchange of personal visits, hoping that something good in return would come out of the foreign ministers conference at Geneva or later in New York anyway. There is some reason to believe that the Soviet Premier accepted the President's invitation rather suddenly, for the United Press International as late as Friday of last week reported as follows:

"The President has told some visitors that an invitation to Khrushchev is like a high card in a poker game, not to be dealt out without something in return. He has referred privately to the foreign ministers meeting as a poker game."

As these lines were written, it was recognized here that some move by Moscow that would seem to be a concession to the President's viewpoint might be in the offing. If it came, the feeling here was that this might have justified the maneuverings on both

sides. If it didn't come, Mr. Eisenhower was represented as still hopeful of an eventual change for the better on the issues raised at the Geneva Foreign Ministers Conference.

A Tribute to the University of Texas' War on Cancer and the Leadership of Dr. R. Lee Clark

EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. YARBOROUGH. Mr. President, one of the most terrible diseases which affects mankind today is cancer. Yet we all earnestly hope this will not always be so.

Our men of science and medicine are working now toward new weapons to fight this enemy. The Congress votes increasingly large appropriations to fight cancer. One of the battlegrounds of the war on this disease is a modern building in Houston, Tex.—the M. D. Anderson Hospital and Tumor Institute of the University of Texas, one of the three top cancer research institutions in America.

One of America's leaders in this war is Dr. R. Lee Clark, director and surgeon in chief at the center. His leadership has helped to build the center into one of the finest of its type in the Nation. He has earned the respect and honor of his profession and of the general public. Dr. Clark came to the center in 1946, just 2 years after it began operations in a makeshift barracks. He has helped it become the modern, advanced medical research center it is today. Dr. Clark is from a family of educators. His father founded Texas Christian University. His uncle, Lee Clark, long professor of American history at Sam Houston State Teachers College, was my mentor in that subject. Before Dr. R. Lee Clark came to M. D. Anderson Hospital and Tumor Institute he had engaged in study and research for years in Europe, in addition to his American studies. The country is fortunate to have his leadership at the institute.

I ask unanimous consent to have printed in the Appendix of the RECORD an article from the University of Texas Record for spring 1959, entitled "University of Texas' War on Cancer."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF TEXAS' WAR ON CANCER

There's a war going on in Houston, and the University of Texas is in the thick of it.

The enemy is cancer—a formidable foe which kills 24 Texans every day and which shows few signs of surrendering.

The battleground is the university's M. D. Anderson Hospital and Tumor Institute, a modern \$10 million pink marble building located on a 9-acre tract in the bustling Texas Medical Center.

TOP THREE

A next-door neighbor of the university's dental branch, M. D. Anderson (named for its

generous benefactor) ranks "among the top three cancer research institutions in the country," according to Dr. R. Lee Clark, Anderson's director and surgeon in chief.

"Only the Sloan-Kettering Institute in New York City, and the Roswell Park Memorial Institute in Buffalo have more comprehensive research programs," he said, "but, then, they have larger research facilities."

Certainly, Anderson is the only one of its kind in the Southwest. There is no comparable cancer research institution within 1,500 miles.

What makes Anderson unique? The fact that it has gathered under one roof three entities: research laboratories, educational-training facilities, and a specialty hospital.

A specialty hospital it is. "We see more cancer here in 1 year than the average general hospital sees in 10," said Dr. Clifton Howe, head of the department of medicine.

In an all-out offensive, Anderson battles cancer from three important fronts: research and education (heart and soul of the Tumor Institute which receives about 50 percent of the \$5 million a year budget), and patient care.

Anderson's assignment is a tough one: determine what causes cancer, how it behaves, and then prevent and control this medical scourge.

FROM MAKESHIFT TO MODERN

Named the M. D. Anderson Hospital for Cancer Research when created by the legislature in 1941, Anderson became a reality in 1944.

In makeshift barracks at the old Baker Estate on Baldwin Street, a staff of 25 started to work. Two dozen beds were leased in Houston hospitals; only 49 hospital patients were seen that first year. Research started but was limited to projects which did not require air conditioning—and they were housed in ex-stables. It was a humble beginning.

Since 1954, however, when Anderson moved into its new building, things have brightened tremendously.

In a colorful, comfortable setting, Anderson now maintains a 300-bed hospital, sees about 10,000 patients a year (as many as 300 a day), and employs 1,400 persons including a professional staff of more than 100 scientists and physicians engaged in 125 active research programs covering the basic sciences (biochemistry, biology and physics) and the clinical sciences (surgery, radiology, medicine and pathology). In between is the coordinating science of epidemiology.

NO HOLDS BARRED

In its efforts to defeat cancer, Anderson takes a "no-holds-barred" attitude.

Anderson fights cancer on the clinical level with radiation, surgery and chemotherapy (the use of chemical drugs which attack cancer cells without harm to normal cells).

On the basic science level, researchers fight cancer by learning more of how it starts, how it grows, how it behaves, how it affects its host, how it responds to treatment.

In 125 research projects (and an equal number still in the "dry run" stage), the problem is approached on a coordinated basis.

"Coordinated research is one of our principal efforts," Dr. Clark said.

In biology, working with the medical staff, Virologist Leon Dmochowski continues research wherein he saw for the first time anywhere virus-like particles in human leukemia through Anderson's \$35,000 electron microscope.

Using bacteria, fruitflies and mice, biologists carry on research that varies from human genetics to cytology, from radiation biology to microbiology.

In surgery, Dr. John S. Stehlin has treated more than 100 patients with a refinement of the perfusion technique developed from

Anderson research. This is a process whereby a patient with a tumor in a leg or arm receives massive doses of a chemotherapeutic agent (usually nitrogen mustard). A tourniquet applied to the extremity cuts circulation from the rest of the body. Using a heart-lung machine, circulation in the leg or arm is maintained while large drug doses are added—doses which can be tolerated in an isolated area but not in the entire body.

Anesthesiologists are perfecting a technique at Anderson for the control of pain in cases of advanced malignancy.

In medicine, Anderson's staff was the first to suggest cutting the pituitary stalk in the brain to change hormone balance in advanced breast cancer cases. Result?—a comparatively normal life without pain. Also in medicine, clinicians use radioisotope therapy for cancer of the stomach and intestines.

In pathology, the staff has developed and refined the "cryostat," an instrument which fixes frozen tissues to allow for final diagnosis within minutes. Pathologists, too, are working on ways of detecting cancer cells in sputum with an eye to earlier diagnosis of lung cancer.

PIONEERING

In physics and radiology, the staff has at its research fingertips some of the world's finest equipment.

With the slightest trace of a British accent, Physicist Warren Sinclair, formerly of London's Royal Marsden Hospital, said:

"I believe that this institution has one of the most outstanding radiotherapy programs in the country.

"Therapists here have a greater variety of radiation devices than any other institution in the U.S., and probably in the world."

Radiotherapy equipment includes two cobalt 60 units, a nine-ton Betatron and a newly-installed Caesatron unit.

"These units," said Dr. Clark, "give Anderson an excellent 'panorama' of equipment for radiation therapy."

He explained that the first Cobalt unit was designed at Anderson by Dr. Gilbert H. Fletcher, radiologist, and the late physicist, Leonard Grimmett, with Atomic Energy Commission help. "It was the first such design approved by the AEC for therapeutic use, so I suppose you could say we're 'pioneers' in that area of radiation," Dr. Clark said.

The second cobalt unit, newer in design, rotates around the patient. Both units have approximately the equivalent of 3-million volts.

The 22-million-volt Betatron, one of the most powerful of all existing X-ray units, has great penetration and is used for deep-seated cancers (as found in the gall-bladder or cervix).

The Caesatron, newest of the units, uses radioactive cesium in special cases (post-operative breast cancer, for instance) where less radiation penetration is required.

About 90 patients a day are treated with these radiation units.

CHEMOTHERAPY

More than 20 percent of Anderson's current research is in the growing field of chemotherapy. In fact, Anderson is headquarters for the four-State Southwest Cancer Chemotherapy Study Section, which includes several medical schools and hospitals.

Latest drugs and chemicals are being tested by 32 staff members in 39 research projects for their effectiveness against cancer, especially leukemia, which defies treatment by surgery or radiation.

REINFORCEMENTS

While research is the heart of the tumor institute, education is its soul.

Anderson, for example, gives specialty training each year to about 60 residents and fellows in the basic and clinical sciences;

holds an annual 3-day symposium on fundamental cancer research which brings basic scientists from all over the world to report on latest research findings in 1 general research area (this year's meeting attracted 524 delegates from 30 States and 14 foreign countries); conducts a fall clinical conference for Texas physicians to help them keep abreast on new methods of cancer diagnosis and treatment; operates a slide set service where Texas doctors can see color slides of 21,000 examples of cancer cases ranging from the earliest to the most advanced cancers; maintains for physicians a 15,000-volume library devoted primarily to cancer, and has begun offering, in cooperation with the main university's graduate school, academic work in graduate fields of biology, biochemistry, and physics.

PRINTED WORDS

One of Anderson's liveliest educational aspects deals with printed words.

The Cancer Bulletin, a colorful, sprightly bimonthly journal with an international circulation of 50,000, is edited by Anderson's staff to help practicing M.D.'s better diagnose and treat cancer.

Begun in 1948, the bulletin has been described as a "departure from the yawn-provoking trend found in most medical journals."

"Content—the bulletin's essential aspect—is not overshadowed by color or layout," said Dr. Russell W. Cumley, bulletin editor. "Every article gets hard scrutiny from 6 to 12 scientists."

Since 1957, the staff has edited a major scientific publication, the "Year Book of Cancer," the medical world's first cancer digest of thousands of articles pertaining to this disease.

Anderson joins hands with the University of Texas Press each year to put out in book form the papers delivered at the annual symposium.

In addition, a newsletter is mailed quarterly to all Texas physicians to keep them posted on Anderson activities and policies.

In the printed-words area, one must not overlook the 200 to 300 scientific papers published annually by the staff.

EXCELLENT CARE

Patients at the M. D. Anderson Hospital receive care and treatment usually unavailable in their own communities (radiation units being too expensive for small hospitals).

Anderson's patients (all Texans who must be referred by physicians) receive excellent care, said Dr. Melvin A. Casberg, university vice president for medical affairs.

Of Anderson's 300 beds, some 65 percent are paid for by the State to accommodate indigent patients. The other 35 percent are for full-pay patients.

Since its beginning in 1944, the staff has treated more than 28,000 patients.

COMPETITION

While Anderson faces a scientific problem on how to whip cancer, it faces other problems, too.

One of the most constant is the hiring of outstanding staff members.

"In certain areas of basic research and laboratory work, industry and several out-of-State research and educational institutions offer much higher salaries," Dr. Clark noted. "Our salary scales need to improve."

Other needs are for more research room (soon to be eased with the addition of a five-story research wing) and a nuclear reactor for research purposes.

When the university's committee of 75 turned in its final report, it said that M. D. Anderson has an excellent opportunity to attain national and international leadership in the field of cancer within the next 25 years.

This prediction, well along the way to becoming a reality, means only one thing: the ultimate winner will be the State of Texas whose citizens may have a cancer-free future.

FCC Rule Needs Changing

EXTENSION OF REMARKS OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. BRADEMAS. Mr. Speaker, there has been a great deal of interest in recent weeks in proposals to amend the Communications Act of 1934 in order to allow news coverage by radio and television stations of candidates for public office without unreasonable application of the equal-time rule.

The able junior Senator from Indiana [Mr. HARTKE] has helped a great deal to make possible the passage by the Senate on July 28 of legislation directed to this end.

Mr. Speaker, I should like to insert in the CONGRESSIONAL RECORD an excellent editorial on this subject published in the La Porte (Ind.) Herald-Argus of July 31, 1959.

The editorial follows:

FCC RULE NEEDS CHANGING

Television like radio is subject to Federal regulation in the public interest but there should be sensible regulation and only that. Newspapers can print or not print, in general, what they like, on the theory that those who publish newspapers have an adequate sense of responsibility to safeguard essential rights and fairness. Those individuals who control TV and radio stations should be conceded a somewhat similar sense of responsibility.

Congress should pass as soon as possible the proposal to set aside the Federal Communications Commission's equal-air-time ruling, which borders on the ridiculous, even though the FCC was apparently serious in believing the ruling carried out the intent of the Federal Communications Act. This ruling means that such eccentrics as Lar "America First" Daly, who runs often for the pure joy of running, is entitled to as much air time as any Republican and Democratic candidate for president.

Should this ruling be applied vigorously, minor candidates for major offices, including a variety of freaks and crackpots, could create chaos on the air lanes before and during political campaigns. In 1956, for example, 9 minor contenders campaigned for the presidency, gaining from 8 to 175,000 votes apiece. Had each of these demanded equal air time as President Eisenhower after his news conferences, the confusion can be imagined.

The Senate bill would exempt all legitimate news programs, such as panel shows, interviews, and newsreels from the strict interpretation of the equal time regulation. This would appear to be reasonable. The TV and radio networks and stations, like newspapers and magazines, should be permitted to use their best judgment in coverage of political personages as news rather than as men or women seeking office.

The FCC can and must function to make possible fair allocation of time on the air waves for candidates whose purpose is to win votes. Bias or intolerance on the part of the stations or networks against any

legitimate candidate should not be permitted to bar him from the air lines or shove him away back in some corner. But the equal-time provision should be adjusted so that freedom of the air does not become ridiculous.

Senior Citizens Month

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. JAVITS. Mr. President, on March 10 I introduced S.J. Res. 75, to provide for the designation of the month of May each year as Senior Citizens Month. Many of the State Governors have already proclaimed this observation, honoring the 21 million American senior citizens past 60 years of age.

I have an article from the September 1959 issue of Senior Citizen describing this activity in the States, and the proclamation for a Senior Citizens Month issued by Gov. Nelson Rockefeller, of New York, which I ask to have printed in the Appendix of the RECORD.

There being no objection, the article and proclamation were ordered to be printed in the RECORD, as follows:

THIRD OBSERVANCE OF SENIOR CITIZENS MONTH (By Anna C. Leahy)

The third nationwide Senior Citizens Month, sponsored by Senior Citizens of America, was observed May 1959. Forty-four States, the District of Columbia, and Puerto Rico issued proclamations while civic-minded organizations reinforced and supported the proclamations with effective programs.

The general purpose of Senior Citizens Month is to call attention to the priceless human resources to be found in the talent, education, experience, and wisdom of older people. It is also to stress their physical, social, economic, and spiritual needs, and their right to equal opportunities for useful living in the community.

The entire month is the most popular form of statewide observance as it allows activities to proceed at leisurely pace, and gives time for consideration of distance, transportation difficulties, and other problems. However, a week, day, or shorter period is often chosen for special types of events.

Due to the number of SCM programs, it is possible to present only a few representative ones. The examples given will indicate, to some extent, the high quality and valuable content of the work being done by individuals and organizations.

New York State, a pioneer leader of the senior citizens movement, had its usual statewide program during May with a proclamation by Gov. Nelson A. Rockefeller. The excellence of the social and economic contributions made by New York to its older citizens, at this time and during its year around program, has stimulated similar contributions throughout the Nation.

Another observance that engaged the interest of people in all parts of the State is that of Washington. Sixty prominent people, each representing his own district, made speeches on topics concerning the interests and welfare of older people. Resource material was made available. This resource material included suggested picture shows; sample proclamations for mayors; fact sheets that gave basic information about older peo-

ple; statements of objectives, outlining practical method of improving unhappy living conditions of many older people, and ideas for community observance through recreation and other constructive projects with year-round possibilities. Miss Margaret Whyte, executive secretary for the Governor's council of the aging, is in charge of the Senior Citizens Month program.

Fort Worth, Tex., observes the entire month but selects a week to emphasize phases of the senior citizens movement. During this week an outstanding citizen is honored at a dinner meeting by the Womens' Civic Council, an organization formed by 25 civic clubs. There is a proclamation by the mayor of the city and tributes are made to the guest of honor by religious and civic leaders. This year William J. Marsh, composer of the Texas State song, was chosen "in recognition of his many contributions to Fort Worth's musical and cultural fields." As a mark of special recognition, Gov. Price Daniel sent a scroll to be presented with the plaque given by the council. Mr. Herbert Shore, president of Texas Society on Aging, made the principal address of the evening. About 350 guests were present.

The Los Angeles area also observes Senior Citizens Month and selects a week for special activities. The following report was sent by Mr. T. H. Edwards, vice president Senior Citizens Association of Los Angeles County, 11921 Santa Monica Boulevard, Los Angeles, Calif.:

The Governor of California proclaimed May as Senior Citizens Month and the week of May 17 to 23 was proclaimed Senior Citizens Week by the mayor of Los Angeles and all the mayors of cities in Los Angeles County. Pasadena held a conference on aging on May 11 and 12 with two different workshops each day with the purpose of educating the various communities on the needs and problems of the aged and the responsibility of the communities, churches and clubs toward them. Libraries, homes, housing authorities, and service clubs held open house for guests.

May 17: Churches in each area participated in honoring senior citizens at their services.

May 18: The various senior citizen and service clubs held special events in the individual communities.

May 18-20: Displays of senior citizen projects, hobbies, etc. were on exhibition in the Los Angeles City Hall rotunda, and also in the Hall of Records building.

May 19: At 9 o'clock a lawn bowling tournament.

May 19: From 8 to 11 p.m. Free dance at the Shrine Exposition Hall in Los Angeles.

May 20: A noonday luncheon with a noted speaker.

May 21: 2 p.m. A special live stage show of singing, dancing, and acting from the entertainment world of Hollywood, with Francis X. Bushman as M.C.

May 22: A shuffleboard tournament in one of the Los Angeles parks and also a stage show, "The Gay Nineties," in Pasadena by local talent.

Besides the special activities mentioned, the libraries, homes for the aged, housing authorities, and service clubs had various activities. The press and TV gave much publicity. The Senior Citizens Association worked in cooperation with many different organizations including Senior Citizens Service Center; Los Angeles City Recreation and Parks; Los Angeles County; Los Angeles County Commission on Aging; State Department of Social Welfare; Welfare Planning; Church Welfare Federation; Welfare Planning Council; Sears, Roebuck Foundation.

The Senior Citizens Association of Los Angeles County is composed of 114 clubs in the county. There are 500,000 senior citizens in Los Angeles County.

First Lady Mamie Eisenhower entertained about 600 guests from local homes for the aged and the blind at a White House garden party on the afternoon of May 28. Although wheelchairs and canes were in evidence, there was an air of gaiety and happiness with smiling exchanges of goodwill. Old friends met and new friends were made. Eighty-nine-year-old, Rebecca Clark, a resident of Carroll Manor, answered Mrs. Eisenhower's welcoming embrace by saying she had known the hostess "since she was a girl." Exsoldier Floyd Jones, lying helpless on a wheelchair, held a mirror in order to see Mrs. Eisenhower as she greeted him. Refreshments were served at two bright red and white striped awning stands. The guests sat in chairs and listened to the Marine Corps Band playing national favorites. It was a happy and unusual Senior Citizens Day.

"Going Like Sixty" club, Oak Park, Mich. enjoyed May 19 as Senior Citizens Day with an outing by bus to Lansing, where they were entertained at luncheon by the Silver Toppers.

On May 10, the Soroptimist Club of Pocomoke City, Md., dedicated Hartley Hall, a home for Senior Citizens, with Gov. J. Millard Tawes as principal speaker. Guests from Washington, D.C., Annapolis, Salisbury, and other neighboring cities came to join the people of Pocomoke in applauding the Soroptimists for their superior achievement. The club bought an old mansion, remodeled it according to State building regulations, and at an open house announced plans for adding more rooms and building an infirmary. Miss Anna Davis, president of Soroptimist said that now the building is paid for, they will concentrate on plans for maintenance and the care of about 25 guests.

A Senior Citizens Conference was held May 14, 1959, at the Opportunity School, West Columbia, S.C. Dr. Joy Elmer Morgan, Washington, D.C., was guest speaker. Dr. Will Lou Gray, the State Director of SCA, presided. At this conference the first State branch of SCA was organized (see account in Senior Citizen July 1959:59). Following the conference the State Legislature created a Commission on the Aging.

The president of the Soroptimist International of Clovis, N. Mex., Miss Alice G. Converse, reports a successful celebration of the first anniversary of the Senior Citizen Center of Clovis with 471 guests attending a fund raising barbecue. Senior citizen programs were given publicity by newspapers, television, and radio. To illustrate the co-operation between State and cities, Miss Converse sends copies of proclamations by Gov. John Burroughs and Mayor Benjamin Newt Hudnall of Clovis.

The names of the States participating in the senior citizens month program and of the Governors who issued proclamations or statements are:

Alabama, John Patterson; Arizona, Paul Fannin; Arkansas, Orval Faubus; California, Edmund Brown; Colorado, Stephen L. R. McNichols; Connecticut, Abraham Ribicoff; Delaware, J. Caleb Boggs; Florida, LeRoy Collins; Georgia, Ernest Vandiver; Idaho, Robert E. Smylie; Illinois, William G. Stratton; Indiana, Harold W. Handley; Iowa, Herschel C. Loveless; Kansas, George Docking; Kentucky, Albert B. Chandler; Louisiana, Earl K. Long; Maine, Clinton A. Clauson; Maryland, J. Millard Tawes; Massachusetts, Foster Furcolo; Michigan, G. Mennen Williams; Minnesota, Orville L. Freeman; Missouri, James T. Blair, Jr.; Nebraska, Ralph G. Brooks; Nevada, Grant Sawyer; New Hampshire, Wesley Powell; New Jersey, Robert B. Meyner; New Mexico, John Burroughs; New York, Nelson A. Rockefeller; North Dakota, John E. Davis; Ohio, Michael V. Disalle; Oklahoma, J. H. Edmondson; Oregon, Mark O. Hatfield; Pennsylvania, David L. Lawrence; Rhode Island, Christo-

pher Del Sesto; South Dakota, Ralph Herseth; Tennessee, Buford Ellington; Texas, Price Daniel; Utah, George Dewey Clyde; Vermont, Robert T. Stafford; Virginia, J. Lindsay Almond, Jr.; Washington, Albert D. Rosellini; West Virginia, Cecil H. Underwood; Wisconsin, Gaylord A. Nelson; Wyoming, Joseph J. Hickey; Puerto Rico, Luis Muñoz-Martin; District of Columbia [Washington], Commissioners Robert E. McLaughlin, David B. Karrick, A. W. Welling.

A NOTABLE PROCLAMATION

Whereas the foundation of these United States of America has been solidly based on the foresight, initiative, courage, strength, and determination of our senior citizens; and

Whereas these senior citizens have met the challenge of pioneering this country and especially our great Southwest with vision and firm resolve; and

Whereas the second half of life should be richer and happier than it now is, and the facilities and opportunities for living a useful and happy life should not be denied to any person because of age; and

Whereas increase in population of this age group due to the many components of the American way of life, becomes greater each year by a large percentage; and

Whereas better provision should be made for housing, [education], recreational, and employment needs of our senior citizens, as well as care for those who are not able to care for themselves; and

Whereas they should be given the opportunity to continue to use their wealth of wisdom, experience, and knowledge in aiding the community in which they live: Therefore be it

Resolved, That I, Benjamin Newt Hudnall, mayor of the city of Clovis, N. Mex., do designate the month of May as Senior Citizens Month in Clovis, and urge the cooperation of every organization, both religious and civic, in developing programs honoring and recognizing the necessary needs of our aging population, and to ask for prayerful guidance and wisdom. Issued May 1, 1959, by Benjamin Newt Hudnall, mayor.

PROCLAMATION

"The Senior Citizens of America have asked me to proclaim May as Senior Citizens Month. I am happy to comply.

"New York State is proud of its men and women who are 65 years of age or more. Their number today is in excess of 1.5 million. Their experience, judgment, skill, and loyalty constitute a major strength of our society. While the increase in the numbers of our aged brings with it new problems, what is needed, perhaps, above all is a new understanding among our people of the great opportunities that now exist to make the golden years in later life rich in service, usefulness, and creativity.

"Unfortunately, too many of these men and women find themselves without a full outlet for their talents. Most of our large corporations have rules which retire people at a specified age, regardless of their physical and mental fitness for service. Most of them, of course, remain as well qualified as ever, but are confronted with the problem of inaction.

"There are also people who find themselves jobless at the age of 45 through no fault of their own. They frequently encounter great difficulty in obtaining new positions.

"The New York Legislature took action on this issue last year by enacting a law which prohibits discrimination in employment on the grounds of age. This was a helpful measure but still much remains to be done to persuade many employers to live up to the spirit of that measure.

"In New York, we are fortunate to have the services of the Joint Legislative Committee on Problems of the Aging. Its work

has received national and worldwide recognition. It has been able to encourage housing for the aging, special counseling and placement of elder job seekers. It has also established Golden Age Clubs and community programs for the elderly.

"Various other State agencies, including the department of health, the social welfare department, the labor department, and the mental hygiene department, are also engaged in endeavors to meet this problem. It is desirable to focus attention on this issue.

"Now, therefore, I, Nelson A. Rockefeller, Governor of the State of New York, do hereby proclaim the month of May 1959 as Senior Citizens Month in New York State, and I urge that social agencies, health and mental hygiene groups, churches, schools, fraternal and civic groups, and public and private agencies cooperate in promoting these purposes."

Given under my hand and the Privy Seal of the State at the capitol in the city of Albany this 15th day of April in the year of our Lord 1959.

NELSON A. ROCKEFELLER.

United States and Italy Renew Food-for-Children Program

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mrs. BOLTON. Mr. Speaker, one of the truly heartwarming activities carried on under our surplus agricultural commodities distribution program is the joint program with Italy to provide food for needy Italian children. Under the program the United States makes dry milk and wheat flour available from Government-owned surplus commodity stocks. In turn, the Italian Government contributes food and distribution costs in the amount of \$11 million per year.

During the 4 years that the food-for-children program has been in operation, the United States has contributed approximately 108,000 tons of surplus food for the benefit of some 5½ million children. Under the terms of the renewal agreement for the coming year, we will provide food for use in over 34,000 school lunchrooms, children's homes, kindergartens, and summer camps.

Mr. Speaker, as this program offers an excellent demonstration of how our surplus food commodities can be used in the interest of humanity, I ask that the State Department press release of July 30 be included with my remarks.

UNITED STATES AND ITALY RENEW FOOD-FOR-CHILDREN PROGRAM

The agreement for a joint Italian-American program to provide food for Italy's needy children was renewed at a signing in Rome today by U.S. Ambassador J. D. Zellerbach and Italy's Foreign Minister Giuseppe Pella.

The agreement covers the period from October 1959 through September 1960 and will continue a cooperative child-feeding program which has been in operation for 4 years.

More than 1,600,000 children benefit from the program. Sixty percent of the food made available under the program will go to depressed areas. Under terms of the agree-

ment, the program will provide food for use in over 34,000 school lunchrooms, children's homes, kindergartens, and summer camps for children.

The United States contribution for the year will continue at approximately the present level. Four thousand tons of dry milk and 23,000 tons of wheat flour will be transferred by the International Cooperation Administration from U.S. Government-owned surplus commodity stocks.

The Government of Italy's contribution to the program, including food and distribution costs, will be continued at the present rate, which is valued at more than 7 billion lire (\$11 million) per year.

Not including the assistance provided for in today's agreement, the United States since 1956 has contributed about 108,000 tons of food toward the child-feeding program, which is carried out under the direction of the Administration for Italian and International Assistance Activities, an Italian Government agency.

Recognition of Oregon's Centennial by Weyerhaeuser Timber

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. NEUBERGER. Mr. President, the Weyerhaeuser News, a monthly company publication of the Weyerhaeuser Timber Co., contains an excellent article on the Oregon Centennial in its July issue.

The article, entitled "Oregon's 100th Birthday Party," contains some wonderful pictures of logging and lumbering in the Pacific Northwest. I regret these cannot be printed because they graphically portray the role that logs and lumbering play in our State's economy. I ask unanimous consent that the text of the article be published in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON'S 100TH BIRTHDAY PARTY

The group of bearded men who sat down together in 1957 to plan for Oregon's admission to the Union had little expectation that timber would dominate the future of their State.

They were trappers, missionaries, farmers, lumbermen, miners, and merchants. What wealth they possessed could be credited to the gold rush boom in neighboring California. Looking out the window of their Salem meeting place, if they could see all the forests of the State, a generous sample of Oregon's green gold would unfold—magnificent stands of cedar, hemlock, spruce, Douglas-fir, and ponderosa pine—mating the hillsides and cluttering the valleys.

For many years to come, settlers would hack and burn the trees to clear the way for more valuable lowland fields and pastures.

The setting of the 1957 territorial legislative session was charged with hope. Then, as now, the borders of Oregon contained more timber than any other State. But mining fever had spread from the Mother Lode and the Comstock and many pioneers pictured a path of gold and silver leading to the Beaver State's future.

Agriculture, too, was booming. For 8 years, the gold rush had demanded more fruits, grains, vegetables, and meats than the sparse white population of Oregon Territory could produce.

The fur trade was responsible for the original settlement of the entire northern Pacific coast and there was reason to hope that the fashion for beaver hats would maintain trapping as an important Oregon industry.

Other optimists pointed to the rich treasure chest of fisheries in the new State's broad rivers and long coastline.

But long before the residents of Oregon Territory voted on statehood in 1857, the predominance of timber in the lives of their descendants had been indicated.

The Hudson's Bay Co. established the first sawmill west of the Mississippi at Fort Vancouver on the Willamette River in 1827. In the early 1830's, a mill at Oregon City was busy producing shingles for export to the Sandwich Islands.

An upstart young village called Portland, located a few miles downstream from Oregon City, was visited by four or five ships in 1848. Two years later, at the height of the gold rush, no less than 50 lumber-carrying vessels made it a port of call.

There were 30 sawmills between the Columbia River and the California line in 1849. But for many years, the major markets for timber products were limited to Oregon or California, which was quickly developing its own lumber mills. Heavily stocked timberlands were selling for only a few dollars an acre even into the 20th century.

The shadow of the future became clearer in the 1870's and 1880's as transcontinental railroads began to find their way into Oregon. At the same time, the advent of logging with railroads made the forests more accessible.

The perfection of softwood plywood at Portland in 1905 was another harbinger of the potential usefulness of Oregon's giant trees.

A new order in the industry was slow in arriving amidst the Nation's greatest stands of timber. It was climaxed when a series of disastrous forest fires shocked Oregonians into the realization that timber was the mainstay of their economy and their hope for the future.

The still-barren hillsides of the Tillamook Burn continue as a reminder that the heritage can be destroyed through carelessness.

Recognizing its indebtedness to nature's generosity with trees, Oregon is giving the place of honor to its billion-dollar industry during this year's statehood centennial observance. From June 10 to September 17, an estimated 8 million visitors will see the grandeur of the 33d State epitomized in a continuous spectacle on the banks of the Columbia.

Among the eye-catching features at the exposition grounds is the unique forest products pavilion. Laminated wood forms the gracefully curving roof of the seven butterfly-like hyperbolic paraboloids that make up the structure. In its 24,000 square feet of floor space, timber products manufacturers and dealers will display the results of a century of progress in the use of wood.

At the end of the 100-day exposition, the building will be turned over to Portland area 4-H groups for their permanent headquarters.

Weyerhaeuser Timber Co.'s colorful exhibit is located at one corner of the main exposition building. It contains samples of essentially every company product, including laminated beams, milk cartons, Nu-loc, and edge-glued products, shipping containers, pulp, plywood, lumber, and Silvatek products.

The company also took part in the display of a totem pole, a new landmark overlooking Portland. The 30-ton cedar log was donated by Weyerhaeuser's St. Helen's tree

farm. A three-unit miniature work train bearing the Weyerhaeuser symbol carts delighted centennial visitors on a half mile track around the fair grounds. Built by the Longview, Wash. mill shops, the gasoline powered train will later be given to Portland's zoo line railroad.

Homebuilders and suppliers have taken more than 2 acres of interior display space to demonstrate their arts and products. The Home of Ideas is another attractive showcase for wood that has become a favorite with visitors.

A complete operating sawmill of pioneer days has been recreated next to the exposition's main exhibit building. It features a primitive whip-saw mill, operated by two men. One, atop a log on a platform, and another below the log, laboriously fashion boards with a hand saw.

The operation is similar to one started at Coos Bay in 1853 near the site of Weyerhaeuser's modern mill, which today produces 350,000 board-feet of lumber in 8 hours.

On a hillside near downtown Portland is a reminder of an earlier centennial celebration. It is the Hall of Forestry—better known to tourists as the world's largest log cabin. Built entirely of wood, the sturdy building was a feature of Portland's Lewis and Clark Exposition of 1905. It has defied time and weather to become the city's most popular year-round tourist attraction as well as a reminder of the durability of wood.

Oregon enters its second hundred years of statehood with the Nation's largest quantity of standing timber. It has ranked first in the production of logs, lumber, and plywood since 1939. More than half of the State's income is derived from forest products.

Though many of the pioneers couldn't see Oregon's forests because the trees got in the way, they would no doubt be pleased with the results of their efforts and the destiny they created for their new State. That heritage is the assured growth of Oregon's industries, its population and its trees into a limitless future.

John W. Mahan, Commander in Chief, Veterans of Foreign Wars of the United States, Recently Observed the Capabilities of the 6th Fleet and Concluded It Is One of the Best Deterrent Forces America Has To Prevent War

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. VAN ZANDT. Mr. Speaker, under leave to extend my remarks I wish to include in the CONGRESSIONAL RECORD an interview article from the August issue of Navy magazine published by the Navy League of the United States. We have just spent a considerable amount of time determining the amount of money this Nation should spend for its defense during this fiscal year. Amid charges of waste, duplication, service rivalry, and conflicting missile systems it should be a real pleasure for all of us to see an outstanding example of a true force-in-readiness which is making the maximum use of its men and materiel and at the

same time is shielding this Nation 24 hours each day. The source of this opinion comes from one of our most distinguished citizens, John W. Mahan, commander in chief of the Veterans of Foreign Wars.

Jack Mahan is one of the most youthful and vigorous leaders that the VFW has ever had. He has greatly enhanced the stature and influence of the VFW in Washington and throughout the Nation. The membership has broken old records during his tenure.

Commander Mahan has, of course, fought for all of the matters traditionally of serious interest to veterans. In addition, he has energetically concerned himself with housing, education, and other matters of extreme importance to the Nation's welfare. National defense policy has been of primary concern to him. It is in this field that I would like to bring his views before this body today. He has traveled extensively in surveying our national defense posture. On one of his trips he had an opportunity to see the important effects of seapower actively exercised in an area of continuing crisis. His remarks, expressed in interview form, show a keen analysis and deep understanding of the military and diplomatic force constantly at work for us in the 6th Fleet. As you will see from the interview, he was impressed by the versatility of the balanced fleet which allows it to patrol the international waters of the Mediterranean unhampered by the vexing problems of fixed bases. It can exert its influence with the proper degree of force in a matter of hours. Lebanon is a practical example. The 6th Fleet story follows:

SIXTH FLEET STORY

Question: Commander Mahan, we understand that you have recently visited the 6th Fleet in the Mediterranean?

Answer: Yes.

Question: What was your general impression of the fleet during your visit?

Answer: The 6th Fleet is one of the best deterrent forces America has to head off any local or general war.

Question: What makes the 6th Fleet such a good deterrent?

Answer: This is highly mobile force capable of striking anywhere in the Middle East and portions of Europe and Russia, if necessary. This fleet is also a force of diplomatic strength, which many Americans probably don't realize. There is no way of telling just how far back these diplomats in uniform have thrown the Communist timetable in local areas touched by the 6th Fleet, but from what I observed, the people who have been exposed to these Americans have a better understanding and liking for Americans in general, than in most countries I have visited.

Question: Commander Mahan, you mentioned a "mobile force." What, exactly do you mean by "mobile force"?

Answer: The 6th Fleet is constantly on the move—it's always moving around going where it is needed, hence there are no power vacuums in the Mediterranean, because the 6th Fleet has the capability to move quickly into troubled areas. This is what I mean by a mobile force. The fleet also contains a great deal of versatility—submarines, surface ships, carriers, and Marine landing forces. It can do the job on, over, under, and from the sea. It offers balanced seapower in all forms. From what I have seen, the 6th Fleet provides the

United States with otherwise unobtainable mobility and versatility in this critical area.

Question: Do you believe as some do, that the aircraft carrier is outmoded as an effective modern-day combat weapon?

Answer: No, I certainly do not. Even though we are entering the age of missiles * * * the aircraft carrier is still a vital element of defense in conflicts where missiles are not appropriate. These carriers can deliver precision attacks on picked targets and thus bring U.S. airpower to bear in any action we might be forced into. It also should be pointed out when talking about the pros and cons of aircraft carriers, that the enemy has modern aircraft that they will throw into a conflict, and this country must be capable of meeting such a threat. The aircraft carrier today is one of the best answers to this problem. But to launch modern aircraft capable of defeating any aggressor force we must have modern carriers that can handle them.

Question: Commander Mahan, do you mean that the Navy does not have the carriers to do the job if this country is attacked?

Answer: That is exactly what I mean. Most of the carriers now on active duty in the Navy are of World War II vintage, built either during or right after that war, and these carriers cannot take modern jet aircraft. Of course, the Navy does have some modern-day carriers, but they are few in numbers. Considering its normal life span, a ship is not much good to the Navy, or anyone else, after about 20 years—and World War II ended about 14 years ago. * * * Now many of these ships are getting to the end of the line. I firmly believe there is a definite need for carriers, either as a weapon or as a deterrent to any type of warfare. Remember the Russians can match us with aircraft and missiles, but they cannot match us with carriers. We must not let our margin of superiority over communism be lost by our default in not building carriers.

Question: But aren't these carriers vulnerable to both air and submarine attack?

Answer: Any naval ship is a target for either submarine or air attack. But so is any type of military and air base. The Navy has various tricks of the trade they can employ to offset an undersea or air attack. I am no expert in naval warfare, but I have seen some of the various defensive measures being used to protect the carriers. In any event, weapons are justified not by whether they are vulnerable to every action—all weapons and installations are vulnerable—but rather on the basis of what the weapon can do to the enemy. The carrier and marine amphibious forces may well be our margin of victory over communism in all-out war. The enemy must also be able to locate a carrier before they can launch any type of attack. These carriers are constantly on the move, so if the enemy cannot locate them, they certainly cannot attack them. Certainly they are no more vulnerable to attack than our fixed bases, and I believe them to be less vulnerable.

Question: Do you think that the Navy is making too much fuss over getting modern carriers, and other types of ships?

Answer: Again, no. Let me qualify the entire subject of ship procurement as I see it. The Navy is not in love with any one type of ship. They have eliminated the battleship over the clamorings of many people, and when the Navy feels that the aircraft carrier is no longer useful in our defense setup, I am sure they will move them out of the picture * * * the same also applies to destroyers and any other type of ship the Navy might have. Many ships the Navy has in the front-line defense system are old and

should be replaced if we are to keep control of the sea. For instance, about 80 percent of destroyer forces will have to be replaced within the next few years. These are a lot of ships, especially when you consider the destroyer is a multipurpose vessel capable of doing many jobs.

Question: Mr. Mahan, aside from the carriers what other general striking force does the Sixth Fleet have?

Answer: Well, there are many and I am afraid I don't have time to cover them all. One of the most impressive forces I saw were the battle-ready Marines carried by the Fleet.

Question: How could such a Marine force be considered an important element, in say a brush fire war? It takes time and planning to put a Marine force ashore.

Answer: Let me answer that question by saying this. It took only a few hours from the time President Eisenhower issued orders for the Marines to go into Lebanon until the first Marine hit the beach. Why? Because they had good planning and years of experience and practice * * * and were prepared for such an incident.

Question: Why are helicopters so important to the Marine Corps?

Answer: Because the helicopters make possible what the modern Marine Corps calls the vertical assault. The versatility and flexibility of this type of assault is practically unlimited, for it is based upon the idea of hitting the enemy where it will hurt him the most—and us the least. Combat ready Marines are transported in specially constructed troop ships. From these ships they can launch their forces, by helicopter, in attacks behind enemy lines, cutting enemy communications and disrupting his prepared defenses. These forces are supplied by helicopter and other aircraft. Basically, the helicopter and the vertical assault give the Marines, and the Fleet of which they are an integral part, the ability to attack the enemy unencumbered by the usual difficulties and restrictions imposed by difficult terrain, inadequate beaches, and concentrations of enemy forces. Manmade and natural obstacles to landing our Marines are of little significance in the vertical assault.

Question: You spoke of specially constructed troop ships. What exactly do you mean?

Answer: I believe the Navy calls them LPH's—Landing Platform Helicopter. They are ships designed to carry Marine assault troops along with the helicopters necessary to carry these troops to land. The ships are equipped with helicopter platforms and the necessary helicopters. In this way there is no time lost getting the landing vehicle to the troops and then getting the troops ashore. Speaking of the Navy's needs, I feel they should certainly have more of this type of ship. I think it is worth noting that, as an interim measure, to meet the need for this type of ship, two of the Navy's smaller carriers have been adapted for this service. These two ships, the *Boxer* and the *Princeton* are manned by both sailors and marines. Their use in this way is a reflection of the wisdom of the Secretary of the Navy, Admiral Burke, and General Pate in finding a workable solution to this pressing problem without spending huge sums of the taxpayers' money to get results. The development by the Marine Corps in this landing tactic—vertical assault—is perhaps the most significant development in our combat techniques since World War II. It gives the Fleet an unprecedented flexibility in moving U.S. power from the sea to the shore.

Question: How many marines are with the 6th Fleet, and are they ready for combat operations?

Answer: Let me answer the lead part of your question first. There is one reinforced marine battalion with the 6th Fleet. They have their own engineers, artillery, etc. As for them being ready, I think the answer is a positive yes. From what I observed, each and every man, from the battalion commander to the newest private knows his job. Each also knows why he is there and what he must do if called upon. The morale is high and the spirit cannot be matched. After talking to some of them, I feel that this reinforced battalion should be expanded to a regiment that has the necessary support to fight. A regiment would certainly give us considerably more authority than the present battalion.

Question: Could an enemy force bottle up the 6th Fleet in the Mediterranean?

Answer: It would take a great many ships to do this, plus additional aircraft. If an enemy made 6th Fleet their sole target, it would take the pressure off the rest of the fleet making it possible for us to go where we wanted, when we wanted. No, I don't believe an enemy would do such a thing, but again, I'm not an expert.

Question: Well, couldn't an enemy destroy our supply bases in Europe, cutting off the fleet?

Answer: First of all, the 6th Fleet is supplied directly from the United States * * * ships, food, personnel. Not unless they knocked off Norfolk could they stop supplies from getting through to the 6th Fleet. As long as we control the seas, I don't think it will be possible for an enemy to stop supplies.

Question: Commander Mahan, there has been some talk recently about splitting America's defense forces into strategic and tactical force. What do you think about such a proposal?

Answer: I think it would be a tragic mistake if we do.

Question: Why?

Answer: Let's take the 6th Fleet for instance. I have said earlier that it is a multipurpose fleet, capable of performing both strategic and tactical missions. Presently the 6th Fleet's mission is both tactical and strategic. They are guarding allied sea communications throughout the Mediterranean, while at the same time they are prepared to protect movements of Middle Eastern oil to Europe and the United States. The 6th Fleet in its role could also deny the use of the Mediterranean to enemy shipping and protect our various north African bases. The fleet's aircraft could fly both tactical and strategic missions in support of our allies, plus supplying them with arms and supplies. No, the 6th Fleet is a good prototype of both strategic and tactical support. I think it would severely cripple our defense to disrupt such a team. The country is very fortunate to have a fleet like the 6th, very lucky indeed.

I have been dismayed and deeply disturbed by the proposals from several quarters that a new naval weapon be removed from naval command on the grounds that it is a strategic weapon. Now, I don't claim to be an expert in naval warfare, or any other kind. But, it just seems to me, from my own limited military experience, that * * * well, you can't put these things in such neatly divided categories like tactical or strategic. It seems to me that these proposals reflect the thinking of theorists, with no practical experience in the hard school of using—I guess application would be a better word—seapower. These men are captivated by the theory that command of a force should depend upon whether its targets are labeled strategic or tactical rather than upon the skill, knowledge, and experience needed to apply the force effectively against enemy targets.

Mrs. McGuire, a Texas Lady, and Her Sister in Maryland Are Leaders in Making a Better Life for Senior Citizens

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. YARBOROUGH. Mr. President, Mrs. Marie C. McGuire, of San Antonio, Tex., and her identical twin sister, Mrs. Margaret C. Schweinhaut, of Kensington, Md., have been outstanding leaders in work to make a better life for elderly citizens of America.

Mrs. McGuire has worked with the housing authority in San Antonio for 18 years and has been instrumental in helping elderly citizens find satisfactory places to live. She is also author of a book on this subject entitled "Housing for Elderly." Her sister, Montgomery County delegate to the Maryland General Assembly, introduced a bill which was quickly passed by the State's legislature and created a committee to study the problems of the senior citizens of Maryland. Mrs. Schweinhaut is chairman of the Maryland Commission on the Aging.

Both Mrs. McGuire and Mrs. Schweinhaut show their active good citizenship by turning their ideas and ideals into real action.

I have known Mrs. McGuire for more than 15 years, and have watched her work with appreciation and enthusiasm.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record these articles:

First. An article by Marie Smith from the Washington Post and Times Herald for Wednesday, August 5, 1959, entitled "Twins Take Up Cudgels for Oldsters—Aged Have Double Chance."

Second. An article by William T. Noble from the Detroit News for Thursday, June 25, 1959, entitled "Twins Living Far Apart Find Careers Run Together."

Third. An article from the Washington Post and Times Herald for Sunday, July 12, 1959, entitled "Tawes Appoints Commission on Problems of the Aging."

There being no objection, the articles were ordered to be printed in the Record, as follows:

[From the Washington Post and Times Herald, Aug. 5, 1959]

TWINS TAKE UP CUDGELS FOR OLDSTERS—AGED HAVE DOUBLE CHANCE

(By Marie Smith)

When members of the Senate Subcommittee on Problems of the Aged show up for their hearing this morning they may think they're seeing double. In the audience will be handsome, silver-blond identical twins who all their lives have been causing people to blink and look again.

They are Margaret C. Schweinhaut, Montgomery County's delegate to the Maryland General Assembly, and her younger sister (by 5 minutes), Marie C. McGuire, of San Antonio, Tex.

Mrs. McGuire, who is executive director of the San Antonio Housing Authority and a director of the National Association of Housing and Redevelopment, will tell the subcommittee headed by Senator Pat McCNAMARA, Democrat, of Michigan, about San Antonio's pioneer work in providing housing and recreation facilities for the aged.

Mrs. Schweinhaut, who is chairman of Maryland's Commission on Problems of the Aging, will testify later. Today she'll listen to the testimony of others to get information that may be adaptable to that group's work.

Although the twins, who were born and grew up in Montgomery County, have lived 1,800 miles apart since their marriages 30 years ago, their careers have run a parallel course.

Both are Democrats and interested in politics. Marie worked in Senator LYNDON JOHNSON's first campaign for the Senate in 1938. Her political activities have been curtailed since she began work with the housing authority 18 years ago.

During part of that time, Margaret was assistant to the director of women's activities of the Democratic National Committee and while she was busy during a campaign, Marie would come to Washington to take care of Margaret's children.

Yesterday, the twins recalled that when Peggy first ran for the Maryland House of Delegates in 1950, it was Marie's picture on her campaign cards.

"I gave her the cards as my contribution to the campaign and had them printed in Texas. I didn't have a picture of Peggy, so I used my own and no one knew the difference."

But Peggy figures that must have been bad luck. "I lost that time," she said.

It was 5 years ago that Marie began thinking in terms of housing for older people and Peggy, who had just been elected to the Maryland Legislature began asking what her State was doing for its senior citizens.

As a result of Marie's work that followed, 610 units in San Antonio's public housing have been taken over for housing the aged, and in just 2 weeks, the city will open 36 motel cottage units giving the aged a choice of multistory or ground-level living.

Three years ago, Peggy Schweinhaut introduced a bill in the Maryland Legislature to create a legislative study committee to decide what Maryland was doing and where action was needed. It recommended a commission on the aged, and legislation creating the independent agency sailed through the legislature earlier this year and was the first one signed by the incoming Gov. Millard Tawes.

Because of Peggy's pioneering and promoting of the legislation and interest in problems of the aged, she was appointed commission chairman.

The twins went to the beauty shop yesterday and had their silver locks styled identically. Then they turned heads at the Statler embassy room where they recalled over lunch some of their "look alike" experiences.

They recalled:

That Marie accompanied Peggy's husband to an official judicial reception here once when Peggy was awaiting the birth of one of her two children.

They always made the same mistakes on examinations at school, although the teacher seated them on opposite sides of the room.

One striking difference in the sisters' lives is that Mrs. Schweinhaut has two daughters and Mrs. McGuire has no children. But because they have visited each other frequently "the children feel like they have two mothers instead of one," said Peggy Schweinhaut.

The twins no longer dress alike. "We did that until we graduated from high school and I think it's a big mistake for parents of twins to dress them alike," said Margaret. "Sometime I'm going to write a guidebook for parents of twins," she suggested wryly. Marie has already authored a book—"Housing for Elderly."

[From the Detroit News, June 25, 1959]

TWINS LIVING FAR APART FIND CAREERS RUN TOGETHER

(By William T. Noble)

ANN ARBOR, June 25.—Two handsome sisters are creating a stir among delegates attending the National Leadership Training Institute here. And not only for their erudition.

The sisters, both delegates, are identical twins. After a first glance at the tall, white-haired women, delegates blink and look again. It's like seeing double, and it's pleasantly upsetting.

Mrs. Marie C. McGuire, of San Antonio, Tex., and Mrs. Margaret C. Schweinhaut, of Kensington, Md., are representing their respective States at the conference on design for retirement in preparation for the White House conference on aging, to be held in January, 1961.

PATTERNS CONVERGE

The fact the sisters are attending the 3-day conference together is the result of one of those strange quirks that direct identical twins to think and act almost in unison. Although they went separate ways 30 years ago their activities almost uncannily have followed similar patterns.

Their tastes are identical—including politics. Both are Democrats, and are eager to use their varied talents to aid underprivileged persons. Both are university graduates.

Born in Maryland, December 1, 1904, the sisters dressed alike and were inseparable until Marie married John McGuire, now an engineer at the Kelly Air Force Base, San Antonio. Six months later Margaret married Henry A. Schweinhaut, now a retired Federal judge, and remained in Maryland.

Both plunged into politics and social work. Mrs. McGuire became an active member of a long list of various commissions on appointment from governors. Mrs. Schweinhaut now is serving her second term as a member of the Maryland general assembly.

When it came time to send delegates to the institute here, Governors of the widely separated States chose the sisters.

"It was a wonderful feeling to know we would be working together on a project so close to our hearts," said Mrs. McGuire. "But I can't say we were too surprised to learn we both were being sent to the same conference. We think alike and, therefore, it seemed quite natural we would attend such a meeting."

IDENTITY MISTAKEN

The sisters see each other quite frequently. In February Mrs. McGuire attended a session of the Maryland General Assembly to observe sister Margaret in action. It created a commotion.

Perry O. Wilkinson, speaker of the house, ordered Mrs. McGuire to get out of the absent Hartford County delegate's seat and into her own Montgomery County position. When Mrs. Schweinhaut arose to explain she was properly seated, Wilkinson's eyes popped. And then it was explained.

The sisters, descendants of a colonial family that settled in Maryland in 1792, frequently send each other identical Christmas gifts.

There have been incidents of extrasensory perception.

When Marie left Maryland to make her home in Texas 30 years ago, Margaret awakened one night from a deep slumber.

"I dreamed my sister had smashed a glass table," said Margaret. "I wanted to know all the details."

Marie said that at precisely the same moment she had broken a motel table while ironing.

On another occasion Margaret packed her suitcases and told her husband she soon would have to visit Marie in a hospital.

Later the word arrived. Marie, indeed, had been hospitalized by a recurrent ulcer.

On the problems of aging, they are completely in accord: Oldsters should use their wisdom to help elect better representatives.

"The term 'elder statesmen' came from the Greeks who recognized the fact that older people are knowledgeable and therefore should help govern the country," said Mrs. Schweinhaut. "Retired folks should use their time and energy in politics. Too few of them do it."

There is one striking difference in the sisters' lives. Mrs. Schweinhaut has two daughters. Mrs. McGuire has no children.

[From the Washington Post and Times Herald, July 12, 1959]

TAWES APPOINTS COMMISSION ON PROBLEMS OF THE AGING

ANNAPOLIS, July 11.—Gov. J. Millard Tawes today appointed a newly created State commission for the aged and designated Delegate Margaret Schweinhaut, Democrat, of Montgomery as chairman.

The 16-member agency will be known as the State coordinating commission on the problems of the aging. It was created by the 1959 legislature to help older citizens in problems of employment, housing, medical services, and recreational activities.

Delegate Schweinhaut headed the legislative council committee which drafted the bill. It was the first act to be signed by the Governor after taking office and was listed as one of his campaign goals.

Tawes said at the time that a tremendous increase in the number of persons over 65 has "created problems which are beyond the powers of individuals or private philanthropy to resolve . . . [It] becomes the responsibility of the State to point the way to a better living for this group which constitutes 8½ percent of our total population."

The commission consists of 10 nonpaid members appointed by the Governor and 6 ex officio members from State departments which have some connection with problems of the aged.

Named by Tawes to serve with Delegate Schweinhaut are:

Senator William S. James, Democrat, of Harford, representing the Maryland Senate; 4 years.

Dr. C. Rodney Layton of Centreville, recommended by the medical and surgical faculty of Maryland, member of the medical organization's geriatrics committee; 2 years.

Dr. Herman Seidel, of Baltimore, chairman of the Baltimore City Medical Society's committee on geriatrics and chief of medicine at the Levindale Hebrew Home; 2 years.

Edwin Abbott, of Dundalk, international representative of the United Steel Workers of America, representing labor, for 3 years.

James T. Stott, of Baltimore, industrial relations official of the Bethlehem Steel Co., representing industry; 3 years.

Dr. Matthew L. Tayback, of Baltimore, assistant commissioner of health for Baltimore city, professor of biostatistics at the University of Maryland, chosen under a provision that one member shall be knowledgeable in research; 5 years.

Msgr. Leo J. Coady, of Hyattsville, chaplain of Carroll Manor, a home for the aged, director of catholic charities in the District of Columbia and Prince Georges County; 5 years.

Dr. Furman L. Templeton, of Baltimore, executive director of the Baltimore Urban League; 6 years.

M. Shakman Katz, of Baltimore, vice president, K. Katz & Sons, men's clothing; 6 years.

Ex officio members: Thomas J. S. Waxter, director, department of public welfare; Dr. Thomas G. Pullen, Jr., State superintendent of schools; Dr. Perry F. Prather, director, State department of health; Dr. Clifton T.

Perkins, commissioner, department of mental hygiene; Joseph Meyerhoff, chairman, State planning commission; David L. B. Fringer, director, employment service, of the department of employment security.

The Commission is authorized to hire a full-time executive director and was given a \$25,000 appropriation as a starter for its work.

It is empowered to make such surveys and studies concerning the problems of the aging as it may determine "to promote in every manner possible the welfare and the betterment of the aged people of this State."

Recommendations for legislation are to be submitted to the Governor.

Results of Poll

EXTENSION OF REMARKS OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks I should like to include a tabulation of responses totaling over 7,000, to my questionnaire recently mailed to some 35,000 constituents in my congressional district, seeking their views on current political issues.

I should particularly like to call attention to the fact that an overwhelming majority of their replying feel that legislation should be enacted in the labor field, and that to be effective, provisions should be included to restrict secondary boycotts and blackmail picketing.

With respect to choices for presidential candidates, this poll indicates a strong preference for Vice President Nixon over Governor Rockefeller and on the Democratic side, a slight lead for Senator KENNEDY over Adlai Stevenson. The tabulation was made prior to the Vice President's recent trip to the Soviet Union and Poland:

TABULATED RESPONSES TO 1959 QUESTIONNAIRE MAILED BY CONGRESSMAN FRELINGHUYSEN

1. On the subject of a balanced budget do you favor:

(a) Curtailing our domestic programs, if necessary, to balance the budget? Yes, 68.4 percent. No, 19.6 percent. No opinion, 12 percent.

(b) Cutting defense spending, if necessary, to balance the budget? Yes, 24.4 percent. No, 58.4 percent. No opinion, 17.2 percent.

(c) Balancing the budget regardless of defense or domestic considerations? Yes, 25.4 percent. No, 47.9 percent. No opinion, 26.7 percent.

2. On the subject of labor legislation do you believe:

(a) Legislation is needed to curb abuses by certain labor unions? Yes, 94.7 percent. No, 2.2 percent. No opinion, 3.1 percent.

(b) If labor reform legislation is enacted, should provisions be included to restrict secondary boycotts and "blackmail" picketing? Yes, 88.4 percent. No, 4.5 percent. No opinion, 7.1 percent.

3. Which form of Federal aid to education, if any, do you favor?

(a) Aid in school construction programs to needy areas? Yes, 57.5 percent. No, 19.9 percent. No opinion, 22.6 percent.

(b) Aid for teachers' salaries as well as school construction? Yes, 32.3 percent. No, 44.2 percent. No opinion, 23.5 percent.

(c) No Federal aid? Yes, 28.2 percent. No, 32.2 percent. No opinion, 39.6 percent.

4. In our foreign aid program would you favor a shift in emphasis from military assistance to economic aid? Yes, 48.8 percent. No, 30.8 percent. No opinion, 20.4 percent.

5. On the subject of farm subsidies:

(a) Should we reduce Government price supports and attempt to return to a free market system? Yes, 84.3 percent. No, 6.1 percent. No opinion, 9.6 percent.

(b) Should we cut off all farm subsidies? Yes, 47.6 percent. No, 30.6 percent. No opinion, 21.8 percent.

6. (a) Whom would you prefer as the Republican presidential candidate in 1960?

Name	Percent
Nixon	55.4
Rockefeller	24.4
No opinion	20.2

(b) Whom would you prefer as the Democratic candidate?

Name	Percent
Kennedy	21.6
Stevenson	17.1
Johnson	8.1
Symington	7.9
Humphrey	4.5
Kefauver	3.8
No opinion	36.4

Jehudi Ashmun, Father of Liberia

EXTENSION OF REMARKS OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. JAVITS. Mr. President, Jehudi Ashmun, known as the father of Liberia, was among the first children born in the community of Champlain, N.Y., following its settlement in the late 18th century. He was among the first to publicly state the opinion that if slavery continued, it was certain to overthrow the United States and bring it to chaos. He proposed the purchase of all slaves by the Government.

The village of Champlain, N.Y., will, on August 8, as part of the Champlain Festival, have a special program honoring Jehudi Ashmun. Among those attending will be ex-President King of Liberia, Ambassador Padmore, and the New York Liberian consul general. I ask unanimous consent that excerpts from a pamphlet prepared by the community as part of this commemoration be printed in the Appendix of the Record. The citizens of Champlain are to be complimented for their efforts to preserve a too-little-known corner of our American history and heritage.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

JEHUDI ASHMUN

Champlain was first settled in 1788. Six years later, on April 24, 1794, a son was born to one of the original settlers, Samuel Ashmun, and his wife Parthenia.

Jehudi Ashmun attended Middlebury College and University of Vermont. He earned his way by teaching in his native village.

His future wife, Catherine D. Gray, also taught in Champlain.

After graduation he served as a professor in the Theological Seminary at Bangor, Maine, but in 1819 moved to Baltimore and to Washington, where he edited several religious periodicals.

About this time he became active in the American Colonization Society, which was endeavoring to establish a colony in Africa for former Negro slaves. In 1822 he and his wife sailed for this newly created settlement of Liberia with the second shipload of colonists, intending to return to America immediately.

But on his arrival in Africa in August, he found the colony in a wretched state of disorder and demoralization, without leaders due to death and desertion, and on the point of extinction through incursions of the neighboring savages.

With extraordinary energy and ability he undertook the task of reorganization. In November he was attacked by a force of 800 savages. Although he and his wife were both stricken by fever, he repelled the attack with only 35 men and boys under him. A few days later a larger attacking force was repulsed.

His wife died shortly thereafter, but Jehudi Ashmun remained in Liberia for 6 years. Working incessantly for the development of the colony, he expanded its territory, increased its agriculture and commerce, codified its laws, and initiated a democratic form of government. In July 1828, completely broken in health, he returned to America. Less than a month later, on August 25, 1828, he died in New Haven, Conn., where he is buried.

Jehudi Ashmun, the father of Liberia.

SOME NOTES ON JEHUDI ASHMUN FOREWORD

These notes on Jehudi Ashmun cover two periods in his life. The first reviews everything that has been learned about his youth until he left Champlain, never to return. The information has been gleaned from the "Life of Jehudi Ashmun," by Ralph Randolph Gurley, published in 1835, and from the research among local records by my father, Hugh McLellan.

The second section is composed of six letters discovered last year among the papers of the American Colonization Society in the Library of Congress. It is believed that they have not previously been published. These letters cover the last few months of his life, with his hopes of returning to Champlain, and his death and funeral in New Haven, Conn.

A poem to his memory, written shortly after his death by the New England poet, Mrs. Sigourney, will be found at the end of this article.

The site of Jehudi Ashmun's birthplace, on Oak Street just north of the village of Champlain, is indicated by a historical sites marker, erected by the State of New York in 1938.

CHARLES WOODBERRY MCLELLAN.
CHAMPLAIN, N.Y., August 1959.

JEHUDI ASHMUN IN CHAMPLAIN

Jehudi Ashmun left his native village of Champlain in 1816, before he was 22 years old—never again to see his parents, his brothers and sisters, his boyhood friends.

From his diaries and his letters, as published in his "Life" in 1835, and from the meagre surviving local records, we can learn something of his childhood and youth—not a great deal, but sufficient to show the development of his character and the growth of his consuming determination to obtain an education.

The earliest reference to him is found in a day book of one of Champlain's first doc-

tors, Dr. Benjamin Moore. On August 2, 1805, medicine valued at 12½ cents was delivered to Samuel Ashmun Esq pr Huda.

According to the records of the Presbyterian Church, on April 5, 1807, Samuel Ashmun and Mary, Nancy, Jehudi, Raymond, Samuel, Harriot, Eunice, and Orson Branch, his children by Parthena his wife was baptised by Rev. Amos Pettengill. Three years later, on July 15, 1810, Jehudi Ashmun was received into the church as a member.

From his "Life" we find that he commenced his studies—beyond that which was to be obtained in the local school—in 1808, under the tutelage of Reverend Pettengill, in preparation for further formal education. These studies were seemingly continued for the next 3 years, with occasional trips away from home on account of his health. During this period he considered the possibility of studying medicine or the law—in 1811, he obtained brief employment with a lawyer in the city of Troy, N.Y.—but finally determined that his life must be devoted to educational and missionary labors.

In 1812, therefore, he entered Middlebury College. Two years later he transferred to the University of Vermont at Burlington, seemingly for economic reasons, where he graduated in 1816 with the degrees of A.B. and A.M. and with "literary honors." His college career was repeatedly interrupted by poor health; in 1813 he is traveling in Vermont, and in 1814 in Connecticut.

From one of these trips, probably in 1813, the death of two of his sisters called him home, and it is presumed that it was at this time that he organized and took command of a military corps. During these war years Champlain was alternately occupied by British and American troops, and Jehudi was greatly perturbed by the burning by the British of the church-schoolhouse, although justified by the fact that it was at the time being used as an American military depot.

The size of his family prevented much parental financial assistance, resulting in further interruptions in his efforts to complete his college education by the necessity of earning his own living and tuition. This he accomplished by teaching school, at least one season in Champlain.

A fragment of school records has been preserved which show that the first common school district in the town of Champlain paid \$66 in March 1815 to Mr. Jehudi Ashmun for instruction. On July 17 of the same year \$24 was paid to Miss Catherine Gray, instructress and \$21 to Mr. Ichabod Fitch for boarding instructress. It is interesting to note that Jehudi's father Samuel was one of the three school trustees at the time.

Research has failed to identify Catherine Gray, beyond the fact that she had attended a girl's school in Middlebury, Vt. Whether Jehudi first met her there, and suggested her to the Champlain school as a teacher, or whether he met her in Champlain while they were both teaching there, has not been determined. However, an attachment was formed, resulting in their marriage 3 years later. In 1822 she accompanied him to Liberia, where she died 3 months after their arrival.

After his graduation from the University of Vermont in 1816, Jehudi accepted a position as the first instructor in the newly founded Maine Charity School. So far as has been discovered, he never returned to Champlain, nor saw any of his family again.

Jehudi Ashmun, as has been stated, suffered from poor health during much of his life. While this may be partially attributed to physical causes, a certain amount must be laid to the intensity of his character. He was ever a strict self-disciplinarian and taskmaster, as is shown in his journals which ac-

count for every waking moment devoted to some form of self-improvement or labors in behalf of others.

We may judge something of his intensity from a letter written to him in 1817 by a clergyman, one of the trustees of the Maine Charity School:

"You have preached 25 times in 2 months; that is, 15 times more than you ought to have preached. You do right to tell me your faults, and I shall do right in reproving you. Hear me then. If you will persist in preaching at such a rate, your race will be short. You ought to begin as you can hold out. Preach only when duty calls, and attend more to a regular course of studies. Count me not your enemy, because I thus write. It is not the language of hatred, but of love."

This typifies his method of working throughout his life. His perpetual urge to keep going, his feeling that he could not relax for a moment, his sense of obligation toward his fellow men—these as much as a frail body brought him to an early grave.

DEATH OF ASHMUN

(By Lydia Huntley Sigourney)

"Whose is yon sable bier?
Why move the throng so slow?
Why doth that lonely mother's ear
In sudden anguish flow?
Why is that sleeper laid
To rest in manhood's pride?
How gained his cheeks such pallid shade?
I spake, but none replied.

"The hoarse wave murmur'd low,
The distant surges roar'd;
And o'er the sea in tones of war
A deep response was pour'd;
I heard sad Africa mourn
Upon her billowy strand;
A shield was from her bosom torn,
An anchor from her hand.

"Ah! well I know thee now,
Though foreign suns would trace
Deep lines of death upon thy brow,
Thou friend of misery's race;
Their leader when the blast
Of ruthless war swept by,
Their teacher when the storm was past,
Their guide to worlds on high.

"Spirit of Power, pass on!
Thy homeward wing is free;
Earth may not claim thee for her son,
She hath no chain for thee;
Toll might not bow thee down,
Nor Sorrow check thy race,
Nor Pleasure win thy birthright crown,
Go to thy own blest place!"

Resolution on a Strong Foreign Policy Adopted by the American Legion, Department of West Virginia

EXTENSION OF REMARKS OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. BAILEY. Mr. Speaker, today I received Resolution 48 from Tommy E. Jones, department adjutant, the American Legion, Department of West Virginia. This resolution was adopted at the 41st annual department convention held in Parkersburg, W. Va. The members request that a firm stand be taken to resist the Communist sphere of influence and establish a strong foreign policy.

The above-mentioned resolution follows:

**RESOLUTION 48 OF THE AMERICAN LEGION,
DEPARTMENT OF WEST VIRGINIA**

The following resolution was adopted at the concluding session of the 41st annual department convention of the American Legion, Department of West Virginia, on Sunday, July 26, 1959, in Parkersburg, W. Va.:

"Whereas the department convention of the American Legion of West Virginia was addressed by Gen. Carlos P. Romulo in a most forthright and enlightening manner, tracing the history of the progression of the Communist plan, proclaimed by them, and made possible by the weakening of the United States of America from its rapid postwar demobilization, and impliedly augmented by subsequent lack of decision on a firm policy of resistance at crucial times and points; and

"Whereas he pointed to and enumerated the many countries and hundreds of millions of people who have been overrun and enslaved by Communist rule, while the free world stood by, lacking strength and the willingness to sacrifice, necessary to save those free people; and

"Whereas, from the history and pattern of the Communist aggression, it has become clearly evident that unless a firm and sacrificial stand is now taken and backed by adequate strength and determined resistance to every effort to spread the Communist sphere of influence, it will be inevitable that the remaining free nations will be gradually engulfed by the Red flood; and

"Whereas the American Legion deplors the seeming lack of understanding of and indifference to the meaning and dangers, inherent in these facts, by the average citizen, and particularly by many of our public officers responsible for formulating and implementing our foreign policy and an adequate national defense: Now, therefore, be it

"Resolved by the American Legion, Department of West Virginia, in convention assembled, this 26th day of July 1959, That with the guidance and under the everlasting supervision of almighty God, that we call upon our representatives in the U.S. Senate and Congress to take a firm and audible stand on the issues involved in these alarming problems, to the end that a strong, vigorous foreign policy may be forthwith established, maintained and defended by every necessary implement of national defense and requisite cooperation with our allies; and

"That we call upon our public officers and representatives to discard all political expediency, and patriotically turn their undivided attention to problems inherent in saving our country, while there is yet time, from the fate of Rome and other great nations which fell because of indifference and weakness of their people and their leaders; and

"That we particularly call upon all members of the American Legion to fulfill the serious patriotic responsibility of bringing home to our people the truth of this situation and of aiding and stimulating our public officers in implementing of action required to meet this alarming necessity; and

"That this resolution be immediately released to the press and copies sent to the West Virginia representatives in the U.S. Senate and Congress and to Ambassador Romulo and the President of the United States. Also to the Honorable Christian Herter, Secretary of State, and the Honorable Neil McElroy, Secretary of Defense, and that it be forwarded for submission to the national convention at Minneapolis for action thereon, and a copy hereof be sent to each post in the department of West Virginia."

I, Tommy E. Jones, do hereby certify that I am the duly elected, qualified and acting adjutant of the American Legion, Department of West Virginia, and that the above

is a true and correct copy of the resolution adopted by the 41st annual department convention, at its concluding session, of the American Legion, Department of West Virginia, on Sunday, July 26, 1959, in Parkersburg, W. Va.

Given under my hand this 28th day of July 1959, at Charleston, W. Va.

[SEAL]

TOMMY E. JONES,
Department Adjutant.

Help for the Aging

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. WILEY. Mr. President, we recognize that the benefits of modern-age development and discoveries that improve living conditions for humanity are manifold—major among which has been the extension of the lifespan for human beings.

Today, there are an estimated 15 million people over 65. An estimated 1,000 more persons are joining the ranks. By 1975, it is expected that there will be 20 million Americans in this upper-age bracket. In Wisconsin, there are an estimated 300,000 folks 65 and over.

Longer years of life, however, have brought with them problems, as well as blessings.

Major among these include:

First. Aging often means, not retirement on a bountiful income, but, rather, economic distress. According to surveys, three-fifths of all people over 65 have less than \$1,000 of annual income.

Second. Retirement, too, means forced idleness.

Third. Social patterns are changing, resulting in a vast proportion of these elderly citizens—who had homes with their children—now live in cheap, often inadequate housing—many times on deficient diets.

Fourth. Unfortunately, the social life of the community many times excludes the aging.

These, and other problems, confront our citizens in their golden years.

Philosophically, the Nation needs a change of its traditional attitude toward aging. Along with this goes the need for adopting constructive programs, including:

First. Providing the opportunity for individuals—in all possible cases—to continue to engage in useful, constructive work. This is important, not only in terms of the chance to be as economically independent as possible, but also to continue to give the community the benefit of a lifetime of experience in a given field.

Second. Providing opportunity for these folks to broaden their minds, through reading, education, television, radio, and access to other forms of mass media, opportunity to participate in group discussions, lectures, enjoying

music, and other advantages of our modern age.

Third. Improving our housing for the aging to provide them with the needed quarters, constructed, if possible, to meet the special needs of senior citizens.

Fourth. Making vocational and/or a vocational guidance available.

Fifth. Establishing counseling to better enable aging folks to adjust mentally and physically to the changed conditions of having reached maturity.

The goal, of course, is to make maturity an age of enjoyment rather than a nightmare of poverty, deprivation and unwantedness.

To deal with these problems, we recall that a White House Conference on Aging has been scheduled. As I understand it, the first meeting will be held January 1961.

A recent edition of the New York Times carried a thoughtful article by Dr. Howard A. Rusk, reviewing some of the major problems to be considered by the White House parley. As a constructive analysis of basic problems in this field, I believe it merits the consideration of the Congress.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Aug. 2, 1959]

HELP FOR THE AGING—A LOOK AT SOME OF THE MAJOR PROBLEMS THAT WILL FACE THE WHITE HOUSE PARLEY

(By Howard A. Rusk, M.D.)

WASHINGTON.—During the last few years, industry has turned increasingly to the use of brainstorming sessions among its executives and research personnel. The purpose of this technique, originated by Alex F. Osborn of Batten, Barton, Durstine & Osborn, is to promote creative thinking in problem-solving through group discussion.

The Department of Health, Education, and Welfare is now engaged in planning what will be both the biggest and longest brainstorm session ever held. The time and effort are justified, for it will be directed toward one of our Nation's knottiest health, social and economic problems—aging.

That meeting, the White House Conference on Aging, will not be held until January 1961. Staff work in preparation, however, started months ago, and in April, Arthur S. Flemming, Secretary of Health, Education, and Welfare, named former Representative Robert W. Kean of New Jersey as a chairman of a 130-member citizens' advisory committee for the conference.

This committee, which had its first meeting here in June, will have overall direction of the plans, preparation and conduct of the meeting.

SCOPE OF CONFERENCE

The conference will be concerned with the major problems faced by older persons, such as economic security, retirement, housing, health and medical care, rehabilitation and recreation.

Preceding the actual conference 18 months from now, will be a series of local and State conferences devoted to the same problems. Forty-four of the fifty States have already made application for Federal grants of from \$5,000 to \$15,000 to help finance their State conferences and preconference activities.

Last Thursday, 20 nationally recognized leaders in various aspects of problems of the

aging, who are serving as chairmen of the planning committees for the Conference, met here in an all-day session with Secretary Flemming and his associates. Each of these planning committee chairmen will have available as consultants to his committee a number of highly experienced professional workers in the problems under study.

The necessity for such a large-scale approach to the problems of aging is dictated by the sheer size and complexity of the problem. Here briefly are some of the factors involved:

The number of aged persons in our population is increasing rapidly. Currently there are about 15,400,000 persons aged 65 and over in the United States, constituting 8.6 percent of the total population. But their numbers are increasing rapidly and by 1975 the aged will total about 20 million.

Most older persons live with some family member. Only 15 percent of persons 65 and over live in their own households, either alone or with nonrelatives. Four percent more live with nonrelatives, but not in their own homes. Only 3 percent live in institutions and another 3 percent live in hotels and roominghouses. The remaining 75 percent live in the homes of family members.

Most older persons are not working. In December 1958, only 3 million persons 65 and over—1 in every 5—had a paying job. In 1890, 7 out of every 10 men 65 and over were in the labor force. In 1945, the proportion was 1 out of 2; today it is only 1 out of 3.

Most older persons have low incomes. Three out of every five persons aged 65 and older have money incomes of less than \$1,000 a year. Of the remainder, half have incomes of \$1,000 to \$2,000 and the other half have incomes of more than \$2,000.

Most older persons receive social security. In June 1958, 6 out of every 10 persons 65 and over were receiving social security benefits and 1 out of 10 some other social insurance or pension benefits. The average monthly payment received in March 1959, however, was but \$72. About half of all aged married couples receive less than \$125 a month.

Most older persons are not on relief. In June 1958, 16.2 percent of persons 65 and older were receiving State old-age assistance payments. Percentages ranged from 58 in Louisiana to 3.9 in New Jersey. The national average of such payments was \$64 monthly, ranging from \$108 in Connecticut and \$101 in New York, to \$29 in Mississippi and \$33 in West Virginia.

Health is the major problem of the aged. More than half of the aged men who are not in the labor force retired voluntarily because of health reasons. Persons 65 and older use more than twice as much hospital care as those under 65, but about 65 percent of the aged do not have hospital insurance, as compared with 34 percent of those under age 65 who do not have such insurance.

An interesting suggestion has been made that a selected list of foreign leaders in problems of aging should be invited to participate in the conference. The Scandinavian countries, for example, have advanced programs in housing and income maintenance for the aged. Family acceptance of the older person in the home presents no problem in Korea.

There is much we could learn from the rest of the world about the problems of aging. At the same time, the White House Conference on Aging would be vivid evidence to other nations that we in the United States frankly acknowledge we have not solved some of our most difficult health, social and economic problems, but are working toward their solution in our traditional democratic way.

Dogfish Are Still a Problem

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. WESTLAND. Mr. Speaker, the dogfish shark continues to be a serious problem for commercial fishermen and sports fishermen of Puget Sound and the Pacific Northwest, as well as for fishermen as far away as the States of California and Alaska. The seriousness of this problem led me to introduce legislation and to appear before the House Committee on Merchant Marine and Fisheries on behalf of these fishermen who suffer losses of gear, time, and money because of this shark.

At one time the dogfish was taken for its liver. As much as 135 million pounds of dogfish were landed annually before 1949. This catch held the fish in check, but in 1950 the market for dogfish livers became virtually nonexistent because of low-cost synthetic vitamin A compounds.

This problem is international. Our neighbor, British Columbia, has the same problem and is doing something about it. According to the Seattle Times in its July 30, 1959, issue, the Canadian Fisheries Department has received an appropriation of \$250,000 for use as incentive payments to Canada fishermen. This program has been successful. Under leave to extend my remarks I want to include this news item in the RECORD.

CANADA TO PAY BOUNTY ON DOGFISH

The Canadian Fisheries Department has received a \$250,000 appropriation for eradication of dogfish sharks, Joe Whitmore, fisheries director for western Canada, reported yesterday.

The appropriation was disclosed in a telephone conversation between Whitmore and Milo Moore, Washington's fisheries director.

Moore said the news should be a boost for a dogfish-control bill now pending in Congress.

The bill has been approved by the Senate Interstate and Foreign Commerce Committee and is under study in the House of Representatives.

"Unless we get such a bill, the Canadian program will fail," Moore said. "We should join with Canada in doing something about the dogfish-shark menace."

The Canadian appropriation provides for a bounty or subsidy of 10 cents a pound for dogfish livers, above what fishermen receive from processors.

Mr. Speaker, the legislation I have introduced, H.R. 7891, goes further than incentive payments. It would authorize the Secretary of Interior to investigate the use of chemical repellents to reduce fishing gear damage and to conduct a research program to develop commercial uses of the fish. I hope Congress will authorize this program because it offers a solution to the problem facing Pacific coast fishermen.

Preservation of Scenic Shorelines and Seashores of the United States

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. NEUBERGER. Mr. President, the saving of America's scenic shorelines is one of the duties of Congress and the executive arm of Government. In the August 6 issue of the Washington Post and Times Herald appears a most effective editorial on this challenging obligation.

I subscribe to the views in the editorial, which mentions three pieces of legislation dealing with this topic—the omnibus shoreline bill, the administration bill to set aside three national seashores, and the Indiana Dunes bill. I am pleased to be either sponsor or cosponsor of all these measures. At the request of the administration, I have introduced their bill for consideration by the Senate Interior Committee.

The Washington Post defends the procedures described in the bills—that is, of prescribing overall boundary limits but leaving the precise borders of each park to administrative determination. That has been done many times in the past with safety and success. I also should add that one of the chief authors of the omnibus bill, introduced by the able senior Senator from Montana [Mr. MURRAY] with many of the rest of us as cosponsors, is Joseph W. Penfold, conservation director of the Izaak Walton League of America and a man dedicated to preservation of the American outdoors. Senators MURRAY, DOUGLAS, MANSFIELD, GRUENING, ANDERSON, ALLOTT, and others who have been in the forefront of the save-our-seashore movement deserve the gratitude of all Americans everywhere because this is part of the priceless heritage of our country.

Mr. President, I ask unanimous consent that the August 6 editorial of the Washington Post be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEASHORE POLITICS

The save our shoreline bill introduced by Senator MURRAY and 15 of his colleagues is the most ambitious proposal yet to preserve what is left of our vanishing seashore areas. Because this follows the introduction of other similar bills, however, there is a danger of public confusion, and in the melee the overall objective may be lost.

Mr. MURRAY's proposal differs largely in degree from another omnibus shoreline bill introduced by Senator NEUBERGER at the request of the administration. The administration is seeking \$15 million to acquire seven areas designated by the Interior Department as worthy of becoming national monuments. The bill which Mr. MURRAY has prepared would do considerably more than this. His measure, which Mr. NEUBERGER is also sponsoring, would permit the Government to spend \$50 million to pur-

chase 10 areas and would further provide \$10 million to assist State shoreline projects.

Both bills grant leeway to the Secretary of Interior in designating the specific boundaries of the shoreline areas. Some critics, including former Attorney General Francis Biddle, have expressed fears about this grant of authority. But the Secretary of Interior would have to return to Congress for an appropriation to acquire the new lands, and this seems a reasonable safeguard against arbitrary decisions.

Prompt action is needed before what is left of our shorelines is leveled by the bulldozers, and it is this sense of urgency which underlies the approach of both bills. The Indiana Dunes, one of the country's most prized shoreline areas, face imminent spoliation. This is why Senator DOUGLAS is championing a third measure dealing only with the Indiana Dunes. In order of priority, the most urgent need is to save the dunes first. Then the omnibus measure can be considered, with the administration request taken as the very minimum of what Congress ought to do before our beaches are all gone with the wind and concrete mixer.

Affairs of State

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues a most timely editorial as it appeared in the Washington Post of August 6, 1959:

AFFAIRS OF STATE

A subcommittee of the Committee on the District of Columbia has some urgent business to lay before that greatest of deliberative bodies, the Senate of the United States. The subcommittee, after hearings and due consideration, has adopted the view that the Society of Oldest Inhabitants, an esteemed community organization, should be permitted to buy an abandoned firehouse for half price; the subcommittee is also of the opinion that St. Ann's Infant Asylum should be allowed to expand and to change its name to St. Ann's Infant and Maternity Home. We hope heartily that the Senate as a whole, after appropriate debate, will approve these measures, send them to the House of Representatives for consideration there and, in due course, submit them to the White House for Presidential approval.

It is not to be supposed that the District Committee of the House was idle while these proposals were being scrutinized by the Senate subcommittee. The House District Committee suspended its hearings on a number of bills providing for District self-government in order to weigh the merits of a proposal to permit prescriptions for paregoric to be issued orally. Happily, the committee approved the proposal. Just when the whole House will take it up, we cannot say with certainty. We can say, however, that if the House and the Senate would like to be relieved of the responsibility for such legislation—if they would like to be set free to consider such relative trivia as a defense budget for the United States or an exchange of visits between heads of state, there is an easy formula to liberate them. The formula is known as home rule.

Steel Company Profits

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. HUMPHREY. Mr. President, this past week the major steel companies announced record profits for the first half of the year.

In commenting on these reported earnings, I pointed out in a Senate speech that the steel companies have adopted a double standard whereby wage boosts are considered dangerously inflationary but profit boosts are completely in order. The rationale of such thinking escapes me completely as I am sure it does the vast majority of Americans.

In the August 8 issue of Labor newspaper there appears an excellent article on this very issue written by Mr. Duane Emme entitled "Wage Freeze Is Blasted While Steel Profits Soar."

I ask unanimous consent that the text of this article be inserted in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

[From Labor, Washington, D.C., Aug. 8, 1959]

WAGE FREEZE IS BLASTED WHILE STEEL PROFITS SOAR

(By Duane Emme)

During 10 weeks of fruitless negotiations that preceded the Steelworkers' strike, the union repeatedly said the steel industry could give employees a sizable wage boost without increasing prices. This past week the Nation saw the dramatic new proof of that contention.

Each of the 12 major companies in dispute with the union reported huge profits for the first 6 months of 1959, ranging from 88 to 838 percent more than was reported in the same period of 1958. One other concern, Crucible Steel, showed a 2,080-percent increase. These figures were after taxes and all charges.

All told, the 12, who have refused their workers one penny in unconditional wage boosts, rolled up \$694 million in profits for the first half of the current year—a 147-percent increase over the \$287 million reported for the same months in 1958.

Describing the reports as a mammoth pile of profits, Steelworkers' President David J. McDonald asked:

"How can the companies continue to justify the phony inflation issue when they are rolling in unprecedented wealth? How can they continue a heartless denial of needed benefits to workers?"

At the same time, McDonald said he welcomed government efforts to help settle the strike. At Labor's press time Monday, Federal mediators were holding joint meetings of union and management and Secretary of Labor Mitchell continued his fact finding study of the dispute.

However, Roger M. Blough, chairman of United States Steel, and Arthur B. Homer, president of Bethlehem Steel, warned the Government to "keep hands off." For the first time, they conceded they could possibly give workers a raise without boosting

prices, but only if a settlement is reached voluntarily.

McDonald said he would believe this when he saw it happen. The more likely course is, he added, "that when we get our deserved wage increase, the companies will raise prices as they have done in the past and falsely blame the union."

Mitchell issued a statement critical of both sides for not making a continuous effort to reach an agreement. Whether or not this meant the administration would step up pressures to settle the strike and perhaps intervene remained to be seen.

IKE NEUTRAL ON PROFITS

Meanwhile, these were other highlights in the picture.

At his press conference, President Eisenhower sounded almost apologetic for the companies when asked if the fantastic profits did not indicate the companies could grant a wage boost without increasing prices. He declined to venture an opinion.

One question was asked with United States Steel in mind. That "giant," which accounts for about 28 percent of all the steel produced, reported \$255 million in first-half profits—the greatest amount ever recorded by a steel firm in any 6-month period.

The President turned aside that question on grounds United States Steel might not be typical. However, the reports—some of which were in at the time of the press conference—showed other firms increased their takes by even greater percentages than "Big Steel."

MORE THAN ALL OF 1958

Four companies—Jones & Laughlin, National, Youngstown Sheet & Tube, and Colorado Fuel & Iron—netted more profits in the first 6 months of 1959 than they did in all of 1958.

Bethlehem, No. 2 in size among the steel companies, netted \$123 million, a 112 percent leap over the same months in 1958; Republic, third ranking, netted \$87 million, a 180 percent jump; Armco Steel, \$50½ million, a 141 percent hike; Wheeling Steel, \$11 million, a 267 percent jump.

Some Members of Congress were not as reluctant as the President in commenting on the amazing profit records:

Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, declared in a Senate speech that the profits showed the steel industry was maintaining a double standard.

"They regard any wage increase for steel workers as dangerously inflationary, but at the same time they seem to feel alltime record profits are completely in order," he asserted.

Congressman LEROY H. ANDERSON, Democrat, of Montana, said it was scandalous that the industry has forced workers to strike to enjoy even a small share of its prosperity.

He added, "Let us have done with any pretense that this is an entirely free and competitive economy when it is evident that major segments of our economy, like steel, are governed by administered prices . . . set by a few big corporations at whatever price will yield the greatest profits."

Why We Cry Wolf

EXTENSION OF REMARKS OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the

Record, I include the following editorial from the Lancaster News, Lancaster, S.C., of August 3, 1959:

WHY WE CRY WOLF

This newspaper has been consistently critical of the attitude of the U.S. Government toward the cotton textile industry. We wrote an article recently in which we said that unless this attitude changed the bankruptcy of the industry was not only predictable, it was inevitable.

This was written at a time when the industry is enjoying a considerable measure of recovery. Even the marginal mills are seeing profits for the first time in years. A reader asked us frankly if we believed what we had written. And we answered, just as frankly, that we do and we don't.

We do believe that if this Government continues its policy of giving financial aid and tariff concessions to foreign mills the American market will be inundated with imported textiles selling at prices no domestic manufacturer can meet. That will mean bankruptcy without question or quibble.

We do not believe that this Government will be stupid or shortsighted enough to let this happen. We cannot believe that Congress will sit idly by and allow a fuzzy-minded set of one-world theorists destroy an industry ranking second only to steel in its importance to the defense of the United States.

But we are not naive enough to think that this recognition of impending disaster will come unless those interested in the textile industry do some powerful shouting. If we seem to overstate the case, to cry before we are hurt, it comes from that fearful feeling that no one is listening.

Developments and Undertakings in Africa

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared last week in the Christian Science Monitor commenting on a number of the central developments now taking place in Africa. These past weeks have seen on the continent a number of fresh developments and undertakings which will vitally affect the new and emerging nations of Africa and our relations with them.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, July 29, 1959]

THREE ROADS IN AFRICA

Three notable developments have made headlines about Africa in the last week or two, highlighting that vast stage whereon the discovery of a continent by its own people is being enacted.

These developments were (1) the meeting of three west African leaders in Liberia to consider formation of an all-African federation; (2) the proposal by Prime Minister Macmillan for a commission to study the question of Central African Federation, a project in which the white communities in the region take the leading role; and (3) the report of the British commission on the

uprisings in Nyasaland several months ago—uprisings against the Central African Federation.

These developments reflect major trends in African political evolution: The pan-African movement, the new French Community of Nations, and the British-led Commonwealth of Nations.

It seems likely these great movements will march side by side for some time to come. They cannot quite merge because of fundamental differences. But each makes contributions to African evolution which are essential in a century dominated by world struggle between democracy and communism—two systems much more divergent in method and purpose than are the three African movements.

In the pan-African outlook, for which Prime Minister Kwame Nkrumah of Ghana aims to remain the leading spokesman, African self-consciousness finds its greatest stimulus. This affects all Africans, even in the groups that form around African-French and African-British cooperation. But this cooperation also represents a valid relation between African natural resources and talents and European education and finance.

For the moment the pan-African movement has received a minor check. That was the result of the three-nation West African meeting. The conference decided to wait until Nigeria and the French Cameroons and Togoland achieved independence next year before trying to form a new African federation.

Meanwhile the building of a once-colonial into a Commonwealth area is presenting some difficulties to the British. Ghana is in the Commonwealth, and Nigeria will be, but always subject to the pull of pan-Africanism. Then, too, there is the question of the Central African Federation. This has split not only whites from Africans in the Rhodesias and Nyasaland, which make up this uneasy federation, but also the British Parliament itself. There the Labor opposition is beating the Macmillan government for its African policies.

It is interesting, as a token of British sincerity, that a commission appointed by the Macmillan government has just brought in a report contrary to certain past basic assumptions of the government, and this has become a British White Paper.

Into this overall picture, as it has unfolded recently, the French Community comes by way of its interest in a possible future challenge from leaders like the Marxist Sekou Touré, President of the only and tiny state that chose full independence from France under the de Gaulle Constitution.

This, then, is the mighty patchwork of Africa. It is being redesigned by African forces of the 20th century, sometimes in harmony, sometimes despite the divisions imposed on Africa in the 19th century. To comprehend its possibilities and its dangers is one of the chief responsibilities of free peoples as the wider struggle between liberty and totalitarianism goes on.

Malcolm "Okey-Doke" Smith

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. LESINSKI. Mr. Speaker, in this day and age too many demand too much of others and do not give enough of themselves toward the happiness of

others. It is refreshing, therefore, to meet a remarkable personality, Malcolm "Okey-Doke" Smith, a rigger at the Ford Motor Co.'s vast industrial plant in my home district, who has dedicated himself to making children happy with his one-man band.

The following article from the Southwest (Detroit) Journal tells of his efforts to entertain young people:

[From Southwest (Detroit) Journal, July 30, 1959]

MALCOLM "OKEY-DOKE" SMITH SETS HIS ONE-MAN BAND FOR MICHIGAN STATE FAIR

(By Jed Miller)

Biggest news for kids everywhere is that Malcolm "Okey-Doke" Smith, southwest Detroit's gift to good music, is going to have his absolutely unique one-man band at the Michigan State Fair.

It's just possible that the State fair hasn't heard about it yet—and it may be a long time before the downtown papers get wind of it, but Smitty has the band's buggy almost ready in his basement at 1449 17th Street in the Corktown section.

Of Scottish-Irish origin, Okey-Doke established himself as a true son of southwest Detroit when he took an early version of his one-man band to one of the Patton Park rallies and was literally mobbed by children, 14-deep, as he played banjo, electric piano, and the drums, all at one time.

He has applied automotive engineering to the old one-man band idea.

A nephew, M. M. Hunt dressed as a clown, was his source of moving power, wheeling the cart along. In the State fair mode, now being fabricated with delicate precision in his garage, Mr. Hunt will ride an old-time bicycle, high atop the contraption, easing the one-man band gently through the crowds.

Dancing puppets revolve around a pair of hard-working cymbals, and inside both the drum and the dancing platform are secret compartments where apples, candy, and cakes are dispensed.

Smitty has an idea that some enterprising merchants might like to sponsor his show.

Whoever does, is going to get his money's worth in goodwill and advertising. He has the darndest names for the four puppets atop the cymbals, and they would be more popular than Howdy Doody on the TV.

Malcolm "Okey-Doke" Smith is a rigger at the Ford plant. He is proud to work at the world's biggest industrial complex. A rigger, Smitty explains, is one of a group of men who can move heavy machinery or buildings. It must have been riggers that Henry Ford, Sr., used to get to move buildings that Edsel had erected, if the Ford biographers were correct.

Smitty got his nickname at the plant. Whenever someone wanted a giant stamping machine or engine-maker moved, they simply called for him, and he cheerfully replied, "Okey-Doke."

He is just 2 years short of retirement. Then, look out. Because one-man bands are bound to become the rage in Hollywood and on TV.

He didn't take up music (guitar, banjo, mandolin) until he was 28, but can now play along with the best of them, oldtime, cornball tunes, or new-style cool stuff. You just name it, and Smitty can knock out the tune on banjo or "git" and set your toes to twinging.

He's so good he was the only man selected out of 65 who auditioned for that very select and important Michigan group known as the Ford Girl's Club. They can command the best and they picked Smitty.

Why does he do it? Smitty has a simple explanation. He likes kids. Whenever he is in his basement music room, the windows are jammed with neighborhood children, and

Smitty is never too busy to pick out a request. "Some of the strangest," he says.

He is good at any national music and his Mexican neighbors love it when he swings into "La Paloma." When he sounds out a spiritual his colored friends join with sure and happy voices.

A favorite selection is "Bye, Bye Blues," one of the first tunes he picked out, note by note. Now there is no limit to his repertoire.

You can reach Music Man Malcolm Smith at TA 6-2120 or 1449 17th and he's never too busy. Call him up and ask for Okey-Doke.

Lincoln and Us

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an essay on Abraham Lincoln written by Christopher Vanier, of St. Kitts, British West Indies. This excellent and beautiful essay was the prize-winning essay in a contest sponsored by the USIA in the British West Indies, in which 54 schools participated.

Young Christopher Vanier, 17 years old, is now in the United States studying our institutions and visiting Lincoln shrines. We are honored that he is the guest of our country.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

LINCOLN AND US

Lincoln was not a God. Lincoln was not even a demigod; he was a man like us. He was not a rich man, nor a handsome man, nor a well educated man, nor a man for whom Providence has made the path of life a rosy stroll. He was a plain man of the people. Lincoln has been dead and buried now for 94 years. He was born at Nolin Creek, Kentucky, and lived all his life in a relatively small portion of the United States, thousands of miles away from most of us.

Thus separated in time and space, how does this man exert his lofty influence over the minds of other men? For Lincoln is loved and respected by people who have never seen America, people who will never see America, and people who do not wish to see America. He has monuments to him in England, books about him in Chinese, and interest in him from Australia to the West Indies. He is a guide and an example to administrators of freedom everywhere. What is the formula for the fiery jet of his fame that burns more vigorously on the bitter cries of his adversaries, and sheds light on millions, making the paradoxical fog of this life a little clearer?

The secret can be found in his actions while President. For if he had not been elected President of the United States, he would have been doomed to obscurity. He always possessed the propensities for greatness, but it was not until the Kansas-Nebraska bill, allowing the spread of slavery, was passed in May 1854, that Lincoln, as one biographer says, awoke from his "civic slumber." As an Illinois lawyer, he would never take a case in which he did not believe, and he could never believe in a cause which did not stir him as being just and right. And so it was with slavery. The

Kansas-Nebraska bill amounted in Lincoln's words to this: "That if any one man chooses to enslave another, no third man shall be allowed to object." This Lincoln would not condone.

Now Lincoln's main bulwark of greatness was to be as "the Great Emancipator." The Negro race, the poor and downtrodden everywhere owe him a great debt for this. And Lincoln in his glory is likewise indebted to these for his inspiration, because the major part of his eminence rises from his defense of them, and only through them did he fulfill his aspirations, as declared to the people of Sangamon county "of being truly esteemed by my fellowmen."

Lincoln personally hated slavery all his life, and told the Illinois Legislature that "Slavery is founded on both injustice and bad policy." He believed in freedom, and equality—not in achievement, but in opportunity—for all men. But though convinced of the moral turpitude of slavery, Lincoln made no determined attack on it until 1854, and even then did not join with the Abolitionists in their blind and violent extinction crusade, because he knew that this course would arouse seven devils—each worse than the first.

He was in favor of confining slavery to the South, and waiting for its slow, but ultimately inescapable disintegration. The South, however, deemed the spread of slavery essential to their survival. Lincoln fought this with all the mighty political eloquence of his ideals. It is needless to trace the well-known course he blazed across the political skies. Sufficient that he spoke as never before, and within 6 years of the Kansas-Nebraska Act, he was elected as President. In the seventh year, when he took up the active reins of Government, the ranks of slavery closed against him, and the Southern States seceded from the Union. Then began that terrible Civil War, lasting 4 bloody years, and costing 600,000 lives.

Had Lincoln's sole objective been to save the Union, he would have achieved a mere nationalistic hurrah, of little importance to other countries. But as Professor Randall said, Lincoln fused the cause of the Union with the cause of freedom. In January 1863, he declared all rebel slaves free—following in the wake of British freedom lovers. Lincoln was fighting for a nation "dedicated to the proposition that all men are created equal." Not only, however, was that American Nation at stake—the whole cause of humanity—freedom, popular government, that elusive conception, democracy—was being evaluated. Lincoln was "testing whether that nation, or any nation so conceived and so dedicated can long endure."

And Lincoln is valued because he himself was one of the greatest battlefields for democracy and emancipated freedom. Liberty, equality, and fraternity were his ideals, and he suffered uncomplainingly to the end for them. A man of peace, who hated brutality, he was forced to send northern youths to battle and death. A man who loved honesty, who went "with malice toward none, with charity for all," he was disbelieved, buffeted, and lacerated by cruel criticisms from all parts. A man who was the friend of all, who pardoned hundreds from death—this man was murdered by a southern assassin.

Lincoln's death was his final guarantee to immortality. He could make no more mistakes—what he might have done was limitless—and he was a martyr to democracy. His philosophy and ideals, together with the tremendous drama and pathos of his extinction in the prime of his career lifted him above Illinois, above America, to the Valhalla which only the few can achieve.

While fully realizing all its limitations, Lincoln found democracy best, and his hopes were for equality, self rule, and happiness everywhere. He believed with Wordsworth,

that other great humanitarian, that God did not intend even the meanest and plainest of people to exist divorced from good, or from equal opportunities for good. His creed of freedom and of human rights embraces everyone, everywhere, as friends, and equals, and perhaps his greatest eulogy has come from Edwin Stanton in the words "Now he belongs to the ages."

Johnstown Babe Ruth League All-Star Team Wins New York State League Championship

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. STRATTON. Mr. Speaker, I am proud that in representing the 32d Congressional District of New York I represent the home of the great national game of the United States of America, baseball, which was first played in Coopers-town, N.Y., 120 years ago this year. Because of this close connection with the great game of baseball I am always interested in the tremendous job that is being done throughout our country in training young people not only in the game of baseball but what is even more important in the qualities of sportsmanship which go with that great game. For this reason, I am particularly proud that the annual New York State Babe Ruth baseball championship was won this year by a team from my district, the All-Star Babe Ruth baseball team from Johnstown, N.Y. These splendid young baseball players are to be commended on their great victory. Under leave to extend my remarks, I include the following article from the Gloversville Leader-Herald which describes the game which won for them the championship:

JOHNSTOWN COPS NEW YORK STATE BABE RUTH LEAGUE CHAMPIONSHIP—KINGSTON ERRORS, TIMELY HITS SPARK RALLIES IN FOURTH AND SEVENTH FRAMES

Johnstown All-Stars celebrated its third year into the Babe Ruth baseball program last night with a 5 to 0 victory over Kingston for the New York State championship.

Playing before more than 1,200 fans in Amsterdam's Mohawk Mills Park, the Fulton County club, comprising Johnstown and Gloversville athletes, scored two runs in the fourth and three in the seventh for sixth straight tourney win.

Manager Bill Wilmot reported last night that the club plans to participate in the regional tourney in Griffith Stadium, Washington, D.C., providing funds are available.

An alert Johnstown club, taking advantage of Kingston mistakes, was on the short end of hits until the last-inning scoring spree.

Skip Scofield, who started on the firing line for the Sir Bills, checked the losers with four hits in four innings. He issued one pass and fanned three.

ALLOWS ONE HIT

Cole took over the hurling duties in the fifth and wound up with a one, three, and five performance, respectively.

Mike Ferraro went the distance for Kingston. The five errors committed by his teammates helped the Johnstown scoring. He

limited the Sir Bills to a pair of hits and two runs until the last canto. Ferraro fanned two, both in the fifth.

Johnstown threatened in the opening canto, but a double play started by shortstop Smedes ended the potential rally. An error on Michaelson's grounder to short and a pass to Steve LaMantia had the champs threatening in the second. Scofield popped up to second baseman Bruck to retire the side.

Gerald Gaydusek started the rally in the fourth with a double. Dom Ruggeri flied out to center fielder Falvey. Whittingham hit to shortstop Smedes, who attempted to nail Gaydusek at third.

The Johnstown catcher was safe when Davide dropped the ball. Michaelson sacrificed Whittingham to second. The two scored when Smedes scooped up LaMantia's hard grounder and made a bad throw at first. LaMantia moved to second. He attempted to reach third, but a perfect relay from Ferraro stopped the scoring threat.

LA'MANTIA DOUBLES

In the seventh, Michaelson singled to right field. A good piece of defensive work by Hetsco prevented the Johnstown center-fielder from advancing. After fouling several pitches, LaMantia hit to right field just inside the foul line for a one-run double.

Cole sent centerfielder Falvey back to the fence for a running catch on the first out and Hall grounded to third. Hornung walked. When he reached first, he kept on heading for second.

Pitcher Ferraro spotted the attempt for a steal and tossed to shortstop Smedes. Hornung stopped. He attempted to go back to first. That was the green light for LaMantia, who scooted home. When the attempt was made to stop the run, Hornung went to second, scoring on DiCruttalo's liner.

Gaydusek flied out to Ron Thomas in left field for the final out.

The visitors had players on base in every frame but the second. In the opening stanza, they loaded the sacks before Scofield slammed the door. Kingston had two aboard in the fourth and a double play started by Timer Whittingham closed up shop.

The losers, who eliminated Schenectady in the Intra-District playoffs, were bidding for a score in the fifth on a pair of passes. Cole settled down to have Ferraro hit to center fielder Jim Michaelson and strike out Rich Sickler to end the inning.

THREATEN IN SIXTH

Kingston threatened in the sixth. Bill Bolce walked, Jim Bruck fanned and John Falvey singled to center field. Michaelson slipped in fielding the ball.

Bolce continued to third when he saw the center fielder fall. Michaelson made a one-handed stab for ball, regained his feet and nailed Bolce at third with room to spare.

When Johnstown had the game wrapped up, Cole made fast work of his assignment in the seventh by fanning the first two batters, Ron Thomas, Hutch Davide, and forcing Vin Smedes to ground out to DiCruttalo.

That touched off the celebration by the youthful players and their many followers. It spread to the Glove Cities, where some fans started plans to attend the regional tournament.

Hal Schumacher, Dolgeville, former star hurler with the New York Giants, presented the State Championship Trophy to Bill Wilmot, manager of the Johnstown All-Stars, at brief after-game ceremonies.

"It is a privilege to present this trophy of New York State Babe Ruth League to Johnstown," Prince Hal said in congratulating the champions.

Schumacher also thanked Kingston, who he said, "came a long ways in the tournament. It is nothing to be ashamed of in finishing second."

"I hope this is just a start toward winning the national championship. You are enthusiastic neighbors, and you know we are neighbors," the Dolgeville resident added in bestowing praise upon the Johnstown team and its followers.

James White, assistant district attorney of Montgomery County and a member of the Amsterdam Junior Chamber of Commerce, tournament sponsors, presided at the brief program.

He introduced Amsterdam and Kingston city officials and members of the tournament committee.

The master of ceremonies thanked Amsterdam residents, who housed players for four days; merchants for their cooperation in the project, use of the baseball facilities and the patrons, who helped put the eight-team tourney across.

White also congratulated Johnstown for clinching the crown.

College Housing—An "Extravagant" Program?

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, August 6, 1959

MR. NEUBERGER. Mr. President, at the time when Russia's first sputnik soared aloft in October of 1957, there was much fine talk about all that America would do to increase educational opportunities in an effort to keep abreast in scientific achievements.

Yet we have actually neglected rather than achieved many of our educational goals. For example, the President's recent veto of the sound housing bill passed by Congress has greatly imperiled many housing programs on college campuses. These programs are essential to the sound expansion of many of our colleges and universities, great and small, throughout the United States.

The bill which would have aided the implementation of these important housing programs—and thus directly af-

fected the educational opportunities of many thousands of students—has been described as extravagant.

Mr. President, I have received many telegrams and letters from presidents and deans of Oregon colleges and universities. I read from a typical letter, written to me by Mother Mary Gemma Pienett, O.S.B., president of Mount Angel College, in Mount Angel, Oreg.:

The news of President Eisenhower's veto on July 7 of the college housing bill was a definite shock and disappointment to the members of our college faculty and administration. Although our institution has not yet applied for a housing loan, we had planned to do so in the immediate future. It will be virtually impossible for us to continue operations, and take care of our increasing enrollment without expanded facilities.

The college housing program has fulfilled a great need in the Pacific Northwest. Cutting it off at this point would definitely cripple the educational program of our State, because the increase of our college-age population is continuing. Our college, like many others, could effectively care for a larger number of young people if we had housing facilities.

Is this extravagant talk, Mr. President? If it is extravagant, then it is an extravagance which we need if it means the difference between education and no education for many American youths.

In Oregon, for example, eight colleges received a total of \$6,319,000 under previous loans. This is not a great sum, but it has made possible dormitory facilities for 1,440 single men and women and 8 student families, plus new and remodeled dining rooms.

Today, because of the uncertainty of funds for college housing following the President's veto, three loan applications from Oregon are being held up. Dormitory space for 406 students and dining facilities for 750 more would be provided through the construction which \$1,739,000 in loans could make possible.

Extravagance, Mr. President? Housing loans are extended to colleges over a 40-year period with an interest rate equal to the average paid by the Federal Government in its borrowings, plus one-fourth percent for administrative costs of the program. The cost to the Government is small, if anything. The benefit to colleges and universities—and, more important, to thousands of students—is great.

Private financing for such projects, which the President said in his veto message would be displaced by the continued loan program, simply is not available. The Washington correspondent for a number of Oregon newspapers, Mr. A. Robert Smith, reported recently on the testimony of two distinguished educators—President Calvert N. Ellis of Juniata College, Huntingdon, Pa., and President John A. Hannah of Michigan State University—before the Senate Subcommittee on Housing. I quote from his dispatch of August 1, 1959, in the Oregon Statesman of Salem:

Dr. Ellis rebuffed the President's contention about displacing private money. He said "there is not adequate private financing" and as far as most private colleges are concerned, "a Federal loan program is the

only available guarantee that our building needs will be met.

"Without such a program, what assurance has a college like my own, not merely that it will be able to raise a loan at a rate of interest it can afford to pay, but even that it will get a loan at all? If we were to pretend that there is any satisfactory alternative to a Federal loan program, we should be conspiring to deceive the American people."

I was pleased to learn that the new housing bill just approved by the Senate Housing Subcommittee contains authority to extend this valuable program, despite the necessity of cutting the college classroom loan authority from \$62.5 million to \$50 million.

Extravagant, Mr. President, is defined by Webster as "exceeding due bounds, excessive, wasteful." The college housing program proposed in S. 57 and in the new housing bill does not exceed due bounds. It certainly is not wasteful. It is minimal. It is vital to the bare needs of American colleges and universities.

I hope that the Senate Banking and Currency Committee will give speedy approval to this feature of our much-needed housing bill and that it will receive rapid and favorable consideration on the floor of the House and Senate.

In conclusion, I ask unanimous consent that several letters and telegrams from Oregon educators on this subject be printed in the Appendix of the RECORD, together with the dispatch of Mr. A. Robert Smith, "Colleges in Oregon Wait Federal Loans," which appeared in the Oregon Statesman of Salem for August 1, 1959.

There being no objection, the communications were ordered to be printed in the RECORD, as follows:

PORTLAND, OREG., July 9, 1959.

Senator RICHARD NEUBERGER,
Senate Office Building,
Washington, D.C.

We urge utmost effort to provide further college housing loans immediately. We are ready to build to meet current heavy demands which increase yearly.

MORGAN ODELL,

President, Lewis and Clark College.

LINFIELD COLLEGE,

McMinnville, Oreg., July 9, 1959.

HON. RICHARD NEUBERGER,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR DICK: From all that we have been able to learn it appears that there is little likelihood that the Congress will override the President's veto of the housing bill. If this is not done I would like to join with the host of college administrators in expressing a hope that the leadership in Congress will bring forth some kind of a housing bill during this session.

With the burgeoning college population I have a feeling that we owe them the opportunity of an education and thus provide a greater assurance of security for the Nation. We who are affiliated with nontax supported colleges have little opportunity to expand our dormitory facilities without the help of the credit of the Federal Government.

Linfield is now completing a classroom building and we today notified our building crew that with the completion of the unit next week there will be no further employment because the three projected

buildings will be unavailable through the Housing and Home Finance Agency. This will hurt the college similarly to other institutions across America. Of course, it will also add to unemployment.

I am hopeful that you will be able to use your fine leadership in effecting a satisfactory Housing bill to help us in education.

Sincerely yours,

HARRY L. DILLIN,
President.

MOUNT ANGEL COLLEGE,

MOUNT ANGEL, OREG., July 24, 1959.

The Honorable RICHARD L. NEUBERGER,
Senator from Oregon,
Senate Office Building,
Washington, D.C.

DEAR MR. NEUBERGER: The news of President Eisenhower's veto on July 7 of the college housing bill was a definite shock and disappointment to the members of our college faculty and administration. Although our institution has not yet applied for a housing loan, we had planned to do so in the immediate future. It will be virtually impossible for us to continue operations, and take care of our increasing enrollment without expanded facilities.

The college housing program has fulfilled a great need in the Pacific Northwest. Cutting it off at this point would definitely cripple the educational program of our State, because the increase of our college-age population is continuing. Our college, like many others, could effectively care for a larger number of young people if we had housing facilities.

We ask your cooperation, Mr. NEUBERGER, in doing what you can to override the President's veto of the housing bill. This loan program seems to be one of the safest investments that our Government has made, so there seems little justification in dropping it at this point.

We appreciate your kind interest, and sincerely hope for a favorable outcome of this important legislation.

Sincerely,

MOTHER MARY GEMMA PIENNETT, O.S.B.,
President Mount Angel College.

[From the Oregon Statesman, Salem, Oreg., Aug. 1, 1959]

COLLEGES IN OREGON WAIT FEDERAL LOANS
(By A. Robert Smith)

WASHINGTON.—The Nation's colleges and universities strongly favor an expanded Federal program to help them accommodate growing student enrollments, but which the Eisenhower administration wants to abolish next year.

Two spokesmen for the academic community testified this week before the Senate housing subcommittee in favor of a new \$62.5 million program of Federal loans for colleges to build classrooms, laboratories, and libraries. This would be an extension of the 9-year-old program of Federal loans for college dormitories and faculty housing.

President Calvert N. Ellis of Juniata College, Huntingdon, Pa., and President John A. Hannah, of Michigan State University, disputed contentions against the program made by Eisenhower in his recent veto message on the housing bill. Dr. Ellis represented the Association of American Colleges, whose 778 member institutions include virtually all accredited liberal arts colleges and universities in the country. Dr. Hannah represented the American Council on Education, American Association of Land-Grant Colleges and State Universities, American Association of Junior Colleges, Association of Higher Education, and the National Education Association.

An impressive point to the committee was the forecast of future student enrollment,

Dr. Hannah pointed out that when Congress launched this program, it was thought post-war enrollment would level off at twice the prewar level—2.6 million over 1.3 million. Instead, it is now over 3 million. He estimated by 1970 6 million students will be seeking higher education.

In his veto message, Eisenhower called this a subsidy program that would merely displace private financing and lead to Federal spending that is entirely unnecessary.

Both educators disputed this. They explained that the Federal loans are extended to colleges over 40 years at an interest rate equal to the average paid by the Federal Government in its borrowings, plus one-fourth percent to cover administrative expenses of the program. The rate is now 3½ percent.

"This program costs the Government nothing," Dr. Hannah declared.

Dr. Ellis rebuffed the President's contention about displacing private money. He said "there is not adequate private financing" and as far as most private colleges are concerned, "a Federal loan program is the only available guarantee that our building needs will be met."

"Without such a program, what assurance has a college like my own, not merely that it will be able to raise a loan at a rate of interest it can afford to pay, but even that it will get a loan at all? If we were to pretend that there is any satisfactory alternative to a Federal loan program, we should be conspiring to deceive the American people."

Dr. Ellis said Juniata College has built two modern dormitories largely through 40-year Federal loans. He said the best deal banks will offer is a 15-year loan at 5½ to 6 percent, if the school has good security. Dr. Hannah said the Government required Michigan State to obtain half its financing for new buildings from banks and insurance companies. Federal loans covered the balance.

"We simply cannot build fast enough through our normal revenue sources to meet the need," Dr. Hannah added. "Thus borrowing in substantial amounts is inevitable if our colleges and universities are to provide the required campus facilities for our young people—and it is unthinkable that we will not."

It is still a question whether Congress will try to override the President's veto or whittle down the bill in a modified form in hopes of getting him to sign it.

Under the college housing program, 11 sizable loans have been granted to 7 Oregon colleges and universities, mostly for dormitories. Three applications for other loans are now pending, and the availability of further Federal funds will determine whether they go through.

These pending cases are for Willamette University, \$689,000 for a dormitory to house 172 men; Lewis and Clark College, \$225,000 for a dorm for 82 men; and Linfield, \$825,000 for two dorms and a student union. One dorm is for 76 men, the other 76 women.

Those previously extended were for: Reed—\$223,000 for a women's dorm; \$334,000 for a men's dorm; \$300,000 for another men's dorm.

Lewis and Clark—\$465,000 for a men's dorm; \$590,000 for a women's dorm and a dining room.

Linfield—\$202,000 for a men's dorm; and \$75,000 for married students' apartments.

Pacific University—\$630,000 for a women's dorm and to rehabilitate dining facilities.

University of Portland—\$440,000 for a women's dorm; and \$1,460,000 for a men's dorm and dining room.

Eastern Oregon College of Education and Southern Oregon College—\$1,100,000 for a men's dorm on the La Grande campus and a women's dorm on the Ashland campus.

Report of the Board of Visitors to the U.S. Air Force Academy, 1959

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the full text of the 1959 Report of the Board of Visitors to the U.S. Air Force Academy, at Colorado Springs, Colo.

Because I had the great benefit of the information and inspiration of being a member of that Board and attending on all of its sessions at the Academy beginning on May 11, 1959, and completing as of May 15, 1959, I have particular pleasure in presenting this text for the benefit of all the Members to read.

This was the first meeting of the Board of Visitors after the move of the Academy from its temporary site at Denver, Colo.

Now that I have had a similar experience of visiting two other academies during the last dozen years, I feel it appropriate to urge that all Members of Congress become as well acquainted as may be with the program and functioning of each and every of these Government Academies for the training of our youth.

The report follows:

REPORT OF THE BOARD OF VISITORS TO THE U.S. AIR FORCE ACADEMY, 1959

MISSION

The mission of the Air Force Academy is to provide instruction, experience, and motivation to each cadet so that he will graduate with the knowledge and the qualities of leadership required of an officer in the U.S. Air Force, and with a basis for continued development throughout a lifetime of service to his country, leading to readiness for responsibilities as a future air commander.

REPORT TO THE PRESIDENT

The President,
The White House,
Washington, D.C.

Appointment to the Board of Visitors

The Board of Visitors to the U.S. Air Force Academy was appointed under the provisions of 10 U.S.C. 9355.

Preliminary data

Senator GORDON ALLOTT replaced Senator THOMAS H. KUCHEL. Lt. Gen. Bryant L. Boatner and Dr. Robert L. Stearns replaced Gen. Carl Spaatz and Dr. John A. Hannah. Senator HOWARD W. CANNON was named by Senator RICHARD E. RUSSELL to make the visit in his behalf. Representative CLYDE DOYLE was nominated by Representative CARL VINSON to make the visit in his behalf. Mr. Edward P. Curtis visited the Academy April 24. Neither Mr. Curtis nor Mr. Victor Emanuel were able to visit at the time the rest of the Board did, because of previous commitments.

Convening of the Board

The Board convened at 9:30 a.m., May 11, 1959, and completed its inspection at 11:30 a.m., May 13, 1959. This was the first meeting of the Board since the move of the Academy to its permanent site near Colorado Springs, Colo., in September 1958.

Chairman of the Board

The Board elected Senator GORDON ALLOTT as its chairman.

Procedure

The Board made part of its inspection as a committee of the whole. Some aspects of the Academy's operation were examined by subcommittees of the board.

Comments of the Board

Morale: The Board found a high state of enthusiasm and morale prevalent in the cadet wing and among the staff and faculty of the Academy. The sincerity and dedication of the first graduating class speaks well for their motivation toward lifetime service careers.

Discipline: The Board noted that discipline was excellent in all phases of cadet training. Cadets were alert and responsive. Their individual initiative and maturing sense of responsibility are coupled with high concepts of honor and duty.

Curriculum: The Board was impressed with the opportunities offered by an enrichment program which permits each cadet to develop his individual knowledge and competence in accordance with his talent and his capacity for work. The Board was happy to note that the Academy has inaugurated a department of astronautics program and recommends it be continuously expanded to keep pace with the changing security needs of the Nation. All aspects of cadet education—academic, military, and physical development are well integrated to produce a graduate of which the Air Force and the Nation can be proud.

Academic methods: The methods used in teaching are designed to make best use of the cadet's time for classroom learning and individual study. The small classes permit the cadets to participate extensively and they are challenged to their best efforts. Section assignments are based on class academic standings to enable instructors to gear their teachings to the levels of students in their classes. It is suggested that the time and methods of examination be reviewed by a competent committee of the faculty with a view to avoiding interference with class instruction and discussion.

Instruction: By visits to classes in session and inspection of classroom, library, and laboratory facilities, members of the Board observed the effectiveness of teaching methods. In comparison with civilian colleges and university students on recognized tests of academic proficiency, the evidence shows that the cadets have responded favorably to the instruction as given.

Faculty: Members of the faculty are academically well-qualified officers on active duty with the Air Force. Thus, they bring to their classes both military and academic backgrounds that help them provide cadets with a high motivation for education and lifetime service careers. The Board reiterates the vital importance of Air Force personnel policies giving top priority to the assignment of high caliber faculty members to the Academy. The Board is happy to learn of the approval by the Department of the Air Force of a proposal from the Academy which will permit, under appropriate circumstances, Sabbatical leaves for professors. This policy, if pursued, will serve to revitalize and stimulate permanent members of the faculty.

Accreditation: The Board was gratified to learn that the North Central Association of Colleges and Secondary Schools had now accredited the Academy to grant degrees. This is a unique achievement for an educational institution that was yet to graduate its first class, and is a fitting recognition of a sincere, able, and effective institution of higher education.

Airmanship training: The Board was briefed on the various phases of the airmanship program. This includes military, flying, physical, and command training—as well as

the cadet way of life. These are the environmental factors, which, with the academic training, are calculated to develop the cadet into a professional Air Force officer, prepared and motivated for a lifetime career of service to his country. The navigation training and the course in astronautics are designed to give graduates pertinent skills and understanding of aerospace navigation.

The Board was also briefed on the current status of planning for pilot training of cadets. The Board regrets that the recommendations of previous Boards have not been carried out. At the time the Academy was authorized, pilot training was envisioned and contemplated as an integral part of the cadet training program. Such training would add materially to the motivation of individual cadets and to their future value as officers. The land for the airstrip was included in the original land acquisition program and is now available on the Academy site. The Board again strongly urges that the Academy be authorized to construct a suitable airfield at the earliest possible date to carry out primary pilot training. The cadet time required for primary pilot training is available from that now devoted to the extensive navigation program.

Cadet life: The complete life of the student is integrated into his course of training. The functioning of the cadet wing, the dormitory life, and the cadet honor code are all part of the cadet's education and motivation for a career as an Air Force officer. The Board feels that the leadership and administration of this program are excellent. Especially to be commended is the well-phased program of increasing the freedom and responsibility of upperclassmen to make the transition to the life of a junior commissioned officer a gradual one.

Religious activities: Cadets are required during the first 2 years to attend services with the cadet wing—Protestant, Roman Catholic, or Jewish. During his third year he may attend one service per month in a church of his own choice off base in lieu of attendance with the cadet wing. In the first half of his fourth year he must attend services but all attendance may be off base, in lieu of attendance with the cadet wing. During his last half year, attendance is voluntary on his part. In addition, there is considerable voluntary participation in such religious activities as the choirs, Sunday school, and religious instruction classes. Besides conducting these religious activities, the chaplains play an important part in the Academy's counseling program.

Physical equipment: The construction of congressionally approved buildings at the permanent site of the Academy is substantially complete, except for some of the dependent housing, the hospital, and the cadet chapel. Progress by last September was sufficient for the Academy to move from the interim location at Lowry Air Force Base at Denver. Further progress has continued throughout the school year.

Library: The center of any educational institution is its library, and the Board desires to commend the administration on its effective operation of a select and growing library and the extent to which it is used by the cadets.

Planetarium: A unique feature of the Academy is the planetarium which is an effective agency in the instruction of men not only in astronomy and navigation, but in an appreciation of three dimensional interplanetary space essential to the operational understanding of new weapons and techniques.

Fiscal affairs: The Board finds that the Superintendent has maintained a continuing personal knowledge of fiscal affairs of the Academy. The Board has taken cognizance of the recent report of the Comptroller General. However, it is the opinion of the Board that such issues as are raised should

be resolved between the construction agency, the Secretary of the Air Force, and the respective appropriate Committees of Congress.

Date of the 1960 meeting of the Board

The Board set the dates of April 6-10, 1960 for its annual visit to the Academy in 1960.

Remarks

The Board commends Maj. Gen. James E. Briggs and his entire staff on the highly successful operation of the Academy during his service as Superintendent. This is particularly outstanding in view of the move to the permanent Academy site in the past year, the academic accreditation by the North Central Association of Colleges and Secondary Schools, and the preparation of the first graduating class. It is recognized that such success is the result of a great effort by a well-balanced team, under General Briggs' leadership.

Recommendations

1. The Board reiterates that primary pilot training should be added to the curriculum of the Air Force Academy. Such training at the Academy should be given all physically qualified cadets and would constitute an essential step in the military pilot instruction of future career fliers.

2. Lack of a flying field at the Academy site introduces numerous difficult problems in the conduct of Academy flying operations. The Board again recommends that suitable flying facilities, built to proper Air Force standards, be provided at the Air Force Academy. Time and distance factors, plus extensive civilian and other military flying operations in the Denver-Colorado Springs area make any other facilities unsuitable and uneconomical.

3. The Board recommends that the curriculum of the Academy be continually reappraised to insure that it remains sound with respect to changing technologies and world conditions.

Respectfully submitted.

Gordon Allott, U.S. Senate; Henry Dworshak, U.S. Senate; Howard W. Cannon, U.S. Senate; Byron G. Rogers, House of Representatives; J. Edgar Chenoweth, House of Representatives; Clyde Doyle, House of Representatives; Dr. Arthur H. Compton, Dr. Robert L. Stearns, Bryant L. Boatner, Lieutenant General, USAF, Retired; James McCormack, Jr., Major General, USAF, Retired.

Congress Record

EXTENSION OF REMARKS OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial from the Gaffney Ledger, Gaffney, S.C., of August 4, 1959:

CONGRESS RECORD

The record of the 1st session of the 86th Congress, which will probably end its deliberations in September, is now on the way to completion. It is a record which commands respect, viewed from any angle.

It will be recalled that the 1958 election produced the thought among many that the 1st session of the 86th Congress would be a radical or very liberal Congress. A large

number of excessively high spending bills was anticipated.

However, it has become obvious that a coalition of moderate Democrats and Republicans has been able to restrain the left-wingers, and there has been a tendency among the leadership of Congress to cooperate with President Eisenhower in reducing expenditures. This was, of course, partly necessitated by the recession of 1958 and the bleak financial picture which greeted Congress as it assembled in January.

In fact, the 1st session of the 86th Congress assembled with the Nation running head-on into a record peacetime deficit. That deficit totaled almost \$12 million.

President Eisenhower has vetoed a number of bills which he thought were too costly, and Congress has usually worked to write a bill the President could sign, as a result. There has been little acrimony between the majority leader in the Senate and Speaker RAYBURN, on the one hand, and President Eisenhower on the other. In fact, all of them have exercised an admirable restraint in delving into what would be considered low-grade politics.

As a result, this Congress is being termed the best, or most statesmanlike, to be seen in operation in Washington since World War II. A number of veteran reporters have come to that conclusion.

It seems probable that the labor bill, civil rights bill, housing bill, action on Federal highways, a sizable defense bill, and most of the other necessary legislation required, will be passed in good order. The civil rights bills, the labor bill, and many other bills, will not go as far as some people desire, but such legislation is practically certain.

In summary, the 1st session of the 86th Congress has achieved a moderate record, avoiding reckless spending, and accomplishing much. The leadership deserves the praise it is receiving from so many sides.

Labor Reform Legislation

EXTENSION OF REMARKS OF

HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following text of a letter I recently received from a resident of my district in Michigan whose husband is a member of the Teamsters Union. I thought the Members of the House would be interested in the writer's remarks concerning the need for labor reform legislation:

JULY 30, 1959.

MY DEAR MR. BENTLEY: I understand that there is a labor bill coming up to be considered and I hope I am not too late in writing. More of us would write but the issue is so plain and clear that something must be done—we are so disgusted with labor's unjust practices—that a Congress that waits to be told just isn't capable of governing. Strong words, I know. Labor has for a long time been too big for the individual or group of individuals with its tactics, and Government institutions haven't achieved much better. We haven't lost faith that they will and woe to us all if nothing comes of all this.

My husband is a teamster because he had to be. They get little to say about their contracts and I have yet to hear of his voting

for anyone outside of his steward who to my knowledge votes for no one above him and they are all a little afraid of the whole mess.

Nevertheless, a good union is necessary in all our opinions.

The union practice of hiring picketeers to force a (store in this instance) to unionize when even the clerks didn't want to—no good. To our fellows, "You join or you lose your unionized customers" (the biggest ones).

This year, "You get a raise in the form of pension payments to union pension fund" (when my husband fervently hopes not to be a teamster forever) and a reduction in commission with additional hospital benefits. Also, "You take teamsters insurance (instead of Blue Cross) or we don't negotiate the contract."

I am hoping you Congressmen have enough political fortitude to write a labor bill that will turn these unions into law abiding citizens because we do need them—in regulated version.

Life magazine's description of a fleet of outdated navy vessels, a White Fleet, sounded rather good, propagandawise as well. While I feel much foreign aid is just tossed down an ungrateful barrel, this sounds as though it had possibilities.

When the White Fleet comes up before you will you give it consideration? I understand that Senator GEORGE Aiken and Representatives WILLIAM BATES and Ed EDMONDSON are supporting the idea.

Connecticut Needs Housing Bill for Urban and Regional Planning

EXTENSION OF REMARKS OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. KOWALSKI. Mr. Speaker, the President's veto of the 1959 Housing Act has endangered not only the public housing program, college construction plans, and housing for the elderly but it has placed in jeopardy the slum clearance and urban renewal program.

A most important phase of this program, urban planning assistance, has been most valuable to the communities of my State, Connecticut, as evidenced by a letter I have received from James S. Klar, chief of the planning division of the Connecticut Development Commission.

With unanimous consent, I place Mr. Klar's letter in the CONGRESSIONAL RECORD.

STATE OF CONNECTICUT,
DEVELOPMENT COMMISSION,
Hartford, Conn., July 28, 1959.

HON. FRANK KOWALSKI,
Congressman at Large, Connecticut,
House of Representatives,
Washington, D.C.

MY DEAR MR. KOWALSKI: We understand that Congress is currently giving further consideration to a 1959 housing bill. The housing bills of 1954 and 1956 and the recently vetoed bill contained provision for urban planning assistance, commonly known as the 701 program. The Connecticut Development Commission has a very direct interest in this element of the housing bill since the Commission administers the 701 program in Connecticut.

The urban planning assistance program has provided Federal matching funds for technical planning work in municipalities under 25,000 population, in larger municipalities afflicted by disaster and in metropolitan or regional areas. Comparatively speaking, the cost of this program is low but we feel the benefits are great. Professional planning consultants working for the municipalities through the Development Commission prepare comprehensive plans of development, zoning and subdivision regulations, capital improvement programs and other technical tools vital to urban renewal programs and to the prevention of blight and decay. A comprehensive planning program is a prerequisite for participation in the Federal urban renewal program. This 701 program can go far to prevent blight and thus in the long run can reduce the need for costly urban renewal.

For your deliberations on a housing bill, we felt you might wish to know the status of the urban planning assistance program in Connecticut to date. Since 1955, 46 municipalities with a land area of 1,368 square miles and a 1950 population of 455,870 have participated in the program at a total contract cost of \$427,257. All municipalities aided have been under 25,000 population except for the disaster afflicted city of Waterbury. The 701 program has also resulted in regional plans for the three flood valleys and in the recently approved project for the capitol planning region around Hartford.

However, a great many municipalities under 25,000 population have not as yet had 701 aid and their opportunity for participation is largely dependent on passage of a new housing bill. Seventy-three municipalities with planning and/or zoning commissions which have a total area of 2,100 square miles and a 1950 population of 299,022 have not received 701 aid. There are also 32 municipalities with populations of less than 25,000 which currently lack planning and zoning commissions. These total 1,100 square miles and a 1950 population of 83,385. Were these to establish planning and/or zoning commissions, they could receive 701 aid.

If the 701 requirements were amended to permit aid to municipalities in the 25,000 to 50,000 population category as proposed in the recently vetoed housing bill, 16 other Connecticut municipalities totaling 436 square miles with a total 1950 population of 557,022 would be eligible.

The development commission is actively promoting regional planning. In addition to the capitol region which is now receiving 701 aid, one final and seven tentative definitions of regions have been made. Hopefully, regional planning agencies will be established within these regions. Section 701 aid will be vital for these agencies in preparing regional plans.

We also understand that the housing bill which was vetoed provided funds for State planning. We are very much interested in this phase of planning and would expect to undertake work under this program if available.

We feel that Connecticut has benefited greatly from the urban planning assistance program. However, the preceding statistics indicate that many more municipalities and regions are eligible and would greatly benefit from such aid. Congressional action will be required if this program is to be continued. Your support will be greatly appreciated.

Very respectfully,

JAMES S. KLAR,
Chief, Planning Division.

Paying for a U.N. Force

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks I should like to include an article from the Manchester Guardian Weekly by Wayland Young:

[From the Manchester Guardian Weekly, July 23, 1959]

PAYING FOR A U.N. FORCE

(By Wayland Young)

Cybernetic mechanisms are not always a good guide in human affairs, but it does seem odd that they should never have been applied to the greatest political question of all: how the United Nations can keep the peace? Perhaps the two most widely accepted commonplaces in the world are that national armaments threaten peace, and that it is difficult to achieve disarmament without a permanent United Nations force. National forces equal fear of war; United Nations forces equal hope of peace. Any connection? Anything to be done? Any feedback?

At present the United Nations Organization is financed by contributions scaled to the National income of the member state, and poorer members are allowed a remission up to 50 percent scaled to their per capita income. This works fairly well; collections run between 98 percent and 99 percent. The United States pays 32.51 percent of the total, though there is a theoretical Assembly ruling that nobody should pay more than 30 percent. The Soviet Union pays 13.62 percent, and the United Kingdom 7.78 percent. At the other end, 16 little nations pay 0.04 percent, which is the flat minimum allowed.

The United Nations Expeditionary Force in Suez and Sinai and Gaza, which everybody hopes will be pathfinder and pace-maker for the future, is financed by a mixed arrangement. It cost \$30 millions in 1957. About \$15 million of this was raised on a percentage arrangement echoing that which finances the United Nations as a whole, and about \$14 millions came from individual contributions from those states which thought it was their duty to make them. (In 1959 the cost is expected to be only \$19 millions.)

Now let us imagine that a permanent United Nations force were to be built up, and that it were to be financed no longer by contributions scaled to the national incomes of member states, or states participating in the force, and still less by conscience money from rich states, but by national contributions scaled to the level of national armaments in each state. If a nation desired to keep 5 million men under arms, it would pay the United Nations military fund through the nose. If it only desired 10,000, it would pay very little.

The arrangement would be a tax on the destructive force in the world, which is national armaments, and the proceeds would be devoted to the constructive force which is international law and authority and the power to enforce them. For every soldier I pay to threaten my neighbor, I should

have to pay another to protect him and vice versa. It would make the punishment fit the crime with a vengeance. There would be a balance and a neutralization; our plight and its remedy would find their own level and cancel each other out like water in two connecting vessels. As the engine of national military might began to race so would the governor, by arming the United Nations, cut off the supply of steam at the most crucial place, which is the belief of a nation that it can get away with aggression unchecked.

As a matter of fact, it would be better to tax not the men but the machines. An ideal method would be to scale the payment to the number of dead there would be if all the weapons possessed by the country in question were to go off in heavily populated areas. Thus one rifle in national hands would finance one rifle in United Nations hands, but one H-bomb in national hands would finance several million rifles in United Nations hands, or whatever weapons the United Nations might collectively agree should be given to its forces. It is not likely that it would agree to give its forces H-bombs. There is nothing against the United Nations having only smaller weapons, provided it has enough of them. No single power is going to hold United Nations forces at bay with the threat of thermonuclear bombardment, or not for long, anyhow.

But to the extent that the national contributions were scaled to the power of weapons held, inspection would become necessary, and the proposal might fall into the same morass as the disarmament talks have. For this reason, it would perhaps be best of all to have a scale of payments based on that which is readily visible. Men are readily visible; no country at present keeps the number of troops it has secret. Ships and bombers are visible to the naked eye. A bomber capable of carrying a nuclear weapon, that is any bomber, if it exists in a country which has a nuclear industry, should be taxed at the nuclear rate. Rockets are not quite so visible, but their existence is at present loudly proclaimed by all the States that make them. The menaces should be believed, and the tax levied accordingly.

The most hopeful element of the whole proposal is the difficulty which governments would find in resisting it, should it be proposed. It has a kind of flashy neatness which might catch the imagination of peoples. One can hear the popular comment: "Well, that's only fair, I must say." Each conscript all over the world, as he took up his rifle, would think of the United Nations mercenary his government was paying to pick up another rifle. "Silly," he'd think it, "Why don't we both go home?" And in time his government might come to agree.

Federal and State Water Rights

EXTENSION OF REMARKS

OF

HON. THOMAS G. MORRIS

OF NEW MEXICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. MORRIS of New Mexico. Mr. Speaker, because of the continuing struggle in the 17 western States between the Federal and State Govern-

ments for water rights, I would like to call the attention of my colleagues to an article appearing in the Eddy County News, Carlsbad, N. Mex. Eight Eddy County ranchers are named in a Federal complaint for taking too much water from wells on their own ranches for their own use.

The article follows:

PIONEER EDDY FAMILIES FACE U.S. COURT ON WATER RIGHTS—ORDERED TO ANSWER IN ALBUQUERQUE

Eight prominent Eddy County ranchers have been charged, in a Federal court civil complaint, with using water taken from wells on their ranches, to the detriment of Government water rights in Rattlesnake Springs.

All of the ranches involved are located in Eddy County, south and west of Rattlesnake Springs. Named in the complaint are H. F. Ballard, M. M. Bradley, George C. Brumble, Leroy Caffall, Arthur J. Mayes, John Mayes, A. M. Leeman, and George Smart.

Some of the wells which the Government seeks to close have been providing water for the ranchers as long as 11 years. They use the vital water for stock watering and small-area irrigation.

Opening gun in what promises to be a long drawn out fight for survival by the ranchers was fired by an impressive Government legal staff, headed by Assistant Attorney General Perry W. Morton, and including James A. Borland, U.S. attorney, David R. Warner, and Alfred H. O. Boudreau, Jr., all of whom are listed in the court action as attorneys for the plaintiff the United States of America.

Root of the complaint seems to lie in water needs of Carlsbad Caverns park, which pipes its water supply 5½ miles from the pool at Rattlesnake Springs. The suit claims that Government operations are entitled to a total of one-half cubic foot per second of water from the pool, of which two-tenths cubic foot is earmarked for use at Carlsbad Caverns. It is not made clear in the action what disposal is to be made of the remaining three-tenths cubic foot of water.

The Government's claim is that combined pumping effect of the ranchers' wells is depriving it of its total one-half cubic foot per second water allowance.

It further charges that the Government is suffering irreparable injury and has no plain, adequate, or complete remedy at law. The Government lawyers have asked the Federal district court in Albuquerque to appoint a special water master to police use of water by the ranchers.

The ranchers' side of the matter is yet to be heard. They have been ordered by the court to make their answer in the Albuquerque court within 20 days, failing which judgment by default would be taken against them.

Hoffa and Reuther: Contrast

EXTENSION OF REMARKS OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. HIESTAND. Mr. Speaker, the following article by George Todt, published in the North Hollywood (Calif.) Valley Times, offers considerable food for thought. Mr. Todt articulates questions that have bothered many fair-minded Americans. Legislative investi-

gations are an important function in congressional responsibility. But unless they are fair to all concerned, they are open to justifiable criticism and their effectiveness compromised:

HOFFA AND REUTHER: CONTRAST

Watching tough little Jimmy Hoffa, Teamsters Union boss, on the CBS television program, "Face the Nation," last Sunday was quite an experience. He certainly got unhappy at the prospect of labor being placed under antitrust legislation.

This gentleman is hard as nails, but you've got to say one thing for Jimmy, he certainly knows his subject backward and forward, too. And that subject, of course, happens to be his Teamsters.

In this specific area of knowledge, Jimmy racked up the television panel facing him with approximately the same ridiculous ease with which Mrs. Eleanor Roosevelt systematically takes her questioners into camp on "Meet the Press" from time to time.

Quite by coincidence, young Robert Kennedy, Labor Rackets Committee counsel, was guest star of the latter show. His topic was mainly Jimmy Hoffa, as it has been during most of his tour of duty on the McClellan committee.

Kennedy has a tremendous predilection for ferreting out all the secrets of Hoffa which he can find. Maybe there is much to learn here, but it seems to me that young Robert's zeal might have appeared even more commendable in the past if he had displayed the same amount of desire to learn as much of the worldly affairs of Walter Reuther as he did the latter's archival, the boss of the Teamsters Union.

And thereby hangs a tale. Whereas both Hoffa and Reuther have been called before the Rackets Committee in the last 2 years, they did not receive the same impartial and eminently fair treatment from young Kennedy. No, not at all.

For our Mr. KENNEDY sent 40 or 50 investigators at a whack to look into the workings of Mr. Hoffa and others who were unfriendly to Mr. Reuther, boss of the United Auto Workers (UAW) and strong man of the AFL-CIO. But somehow, the great investigator could only spare two men when it came time to observe what went on in the Detroit stronghold of Uncle Walter. How come?

Come to think of it, one of these two men was even intimidated and threatened with loss of his job because 'twas said "he was out to get Mr. Reuther in advance." Or something.

At any rate, Mr. Reuther was hardly treated with the same degree of microscopic inspection as was Mr. Hoffa, and we may wonder why? Granted, of course, that Mr. Reuther is a much nicer personality and honest as they come personally—but what about that interesting matter of using Republican union members' funds for political purposes? Rumor hath it that many solons wanted to look closely into this vital subject—but Mr. KENNEDY nixed it.

Now why did young Robert Kennedy go slow on Reuther but attach Hoffa with full might and main? The answer, of course, seems bound up in the 1960 presidential elections. The quid pro quo, in this instance, would seem to be the help of Reuther's forces in behalf of Robert's older brother, Senator JACK KENNEDY, in return for his assault upon Reuther's main opponent in the labor movement today—Hoffa.

A strange story has come out of Washington since the labor rackets quiz got underway almost 2 years ago. It concerns the fact that only some 15 percent of the labor movement has come under scrutiny by this time—but almost 100 percent of the opposition to Mr. Reuther has been included in the 15 percent mentioned.

This doesn't mean collusion or that Mr. Reuther is calling the signals for the committee to gain the results most desirable for himself. I do not wish to imply that by any means. But I think it is quite probable that, if the facts are as indicated, perhaps young Mr. Kennedy may have taken it upon himself to direct the inquiry in just such a way as has since turned out to be the case.

Should this be true, the Republican Party may have as good a campaign issue for itself in 1960 as it is bound to have in the biased action recently taken against Adm. Lewis L. Strauss in the Senate.

Until we find out how much of young Kennedy's vendetta against Hoffa is based on personal considerations and politics, it might be wise to withhold our final judgment of the latter until all the results are in.

Could it have been that Mr. Robert Kennedy, campaign manager for his brother in 1952, has been playing to the Committee on Political Education (COPE) gallery all this time with an eye glued to 1960? What are we to think here?

Salute to Alaska, Our Newest State

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 27, 1959

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a letter written by Miss Rose J. Boylan, of East St. Louis, Ill., to the editor of the St. Louis Globe-Democrat, which appeared in the Mail Bag of the newspaper on July 6, 1958. Miss Boylan fittingly salutes our 49th State, Alaska:

SALUTE TO ALASKA, OUR NEWEST STATE

To the Editor:

What does one say now? "God bless you, Alaska." "May you enjoy your statehood." Or what?

If we are awkward in our welcome to the youngest sister—remember, most of us never did this before, nor expected to do it. We are packing away two generations of memories, along with our 48-star flags.

Take myself. I can remember St. Pius X as a living Pope. I can remember Nicholas II as Czar of Russia—but I can't remember an American flag that didn't have 48 stars.

When we put the flag out on July 4, back in those golden years my mother would quote the old jingle:

"Thirteen stripes are for thirteen States that first in the Union came;

For every State we have added a star—but the stripes remain the same."

I would say, "But we'll never change the flag again, will we? It'll be 48 stars all the time now, won't it?"

I knew that all the open spaces had been filled in—from the Atlantic to the Pacific, from Canada to the gulf. I knew that Illinois had become American in George Rogers Clark's time, Missouri through the Louisiana Purchase—that the Indian Territory was the State of Oklahoma now—and that New Mexico and Arizona were brandnew. My father told stories of reporting the first State elections in the Dakotas for the St. Paul Pioneer-Press; that was in 1889.

My mother thought a moment, "Alaska might come in some day," she answered, as people said then, "They might fly to the moon some day."

Alaska was the place where my aunt's friend, Miss Beulah, was a medical missionary. She sent us snapshots of Fairbanks. She sent us a basket of leather and bark and beadwork, that held our Christmas cards each year for more than 30 years. During those years, my brother and I, like millions of us, grew up under the 48-star flag.

It was that flag that people were so sentimental about during World War I. It was that flag to which even the most discouraged clung blindly during the depression.

We studied history and civics. The rules always stayed the same. Three-fourths of the States was 36. Two-thirds of the Senate was 64. Three generations of children learned it that way.

In days of plenty and days of peace, we rose to pledge allegiance at every public function. We fussed when flags were made into rosettes—that was only for bunting, not for our glorious 48 stars.

Our own flag hung solemnly from the corner pillar of the big porch, on parade days. We stood at the railing, hands on hearts, as one unit after another marched down our tree-shaded street. Flag and school pennant, flag and Union banner, flag and sacred emblem—always, year after year, holiday after holiday, the same flag.

"The 49th State" was a Globe-Democrat slogan in those days. It was a nickname for the St. Louis trade territory, and my father loved to joke about it.

But the flag that covered his casket still had 48 stars. So did hundreds of thousands of other flags—through two world wars and Korea.

The Philippines said, "Goodbye," and were on their way. New nations were founded, new rulers were crowned. But the 48 States with their 48 stars remained unchanged in a changing world.

Now, at long last, the change has come. Our own kid sister has come of age.

Something has come true that—all of our lifetimes—has been a legend of the long ago. The Union was not intended to be complete. Every so often another of the kindred comes to sit at the council fire. Every so often a new star of peace appears in the blue field.

ROSE J. BOYLAN.

The Late Mrs. Mary T. Norton

SPEECH

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mrs. DWYER. Mr. Speaker, the death this week of Mary T. Norton is a special loss to the people of New Jersey, to the women of America, and to me personally.

Mrs. Norton was not only the first woman in the Democratic Party to be elected to Congress; she was also the first woman to serve in that capacity from New Jersey. The people of the 13th District have great reason to be proud of that service.

Throughout her career, Mary Norton was a pacemaker and a precedent breaker. Her service in the House confirmed that women, indeed, have an important responsibility in the political life of our country. As the first woman chairman of a committee of the House of Representatives, in fact as chairman of both the Committee on the District of Colum-

bia and the Committee on Labor, she exercised wise and courageous leadership, and devoted her talents to social and humanitarian legislation that even today are important influences in the welfare of working people throughout the country.

While our paths seldom crossed, it was my pleasure on a few occasions to meet and talk with Mrs. Norton. And I have always cherished the fact that the very first telegram of congratulations I received on the occasion of my first election to Congress came from that wonderful woman.

But all of New Jersey knew and loved Mary Norton for her courage and determination no less than for her friendliness, gentleness, and broad humanity. Her success, the distinction she earned in the political life of her Nation, helped pave the way for those of us who came after her. Women of New Jersey and the country who believe that women have a role to play in American Government owe a great deal to the pioneering of Mary T. Norton.

Industrial Development for the Devils Lake Sioux Tribe

EXTENSION OF REMARKS

OF

HON. QUENTIN BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the Record, I include the following resolution approved by the Devils Lake Sioux Tribe July 28, 1959. I believe the tribe should be commended for its desire to improve the economic condition of its members and its foresight in laying plans for industrial development to accomplish that purpose:

Whereas the Devils Lake Sioux Tribe, hereinafter referred to as the tribe, is an unincorporated tribe of Indians, acting under a constitution and bylaws adopted April 14, 1944, by a vote of 116 for and 18 against in a general assembly meeting called for the proposal of a constitutional vote and approved by the Commissioner of Indian Affairs on February 14, 1946.

Whereas article 3, section 1, of the tribal constitution provided that the governing body of the tribe shall be the executive committee and under terms of article 4, section (a), provide that the executive committee shall exercise power not in conflict with Federal law as follows: (a) The power to represent the tribe in negotiations with Federal, State, and private agencies.

Whereas the Devils Lake Sioux Tribe desires to improve the economic conditions of the members of the tribe; and

Whereas the following described U.S. title lands designated as agency reserve appears to be excess to the needs of the Bureau; and

Whereas a portion of the area is now used for tribal homes; and

Whereas the executive committee of the Devils Lake Sioux Tribe wishes to set aside the area not used for tribal homes as a site or sites for future industrial development: Now, therefore, be it

Resolved, That the Commissioner of Indian Affairs and the Secretary of the Interior effect the transfer of title in trust to the Devils Lake Sioux Tribe, the following described lands, to wit: Lots 6, 7, 8, 9, 10, SW $\frac{1}{4}$ NE $\frac{1}{4}$ NE $\frac{1}{4}$, SE $\frac{1}{4}$ NE $\frac{1}{4}$, and those portions of lots 2 and 3 of sec. 17, T. 152 N., R. 65 W., fifth principal meridian, not embraced in allotment No. 585 of Jesse G. Palmer, and the W $\frac{1}{2}$ E $\frac{1}{2}$ NE $\frac{1}{4}$, W $\frac{1}{2}$ NE $\frac{1}{4}$, NW $\frac{1}{4}$, SE $\frac{1}{4}$, sec. 20, T. 152 N., R. 65 W., fifth principal meridian, Benson County, N. Dak., comprising 538.85 acres more or less.

What REA Means to America

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. LEVERING. Mr. Speaker, last Friday night it was my pleasure to speak to more than 800 customers of the Tuscarawas-Coshocton Electric Cooperative, Inc., at the fairgrounds in Coshocton, Ohio, in my congressional district. I talked on the subject of "What REA Means to America" and pointed out that since the Rural Electrification Administration was established, 95 percent of the farms in America have been electrified, which all demonstrates how free enterprise and Government can work together for progress.

Mr. Speaker, under unanimous consent, I include the remarks which I made on this occasion in the Appendix of the Record:

WHAT REA MEANS TO AMERICA

Mr. Manning, Reverend Wells, Mayor Leach, President Darling, other distinguished officers of Tuscarawas-Coshocton Electric Co-op, ladies and gentlemen, I am honored to have this opportunity to be with you this evening and to think with you on an important agency of our Federal Government. It is my earnest, honest hope, in speaking to you, that something I might say, some thought I might express, will stimulate in you the desire to help me, and others in our Government, to do our jobs a little better, a little more efficiently, a little more energetically, so that all of us can make more progress. As you know I am a co-op user myself. Our home and farm in Knox County is served by the Morrow Rural Electric Cooperative.

We live, as we all know, in a challenging period in world history. While every generation has produced its own problems, and they have been many, I feel sure that, no matter what former period of human history you could choose, you would encounter no more churning, no more explosive situations, than we know exist in our world today.

At home, and abroad, we, as a free people, face problems of great magnitude. Tom Paine wrote, during the American Revolution: "These are the times that try men's souls. * * * You and I, as we become aware of all the potential peril points on this old globe, can repeat those words and put an exclamation point after them."

And yet, as Emerson once remarked: "The years teach much that the days never know."

As we get a little older, and a little more experienced, we can look back and see that progress is being made, in this or that field of endeavor. Let us realize that there is

nothing automatic about progress, however. All of human history—all of life—all the recorded teachings of mankind—teach us that every step of progress that has been made has been one long and constant battle. Men who wanted to progress, individually or in groups, have found that they must battle against inertia, greed, stupidity, human cruelty, as well as against all the forces of nature, from decay and depreciation to the onslaughts of the elements.

Let us bear in mind that all progress is an uphill fight, not only against people who do not want to move, but against all the impediments placed in our paths by life and nature.

William James said, and I quote: "If this life be not a real fight, in which something is eternally gained for the universe by success, it is no better than a game of private theatricals from which one may withdraw at will. But it feels like a real fight."

You who have been active in the REA movement know, from the history of the agency, that rural electrification has been a real fight, all during its history, and even before the Rural Electrification Administration was born. I did not know the men, but I knew of them, who had a hand in opening up rural America to electricity, and I should like to pay tribute to them. Foremost among them was Senator George W. Norris, the Independent of Nebraska, who for 25 years reigned supreme in the Senate as the man who thought the most about the future of his country. Among those early fighters there was a Congressman named John E. Rankin, of Tupelo, Miss., who no longer sits in the House of Representatives but still is remembered by the oldtimers there. John Rankin will always be numbered among the founders of the REA. And then there was Judson King, who died only a few months ago in his home outside of Washington. Judson King was a public relations man for the people. For most of his life, he battled, through his writings, for projects that would benefit all the people of this country, as opposed to ideas and ideals that were designed to help the few at the expense of the many. And, I am happy to report, my father-in-law, Representative Usher L. Burdick, was in that valiant and limited group that originally fought the battles for rural electrification. I'm also happy to report that Usher Burdick, although he retired from Congress at the end of the 85th Congress, still is alive and happy and as ram-bunctious as ever. While, as I noted, I did not know many of these men personally, I know them by reputation, and I am sure that there is tonight, among us, several individuals who may have known one or the other of them. It behooves us, I believe, to remember these stalwarts of other days, for we can gather strength from their struggles and their victories for the battles that may lie ahead.

These men lived, as we do, in a period of great change. But they never allowed the distractions, and the deliberate tactics of their enemies to divert them from the paths they knew they must take. We, too, must learn not to be diverted from our legitimate aspirations by the little, petty, picaresque things of life. We must keep our minds and our hearts on the larger goals, and push on, regardless of the disruptions which constantly will be placed in our paths.

The Rural Electrification Administration program demonstrates, I think, how free enterprise and a sympathetic government can work together to solve a vexing and difficult problem for human beings.

In 1935, before the REA came into being, only 1 farm in every 10 in the United States had electricity. For all practical purposes, rural America was in the dark. Of course, there were kerosene lamps, there were hand-operated waterpumps, and there were

Chic Sales outhouses behind every farmhouse. If you drove into the countryside after dark, in those days, the only possible lights you would see, besides the headlights of your own automobile, would be the dim and flickering lamps that would be burning in one or two rooms of the farmhouses.

Today, due principally to the foresight of the men who worked for the REA to become enacted into law, 95 percent of all farms in the United States have central station electric service. In less than 25 years, we have seen electricity transform the rural home into a modern, convenient place to live.

As we know, the REA made it possible for groups of local farms and other individuals to organize into cooperatives and to borrow long-term loans at low interest for the purpose of generating and distributing electricity, as well as building and operating rural telephone companies. In the past 23 years, some 1,000 of these REA cooperatives—completely owned and operated by local people in as many communities—have borrowed and used about \$3 billion from the Federal Government to build modern electric power systems to serve rural areas.

I doubt seriously if \$3 billion of Federal funds ever has been used more economically or with more lasting benefit to the comfort and welfare of as many people in the whole history of Government anywhere on earth. There is no telling how many elderly people have been able to turn on the water spout in subzero weather, instead of having to walk out into bitter cold to get water from the well. There is no computing how many women with child, alone and unattended on isolated farms, have been able to do their necessary household chores, more or less in the comfort of their homes, without having to strain themselves by pumping water outside, or injure themselves by other manual labor they might have had to do if they had not had electricity.

If there were any way that we, tonight, could look into the hundreds of thousands of homes that have been served through the years by electric power, made available because of the REA program, I am sure that we would see a story that would make all the miracles of ancient writ pale into insignificance. Electricity, we know, is a miracle in and of itself. The fact that, in the mid-thirties, our leaders of those days could be farsighted enough to see the challenge and to meet the challenge and make Federal money available to local groups, represents another miracle. And every home that has enjoyed a transformation as a result of the electricity represents another miracle.

These rural electrification systems today are operating in 47 States and in Puerto Rico. They have brought electricity to more than half of all the electrified farms of America, and because they have made this great service possible to half the homes, they have provided the competitive stimulus necessary to obtain service for most of the other homes of the country.

Back in 1935, when the REA experiment was just beginning, it was argued that all farmers who wanted electricity had it and that there was no market for power out in the country. Experience in the last 23 years has demonstrated how wrong this contention was. Rural people are using electricity at an ever-increasing rate, doubling their use of power every 5 to 7 years.

The success of the rural electrification program has been so overwhelming that many opponents no longer try to attack it openly. Instead, they are coming forth with proposals to improve the program. The President's budget message, with its proposals for REA, illustrates this point.

For 2 years in a row the administration has asked Congress to jack up the REA interest rate. This is being done despite the fact that all evidence indicates that such an increase would necessitate higher elec-

tric bills for all the consumers served and many co-ops, especially those in the thinner territories, would be driven out of business. As you know, REA is prohibited by law from serving towns with a population of more than 1,500, which means that it is barred from participating in the cream of the electric industry market.

For 2 years in a row the administration has also asked Congress to change the REA Act so as to permit the Secretary of Agriculture to turn a part of the loan business over to the Wall Street bankers. This proposal was so drastic that in the last session of Congress not a single Member was willing to put his name to the bill and sponsor its introduction.

In the budget message the President also asked for a tax on co-ops and he recommended a slowdown for the Federal power program upon which nearly half of the co-ops depend for their wholesale power.

The President is not the only member of the administration who has been harassing REA. The Secretary of Agriculture has extended his domination over the REA Administrator and drastically clipped his authority. All new loans, and all major loans, as a result of the Secretary's directive, must now be cleared with his office before they can be approved.

During this session of Congress a drive has been made to end the Secretary's domination and to restore to the Administrator the loanmaking authority that Congress gave him originally. Committees in both the House and the Senate gave prompt consideration to the bill, which was known as the Humphrey-Price bill, and by April both Houses had taken action, voting overwhelmingly for the measure which had been vigorously supported by rural electric systems in all parts of the country.

First the Senate, and then the House, gave their approval. However, when the bill reached the President's desk, he vetoed it. The Senate promptly overrode his veto, with several votes to spare. The scene changed to the House; and in the last hours before the rollcall the administration decided to make the Humphrey-Price bill a straight party-line issue. The President called upon all the Representatives who had voted for the bill in the earlier vote. He succeeded in getting enough of them to switch that on the final rollcall the veto was sustained by a slim four-vote margin. The House, in the biggest turnout for any rollcall in history, fell just four votes short of the two-thirds majority needed to make the bill a law.

The rural electric systems were defeated in their efforts to reestablish the authority and prestige of the REA Administrator; but it is to be hoped that the overwhelming vote will prevent the Secretary of Agriculture from interfering with the loan procedure in the future.

Another vital issue developed last summer, when the Comptroller General issued a ruling that if allowed to stand will seriously damage the REA program. The Comptroller General, Mr. Joseph Campbell, who served on the Atomic Energy Commission at the time of the Dixon-Yates scandal, and who was appointed Comptroller by President Eisenhower on December 15, 1954, in his ruling ordered an unprecedented restriction on the REA Administrator's loanmaking authority. This ruling completely reversed congressional intent as set forth in the REA Act and completely ignored 23 years of successful administration.

The Comptroller has still not reversed his ruling, although he has said he did not intend to enforce it. There are bills in Congress to investigate this damaging and disruptive procedure.

The big challenge of the future in the REA program is to complete the extension of service to the remaining 2 million rural resi-

dents, and to provide the necessary power capacity to service constantly growing needs.

The use of electricity from REA-financed lines increased from a monthly average of 134 kilowatt-hours per farm in 1949 to about 291 kilowatt-hours in 1957. Farmers are coming to depend more and more upon electricity as a production tool. About 400 farm uses for electricity are known; at least 250 of them increase production or make farming more profitable.

Farmers already use more electric energy for more farm tasks than was expected when the original lines were built. As a result, power distributors are faced with the necessity of heavying up the lines and substations to keep abreast of demand. A program of system improvements has been a major activity of most REA electrification borrowers in recent years.

An important result of the expanding rural electrification program is the increased business it brings into rural communities. It stimulates private business, both locally and nationally. I confirm what Mr. Erman said. Surveys indicate that for every dollar invested in rural power facilities, the farmer invests \$3 to \$4 in wiring, plumbing, and electrical appliances. Also, when power is available, the establishment of industry in rural areas is encouraged.

It has been a great pleasure for me to be with you this evening, and to think with you on this important subject. As you all know, I am pledged to work for the REA in every good way, consistent with the finest democratic principles of our country.

Equal Air Time Is a Very Important Part of the Democratic Process

EXTENSION OF REMARKS

OF

HON. LESTER HOLTZMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include a statement made by Dr. Timothy W. Costello, assistant State secretary of the Liberal Party of New York State, over WCBS-TV in New York on Sunday evening, August 2, 1959, at 7:30 p.m.

Dr. Costello's remarks follow:

REMARKS BY DR. TIMOTHY COSTELLO, ASSISTANT SECRETARY OF THE LIBERAL PARTY OF NEW YORK STATE, OVER CBS-TV NETWORK, AUGUST 2, 1959

The position of the Liberal Party with regard to appearances of candidates for public office on television and radio is basic. We believe that not only are all bona fide candidates entitled to be heard, but that conversely, the people must be guaranteed the right to hear the viewpoints of all bona fide candidates.

We are aware of the problems involved in the appearances of candidates on news programs, panel shows and other broadcasts that may have no direct relationship to their candidacy. But we are even more concerned that the processes of democracy will always be maintained in this vital area of communication.

The president of CBS made a valid point when he said that the equal-time restrictions cause serious hardships for broadcasters. But he made a rather less-than-

valid assertion when he stated that, unless corrective measures are adopted, "we will have no choice but to turn out microphones and television cameras away from all candidates during campaign periods."

We would remind Dr. Stanton that the airwaves belong to the people, and that the assignment of radio frequencies and television channels to commercial broadcasters involves the broadcasters in a never-ceasing obligation of public service. And the processes of democracy in general, and political campaigns in particular, are all part of that public service.

The radio and television broadcasters, by reason of hardship, could no more divert their microphones and cameras away from events and issues of deep public interest than the power companies, also by reason of hardship, could divert electric current away from a community. And in this area, may I say parenthetically, we are concerned not only with free time on the air; we are also concerned with the increasing difficulty of getting even paid time for political broadcasts.

Equal air time is a very important part of the democratic process. And the sharing of the public forums by the candidates of the two leading parties is in the best tradition of let the people decide.

But if the democratic process is to flourish, major recognition must also be given to third parties. For in the history of our country, third parties have shown that they have a vital contribution to make. The Republican Party itself began as a third party. The records of achievement by the Progressive Party in Wisconsin and the Farmer-Labor Party in Minnesota are testimony to the importance of third parties.

And currently, although the Liberal Party of New York State is the only major third party in the Nation today, it too, we believe, is writing a record of achievement in the State of New York and in its cities and counties that brings echoes of agreement and of action from many other parts of the country.

The third parties of the past, as well as the Liberal Party today, have been the originators of much that was new and perhaps daring to begin with but that has now become part of the social and political fiber of the Nation. At the moment, I will name only old-age pensions, unemployment insurance, minimum wages, public housing, and civil rights. There are many more.

For a decade now, between 250,000 and 500,000 voters in New York State have voted for the Liberal Party's candidates at each election. This is greater than the total vote cast in the last presidential election in such States as Arizona, Delaware, Idaho, Maine, Mississippi, Montana, Nevada, New Hampshire, New Mexico, North Dakota, South Carolina, Utah, Vermont, Wyoming, and a few others. It is greater than the total vote of the two new, and let me say very welcome, States of Alaska and Hawaii.

We are dealing here with a major force in American politics. We are dealing with a party whose independent candidate for the U.S. Senate in 1952, Dr. George S. Counts, polled 490,000 votes; with a party which, in that same year, gave Adlai Stevenson 417,000 votes; with a party whose vote carried New York State into the Roosevelt column in the Presidential election of 1944; with a party whose 428,000 votes gave Senator Lehman his margin of victory in 1949; with a party that elected its independent candidate, Rudolph Halley, President of the New York City Council in 1951 with 583,000 votes, and gave him 428,000 votes for mayor in 1953; with a party whose 264,000 votes carried Governor Harriman to victory in 1954, and whose 295,000 votes made State Comptroller Arthur Levitt the only Democratic victor in 1958; with a party that elected its own candidate, Vincent

Corsall, the present mayor of the city of Oswego.

To quote Senator KEATING's recent statement, "Consideration must be given to significant parties such as the Liberal Party. . . . It must not be denied the opportunity to present its candidates and its views on an equal basis with other substantial parties."

In this complex situation of equal time, the Liberal Party realizes that there have to be certain standards applied and certain limitations imposed. But distinction must be made between bona fide parties and candidates with a significant political program, and the others—or we will be throwing out the baby with the bath water. Let's not destroy the good principle of equal time because it contains a weakness in detail, but rather work to eliminate the weakness.

In the quest for both reasonableness and fairness, we would join with CBS in seeking to define just who is and who is not a legally qualified candidate. In this regard, we would hold that the standards and requirements of each State should be the determining guide.

For example, New York State has specific and stringent requirements. And for the broadcaster to deny a candidate, legally qualified and authorized by the State, the right to the airways, is to arrogate to itself a sovereign power of the State.

We agree that bona fide newscasts and on-the-spot news programs should be exempted from the equal-time requirements. But with regard to panel shows, interviews, and documentary programs, we feel that only those should be exempted that are substantially removed from the participant's candidacy.

Unless a radio or television program comes clearly and unmistakably under the heading of news, it must provide the right to equal time for all legally qualified candidates.

We would make one exception. A candidate for the Presidency who is legally qualified in certain States, should be entitled to equal time only in those States and not nationally.

In the worldwide struggle that is now enveloping all of us—the struggle between democracy and totalitarianism—the problem we are discussing here becomes increasingly important. We must be on guard at every moment to see that the concept of free expression and communication is not eroded, eaten away by new encroachments, however slight or reasonable-appearing. We are here involved in nothing less than a defense of the fundamental processes of democracy.

"Service Pays Off"

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. FRIEDEL. Mr. Speaker, for many years I have contended that if the airlines would utilize Friendship International Airport in Baltimore, their services would be patronized beyond expectation.

Several weeks ago on the floor of the House, I called attention to the fact that Friendship is finally taking on the honest identity of an aviation center. Recently American Airlines and Trans World Airlines inaugurated daily jet service to the west coast. This service

has really paid off, as is indicated in the timely editorial which appeared in the August 5 issue of the Sun, which follows.

I heartily concur with the editor that a direct jet flight to Europe from Friendship would be patronized by thousands of people from this area. When the Civil Aeronautics Board receives a request for a certificate to operate this service from Friendship to Europe, I trust it will recognize the fact that Baltimoreans will fully utilize it and the authorization will be granted promptly.

The Sun editorial follows:

[From the Baltimore Sun, Aug. 5, 1959]

SERVICE PAYS OFF

The first month's operation of jet airliners out of Friendship has happily settled the old chicken-and-egg argument about Baltimore's travel habits. The airlines had contended that need for good service had to be proved before they could venture to provide it. Baltimoreans had said that once the service was there, it would be used. How long this war of assertion might have gone on no one knows. Luckily it was settled by geography, which decreed that National Airport could not extend its runways to take jets. They had to fly from Friendship or bypass this area. And it turns out that Baltimoreans are using the service to the west coast in large and increasing numbers. The planes are full and everyone is happy.

What next? Well, how about a direct flight or two to Europe? A lot of Baltimoreans go to Europe, and the traffic of Government and diplomatic people from Washington to Europe is tremendous. A flight a day (using jets, not hand-me-down equipment) would surely be patronized by the thousands of people in this area who would happily cut out the New York stop on the way, and the bother and lost time entailed by it. If such a service were started this winter it could be in the swing by next spring's tourist season, at which time, it may be, more than one flight a day would prove economic.

New American Policy

EXTENSION OF REMARKS OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Peoria Journal Star:

[From the Peoria Journal Star, July 31, 1959]

NEW AMERICAN POLICY

RICHARD NIXON's performance in the Soviet Union has a deeper meaning than might show on the surface.

NIXON is not putting on a show for home use in the political maneuvers for 1960—although that picture of him tapping Khrushchev on the chest is about the hottest political campaign shot of all time.

NIXON is there without doubt, however, as an instrument of American policy that has been thoroughly examined and discussed by the National Security Council—and as such we are seeing a basic change in the American foreign policy.

For 15 years we have been in a cold war which was being fought by the Soviets while we tried to do little more than shore up our defenses and hold on the 40-yard line.

It is small wonder that the Communists have made gains. The strongest defensive team cannot win if it never has the ball, and even passes up the chance to intercept a pass and is content to just knock the ball down. All we have wanted from the cold war is out.

The Soviets have repeatedly proposed, are now proposing, and have often enjoyed a situation in which they enjoy a privileged sanctuary in their own lands and satellites free from U.S. interference—while they roam the world fomenting trouble in every corner of the free nations.

Yet all this time their own gigantic police force, their own strict control of press, radio, and TV, and restrictions on books and movies expose their own fears of their own people.

NIXON has not been parrying Khrushchev's thrusts. He has been making thrusts of his own, and with telling effect. Nothing is more vital to peace than that we shake the confidence of Kremlin leaders, and NIXON is doing a tremendous job for one man in that direction.

The effect is also to serve notice that we will not huddle in our own corner of the world and dodge Red blows, but that we are prepared to carry the cold war to the captive peoples of the Soviet bloc.

A good offense is the best defense, said Knute Rockne. This is true in war as in football. It is also true in a cold war as a hot war.

And the myth of Communist shrewdness, inscrutability, and general ability to take advantage of us in every encounter is being exploded. If we fight back with their own cold war weapons every meeting can be a chance to gain.

The cold war will never be won any other way—and never be ended in any other way.
C. L. DANCEY.

Mary Norton

SPEECH

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, August 4, 1959

Mr. GALLAGHER. Mr. Speaker, as a tribute as to the high esteem in which the late Mrs. Mary T. Norton was held by everyone, it is best expressed in the editorial which appeared in the Jersey Journal of August 3.

I would like to make this editorial part of the record of feeling that everyone held for Mrs. Mary T. Norton.

[From the Jersey Journal, Aug. 3, 1959]

MARY NORTON

Everywhere in the Nation today, people are recalling that it was Mary Norton who first really carved out a meaningful place for women in the Halls of Congress. Jersey City and Bayonne sent her to the House of Representatives not as a woman, nor merely as the widow of a Congressman, but as a capable legislator who could hammer out the Nation's laws as well as any man, if not better.

Historically, she was just what the Nation needed when many Americans were still wary of the effects of the suffrage newly extended to women and their participation in public life. Mrs. Norton was aware of her role as a trailblazer, and she met every challenge.

In 1925, when it was generally held that women Representatives had better be seen

and not heard, Mrs. Norton was outspoken, right from her freshman year. She later headed important House committees. As head of the District of Columbia Committee, she was virtually mayor of the Nation's Capital. She was the first to introduce a bill to repeal the prohibition law. She was chairman of the House Labor Committee which made a minimum wage-hour law part of the American laboring standard.

That Mary Norton's extraordinary congressional career should have originated in Jersey City is something for her hometown to boast about, even in this hour of mourning.

About "Pop"

EXTENSION OF REMARKS OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. PORTER. Mr. Speaker, a constituent of mine in Medford, Oreg., recently wrote asking, "Which is the purest soft drink on the market?" Miss Lynn Koch told me she had heard many pros and cons on this subject and she requested advice.

I referred her letter to the Food and Drug Administration and an answer was forthcoming almost immediately. Commissioner George P. Larrick noted:

1. We know of no soft drinks on the market that would be considered harmful when consumed in the usual amounts by persons in normal health.
2. We know of no basis upon which to consider one soft drink as better than any other, since an individual's personal choice as to flavor and other characteristics of a particular product is the ordinary method of selection.

Commissioner Larrick went into further detail in answer to Miss Koch's question and her observation that she was "lost without pop."

Miss Koch's question and the agency's reply is of general interest, I believe, and under leave to extend my remarks in the RECORD I include her inquiry and the Food and Drug Administration's reply:

MEDFORD, OREG., July 5, 1959.

DEAR MR. PORTER: I have heard many pros and cons on this subject and I would like the question settled right now. Which is the purest soft drink on the market?

I know that you have all the information handy and through this information you could give me the facts. I would like to know which is the purest and the best for a person.

I hope you can get this to me soon because I'm lost without pop and I don't want to drink any that is not good for me.

Thank you so much for your time and trouble.

Sincerely,

LYNN KOCH.

DEPARTMENT OF
HEALTH, EDUCATION, AND WELFARE,
FOOD AND DRUG ADMINISTRATION,
Washington, D.C., July 27, 1959.

HON. CHARLES O. PORTER,
House of Representatives,
Washington, D.C.

DEAR MR. PORTER: This is in reply to your request of July 21 for information on soft

drinks, which was the subject of a letter you received from Miss Lynn Koch of Medford, Oreg.

There are numerous soft drinks on the market in this country. Many of these products are manufactured and sold only in the State in which they are made and thus are not subject to regulation under the Federal Food, Drug, and Cosmetic Act.

Most of these products are quite similar in composition, and are made up of carbonated water, sugar, harmless colorings and flavorings, and a harmless acidulant. Some contain natural flavors such as lemon or orange oil, others contain a small amount of fruit juice, while others contain harmless imitation flavors.

We know of no soft drinks on the market that would be considered harmful when consumed in the usual amounts by persons in normal health. Most cola-type beverages contain between one-third to one-half grain of added caffeine. This is equivalent to about the caffeine in one-third of a cup of coffee. Caffeine has a stimulating effect which differs widely between individuals. Individuals who find coffee unduly stimulating, particularly at night, should recognize that cola beverages may exert similar effects. The amounts of caffeine in these products, however, are generally recognized as safe by authorities in this field. Aside from the sugar content of these products, they possess no other significant nutritional properties.

We know of no basis upon which to consider one soft drink as better than any other, since an individual's personal choice as to flavor and other characteristics of a particular product is the ordinary method of selection. If any evidence were available that a particular one were harmful, we would take action under the Federal law to remove it from the market. We are confident that similar action would be taken against a harmful product under State or other local laws if the article were not subject to Federal control.

We hope these comments will be helpful. If further information concerning this matter is desired, we shall be glad to try to furnish it.

Sincerely yours,

GEO. P. LARRICK,
Commissioner of Food and Drugs.

Aid for Impacted School Areas

EXTENSION OF REMARKS OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. GUBSER. Mr. Speaker, the August 5 edition of the Washington Post and Times Herald, on page A-12, carries an article concerning an administration proposal to reduce aid to federally impacted school areas by \$61 million, which is now being considered by the House Education and Labor Subcommittee on General Education. The account relates that six "House Members complained that the denial of aid placed an unfair burden on the schools in their districts. The money has been appropriated to help school districts whose enrollments have been increased sharply by the impact of military installations."

In view of the deficit budget, there can be no quarrel with the thought that economy must be practiced somewhere

if expenditures are to be made elsewhere. Our colleagues who have attacked the move to reduce the aid program by \$61 million should be pleased to learn that the Treasury would have this sum available if we accepted the Pacific Gas and Electric Co.'s proposal to construct the Trinity River power facilities with its own funds. We certainly are not critical of these Members opposing this reduction since they undoubtedly feel it would work a hardship in their own districts.

However, in order to be helpful to them and others of my colleagues in the House, I am calling their attention to the fact that the administration is strongly advocating joint development with this regulated utility of the Trinity River project, and seeking to reduce aid to federally impacted school areas in the same amount; the answer is obvious: the \$61 million which the Government would be spared by not building the Trinity generators itself could be diverted to aid impacted areas.

The Post article referred to, above, follows:

MOVE TO CUT AID FOR IMPACTED AREAS STIRS ATTACK BY SIX HOUSE DEMOCRATS

An administration proposal to reduce aid to federally impacted school areas—including Maryland and Virginia—ran into more opposition yesterday.

The move to reduce the aid program by \$61 million was attacked by six Democratic House Members at a hearing before the House Education Subcommittee.

The proposal would cut \$3.5 million from the aid to Virginia and \$2.4 million from Maryland's share.

The House Members complained that the denial of aid placed an unfair burden on the schools in their districts. The money has been appropriated to help school districts whose enrollments have been increased sharply by the impact of military installations.

One Representative, CLEM MILLER, Democrat, of California, criticized the cutback as a typical administration effort to make problems disappear through "formulas and abracadabra."

Others who testified were Representatives JAMES M. QUIGLEY, Democrat, of Pennsylvania; D. S. SAUND, Democrat, of California; PORTER HARDY, Jr., Democrat, of Virginia; HARLAN HAGEN, Democrat, of California, and NEAL SMITH, Democrat, of Iowa.

A Cyprus in the Foothills of the Alps

EXTENSION OF REMARKS OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. BOSCH. Mr. Speaker, under leave to extend my remarks, I include the following article which appeared in the New York Times on July 29, 1959, which I commend to the attention of my colleagues:

A CYPRUS IN THE FOOTHILLS OF THE ALPS (By C. L. Sulzberger)

VIENNA, July 28.—A dispute that has smoldered 40 years in the mountainous South Tyrol again is poisoning relationships be-

tween Austria and Italy. If this cannot soon be pacified there is distinct possibility that violence may flare in the disputed area. And, unfortunately, negotiations have reached a stalemate.

The Western world is so preoccupied with the cold war and with its efforts to adjust to the strident claims of newly independent Afro-Asian lands that it tends to forget until too late its own internecine quarrels. This was the case with Cyprus, where a wholly unnecessary little guerrilla war was permitted by negligence to erupt.

Cyprus, happily, has been pacified. But if the festering controversy over the South Tyrol continues for much longer, one can predict with almost mathematical certainty a bitter altercation between Rome and Vienna, accompanied by troubles from a Tyrolean underground.

The scale of this controversy seems minuscule when measured against other political agonies. In 1918 the Alpine foothills of Austria's South Tyrol were awarded to Italy and became the Province of Alto Adige. A German-speaking minority, now numbering a quarter of a million, was maltreated under Mussolini. After World War II, by special accord, Rome guaranteed certain autonomous rights to the former Austrians under its rule.

But Rome foolishly chiseled on the agreement. It added the Trento Province, heavily populated by Italians, to the predominantly German-speaking Alto Adige Province with which Austria is concerned. Thus, the administrative area whose autonomy would be assured became predominantly Italianate. And more and more Italians have since moved in, provoking the Germanic minority's resentment.

Rightwingers in both Italy and Austria are now pressing their respective governments toward increasing intransigence. Vienna's Parliament unanimously endorsed a strong Foreign Office attitude. And the present Italian Cabinet has so small a political majority that it dares not appear moderate for fear of losing extremist support and falling. Furthermore, Rome worries about demands for greater autonomy in Sicily and fears to establish a precedent in the north.

THE BERG ISEL GROUP

Vienna doesn't suggest changing the frontier. It merely wants further privileges for the Alto Adige minority. But in Austria's own North Tyrol there is less restraint. Revisionists led by Dr. Aloys Oberhammer publicly lay claim to the Italian South Tyrol. Behind them is a small Tyrolean organization called the Berg Isel Society. This is believed to have gathered arms and explosives to smuggle into Alto Adige.

Austrians who have recently visited that Italian mountain region claim that a few hundred young hotheads there have stored dynamite for "action" if they do not obtain a new status by the end of October. They imply they will blow up vitally important hydroelectric stations. And in the distant background is a vague pan-German movement. The Bonn Republic has maintained a correct hands-off policy; but German nationalists have not.

In this impasse Vienna talks vaguely of bringing the matter before the World Court or the U.N. However, some legal experts say it could only be raised in the U.N. as a threat to the peace. Extremists consequently argue that bloodshed is a requisite preliminary to such action.

Thus, the problem becomes inexorably worse. The Rome and Vienna Governments are in political straitjackets which hamper their ability to compromise even if they should be so inclined. This deadlock favors neo-Fascist elements in both South and North Tyrol. So far Russia has remained aloof. How long will it refrain from trying to fan the flames between NATO Italy and neutral but pro-Western Austria?

A decade ago there were similar storm warnings over Cyprus. Yet the West chose blandly to disregard these while hoping for the best. Such wishful thinking allowed a running sore to become cancerous. A handful of Greek Cypriots transformed vehement protests into a partisan war.

The lesson of that tragedy was that disinterested friendly powers like the United States should attempt the role of honest broker while there is still a chance for constructive diplomatic action. We failed, until too late, in Cyprus. Now time is running out in South Tyrol.

Dancey in Russia

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the 13th, 14th, and 15th in a series of articles by Editor Charles L. Dancey appearing in the Peoria Journal Star:

MYSTERIOUS WOMAN TURNS UP ON TRAIN TO ROSTOV

(By Charles L. Dancey)

TRAIN TO ROSTOV.—As I left my room for the long walk down on the flights of stone steps through the gardens, etc., to the car to leave Sochi and catch a train to Rostov, Eugene joined me.

"Would you mind riding with a young lady to the station?" he asked. "She just got in, is very attractive, also an American, and she is leaving on the same train in the same carriage with you. I think you'll like her very much."

I thought he was kidding.

People don't just drop out of nowhere in Russia and turn up at the last minute as traveling companions—Americans especially.

In Yalta, Natasha had asked me what I was really doing in Russia. She had said, "You are no tourist. All tourists are old and rich and proud. And they don't travel alone."

Others had made similar remarks about age and traveling alone. Yet here suddenly heading for a place not a normal tourist spot, come from I don't know where, is supposed to be a young American woman traveling alone.

In the limousine, she sat, as real as could be. Maybe 25 years old, well dressed, made up, and peculiar only in being there at all and having fingernails about an inch long.

She talked American as Peoria, itself (said she was from California but volunteered little more). There was no trace of Gregory Ratoff here.

We rode to the station and boarded the train. Here was none of the crowding I'd heard much about, and none of the four-person sleeper compartments with mixed company folks talked about in Yalta (it certainly crossed my mind).

Instead we were ushered into a luxurious car where I had a private compartment, my mysterious companion another, and only two other rooms were occupied.

She came tripping back to my compartment loaded with fruit, bread, and other chow, and the white-coated whatever-he-was promptly popped in with a couple of cups of tea.

I made sure the door was left open, and I answered her running series of questions, but while it may have been pretty silly, I couldn't help figuring that this girl was either some kind of a nut, or something even more dangerous. I played it very cool.

What really threw me was when she asked what I planned to write about—and up to this point I'm sure I'd never mentioned any newspaper connection.

Now, Eugene could have told her—but if he did he gave her a devil of a lot more briefing off my passport than he gave me from hers.

In any case, I acted as dumb as possible (which comes naturally and easily I'm afraid), and as completely worn out as possible—the conversation wound down to nothing, and eventually she went back to her compartment and I went to bed.

In the morning we arrived at Rostov, and an Intourist guide was right by the tracks waiting. When I joined her she was standing talking to my companion of the train, who said goodbye, got back aboard, and continued on to wherever she was going while I went off to take a look at Rostov-on-Don * * * and try to catch a riverboat up to Stalingrad.

There were no other Americans in Rostov.

REDS REGARD SUNDAY AS REGULAR WORKDAY

(By Charles L. Dancey)

The Communists no longer abolish religious worship, but they are attacking it on two sides: (1) they have abolished Sunday as we know it, and (2) they have abolished religious teaching of the young.

Yet they have not stamped out religion in 42 years of trying. They say they will have it completely liquidated in another 50 years.

They have abolished Sunday simply by working a 6-day week and then dividing up the various normal business and office activities of a city into seven parts, each group working a different 6 days and having a different day of the week as the day off.

Thus, theoretically, only one-seventh of the city's employed are off on Sunday.

They say this is very "efficient," having recreational facilities (beaches and parks in particular) in heavy use every day and not overloaded on any given day. Actually, Saturday afternoons and Sundays still find crowds heavier than weekdays.

The real effect of this on churches is to make every day, to a degree, a "Sunday," so far as services are concerned.

I was able to visit half a dozen active churches—but none on a Sunday morning. I understand there is a larger service Sunday than on any other day.

Curiously enough, although I visited at odd hours on odd days, there was a small service underway for 20 or 30 or 40 people every time I came to a church. And every time the guide in that city remarked that this was very unusual. Most of the people are older, but not all of them.

Every guide also gave me the same propaganda spiel—that only the old and illiterate still "believe" in the "magic" and "superstition" of religion. They tell of supposed atrocities, claim that the church extorted money from the poverty-ridden peasants with threats and "mumbo-jumbo," and ridicule the incense, the rich ikons, and the colorful ceremonies.

Every guide that gave me this "pitch" giggled nervously as she did so, and every single one ended her long speech with: "Are you a believer?"

I must admit that in this atmosphere the first time this question came after such a description of "religion" I fumbled for an effective answer, but each time thereafter I was ready for them.

I would say: "What do you mean? A believer in what? Certainly not in all the things you have described as 'religion.' But I believe in God. However, I will tell you in what way I am an unbeliever. I do not believe that all the perfect order of the world of nature and of space which your scientists are revealing came to be by some accident or coincidence without a plan and a planner."

The Russians have it constantly drummed into them that nothing can be accomplished without central planning so this argument usually silenced their antireligion pitch.

One guide, however, simply fired back that "it is stupid to believe in religion." I told her that if it is stupid to believe in a God with perfect wisdom, it is much more stupid to believe that there is perfect wisdom in the writings of a 19th century German hack named Karl Marx.

To the question, "What do you believe?" they reply, "I believe in man."

This is the religion preached to the masses. A religion of science and health, but more than that of the hero-gods who have led and now lead the Communist Party. This is a throwback to the barbarian religions of humanism, elevating men to the status of hero-gods.

In the Moslem areas, the same tactics apply. Here, however, one can identify believers because the men wear a white roll as a sort of brim on their turbans, and the women wear a snow-white loose dress. One constantly sees a scattering of these believers even among the people in the heart of the urban centers.

There is also the Communist "religion," the true faith of this "elite corps." Its basic tenet is that the overthrow of capitalist society is historically and scientifically inevitable.

The "elite" who perceive this "scientific" truth and place themselves in the vanguard of this overthrow will inherit the world, as heirs of all existing political governments, all existing social aristocrats, and all economic capitalists. Those who do everything possible to hasten the day will be in this vanguard. Those who miss any such opportunity will not.

This dream of an invincible destiny is what drives them on, a destiny that will make the party members rulers of the masses, economically, politically and socially.

This is a religion of power, not of humanitarianism—and its bible consists of the works of Marx and Lenin with comments by Stalin, Mao Tse Tung and Nikita Khrushchev.

But for an organization whose own religion is based on a theory of history, they seem to have studied very little real and true history.

Otherwise, how could they be so confident that by forbidding religious instruction they will stamp out Judaism in 50 years?

Six thousand years of history say this is nonsense.

WAR HISTORY A LA RUSSIAN "BURNS HIM"

(By Charles L. Dancey)

Rostov.—Only here from noon until 7 p.m., when the boat heads upriver toward the Volga and Stalingrad, but an Intourist guide named Nina (Neena) met me at the train, took me in tow the entire time, and delivered me at the boat.

In Rostov, thus, in rapid succession I saw the inevitable stadium, theater, bank building, apartments under construction (and completed), and large, beautiful beach.

It is a factory town with workers living near the factories in more-or-less self-contained little areas (they must walk to work, in most cases) made up mostly of little,

square houses, one story, surrounded by high rickety fences.

I was also shown a TV tower, but saw no antennas, and was told the station began a year ago.

They say 70 percent of the city was destroyed during the war. It was fought over and taken and retaken several times. A few ruins remain. Much has been rebuilt. Much is building.

Here again I heard the question asked, "Nemyets? (German?)". And the questioner being reassured: "Nyet, Amerikanyets."

It seems to make a big difference to them. Here too was the inevitable historical museum where one is not-so-subtly given a large dose of Red propaganda.

They start with the little Greek statues of Athena dug up there and Greek weapons of ancient times, thence to Rostov as a fortress against the Turks, and to the history of the famed Don Cossacks and weapons and armor of the Russians, Tartars, Cossacks, and Turks.

Finally they come to World War I, "the first imperialist war," the revolution, the civil war in Russia (with no mention of the general who led the Reds to victory—Leon Trotsky) and a big set of pictures and weapons designed to show that when "the workers" came to power the Germans, French, British, and Americans, as capitalists, all joined forces against the revolution.

This burned me up, inasmuch as the Bolsheviks overthrew the liberal Kerensky regime that had deposed the czar largely by winning over the Russian troops with promises of peace. Indeed, Lenin had been in exile and the Germans put him on a special train and rushed him through the territory they occupied after the Russian revolution to get him in there and get Russia out of the war.

Then, when he did get to power and did make peace with Germany, the allies (who regarded Lenin with justice as a German agent) landed covering forces at key ports. These were, of course, withdrawn after Germany's surrender.

The Reds have rewritten all this. Now Lenin was there all the time. He is not associated with the nasty Germans. And all capitalist countries attacked the worker regime at the same time. As a final touch, according to them, they proceeded to whip us all.

Then, we come to what we call World War II. In Russia, this is known as "The Great Patriotic War." (Note: When Germany attacked Poland and later France, the official label was the "Second Imperialist War" during which Stalin cooperated with Hitler and grabbed off Lithuania, Latvia, and Estonia, plus part of Poland.)

This is also passed over.

This is not only the history they teach in schools but it is drummed into people in museums like this in every city, with physical exhibits and photos.

Ah, well, on to Stalingrad.

Distributive Rights of Foreign Beneficiaries as Affected by State Action

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 23, 1959

Mr. TOLL. Mr. Speaker, I would like to call to the attention of the Members of the House an important article,

which appeared in the June 1959 issue of Dickinson Law Review, on the "Distributive Rights of Foreign Beneficiaries as Affected by State Action." This article was written by two distinguished and learned members of the Pennsylvania Department of Justice, Deputy Attorney General Ralph S. Snyder and Special Assistant Attorney General Irvin Stander.

The article refers to recent Pennsylvania developments but also includes references to the situation in Oregon, New York, Michigan, Missouri, Nebraska, Vermont, New Jersey, Maryland, Massachusetts, Rhode Island, Connecticut, Ohio, California, Montana, Nevada, and Iowa.

A Pennsylvania decision rendered by the Philadelphia Orphans' Court in Zupko's Estate brought forth an excellent opinion by Judge Robert V. Bolger, which upheld the constitutionality of the Pennsylvania act of 1953 on the subject of the protection of the beneficiaries living in foreign countries.

The reference in the article to the testimony of the Commonwealth's witness regarding the Soviet law is so enlightening with respect to the ownership of private property that the portion of the article is herein set forth in full:

When one considers the 400 pages of testimony heard by the court, including the testimony of the witnesses for the claimants and that offered by the Commonwealth, regarding Soviet law, economics, and political system, the veiled facade of the so-called people's democracy is destroyed. The Commonwealth's principal witness was Dr. Vladimir Gsovski, Chief of the European Law Division of the Library of Congress since 1931; lecturer at Georgetown University; author of two volumes on Soviet civil law; Director of Mid-European law project; editor of "Highlights of Mid-European Law and Activities"; graduate of the University of Moscow, 1913; Law School, University of Bratislava, 1926; and a former Russian lawyer and judge. He testified at great length about the insecurity and actual danger in the ownership of private property in the Soviet. He documented his testimony by citing chapter and verse from the Soviet Constitution, civil code, criminal code, published decisions of cases, and writings of legal authors.

The following important references to his voluminous testimony serve to illustrate how fully he proved the fact that Soviet beneficiaries would not have the benefit, use, enjoyment, or control of their distributive shares:

(a) He quoted from Professor Malitsky's book "Civil Code of the Soviet Republics" which states:

"Here lies a basic difference between Communist law and capitalistic law. The capitalist law is based upon the abstract (natural) rights of the individual. It places the individual in the center of the world, surrounds him with a cult, and therefore establishes limits to the state . . . however, the proletarian state limits the acts not to itself but to its citizens. . . . The proletariat bestowed rights upon the citizens of the state, but set for each person limits to private liberty to be observed in the exercise of private initiative."

(b) The Soviet Constitution, though it uses the term "private ownership" in only one place, provides that all private ownership of the means of production are abolished.

(c) Section 4 of their constitution calls for the liquidation of the capitalist system

of economy and the abolition of private ownership of the "instruments and means of production."

(d) Section 5 of their constitution places the ownership of all property in either the form of state ownership or the form of ownership of cooperatives or collective farms.

(e) The only form of ownership given to individuals is not of "private property" but "personal ownership" of their earned income, savings, dwellings, household effects and utensils, objects of personal consumption and comfort and the right of succession in personal ownership under section 10 of the constitution.

(f) The conduct of business for gain is prohibited since it involves ownership of the "instruments or means of production," except for artisans who do not employ hired labor.

(g) Despite the continued presence in the Soviet of some few independent farmers, the farmer is not permitted to own more than one cow, and two calves. He may not own a draft horse or oxen since these are instruments of production.

(h) Even artisans are proscribed in their activities. A tailor may produce a suit for a given customer, but is prohibited from any production for the market.

(i) The sale of goods in the open market by an individual subjects him to prosecution for committing the crime of speculation. The crime of speculation carries with it heavy penalties of banishment, imprisonment, and confiscation of property.

(j) There is no system of legal precedents in the enforcement of laws, and few decisions are published, since one of the basic doctrines in the Soviet system is "dialectic materialism," under which the Government does not want to have its own actions limited by its own courts or its own laws. This is a process of alternate progress and retreat dictated by circumstances.

(k) The criminal code can be applied ex post facto against acts which were not in violation when performed.

(l) The criminal code permits the prosecution of an act of a citizen as a crime by analogy to other offenses, leaving the interpretation of the analogy solely in the hands of the public prosecutor.

(m) Speaking of personal ownership, Dr. Gsovski stated: "My general conclusion is that personal ownership is in the darkest corner of the Soviet legal system, fenced in from all sides."

(n) Section 147 of the criminal code makes any contract invalid when "directed to the obvious prejudices of the state," and renders the contract unenforceable and the goods subject to confiscation. Any transactions involving a sale for unearned income would come under this category.

(o) A recent development in the Soviet has been the enactment of antiparasitic laws in many Russian states which subject persons living on unearned income to banishment in a proceeding by public judgment of the persons living on his street, in his apartment house, or in his collective farm.

(p) Russian citizens may not enter into any transactions involving foreign currency since this is a monopoly of the state bank.

(q) Any foreign currency received by a Russian must be deposited in the state bank where he receives rubles at the official rate of exchange.

(r) There is no system of redress by a private citizen against the Government or its administrative agencies, merely a right of complaint.

(s) There still exists the power in the Ministry of the Interior to banish persons for dangerous activity without any specified definition of the crimes involved, or guarantees of fair trial or right of appeal.

(t) The Soviet Constitution itself has been amended by various bodies without proper

notice or the guarantees usually associated with changes to a basic charter.

(u) When asked specifically his opinion regarding the right of a Russian national to the actual use, enjoyment, benefit, and control of moneys which might be sent from a Pennsylvania decedent's estate, Dr. Gsovski stated:

"The restrictions are so numerous and so indefinite that the actual use, enjoyment and control is reduced to a minimum and the such small portion of the money which the recipient would get under the exchange regulations, could only be used in a very limited way for a very limited purpose and for articles of personal consumption only."

(v) Private ownership of land is prohibited in Russia, although a person can buy a small house and place it on land assigned to him.

(w) Dr. Gsovski concluded by pointing out the various perils facing Soviet citizens who receive a sum of money from the United States, even though it be a small portion of the money sent because of the currency regulations. These perils include:

1. Possibility that the money may be considered unearned income which is not protected by the Soviet Constitution.

2. The use of the money to purchase articles which are not strictly necessary may be deemed dangerous activity, prejudicial to the state.

3. The attempt to sell any excess belongings purchased with this money might be subject to prosecution as speculation.

4. The mere use of the money for living purposes might be subject to prosecution for parasitism because it would be considered as living on unearned income.

The Commonwealth's expert witness on the restrictions imposed by the Soviet economic system and the Soviet currency regulations on foreign bequests was a specialist in the Soviet economy, Leon H. Herman, Economic Analyst for the United States Library of Congress. Mr. Herman is a trained economist who has published and lectured extensively on the Soviet economy. He reads and speaks the Russian language and uses for his source material Russian newspapers and economic publications, as well as official dispatches from the various U.S. officials in Russia. His prior experience includes almost 10 years of service in the U.S. Department of Commerce where he rose to the position of Chief of the U.S.S.R. section in the Bureau of Foreign Commerce.

Mr. Herman testified at length regarding the shipment of parcels to Russia, exchange regulations, purchasing power of the Russian ruble and standards of living in Russia and covered the following salient points:

(a) Parcels may be sent to Russia with certain limitations as to size, value and content. While they can be sent duty free this method imposes an insurmountable burden of paying the prohibitive duties on the recipient, and therefore the common method is to send the package with duty prepaid by the sender in U.S. dollars.

(b) One of the most troublesome limitations imposed by the Russians is that the parcel may not contain saleable merchandise.

(c) Since October 1, 1957, used clothing cannot be shipped in parcels to Russia.

(d) Prepaid duties on parcel shipments range from 25 percent to 250 percent of the value of the goods sent; on clothing the duty is 100 percent and on shoes 75 percent. On coffee, tea and cocoa that duty is 100 percent of value.

(e) The duties are prepaid in U.S. dollars and these go to the Soviet Government through the state bank.

(f) There are five additional charges on the sending of parcels levied by the Soviet Government for commissions, inspection fee, insurance fee, and two service charges by the shipping company.

(g) These prepaid duties collected by the Soviet Government on parcels shipped from the United States totaled \$1,700,000 during 1956. They were considerably higher in 1957 and amount to more than \$2 million.

(h) Shipment of dollars to Russia is prohibited and the recipient receives rubles, not dollars. Until April 1957 the recipient received 4 rubles per dollar, which is the official rate of exchange. Since then the United States Embassy has indicated that the Russian State Bank would pay recipient 10 rubles per dollar, but this is not the official rate, so the State Bank can resume the official rate at any time.

(i) Studies of the purchasing power of the ruble show that it is quite low, e.g., 4 rubles (\$1) for a pound of sugar; 8 rubles for a dozen eggs (\$2); 12 rubles (\$3) for a pound of butter.

(j) An analysis of the purchasing power of the ruble compared to the United States dollar shows that in the class of survival food items and luxury goods the ruble purchases from one-tenth to one-fifteenth as much as the dollar, which is a comparable ratio. However, in the class of nonsurvival items needed for everyday living such as wearing apparel, yard goods, suits, shirts, shoes, etc., the ruble's purchasing power drops to one-fiftieth of the dollar and buys on the average only 2 cents worth of goods although its official exchange value is 25 cents.

(k) In this class of goods, the Soviet controls consumption by imposing a hidden "turnover" tax which is reflected only in the increased selling price.

(l) The hidden turnover tax is used by the Soviet for its new capital expenditures and for the support of its military establishment. It represents from 40 percent to 60 percent of the total government revenue in Russia.

(m) The prepaid duties on parcels provide the Soviet Government with a sizable fund (\$2 million) per year for purchase of goods in the United States and for propaganda purposes.

(n) The Soviet has devalued and debased its currency many times. In April 1957, it suspended payments on government bonds for 20 to 25 years and thus wiped out over half of the currency value held by all Russians.

(o) The free market in rubles, which exists in many European countries and in the United States, quotes current exchange rates at 33 to 60 rubles for the United States dollar. Contrasted with the official rate of 4 rubles and the so-called premium rate of 10 rubles per dollar the free market fairly reflects the actual purchasing power of 2 cents per ruble in most cost-of-living items.

(p) Because the ruble has a 2 cents purchasing power in exchange for the dollar, the recipient of a money bequest would not get the actual use, control, benefit, or enjoyment of the funds which might be sent to him from the United States. The balance of the value of the dollars sent will be used for other non-economic purposes of the Soviet Government.

(q) Because of the heavy duties and other charges imposed by the Soviet the recipient of any parcel from the United States would receive a maximum of only 50 percent of the true value of the United States dollar used to purchase the goods in the United States, and the balance of the true value will be paid to the Soviet Government in the form of duties and charges.

The principal witness for the claimants was Prof. Harold J. Berman, teacher of comparative Soviet and American Law at the Harvard Law School and the Russian Research Center of Harvard University. Professor Berman testified at length regarding the Soviet legal system and form of government. While he attempted to show

a growing system of legal procedure in Russia, his testimony clearly revealed the shortcomings of their legal system in failing to protect the rights of the individual from governmental oppression and terrorism. Here are some of the pertinent admissions made by him on this subject during his direct and cross-examination.

(a) There is no effective constitutional restraint upon the power of the top leadership to change the law.

(b) Ex post facto laws can be and have been enacted in the field of criminal law.

(c) The top leadership of the Soviet can change any law under effective Soviet law.

(d) Most of his opinions as to the progress of the Soviet legal system were derived from conversations with judges, lawyers, and citizens and not from the usually accepted sources of the Constitution, statutes, and reported decisions of the courts. His testimony was almost entirely devoid of documentation.

(e) No Russian may purchase goods for resale without being guilty of the crime of speculation.

(f) The private ownership of real estate is limited to a private homestead without title to the land under the house.

(g) Ownership of the means of production is prohibited. If a loom or sewing machine is owned, the Soviet citizen can use it only to make his own clothes and he can employ no one to help him or to sell the products to others for gain.

(h) Foreign currency must be turned in to the State Bank for redemption into rubles at the official exchange rate.

(i) There is a provision in Soviet law for escheat to the state for nonclaimers of inheritances after 6 months from date of death.

(j) The rights of nonresidents of the Soviet are determined by the existence of treaties with the country of their nationality and there is no such treaty between U.S.S.R. and the United States.

(k) There is considerable doubt in Soviet law as to whether an American can inherit and receive moneys from a Russian estate.

(l) Banishment of a person for being socially dangerous still exists in the Soviet without any definition as to the elements of the crime.

(m) He admitted that, "one of the most vicious aspects of the Soviet legal system" is the "enactment in some instances of laws which are not published."

(n) The criminal code in Russia states that a person may be convicted of a crime analogous to other crimes in the code, without further definition of the nature of the crime.

(o) Antiparasitic laws are now being enacted in many Soviet States which make it a crime to live on unearned income. Trial is conducted by the neighbors of the accused and the penalty is banishment from 2 to 5 years. This law, the witness admitted, was "a violation of everything they had been proclaiming" about the progress of their legal system.

(p) The system of voluntary purchase of government bonds out of salaries was abolished in 1957 after an edict by the government postponing the maturity date of these bonds for 25 years. This repudiation or postponement involved 253 billion rubles of currency in Russia and amounted to one-half of the currency in circulation at that time.

(q) The U.S. Government prohibits the sending of any remittances from the U.S. Treasury of pensions, retirement funds, etc., to beneficiaries who reside in the Soviet.

(r) Berman affirmed a quotation from his own book "Justice in Russia," reading as follows:

"The restoration of law since 1936 although still a movement rather than an accomplished fact is one of the most significant

cant internal developments in Soviet Russia since 1917."

(s) He also affirmed a quotation from his own article in the Yale Law Journal of July 1957, stating as follows:

"Yet law and order cannot now be considered entirely secure in the Soviet Union. They can never be out of danger so long as the leadership endorses the philosophy that law is basically an instrument of force and that where the instrument fails, force must use more ruthless means. Nor can law be completely secure while the leadership believes that all social institutions and processes are essentially products of the time, of a given stage of historical development, and that there is nothing beyond the given stage, nothing sacred."

(t) The prepaid duties on parcels and the currency exchange rules on the remittance of moneys to Russia confer a distinct and substantial benefit to the Soviet Government.

One of the claimant's witnesses was Thomas V. Zug, trust officer of the Provident Traders Bank and Trust Co. Mr. Zug testified that he was in charge of the administration of this estate. He found four bolts of cloth in decedent's apartment and indications that these were to be sent to brothers and sisters in Russia. These were shipped to Russia through the Globe Parcel Service. Cross-examination revealed the extent of the prepaid duties and charges on these articles as follows:

(a) On a shipping invoice on which the cost value of the goods was \$38.10, the prepaid duty and shipping charges totaled \$45.10, over 125 percent.

(b) On a shipping invoice on which the cost value of the goods was \$16.40, the prepaid duty and shipping charges totaled \$29.95, over 175 percent.

(c) On a shipping invoice on which the cost value of the goods was \$32.90, the prepaid duty and shipping charges totaled \$42.69, over 130 percent.

(d) On a shipping invoice on which the cost value of the goods was \$40.10, the prepaid duty and shipping charges totaled \$46.40, over 115 percent.

From the testimony presented to the court, it appeared abundantly clear that the shipment of money or goods to Soviet beneficiaries is subjected to prohibitive charges for duties and currency exchange manipulations which serve only to fatten the Soviet exchequer. The benefit to the Soviet citizen is minimal and incidental. In the shipment of money the beneficiary receives rubles at a rate having a purchasing power of about 2 cents instead of the theoretical 25 cents produced by the official rate of exchange. Thus, the recipient gets only one-twelfth to one-fifth of the United States dollar sent, and the Soviet Government gets the rest.

In the matter of packages, the testimony clearly established that the duties on the most desirable goods range from 100 percent upward and the packages are limited as to value and content. Further additional charges are imposed for the benefit of the Soviet Government so that the actual benefit to the recipient is between 25 percent and 50 percent of the value of the purchase price of the goods sent, the balance going to the Soviet Government.

Overriding in these considerations, the testimony clearly established that the ownership of private property, as we know it, is extremely hazardous and tenuous in the Soviet Union. The Soviet laws, published or unpublished, existing or suddenly imposed on an ex post facto basis, and "subject to change without notice" are designed to discourage the ownership of personal property. Thus, Soviet beneficiaries of Pennsylvania bequests may be harmed rather than helped by the receipt of money from an estate.

Based on the overwhelming testimony of the Commonwealth's witnesses Judge Bolger made the following trenchant observations in his opinion:

"It is our opinion that although the testator gave his bounty to his brothers and sisters, residents of the U.S.S.R., that he did not intend them to be used as pawns through whom the Government of Russia would enrich itself at their expense so that they would receive little, if any, benefit under his will.

"The use of personal ownership and property rights is not only unprotected by Soviet law, but is also prosecuted.

"The finding is inescapable that minimal benefits would flow to the distributees and maximum benefits to the Soviet Government and would be available for uses inimical to the United States were the claimant's request granted."

Vice President Nixon's Trip

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 28, 1959

Mr. CHAMBERLAIN. Mr. Speaker, despite the trepidation held in some quarters over the outcome of Vice President Nixon's trip to Russia and Poland, it turned out to be a greater success than most dared to hope. Reflecting the general acclaim over his experiences abroad, and the skill with which he conducted himself, I include under permission to extend my remarks in the RECORD editorials from two daily newspapers in my district.

The editorials follow:

[From the Lansing (Mich.) State Journal, Aug. 4, 1959]

HISTORIC OCCASION

Vice President Nixon made the most of his unprecedented opportunity to talk to a mass Soviet audience. His speech to the Russian people on a nationwide radio hook-up and a special combine of 10 television outlets was polite but firm. In it he stressed the strength of both countries and the desire of the American and Soviet peoples for peace.

Mr. Nixon said that because both the United States and the Soviet Union are strong, peace must be based on mutual respect and not be a peace of surrender or dictation by either side.

The Vice President told the Russian people that Soviet Premier Khrushchev "can go down in history as one of the greatest leaders the Soviet people have ever produced if he devotes his energies and talents to building a better life for the people of his own country." But, he said, Mr. Khrushchev and his people will continue to live in an era of fear, suspicion and tension if his objective is promotion of the communization of countries outside the Soviet Union.

Mr. Nixon replied to Premier Khrushchev's recent prediction that the grandchildren of Americans would live under communism by saying that "we do not object to his saying this will happen" but that "we only object if he tries to bring it about."

Mr. Nixon stressed what he regards as the desirability of more contacts between leaders of the two countries and suggested regular radio and television broadcasts by Premier

Khrushchev to the American people in exchange for President Eisenhower being given the same privilege to talk to the Russian people.

For the chiefs of state of the United States and Russia to talk regularly to the peoples of the other country would be an innovation in the conduct of foreign relations. Whether such a plan would have the effect that Mr. Nixon seems to have in mind will be questioned by those who are convinced that what will be important in the future will be Kremlin policy as it affects the United States and the rest of the free world, not what Mr. Khrushchev says in speeches to the American people.

Mr. Nixon provided additional evidence that he sees the hope of improved relations between the United States and Russia in increased contacts between leaders of the two countries when he said Sunday that the Soviet Premier should be invited to the United States to correct his "very real misconceptions" about American policies and attitudes.

The American people learned Monday, however, that an agreement already has been reached for an exchange of visits by President Eisenhower and Premier Khrushchev. Mr. Eisenhower said that early in July he initiated the correspondence that finally brought about the agreement.

If Mr. Khrushchev has what Mr. Nixon calls very serious misconceptions about the United States in spite of all the information that has been available to him, a visit to the United States might serve a useful purpose.

It would seem, however, that reports by Deputy Premiers Mikoyan and Kozlov on their tours of the United States would have been helpful in clearing up the misconceptions.

Premier Khrushchev may have real misconceptions about America, but he should have known about the attitude of the people of Poland who gave Vice President Nixon the greatest reception he has had during his travels in 60 foreign countries.

Mr. Nixon was showered with flowers, applause and smiles by a cheering, singing crowd of 250,000 Poles who greeted him as he arrived from Moscow. The repeated shouts of "Bravo America" should be significant to Mr. Khrushchev as evidence that the hearts of the Communist-ruled Polish people are with the West.

The Kremlin can find no support for its anti-American propaganda line in the fact that the Polish people's welcome to Mr. Nixon surpassed in enthusiasm and perhaps in numbers the official reception for Premier Khrushchev in Warsaw 2 weeks ago.

Whatever effect Mr. Nixon's address may have had on the Russian people, initial reaction of Soviet officialdom made it clear that the Vice President's words have not moderated the attitude of the Soviet Government toward the United States.

Radio Moscow went on the air following Mr. Nixon's speech with an accusation that the vice president had distorted Soviet foreign policy and a claim that he had dodged the question of American bases encircling the Soviet Union.

Deputy Premier Kozlov, who had an opportunity to clear up misconceptions he may have had about the United States during his tour of this country, made a scathing reply to the Nixon speech, asserting that the United States does not practice what it preaches.

It is on the basis of the Kremlin's attitude as revealed in official Soviet statements and in Soviet policy pursued in normal contracts between officials and diplomats of the two countries that the United States must continue to evaluate United States-Soviet relations and issues.

What Premier Khrushchev might say in regular speeches to the American people would be far less important than what those who do his bidding say and do in Geneva or East Germany or Hungary or other places where representatives of the Kremlin speak for the Soviet Government.

Many Americans share Mr. Nixon's views on the desirability of increased contacts between United States and Soviet leaders it must be kept in mind that there is already an adequate opportunity in normal contacts between representatives of the two Governments for the Soviet Government to make known any improvement in its attitude toward the United States.

[From the Flint (Mich.) Journal, Aug. 4, 1959]

NIXON IN POLAND

The great welcome given to Vice President Nixon in Poland was touching evidence that the people of Poland still have a very deep friendship for the United States. The nature of the welcome also served to emphasize that in the hearts of the people of Poland the spirit of freedom still is strong.

This welcome was not engineered. It was spontaneous. And one must wonder what Nikita Khrushchev thinks about it. The welcome given to him on his recent visit to Poland was pale, in comparison. The lesson should be clear enough to the Russian dictator.

The welcome—250,000 people—also was evidence that the Voice of America broadcasts are being heard regularly inside Poland. The official press and radio had not even announced the time of Nixon's arrival, saying only that it would be on Sunday. The Voice of America had been broadcasting the details of Nixon's visit for 3 days.

Another factor that makes the welcome so remarkable is that Polish officials took Nixon into town along a route not usually used for visiting dignitaries. Nevertheless, throngs lined the 15-mile route from the airport. Men, women, and children cheered the U.S. Vice President. Obviously, the people of Poland were determined to salute this representative of democracy.

Another indication of this was that 5,000 Poles were on hand when Nixon laid a wreath at the tomb of Poland's Unknown Soldier. There had been no advance announcement of the wreath-laying.

It is reported the crowd hushed when Nixon laid his wreath of red, white, and blue flowers, with a card reading: "In memory of Polish war heroes, from the people of the United States." How this must have stirred memories of gallant Poland's battle against the Nazi hordes—and the stab in the back administered by Soviet Russia.

The cries of the crowd must have an unpleasant ring in the Khrushchev's ears. They included, "Long live Nixon," "long live the President of the United States," "long live America," "we love Americans."

No, the Communists have not succeeded in crushing the spirit of the people of Poland. They never will.

Banks Grow Cool to Student Loans

EXTENSION OF REMARKS OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 16, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues

the following item which appeared in the New York Herald Tribune of June 14, 1959:

BANKS GROW COOL TO STUDENT LOANS

(By James J. Morrisseau)

New York State's effort to provide guaranteed low-interest loans for college students appears at the end of its first year to be a noteworthy success—everywhere but in the heavily populated suburbs of Long Island.

The New York Higher Education Assistance Corp. was set up by the legislature in April 1957, and issued its first loans on June 30, 1958. Since then, it has guaranteed loans totaling \$3,045,246 to 5,557 students.

PLIGHT OF LONG ISLAND STUDENTS

Thus, in the words of Donald G. Eichmeyer, assistant secretary of the corporation, the program has been a tremendous success.

Nevertheless, students and potential students who live on Long Island have in many cases found it impossible to secure loans under the HEAC program.

Only \$273,000 in loans to 473 students have been granted so far by the 6 banks in Nassau County and 13 in Suffolk County that are listed as participants in the program.

At least two of them, the Bank of Rockville Centre Trust Co. in Nassau and the Suffolk County National Bank of Riverhead, are no longer issuing loans under the program.

The primary problem is not limited to Long Island. Very simply, the interest and repayment provisions of the HEAC plan are not attractive to bankers.

LIMITED TO \$5,000

As the program is now set up, a student may borrow a maximum of \$500 in his freshman year, \$750 each for his sophomore and junior years, and \$1,000 for his senior year and for succeeding years of postgraduate study, but is limited to a total loan of \$5,000.

Thus the student may borrow up to \$5,000 over a period of 6 years, during which time he is required to pay only the interest on the outstanding loan—fixed by the corporation at a rate of 4 percent simple interest. Repayment of the principal, on the basis of an agreement reached between the student and the bank, does not begin until 3 months after graduation or other termination of studies.

"The package," said Grant Van Sant, vice president of the Long Island Island Trust Co. in Garden City, participating bank, and a member of the New York State Bankers Association Committee on Financing Higher Education, "is not palatable enough to make it generally acceptable to the banks in the State."

Another bank officer, who admitted that his institution had processed no applications and made no loans for several months, said his bank would participate in the program, but with little enthusiasm.

MORE IN MORTGAGES

Several observers said the problem was more acute on Long Island because there is more interest in college educations among suburban families and because of the rapidly growing population.

At the same time, new home construction on Long Island has created a heavy demand for mortgage money, which brings the banks a far greater return than the 4 percent on student loans. One banker pointed out that it costs the banks 3½ percent to borrow from the Federal Reserve system, so that, with operating expenses, they actually lose money on the student loans.

This, despite the public service nature of the student loan program and the admitted dividends in good public relations, is hard for the bankers to swallow.

The drawbacks are so serious that Nassau County's two largest banks have refused to

take any part in the HEAC program. They are the Meadowbrook National Bank in West Hempstead and the Franklin National Bank in Franklin Square, each with more than 30 branches, blanketing the county.

SOME QUOTAS ARE SET

The refusal of these banks, despite repeated overtures from the HEAC, to join the program has shifted the demand to the six participating banks in Nassau, all of which are smaller and operate with fewer resources. As a result, the participating banks have had to limit loans to students from their banking area, to set quotas on the total loans they will make and, in some cases, to suspend or discontinue the loan service.

Both Meadowbrook and Franklin National have announced great interest in the program, and a willingness to participate providing that a more equitable interest and repayment schedule can be agreed upon. They have also asked that parents be required to cosign the loan if the student is a minor.

Meanwhile, the Nassau students will find little relief outside their home county. Most banks in the program have adopted the rule that loans will go only to residents of their banking area, and in some cases, to applicants whose parents or relatives have deposits in the bank. Most banks adopted the rule early in the program when Westchester and Nassau students flocked to New York City and Suffolk to apply for loans. The County Trust Co. in Westchester has since joined the plan, cutting off emigrants from that area.

Suggested improvements in the program are now under study by the assistance corporation's board of directors, according to Mr. Van Sant. Most of these involve elimination of some of the redtape and improvement of the cumbersome method of computing interest.

But suggestions that the interest rate be made variable—pegged to 1 percent above the prime rate of the Federal Reserve System—have so far met an unwilling audience at the corporation. And there have been no results so far in the bank's attempts to vary the length of the repayment agreement rather than face a 6-year plan which the borrower now may demand.

There seems, however, to be optimism even among the nonparticipating banks that the kinks will eventually be ironed out of the program.

Certainly, there can be no question that the granting of substantial financial assistance to more than 5,000 students with the cooperation of 211 banks during the corporation's first year of operations is an important and commendable achievement.

The Great White Fleet: A Mission for Humanity

EXTENSION OF REMARKS OF

HON. GEORGE S. McGOVERN

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. McGOVERN. Mr. Speaker, as one of the sponsors of a concurrent resolution calling for the use of some of America's idle warships in a worldwide mission to transport surplus food, medical assistance, and technical aid to distressed peoples, I am deeply moved by the manner in which the American people have

opened their hearts and minds to this proposal. My own South Dakota constituents who have written to me on this theme have endorsed the Great White Fleet idea without exception.

The deep humanitarianism of the American people and their basic religious faith in the brotherhood of man shines through the letters coming to me and to other sponsors of the mercy fleet proposal.

I am grateful to Commander Manson of the U.S. Navy who conceived of the idea, and to Life magazine for so effectively publicizing it.

Here is an idea in which all Americans can share by modest voluntary contributions. It will dramatize America's material and spiritual strength for all the world to see. It will give us a powerful instrument in the competition with communism for the uncommitted masses of the globe. Most of all, it will be good for the soul of America to thus heed the admonition of the Great Teacher that we feed the hungry, clothe the naked, and minister to the afflicted.

The Navy has many ships lying idle in American harbors—including four completely equipped hospital ships. We have other ships filled to overflowing with surplus farm commodities that are beginning to deteriorate. We have a host of the world's finest doctors, nurses, and technicians. We have millions of citizens who would contribute dimes, quarters, and dollars to finance the staffing and supplying of the mercy fleet.

Why should we delay in activating a small portion of our mothball fleet and devote it not to the science of killing, but to the science of healing? This idea may well be grabbed up and put into operation by the Soviet Government if we do not hasten to implement it.

The finest minds in the United States have deplored the unfortunate tendency of American foreign policy to react in a negative way to Soviet moves. There is a widely felt need for a more positive, imaginative U.S. foreign policy that would give America the initiative. We desperately need to hold up to the world the image of an America that has a positive faith and a constructive foreign policy of its own.

Who can cite a more effective device to dramatize to disaster and distressed sectors of the globe that America is concerned about all of God's creatures?

Listen to some of the letters I have received in reply to my White Fleet newsletter of July 25 which I will ask to have printed at the close of my remarks today.

A successful insurance man, who is a long-time fellow townsman and friend of mine, M. A. Hoellwarth of Mitchell, S. Dak. writes:

The Great White Fleet is the most important idea that has come across the brain of Christian man in a long while. Let's do it, as it is an opportunity to show the people in our world that Americans are unselfish and love their fellow man wherever he may be. One hundred percent endorsement.

A banker from Huron, S. Dak., Mr. Arlo Swanson, said:

I just finished reading your Washington report of July 25 in connection with the Great White Fleet for promoting peace and better relations between our Nation and less fortunate nations in the world today. I can see no better way to promote good will and peace than using our surplus grains and some of the ships that are in mothballs in giving food and medical care to the underprivileged of the world. I wholeheartedly support this movement and certainly encourage you to back it up.

Mr. and Mrs. Elmer Heide, who live at Canton, S. Dak., which is also the residence of my mother and my sister, have written:

We are especially interested in the Great White Fleet and sincerely hope it will become a reality soon. Certainly, a project like this is in harmony with the great commission of Jesus Christ. How can we make disciples if we neglect these crying needs?

Charles O'Neill, telephone manager of the city of Brookings, S. Dak., observed:

It is my sincere hope and prayer, that the idea of the White Fleet will very soon become a reality, as I am fully convinced that such a gesture by the American people and their Government can do nothing but good wherever applied. I surely would hope that there are enough intelligent men in the Congress to vote such a measure into existence. Direct humane relief is, as you have many times mentioned, our best defense against communistic aggression, especially in India, Greece and the other disease- and poverty-besieged countries.

A most enthusiastic response comes from H. R. Brekke of Madison, S. Dak., who said:

The idea of the White Fleet is the greatest idea of the century. In my opinion, it is a fulfillment of scripture of "Do unto others as you would have them do unto you."

One of my fellow World War II comrades who is also a resident of my hometown, Arthur Buehler, of Mitchell, wrote:

I wish to express my opinion about your supported idea of a new White Fleet. I, too, saw firsthand, as a soldier in Europe during World War II, such hunger and misery as you have described. I want to say that I am wholeheartedly in favor of the proposed idea.

I believe that Mr. Fred Becker, a jeweler from Mobridge, S. Dak., has expressed the reaction of many Americans when he observed:

People have been wondering why the Government has not been doing this for many years. It is a good plan.

A treasured friend of mine from Yankton, S. Dak., Emma Meistrik, has told me that:

Most persons are in sympathy with your program of disposing of U.S. surpluses to needy persons overseas.

Another Yankton resident, an attorney and businessman, Mr. John E. Walsh, has written:

As a citizen, I believe this would be a marvelous program and one which would be extremely meritorious. You should have the support of all of your constituents. I trust that it will be successful.

Rev. Einar Michaelsen, pastor of the Congressional Church at Brentford, S. Dak., has raised a most interesting ques-

tion with regard to the White Fleet proposal that deserves careful consideration. A portion of his letter follows:

I was pleased to read in the Aberdeen-American News that you also are advocating U.S. sponsorship of a White Fleet. You are to be congratulated for taking a forthright stand for the cause of peace; I want you to know that you have my most hearty support.

I wonder, however, if the fleet might be better handled under the sponsorship of the United Nations rather than flying the U.S. flag. Such a procedure, it seems to me, would eliminate any criticism of using the enterprise for propaganda reasons and also give other nations an opportunity to share their peculiar gifts with the rest of the world.

Many people are eager to play a personal part in implementing the mercy fleet idea as indicated by the following statement from Ernest C. Wirth of Vermillion, S. Dak.:

I am in full accord as to the mercy fleet and would welcome suggestions what to do to promote any more toward the realization of this hope. * * * Do write and state what I can do to help any further.

Mrs. Margaret McIntosh, the able public relations director of Yankton College, has written:

The Great White Fleet sound like a most excellent idea. Would not the giving of surplus wheat for seed as well as for bread solve—or help solve—the surplus problem as we all hope it can be solved someday freeing the billions of dollars that the storage costs and, at the same time, demonstrating, as you say, our good will toward the hungry nations?

The J. C. Penney Co. manager, Harold Dufelmeier of Chamberlain, S. Dak., writes:

Your Washington Report dated July 25 has just arrived. I am one of the many folks back home who wish you great success in your attempt to establish a Great White Fleet.

Alec McDonald, an old friend from Wilmet, S. Dak., writes:

Your newsletter came today. The idea contained is new to me, but nonetheless praiseworthy. What a great world it would be if we spent half as much for construction as we do for destruction.

Rev. Roger Grow, minister of the First Congregational Church of Beresford, S. Dak., writes:

I think that the White Fleet idea which is written up in the current Life magazine deserves the attention of the Congress. This seems to me to be a most wholesome idea, worthwhile—and the kind of thing that should meet with your approval.

My friend, Ivan Brewick, Mitchell insurance man, writes:

I was very much impressed with your newsletter about the Great White Fleet. When a person sees all of the sickness and suffering that goes on even in our land of plenty, and then hears all about the surpluses we have, it makes a person wonder if there isn't something that can be done to alleviate this misery and hunger in a lot of places.

A 16-year-old boy from Huron, S. Dak., Dennis Lyle, wrote:

I believe that if more ideas like the idea of the new White Fleet were forthcoming from the people of both Russia and the

United States, our problems would be solved. I sincerely think that the new White Fleet would help us more overseas than some of our aid programs.

George Holbosen of Willow Lake, S. Dak., has presented his views in slogan form:

Let's feed with the fleet, rather than fight with the fleet.

Judge William M. Potts of Mobridge writes:

I am very much in favor of promoting the Great White Fleet. Not only will this enterprise accomplish a great deal of good for poor people of the world, but it will also make it impossible for other nations to criticize the motives of the United States.

Other South Dakotans who have written me, and their comments follow:

Thomas Rowlands, Aberdeen, S. Dak.: I think this is the best ever.

Earl Buhler, Aberdeen, S. Dak.: I just finished reading your recent report concerning the Great White Fleet. In short, I think it is a tremendous idea.

Dr. P. O. Dickinson, Aberdeen, S. Dak.: Just a note to tell you that I think the Great White Fleet idea is one of the best to come before Congress in my memory.

Wilbur Tiohet, Meckling, S. Dak.: I think your proposal is the thing; get the surplus grain we have into the mouths of the starving people of the world.

Clem Heiberger, Spencer, S. Dak.: I am in favor of putting the White Fleet into service. In talking with Ewald Osterberg of Salem last evening, he voiced the opinion that it was a very good thing.

Truman D. Elder, Miller, S. Dak.: Received your interesting newsletter, and think your White Fleet idea an excellent one, as it serves many purposes. * * * I served in the Southwest Pacific area in World War II, and, too, noticed many cases of starvation, where a lot more good could be done with kindness, understanding, and supplying of more material comfort than mere cold dollars could bring.

B. J. Buisker, Britton, S. Dak.: The Great White Fleet is a great idea. Push it all you can.

Barney Van Hatten, Conde, S. Dak.: I approve of this proposal 100 percent. That would do more good than all the guns and bombs we could send.

Esther C. Rieck, Waubay, S. Dak.: I think the new White Fleet idea is a wonderful idea.

Frank Egan, Sioux Falls, S. Dak.: I am in receipt of your last report sent out July 25, 1959, and I approve of all this good work you speak of, and are trying to get set up relative to the White Fleet. I think that if we could get this material and food surpluses direct to the people, without some smart guy cashing in on it as in most of our past attempts to get through to the common people. Anyway, George, I'm for any attempt it might be to get our surpluses into the hands of these poor people, as I noticed Sunday while in the country a lot of our stored corn is not in too good shape

now; and if it is not moved before the winter sets in, won't be much good.

Mr. Speaker, there is one South Dakotan I would like to single out for special praise in connection with the Great White Fleet. I refer to Mr. August Kludt of Mount Vernon, S. Dak., who suggested a similar idea to me in a letter dated June 13, 1959. Mr. Kludt presented his suggestion a full 6 weeks before the article by Commander Manson appeared in the July 27 Life magazine. It indicates the vision and commonsense thinking that characterizes the people who live close to the soil in the rural heartland of America. I include a portion of Mr. Kludt's June 13 letter at this point:

I have often thought how it would be if we would use one of our old aircraft carriers for this job. If such a ship were outfitted with a complete flour mill and large baking oven (which most already have) and put such a ship in a foreign harbor where there is much need for empty stomach and give them ready-baked fresh bread, I think we would hit the spot where it counts most.

A load of wheat does not help much in the raw because the poor cannot buy it, and the rich don't need it, besides it lays in foreign bins too long and is again used to make money for the rich. This should not be.

Our ships should supply this floating bake-shop, thus putting many men to work and moving our wheat to where it belongs, to the hungry. I think this would cost less than paying a million dollars a day to keep our grain under lock and key from year to year.

I think there is too much howling about our surplus; it seems some think it is a curse instead of a blessing.

Under unanimous consent, Mr. Speaker, I include my newsletter of July 25, a regular report which I send to constituents who request it, at this point in the RECORD:

WASHINGTON REPORT (By Congressman GEORGE MCGOVERN)

JULY 25, 1959.

DEAR FRIENDS: "The idea of organizing a new White Fleet grew out of things I witnessed at the close of World War II. Like thousands of U.S. servicemen, I saw diseased, destitute, and poverty-stricken peoples living on the Asiatic rimland and in parts of Europe and Africa. In some areas I saw people actually dying on the streets of starvation and disease. Such sights made deep and lasting impressions on me."

The author of the above observation is U.S. Navy Comdr. Frank Manson, 38-year-old World War II veteran now on duty with the Navy in London.

THE GREAT WHITE FLEET

He is the originator of a proposal which has been presented to the Congress by several Congressmen and Senators including myself. His idea is to take out of idle storage a few of America's warships, paint them white as a symbol of peace, load them with surplus grains, food, and medicine, and send them on a globe-circling mission of mercy to the disaster areas of the world.

Fifty-two years ago, President Theodore Roosevelt dramatized America's emergence as a world power by sending 16 of our battle-ships fully armed around the world. Commander Manson's proposed fleet would be for an entirely different purpose: To demonstrate to hungry, disease-ridden people that

the American people want a world of peace and that we stand ready to help other nations achieve better standards of life.

Commander Manson's impressions of the impoverished areas of the globe calls to my mind the destitute people of southern Italy with whom I lived for a year as an American bomber pilot in World War II. This was my first experience with human starvation, untended sick people and grinding misery. It was during those days of war and tragedy that I first resolved to work for a happier and more peaceful world. Commander Manson speaks for every thoughtful American who wants his country to do everything humanly possible to build a world where peace can be maintained with honor and dignity. This is no easy task, but it is the most important task of mankind.

COMMUNIST ECONOMIC THREAT

No one can doubt that America is everywhere challenged by a ruthless Communist threat which is not only militarily strong but which has every intention of beating us in economic and ideological competition. Khrushchev has bluntly told American visitors to Russia: "We declare war on you in the field of economics."

Highly trained teams of Russian technicians of all kinds, skilled in foreign language and the culture of the countries to which they are sent, are fanning out from Moscow into the underdeveloped areas of the world. They are telling the people that for centuries the Western Powers have exploited them, that communism provides a formula for a better life.

THE CHALLENGE TO AMERICA

America dare not ignore this highly organized Communist challenge. Great masses of people are grasping in desperation for some instrument to break the bonds of hunger and misery. They are no longer content to suffer in silence.

The contest between the free world and the Communist bloc for the allegiance of these uncommitted masses of the world will doubtless be the most significant global struggle of the next century.

The Great White Fleet is one dramatic device that we can use to demonstrate both the good will and the technical prowess of the American people. Such a fleet would be supported by voluntary contributions from the American citizenry.

MERCY FLEET LESS COSTLY, MORE EFFECTIVE

The cost would be much smaller and the results much greater than many of the questionable aid programs in which we are now engaged. The White Fleet would include one of the Navy's idle hospital ships manned by doctors and nurses who could not only minister to the most seriously ill or wounded, but who could demonstrate modern medical techniques to native doctors.

Stocks of surplus food and clothing would be carried on another ship. Still another would be a floating technical school capable of teaching natives techniques for improving their standard of living. Once established, the fleet could add a ship carrying exhibits of American agriculture, industry, education, and culture.

Resolutions introduced by myself and other Congressmen call upon the President to put the White Fleet into service. I would appreciate learning your views on this proposal.

Your friend and Representative in Congress.

GEORGE MCGOVERN.

(If you know of persons who are not now receiving this regular newsletter and would like to be on our mailing list, please send me their names and addresses.)

Appendix

Education Revolution?

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 7, 1959

Mr. JOHNSON of Texas. Mr. President, Sherman, Tex., is the scene of a highly important revolution in education. At Austin College, in the town of Sherman, an imaginative and daring experiment in liberal arts education is taking place. The principle of this experiment is that students will receive a more meaningful education when they, themselves, assume responsibility for the direction of their own studies.

The Ford Foundation was impressed with this experiment and has granted Austin College \$375,400 to carry it out.

Mr. President, I ask unanimous consent that an article entitled "Education Revolution?" from the Dallas Times-Herald of July 26, 1959, be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATION REVOLUTION?

(By Al Hester)

SHERMAN.—On the sedate tree-shaded campus of 110-year-old Austin College a quiet experiment is underway which may eventually cause a revolution in college education.

The campus of the Sherman school echoes to the ringing of a chapel bell given to Austin College in 1850 by Sam Houston. Tradition and high scholastic standing have an honored place at the school. But President John D. Moseley has not let time-honored customs stifle the search for better education.

If Austin College's experiment is successful it may present college education and life in an entirely new light to college undergraduate students.

The emphasis in the Austin College plan puts great faith in the ability of students to assume responsibility on their own—a faith often lacking in conventional college programs.

Beginning in 1958 the college adopted the plan in which a pilot group of students is not subjected to an unconnected potpourri of college courses hemmed in by conventional lecture teaching methods.

The small group of students is given an amazing amount of freedom in pursuing studies. They study much of the time on their own, doing much outside reading. Lectures, when needed, are often by outstanding authorities. And within the next few years, the experimental group of students will be doing even more independent work—digging out a liberal arts education with teachers assuming the students can accept heavy responsibility.

But the Austin College plan is much more than a search to give students the most

meaningful liberal arts academic work possible.

The breadth of the plan so fascinated the Ford Foundation that it has granted Austin College \$375,400 to carry out its educational experiment. The funds will cover costs of planning and 3 full years of operation of the program and its review and evaluation.

In addition to a revamping of the classroom work of the college, the plan is concerned with religious maturity and campus life programs which affect all students, faculty, and staff.

Dr. Moseley and members of his faculty and staff have such an enthusiasm for the plan that a visitor to the campus is infected by it.

"We are trying to answer the question of what a church college is doing in business," Dr. Moseley said. "Is there something unique in the role of a church college?"

Dr. Moseley believes that Austin College, a Presbyterian school, must justify its existence just as other denominational schools must.

Dr. E. Ashby Johnson, who is taking a lead part in the plan, sums up the way many disenchanted college students feel upon completion of their schooling.

"I felt that I was shortchanged," he said.

Austin College leaders are determined that their students won't feel shortchanged when they receive their degrees.

Dr. Moseley doesn't look at the college undergraduate as a person who doesn't have sense enough to assume the responsibility of becoming educated.

He wants to give students a balanced college life and education. He hopes to free up professors from hide-bound methods of teaching. He wants students to develop a religious literacy—to know what religion means to them. And he wants a fuller participation by students in democratic processes such as student government and social activities.

Admittedly such goals may be hard to attain, but the Austin plan may point the way, he believes.

At the beginning of the 1958-59 school year the college set out to draw all phases of campus life into one coordinated learning process.

Thirty-two freshmen made up the first test group for a program of basic integrated studies. In non-academic portions of the college's plan, the entire student body, faculty and staff is participating.

These students are following a 2-year program which will give them more than the academic content found in conventional courses the first 2 years of college. Overlapping of subject matter which frustrates so many college students taking conventional courses is done away with at Austin.

Students don't receive grades for individual courses such as mathematics or English. They receive one grade for their entire year's work under the basic integrated studies plan. They don't operate on any semester plan, but continue their work for the entire year. Next year an additional group will join the original number of students taking part in the basic integrated studies plan.

There are three major areas in what the students term BIS. These are math-science, humanities, and linguistics.

In the math-science sequence of studies students begin with a concentration on mathematical principles. They then progress into physics and related fields such as astronomy, electronics and atomic theory. The math they learn is put to use as they go along, not forgotten as so much useless theory.

In the second year of the math-science sequence they'll study chemistry, geology, and biology. They get laboratory experience as well as theory work.

In the humanities sequence students study philosophy, religion, fine arts, literature, history, political science, psychology, sociology, and economics. A detailed study of Christianity and its backgrounds is included.

The third area involves study of a foreign language—either French or German—with English.

Students were selected at random from the incoming freshman class last year.

After their 2 years of basic studies they will enter the program of independent studies and concentration. Their junior and senior years they will do specialized studies, enabling them to concentrate in their major fields of interest. Assuming responsibility for the heavy dose of studies nearly overwhelmed some students at first, college officials said. But most of them are now enjoying the program.

Mike Parsons is a 19-year-old sophomore from Lawton, Okla. He was chosen to take part in the BIS and independent studies program.

"Boy, it sure hit me in the face at first. Real studying was hard for me," Mike said. "But the work is interesting. And my professors are interesting, too. They don't stick to the book. They have more freedom in teaching."

Mike believes he'll learn a lot more because of the experimental program.

Student government leaders are also pleased with the freedom they have under the Austin College plan. They have worked out a code of conduct for Austin College students and have more say in school affairs than many other colleges allow.

Austin College leaders don't apologize for the emphasis they place on religion in the plan. Students attend a worship service together each week. At other times each week freshmen and upperclassmen meet separately for chapel programs designed for their special needs. Freshmen deal with Christian principles as applied to college life. Upperclassmen work on developing a mature religious understanding.

Dr. Moseley says frankly he doesn't know if the Austin College plan will be a success, but he expects it to point the way for a better college education.

He points out that a medium-sized college such as the 750-student Sherman College is a flexible institution which can experiment to better college education.

"This college ought to justify its place by staying on the cutting edge to solve the problems of society and the church," he said.

Evaluation of the program at Austin College will be done by an independent organization, the Hogg Foundation of the University of Texas.

Half a Loaf?

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. PORTER. Mr. Speaker, all of us have our experiences with political action groups. Most of them are well informed in their fields. Many of them are reasonable in their approach. An example of the well-informed and reasonable approach to legislation is that used by the League of Women Voters. They always keep the ideal in mind but find satisfaction in the small gains that are possible in the meantime. This attitude is well described in an article which appeared in their national publication, the National Voter, for July-August 1959. I include it here under a previous consent:

BETTER THAN NONE?

A league time for action is likely to be a time for reflection as well. Many league members, writing their Congressman about the mutual security program this summer, have asked themselves some basic questions about the nature of league action. They have been thinking, this past year, in terms of long-range foreign policies to achieve the world we want. Now they measure the current economic aid legislation against the yardsticks they have evolved, and the old familiar question arises: Is half a loaf really better than none? Shouldn't we hold out for the whole loaf?

THE IDEAL

"I feel that the spirit behind the world we want should be changed to the world we must have," wrote one leaguer, looking at the proposed mutual security program for 1960. "Leaving the league out of the picture completely, some sort of foreign aid bill will be passed. It won't attain our objectives—so why work and settle for much less than half a loaf? This bill would actually hinder our objectives. Knowing the immensity of the challenge of the revolution of rising expectations, we will of course settle for half a loaf—but only in the right directions."

"Let us plan minimum objectives for the world we must have: Separation of economic and military aid; more money for economic development and technical assistance (a combined program and a long-range program); unification of programs through the U.N. Let us plan an effective program with Congressmen who are sympathetic. Even if we should fail to achieve all we want this year, we would be oriented toward the future."

THE REALISTIC

Another league member, writing about the same problem, came up with a different approach.

"To be realistic," she says, "and to strive for that which can be achieved, I recognize that as an organization we must negotiate and learn to compromise. This is an art, and one needs instruction as to what legitimate concessions are. The citizen, the local leagues, cannot know wherein these areas lie, but it would be of tremendous technical help if the national board could guide us with information about accepting proposed legislation because of certain basic commitments that are part of that legislation. In some instances we would do this because there is no alternative, or because the compromises are secondary. There is also the

necessity to know what to do next, what are the following steps involved in eradicating weaknesses, omissions, or danger points in areas that we support with reluctance.

"If the terms of the unfinished job are not spelled out to us as we work on an item and after we finish the study, we, being human, confuse findings with statements of principle. They then become sacrosanct. An illustration in point would be the Trade Agreements Act. After supporting passage (upon recommendation of the national Board because this would be deemed an effective compromise for the moment), the next step would involve instructions as to the method of working toward the elimination of the peril point and escape clauses of the act. This would be a unique and forceful role for the national body, and at the same time people would come to understand the real scope of each piece of legislation and its meaning in terms of immediate and future needs."

IDEAL AND REALISTIC

These two views of league action differ more in emphasis than in substance: the one would strike out more vigorously for the ideal program; the other would continue to work for piecemeal gains, but relate each step more clearly to the ideal. There is one thing, however, that is essential to both: the existence of a clearly defined, generally accepted picture of the whole loaf.

Does such a picture of the ideal foreign aid program now exist in the league? Each year, as we have worked on specific aspects of technical assistance and economic development, we have moved toward clarifying the basic principles involved. This year, council added some firm strokes to the picture when it endorsed the principles embodied in the Fulbright amendments: emphasis upon economic rather than military aid; upon loans rather than grants; upon long-range aid; upon more adequate funds.

But council also recognized that the outlines of the ideal program—the whole loaf—are still far from clear to most league members. What are adequate funds for development? What is the proper balance between U.S. and U.N. programs? How can the multitude of agencies and programs be coordinated? Do we need all of them? Are there some essential jobs that none of them is doing?

As we seek answers to these and many other questions in the course of the coming year's study, the picture of a sound, adequate, total development program for underdeveloped countries should emerge to guide us in taking more effective, imaginative action. In the meantime—half a loaf.

Robert White II, New Editor and President
of New York Herald Tribune

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Friday, August 7, 1959

Mr. HENNINGS. Mr. President, the State of Missouri has given some extraordinary men to the Nation's press. Many come to mind, but I would call the Senate's attention to only one, a man whom it has been my privilege to know and respect as I have known and respected his father and other members of his family—a family which has played a leading and significant role in Missouri and national journalism.

I refer, Mr. President, to Robert White II, the new editor and president of the New York Herald Tribune, and, until recently, editor of the Mexico (Mo.) Ledger. Bob White was and is a born newspaperman. His family background is synonymous with distinguished newspapering and none has added greater luster to the newspaper profession than Bob White.

It is significant that the Herald Tribune has been, for decades, strongly Republican, while Bob White has been an active Democrat. Yet his paper in Mexico always stood above party and has always declared for the man rather than the party. Bob White will apply those characteristics to the Herald Tribune. He will also apply to the Herald Tribune the freshness that is characteristic of Missouri and of Bob White's own city of Mexico.

That this will be done, Mr. President, is illustrated by an editorial written by Bob White, as his first for the Herald Tribune. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN ACCOUNTING TO OUR READERS

Our belief is that newspapers are important because you—the reader—are important.

And that newspapers will continue to be important just as long as the government of this city, this State, and this country is of, for and by you.

Believing this, then it follows that the new management of a newspaper owes you an accounting.

This is ours, as the new president and editor of the Herald Tribune.

We respect the tradition of the Herald Tribune. There is greatness in that tradition. And greatness for a newspaper only comes through high causes served well.

The most basic cause a newspaper can serve is telling you—the reader—the facts, the truth, the news. That shall continue to be our basic effort:

To report for you the truth as we find it * * * not as we wish it were.

There is another traditional cause to be served well.

It shall be served as usual on this page, in these editorial columns.

It is that grand, old American right, American privilege and, we believe, American duty of standing up to be counted.

Just as our opinions must not and shall not be found in the news columns they must and shall be found in the editorials.

We cannot promise that these opinions, these studied convictions, will always be right.

They won't be * * * because they come from human beings.

What we can promise is that they will be dead-level straight from the shoulder, sincere, our best.

Lastly, we ask for time.

There are to be changes in the Herald Tribune. The inevitable changes which come through having new hands at the wheel.

We believe they will come slowly, for we must build well and that takes time.

We must build well because newspapers are important. * * *

* * * And will be important just as long as our way of life is of, for and by you—the reader.

ROBERT M. WHITE II.

**Senator Kennedy Declares Passage of
Landrum-Griffin Bill Would Jeopardize
Enactment of Labor Reform Law and
Urges Passage of Elliott Bill**

EXTENSION OF REMARKS

OF

HON. JOHN BRADEMÁS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 29, 1959

Mr. BRADEMÁS. Mr. Speaker, I should like to insert in the CONGRESSIONAL RECORD the text of the comment of the distinguished Senator from Massachusetts, the Honorable JOHN F. KENNEDY, concerning President Eisenhower's television speech of August 6, 1959, on labor reform legislation.

Senator KENNEDY, as we all know, by his diligent work on the McClellan committee and in guiding a labor-management reform bill through the Senate, speaks with knowledge and authority in this field.

Senator KENNEDY's statement follows:

The President is wholly misinformed about the contents of the bill which passed the Senate by a 90-to-1 vote and about the House committee bill. Both of these measures would eliminate racketeering and the abuses disclosed by the McClellan committee in trade unions but, unlike the Griffin-Landrum bill, would not wreck the legitimate union movement. Passage of the Griffin-Landrum bill by the House would definitely jeopardize enactment of labor reform legislation at this session of Congress.

Mr. Speaker, in a filmed interview this week, Senator KENNEDY told me he supported the bill reported by the House Education and Labor Committee and introduced by the distinguished gentleman from Alabama [Mr. ELLIOTT]. Said Senator KENNEDY:

I hope that the Elliott bill will be accepted. I think we can get quick agreement between the Senate and the House on such legislation and go home feeling that we've done an important job in protecting union funds and the democratic rights of all union members.

The Senator went on to say that the bill sponsored by the gentleman from Georgia [Mr. LANDRUM] and the gentleman from Michigan [Mr. GRIFFITH] "would not concentrate, as the Elliott bill does, on the shortcomings of a few racketeers and hoodlums but is instead an effort to limit the legitimate rights of all unions to bargain for their members."

Mr. Speaker, I should like also to insert in the RECORD the text of Senator KENNEDY's statement of August 3, 1959, concerning the need for labor reform legislation.

The statement follows:

This Congress must pass a labor-management reform bill. We cannot go home without enacting a responsible, effective measure that will strike hard at racketeers without penalizing honest union members—a bill that will carry out all the recommendations of the McClellan committee.

The Griffin-Landrum bill now offered as a substitute for the Elliott bill is not such a measure, and its adoption would endanger final passage of any reform legislation by

complicating the chances for a conciliation of the Senate and House version.

The Griffin-Landrum bill seeks to undo the conscientious efforts of the House committee members by substituting a punitive measure—restricting the rights of all honest union members—for a responsible measure aimed at the Hoffas, the Dios, and the Sheffermans, based on the McClellan committee reports and compatible with the strong, workable bill which passed the Senate 90 to 1.

The hodgepodge substitute bill, on the other hand, goes far beyond the recommendations of the McClellan committee—threatening to restrict the antiracketeering efforts of honest unions, to bog down small unions, and the bill's administration in a welter of redtape, and to weaken labor's legitimate rights at the bargaining table. Far more than that, it strengthens the grip of racketeers. I am hopeful that it will be promptly rejected by all those truly interested in passing a strong antiracketeering bill during this session of Congress.

Tribute to the Late Mrs. Mary Norton

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 7, 1959

Mr. JOHNSON of Texas. Mr. President, on August 2 this country lost a great lady and a devoted public servant, for Mary Norton died on that day. Mrs. Norton was a humble, honest, intelligent woman; and her service in Congress will long be remembered. We remember her particularly for her efforts in getting one of the most important pieces of legislation passed in the last 25 years—the Federal Wage and Hour Act.

Mr. President, I ask unanimous consent that an editorial entitled "Mrs. Norton Was Pioneer in Politics," from the Houston Post of August 4, be inserted in the Appendix of the RECORD, as a small token of my esteem for this great American.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MRS. NORTON WAS PIONEER IN POLITICS

The Federal wage and hour law is now so firmly established that few question its merit but in 1937-38 it was among the most controversial of the social experiments which stemmed from the New Deal. The Member of Congress who succeeded in getting it approved by the House after a long and bitter fight was Representative Mary T. Norton, Democrat, New Jersey, then chairman of the House Committee on Education and Labor.

Mrs. Norton, who died Sunday at the age of 84, was the first woman Democrat to serve in Congress. She was elected in 1924 and represented her New Jersey district for 26 years before retiring voluntarily. She considered the wage-hour bill her legislative memorial.

Mrs. Norton was a remarkable woman. She got into politics by taking an interest in civic affairs in Jersey City. She engaged in welfare work and became president of the Day Nursery Association of Jersey City. In 1923 she was elected a freeholder of Hudson County, the first woman to hold such a post. In the following year she was elected a delegate at large to the Democratic National

Convention in New York and thereafter began her 26-year career in Congress.

As a pioneer, she scored many firsts. She was the first woman to serve as chairman of a major House committee. In 1928 when other Congressmen were being more cautious, she introduced the first bill for repeal of the 18th (prohibition) amendment. She was the first woman to be elected chairman of the New Jersey Democratic State Committee. She was always reelected by large majorities.

While in Congress Mrs. Norton sought no personal privilege because of her sex. She said she was present with the same credentials as any other Member and wished to be treated in the same manner. Her greatest contribution perhaps was that through her ability she helped break down prejudice against women in public life.

**Algeria Needs Peace—The World Needs
a Peaceful Algeria**

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, August 3, 1959

Mr. PORTER. Mr. Speaker, for too many years a real war has been raging the country of Algeria. That war soon will enter its 6th year. Because we feel the present situation in Algeria continues to constitute a threat to international peace and security, a number of us this week publicly urged a negotiated peace now between the two parties concerned.

A copy of our statement and a news release issued simultaneously follow under the leave to extend my remarks in the RECORD:

Sixteen U.S. Representatives today urged the Government of France to enter into negotiations to end the 5-year Algerian war. Their resolution was made public while foreign ministers of the independent African states are meeting in Monrovia, Liberia, expressly to help the provisional government of the Algerian Republic.

The Congressmen said they were deeply concerned that the war in Algeria was headed toward its sixth year. They said, "we cannot remain silent about this tragic war in Algeria and we publicly urge a negotiated peace now between the two parties concerned."

The statement, issued for the group by Representative CHARLES O. PORTER, Democrat of Oregon, said the signers "recognize the right of the Algerian people—as of all peoples—to self-determination and independence."

PORTER said he favors Congress memorializing the plight of captive nations, but he added "there should be no double standards. There are captive nations in Latin America and in Africa as well as behind the Iron Curtain."

The signers of the statement, all Democrats, are HUGH J. ADDONIZIO, of New York; VICTOR L. ANFUSO, of New York; EDWARD P. BOLAND, of Massachusetts; RICHARD BOLLING, of Missouri; CHARLES A. BOYLE, of Illinois; FRANK M. CLARK, of Pennsylvania; BYRON L. JOHNSON, of Colorado; GEORGE A. KASEM, of California; WILLIAM H. MEYER, of Vermont; ROBERT N. C. NIX, of Pennsylvania; ADAM CLAYTON POWELL, of New York; HENRY S. REUSS, of Wisconsin; JAMES ROOSEVELT, of California; FRANK THOMPSON, Jr., of New

Jersey; LEONARD G. WOLF, of Iowa; and PORTER.

Copies of the statement are being sent to French President Charles de Gaulle in Paris and to Prime Minister Ferhat Abbas, of the Algerian provisional government, through the Algerian office in New York City. Text of the statement follows:

"We the undersigned Members of the U.S. House and Senate, are deeply concerned that the war in Algeria will soon enter its sixth year.

"We recall the two resolutions passed by the United Nations General Assembly in successive 1957 sessions that a peaceful, democratic, and just solution should be found to end the conflict in conformity with the principles of the U.N. Charter.

"We recognize the right of the Algerian people—as of all peoples—to self-determination and independence.

"To achieve this right, thousands of Algerians are dying monthly and thousands more are refugees in other parts of north Africa and elsewhere.

"The present situation in Algeria continues to constitute a threat to international peace and security.

"Therefore we suggest that our U.S. Government take leadership in bringing the Algerian conflict to a just termination, not only for reasons of peace and humanitarianism, but to lay foundations for good relations between a free Algeria and the American people and their government in the years ahead.

"We recommend that our country urge our ally, France, to enter into negotiations for the cessation of the conflict.

"We urge that our country in the forthcoming 14th session of the U.N. General Assembly no longer abstain from voting, as it did in the 13th General Assembly, on any responsible resolution that urges continuing negotiations to reach a solution to the conflict.

"We commend our country for making available certain surplus foodstuffs to the Algerian refugees, and certain scholarships to Algerian students, and we urge our Government and its private agencies and citizens to continue to help these refugees.

"Thus we cannot remain silent about this tragic war in Algeria and we publicly urge a negotiated peace now between the two parties concerned."

Navarro County, Tex., Will Get 100 Dams

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 7, 1959

Mr. JOHNSON of Texas. Mr. President, the need for soil conservation and flood prevention is recognized. In Navarro County, in northeast Texas, we see an outstanding set of achievements both completed and planned. The first dam of a flood-prevention program for this area was completed in 1953; and by 1969, 100 dams should have been built.

Mr. President, I ask unanimous consent that an article entitled "Navarro County Will Get 100 Flood Dams," from the Fort Worth Star-Telegram of August 3, 1959, appear in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Fort Worth Star-Telegram, Aug. 3, 1959]

NAVARRO COUNTY WILL GET 100 FLOOD DAMS

CORSICANA, August 3.—More than 100 flood detention dams will dot the Navarro County landscape 10 years hence, if present plans go as expected.

Farmers alone, estimates the Soil Conservation Service, will benefit annually to the tune of more than \$1,500,000 from these dams, which are expected to encourage bottomland farmers to plant low areas that hitherto have been left to brush and trees.

Since the first of such dams was built on Grays Creek in April 1953, 11 have been built on the same tributary in northeast Navarro County. Three are slated on Post Oak Creek this year.

By 1969, a total of 69 dams will have been built on Richland Creek and 25 on Chambers Creek, all within Navarro County.

Before the flood detention dam program began in 1950, lush and fertile bottomlands in many areas produced only weeds, because farmers would not risk having their crops flooded two or three times each year.

While flood prevention and soil conservation are the primary function of the dams, their value reaches into other areas, such as recreation and the protection of roads and bridges.

One landowner has leased his lake for hunting and fishing. Another has installed a 50-cent fee deposit box at the entrance to his lake, and the "honor system" has been financially successful.

Actual construction is paid for by the Federal Government, which contracts the projects.

The Government assumes the responsibilities until the dams are completed and sodded with grass, then turns them over to the soil conservation district, a State subdivision, which turns them over to either county or other group maintenance. Recently Navarro County voters approved a levy of 2 cents per \$100 valuation to maintain the dams.

The Late Honorable Mary T. Norton

EXTENSION OF REMARKS OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 6, 1959

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks, I wish at this time to pay tribute to Mrs. Mary T. Norton, who for more than a quarter of a century represented the 12th New Jersey District in the House of Representatives. She died August 2 in a Greenwich, Conn., hospital following a heart attack at the age of 84.

I knew Mary Norton for many years. She began her service in Congress a year after I came to Washington as secretary to the late George N. Seger. I served with her in the House from 1940 until her retirement in 1951. She was a truly dedicated public servant held in high esteem by all of her colleagues.

At this time I would like to insert in the CONGRESSIONAL RECORD the following editorial tribute to Mrs. Norton from the Paterson Evening News, Paterson, N.J., of August 4, 1959:

AN ABLE WOMAN PASSES

Mary T. Norton, a great lady of New Jersey and national public life, has passed on to her eternal rest after a long and fruitful life.

Mrs. Norton, of Jersey City, amassed an impressive list of firsts in public life.

She was the first Congresswoman elected by the Democratic Party. Her tenure of 26 years—she retired voluntarily at age 75—is a record for congressional women. She was the first woman to head a congressional committee.

In addition, she was the first woman ever elected to the Hudson County Board of Freeholders, that service preceding congressional membership.

A staunch New Dealer, she supported her political preceptor, the late Mayor Frank Hague throughout her career, serving as Democratic National Committeewoman among important political posts.

An able lady with charm and grace, Mrs. Norton mixed practicalities of politics with an intuitive skill and in her trail-blazing career for New Jersey womanhood, set the pattern for many others who have followed her.

Tribute to Brig. Gen. William L. Lee

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 7, 1959

Mr. JOHNSON of Texas. Mr. President, one of this country's finest soldiers has retired from the Air Force, to take up residence in Amarillo, Tex. Brig. Gen. William L. (Jerry) Lee has served his country with devotion and ability. He is called the enlisted man's general, and the respect his men have had for him is known even to this old Navy man.

Texas is proud to have given Jerry Lee to the Air Force, and Texas is proud to have him back again.

Mr. President, I ask unanimous consent that an article from the Amarillo Globe-Times of July 30, 1959, appear in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HARD-HITTING CRUSADER IS RETIRING—LEE'S FINAL REVIEW FRIDAY

(By Jean Ehly)

The invitation read: "Request the pleasure of your company at the retirement ceremony of Brig. Gen. William L. Lee, Friday, July 31, at 10 o'clock at the Air Force Flight Line, Amarillo Air Force Base."

General Lee, known as Jerry Lee, the enlisted man's general, will inspect his troops for the last time on Friday as they pass in review with the honor guard bearing the flags and the bands playing.

Possibly he will shed a few tears—he always does when leaving a base and old friends—but basically, he's a realist. He and Mrs. Lee will live in Amarillo as permanent residents at 4120 Paramount. He is considering a position in the public relations department of a Texas insurance company.

Retired generals don't just happen and the Nation's big companies seem cognizant of this. The 31-year record of General Lee with Uncle Sam shows great executive ability, experience, and wisdom. He received 12 military decorations including the U.S. Distinguished Service Medal, the Philippine Legion of Honor and the French Legion of Honor, plus about a dozen other academic honorary degrees. When he leaves his airbase headquarters this week, he will take his gold-fringed general's flag with the one star on the blue background. The incoming com-

mander, Brig. Gen. Charles H. Pottenger, will put up his own general's flag.

General Lee, a 200-pound muscular executive, who seems to crowd his khaki shirt, sat at his desk in the Pink Palace, as they call the base headquarters. I had just been offered a can of peanuts from which a 3-foot snake flew out when the top was removed. Gleefully, the general blew a boat horn, his crinkled face, so reminiscent of a mischievous "Skeezix," wreathed in grins. Then, sobering, he said, "Fun's over. Let's talk."

Said to be of the old military school, General Lee has been described as the "toughest guy in the Air Force." He talked of his career that has been dramatic and so legendary. He merited an article in the Saturday Evening Post when he was commander of the 13th Air Force in the Far East (one of seven such U.S. airbases in the world).

He chose a service career because he loved to fly.

"I planned ahead," he said. "I figured that if I made a career in the Air Corps and retired as a major, for instance, I'd draw \$375 a month pension after 30 years. In civilian life I'd have to make \$100,000 to net that much retirement income at 4 percent." Consequently, General Lee refused his father's offer to enter the dairy business in Weatherford, Tex., where he was born.

He entered Brooks Field Flying School in 1923, after an aggressively zesty boyhood of pranks and occasional suspensions from schools, although he graduated from Texas A. & M. in the top 10 of his class. He is probably the only bachelor of science in animal husbandry in the U.S. Air Force Officers' Corps.

Lee's career was a busy one in that he served at 21 different military bases and was on Gen. Douglas MacArthur's staff in the Philippines. Because he was the first instructor of the Filipino pilots, he was respected on the islands as "Father of the Philippine Air Force." It was during this pedagogical period (1937) that Lee taught an inquisitive American infantry officer, Ike Eisenhower, to fly.

Like most generals who earn their star, Jerry Lee went to war—in the Mediterranean. His 49th Bomber Wing of four-engined B-24's reached Italy in early 1944. Lee's responsibilities were 160 heavy bombers he sent against targets all over central and southern Europe, Regensburg, Ploesti, synthetic oil plants in Czechoslovakia, and targets in Vienna, Greece, Yugoslavia, and Austria.

Lee believes a superior power governs the universe. "I'd see a flier killed on his first mission, while there were many like me who survived. I only had a couple of forced landings, after 8,000 flying hours. You've got to be a fatalist in this business; it's pretty grim when a plane explodes in midair beside you through the flak."

It was as a second lieutenant in the Army Air Corps that he married Bertha Haag, a pretty San Antonio girl, who was destined to be among the most gracious and beloved of Air Force wives. The attractive Mrs. Lee is an inveterate golfer. She is a mother and a grandmother and the Lee's only son is Capt. William L. Lee, Jr., a doctor at Andrews AFB, Washington. Capt. Lee is the father of two little girls and one boy.

The Lees have had all the glamour and protocol of the "Big Brass." Lee has subscribed to protocol in military life. Personally, he is humble and unpretentious. He believes in strict military discipline. How can an officer command an airman of lower rank if he's been buddy-buddy with him the night before?

In 1952 the Lees were assigned again to the Philippines, where Lee was boss of the 13th Air Force. He was renowned for his sense of fun, aggressiveness, and good common-sense. He has never been a politician and

never pussyfooted or camouflaged issues. As one observer said, "He's too honest and outspoken for his own good."

Lee still shines his own shoes, washes his own cars, darns his socks, and cleans his car's spark plugs. Since they didn't always have help, Jerry Lee scrubbed floors for his wife 14 years around the world and he helps with the dishes. "Good family morale," he stated. He's proud of his wife's skill with the needle since she has made her own clothes, including evening gowns with sequins.

As a flying instructor in many bases, Lee has seen the evolution of planes from the open cockpit, wooden propeller—DH and PTI—to today's jet that goes faster than sound.

"With the jet, we've more horsepower per pound weight and faster speed," he said. "In 1929, we used to start our own planes by pulling the copper-tipped propellers through. The planes had two wings, little wheels and a tail skid. The PTI had 180 horsepower. The Curtiss-Wright A-3 went 110 miles an hour. Today, our planes land faster than that."

Up until 1935 Lee says the pilots wore boots, dress spurs, and fancy breeches with chamolais skin sewed inside the knee pads. "And some breeches were pink," said Lee, lighting a pipe. "We wore boots because most of our senior officers were ex-Cavalry. We'd take the boots off and hang 'em in the back of the planes. We flew in house shoes. When we landed, we'd put the boots back on. We also wore goggles, helmets and flying jackets since the cockpits were breezy. In the absence of radios, we'd hand notes from one cockpit to another."

"We used to be the Army Air Corps," he continued, "but in 1947 the Air Force as we know it today was born. There were 1,800 Air Corps officers in 1938, and during the war there were 400,000 officers." Oldtimers percentage-wise, like Lee, were a drop in the bucket.

"Congress passed an automatic promotion bill to entice men into the service—I was a second lieutenant 5 years and 10 months. We had to fight for promotions until someone died or retired. The promotion bill for that reason was a good thing," he stated.

In speaking of his own retirement (the general is only 56) Lee said, "Officers are retired to make room for younger personnel, only the service is taking in many young men and is pushing out the older ones with experience that can't be bought."

This frank, rugged militarist, with the iron gray hair that's never in place, has crusaded for many causes from speaker's platforms over the world. He has crusaded against world overpopulation, female he-wives, who domineer their husbands with nagging, and the hazards of the installment plan.

On the eve of his retirement, he's smoldering over Amarillo's complacency about world affairs. "We've got 20-40 percent communism and in the United States one American in 100 knows what's going on in Cuba, Red China, Formosa, etc. Communism is the same as socialism," he declared.

Bristling, he said, "Amarillo should appreciate this beautiful airbase. The Government is spending over 200 million out here—\$40,000 on each barracks that is rehabilitated. There's a new church and new buildings plus the 2½ million SAC runway." His slanting eyes that can be lost in a smile stared accusingly, "Amarillo people want to make a fast dollar; they won't rent their houses but want to sell them. We've only 500 new houses here in 900 families and there are 375 families in the mobile units." He shook his head. "When the military leaves a town because of no housing, they talk about it, which is bad publicity for the town."

The general denounces the general apathy of our businessmen. As a Rotarian and as vice president of the chamber of commerce,

he has noted that not all club members give their best to their town's interests.

Though Lee may talk gruff and spontaneous with some offtrail phrases, he's a master of the written word. Last year, he wrote over a thousand letters by arising at 5 o'clock in the morning. Maybe he wrote to an old Filipino cook or to the big brass in Washington. He writes to anyone who writes to him.

The general's fearless aggression has made him a debatable personality at times, but his men regard him as a square shooter. "He'll go to any extent to get his boys out of a jam, if they tell the truth," said an airman.

The Lees have attended the formalities of retirement parties, and last week Lee took his last official flight to Roswell, N. Mex. He likes to fly because something different always occurs—like weather, engine trouble, scenery varieties and trouble you never forget. He prefers a seasoned veteran pilot to an airplane driver because a veteran usually brings a plane in during a crisis.

As General Lee walked away from his last flight, he said to himself, "Boy, this is it." He didn't look back. Perhaps he was thinking about the Amarillo people who are so likeable, or that he likes this climate better than any place he's been—or maybe he was thinking of all those weeds in his new yard, so big he may import some sheep to keep it mowed down.

Economics in the Kindergarten

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 7, 1959

Mr. JOHNSON of Texas. Mr. President, often it is our smalltown newspapers that spot really important ideas and bring them to the eyes of the public.

On August 4, 1959, the Hallettsville (Tex.) New Era Herald published an editorial entitled "Economics in the Kindergarten," which proposed that children be brought into contact with the simplest economic facts and principles from the first day they enter school.

Quoting President Emeritus Roscoe L. West, of New Jersey State College, the New Era Herald pointed out that a trip to see a train could be tied in with an explanation of how railroads serve the community.

I ask unanimous consent that this editorial appear in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ECONOMICS IN THE KINDERGARTEN

We frequently hear, and with good reason, that the teaching of economics is sorely neglected in American schools. A distinguished educator, Dr. Roscoe L. West, president emeritus of New Jersey State College, agrees. To those who oppose teaching fundamental economic ideas to very young children, he says: "Economics is considered a difficult subject. Anatomy is also considered a difficult subject, but our schools still teach such related subjects as hygiene, sanitation, and first aid. In both fields, the student should be given sufficient knowledge to take care of himself."

The fact is, Dr. West goes on, that economics can be made a regularly taught sub-

ject starting with kindergarten. As an example, he points out that a trip to see a train could be tied in with an explanation of how railroads serve the community.

There is nothing our totalitarian enemies would like more than generations of people who know little about economics and care less, and who are lost in fogs of misunderstandings and plain ignorance. This would perform a major service to the Communist cause, and to leftwing writers and agitators who are solidly grounded in dialectics. As soon as a child can encompass any knowledge, he should begin his economic groundwork.

Vital Need for a Housing Measure

EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 7, 1959

Mr. YARBOROUGH. Mr. President, there are 5 million American families living in below-average homes at this moment. And the need for other types of housing is also growing more acute. For example, we need to provide more adequate places to live for the senior citizens of our Nation, whose numbers are increasing at the rate of a thousand a day.

People are living longer and our population rate is increasing.

None of these things apparently were considered when the housing bill was vetoed. Now the distinguished Senator from Alabama [Mr. SPARKMAN], long noted for his work in behalf of the people, particularly in the field of housing, and his committee have brought forth another bill. Vital items have been pared from this bill in the hope it will meet with approval in the White House. I feel too much has been taken off when all the urgent needs are considered. In any event, however, this bill more than meets the administration halfway in an attempt to get through some sort of measure to help the people. I hope it will not also fall victim to the frightened policy of "No new starts." We need college dormitories and college classrooms. They are two of the most urgently needed types of buildings in America. Every time a college room is cut out of the bill, America's future is trimmed with it. I express the hope that the committee will not forget America's future.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an editorial from the Washington Post and Times Herald for Friday, August 7, 1959, entitled "Saving the Bones."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAVING THE BONES

In view of the apparent reluctance of the Democratic leadership to attempt to override the veto of the housing bill, Senator SPARKMAN's Housing Subcommittee has shown good judgment in bringing out a fresh measure that ought to win the President's approval. The price for keeping the housing

programs alive apparently is to be a serious slowdown in urban renewal and continuing stagnation for the much needed public housing program. But essential mortgage insurance and other authority would be provided, and in the net the compromise program would be a good deal better than nothing.

Before Senate action is completed, we hope that Senator SPARKMAN will seriously consider trying to add another \$200 million or \$300 million to the proposed 2-year, \$550 million urban renewal authorization. Doled out over 2 years under the usual Budget Bureau quarterly allocation system, the sum now proposed would make pretty thin gruel. And next year, involved as he is likely to be in his own political campaign, Mr. SPARKMAN might find it very difficult to put through a supplemental program even though other senatorial friends of the renewal program concede that additional authority would then be necessary if the sum now proposed were not enlarged.

Having retreated very far on the first round from the kind of housing program which the Nation's mayors have urgently recommended, the Sparkman committee has again trimmed the program critically to meet Mr. Eisenhower much more than halfway. We trust that the administration will now join in a cooperative effort to salvage at least the skeleton of an adequate program for the American people.

Texas Farmers Discuss Fears

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 7, 1959

Mr. JOHNSON of Texas. Mr. President, there are farm problems in this country today, just as there have been since before I was born. I believe that the best way we can get to the root of the problems that plague farmers is to get the story from those actually concerned.

I ask unanimous consent that an article entitled "Texas Farmers Discuss Fears," from the Dallas Times-Herald of August 4, 1959, appear in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS FARMERS DISCUSS FEARS

(By Donald Warman)

Three men in trouble Monday compared their problems and explored ways out.

As men of the soil, who mark progress in decades rather than days, they agreed that long-range planning and patience are their solutions—if, indeed, there are solutions.

As delegates to the annual study meetings of the 70,000-member Texas Farm Bureau Institute, typical representatives of the Texas agriculture industry found they feared:

1. A nation of elderly farmers whose children have deserted the land in despair for their economic future.

2. A nation of 15-acre wheat farms, 10-acre cotton farms, and ½-acre tobacco farms as Government control continues its inroads on farm management. (Those acreage minimums are those exempt from present controls.)

3. Or, a nation of big farms in mass production, with the little farmer literally starved off the land.

All were born on the land. None plan ever to leave it. These are the three and their sectional viewpoints:

J. H. West, president of the TFB, farming 320 acres in cotton and grain sorghum near Bishop, Nueces County:

"There is no political solution to an economic problem. The express charge on money sent to Washington and back again is the heaviest freight rate in the world. What we must find is a free market, although an end to price supports would pull a lot of farmers under during the first few years.

"When you've used a crutch for years, it's hard to get rid of. The bureau is looking for gradual but constant relief from Federal props."

Ray Williams, farming 1,200 acres in cotton and wheat near Commerce:

"I'm a big farmer, but I started as small as anyone. It hurts me to see my smaller neighbors go under, but unless they hire out as workers they are doomed. The banks only lend to the big boys. On the other hand, I'm afraid to buy plots vacated near mine because the farm program is so unstable.

"I have two sons in college, both studying for teaching certificates, I hope to make one of them a farmer, but I don't know how I'll persuade him."

C. E. Gregory, farming 2,500 acres in cotton, wheat, maize, and cattle in Jones County, West Tex.:

"In the 50,000 acres of Jones County, there are three farmers under 40 years old. In 15 years, what will that mean? (Mr. Gregory is 55.) If a man is able to start farming now, he's able to retire now—it costs the same. In the depression it was the little farmer who survived. But the little farmer is dead now."

Emphasizing that they are here to explore their problems, delegates said that the bureau, part of the 1,650,000-member National Farm Bureau, adopts resolutions only on a nationwide basis.

Some 300 delegates from every county in Texas are in Dallas for the 3-day meeting at the Adolphus Hotel. General sessions in the mornings are followed by specialized seminars in the afternoons.

Rehabilitation Center Assured

EXTENSION OF REMARKS OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, August 7, 1959

Mr. JOHNSON of Texas. Mr. President, the city of Dallas, Tex., has almost completed a fund drive to finance a Dallas Rehabilitation Center. From beginning to end, every aspect of this project illustrates the good work townspeople can do at the local level when they get together and work toward a common goal.

Mr. President, I ask unanimous consent that an editorial entitled "Rehabilitation Center Assured," from the Dallas Times-Herald of August 3, 1959, appear in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REHABILITATION CENTER ASSURED

The campaign for funds to build the Dallas Rehabilitation Center is near its goal.

Congratulations are in order to Fred F. Florence, general chairman; C. A. Tatum, Jr., vice chairman; William A. Blakley, treasurer; and Karl Hoblitzelle and R. L. Thornton, Jr., cochairmen of the sponsor's committee.

A special merit badge is deserved by James H. Bond, leader of the drive to raise the Dallas goal of \$550,000 to assure the location in Dallas of the institute in which persons who are handicapped by injury can be rehabilitated in this city for profitable employment. Currently, such persons have to be sent to other localities.

The final push to the goal came in the form of a donation of \$95,000 by the Caruth Foundation and Mr. and Mrs. W. W. Caruth, Jr. This gift in memory of Mr. Caruth's parents, Mr. and Mrs. W. W. Caruth, Sr., is one of the many philanthropies from the same source.

Other notable Caruth gifts include substantial contributions to Baylor Hospital, St. Paul's Hospital and Baylor University Hospital School of Dentistry. Several other institutions have been aided. The Caruth name is being written large in the life of Dallas, particularly in the field of medicine and health.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the Record at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the Record should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. _____ addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

CONGRESSIONAL RECORD

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: House Office Building, Washington, D. C.

Appendix

An Appeal to All Americans To Enter the Battle Against Communism

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. McCORMACK. Mr. Speaker, on August 3, 4, 5, and 6 of this year His Eminence Richard Cardinal Cushing, archbishop of Boston, wrote a series of articles "An Appeal to All Americans To Enter the Battle Against Communism" for the Hearst papers, the first article of which, appearing in the Boston Sunday Advertiser of August 2, 1959, I inserted in the CONGRESSIONAL RECORD of August 6, 1959, appearing on page A6777.

In my extension of remarks I include the article written by Cardinal Cushing, appearing in the Boston Daily Record of August 3, 1959, entitled "Red Peace Slogan Means Expansion"; the Cardinal's article on August 4, 1959, entitled, "Red's Aim To Gain World Control"; and the article of the cardinal's appearing in the same paper of August 5, 1959, entitled, "Soviet Censorship Bars Spread of U.S. Messages."

There is no person throughout the world who more clearly understands the history and intent of communism and the evilness of the Communists and international communism than Cardinal Cushing. The articles of Cardinal Cushing should be read as widely as possible. They are ringing messages of the dangers of communism, constituting a powerful appeal for all men and women, whether in the United States or elsewhere, who believe in freedom and a government of law under God:

[From the Boston Daily Record, Aug. 3, 1959]

(In yesterday's Boston Sunday Advertiser, Richard Cardinal Cushing introduced his readers to the dark word of Soviet propaganda, and showed how "peaceful" interchanges and "cultural" relations are employed to spread Marxist theories in America. In today's installment he reveals what the Soviets really mean by the word "peace.")

RED PEACE SLOGAN MEANS EXPANSION

(By Richard Cardinal Cushing)

Let us understand, once and for all, that peace on Soviet lips is nothing other than constant Soviet expansion. By talking about guaranteeing peace, Soviet Russia means that as long as we give concessions to Soviet power, there will be no war. "Peace," "pax"—how sweet the word. Christ, the Lord, immortalized it when time and again, especially after His resurrection, He said to His loved ones—"Peace be unto you." The Communists have so twisted and turned the word that for that it means not the "tranquillity of order," not the "work of justice"—but a mode of existence in which there is no longer any opposition to communism. The obvious plan

that the Kremlin has is to mount one demand for one concession after another until the world is in their grasp.

Again, we have in the home of peace been violently threatened by Khrushchev and his colleagues with a catastrophic fate if we do not turn our backs on the 2 million people of West Berlin. War has not followed these bluffs, and we must draw the lesson from this that firmness is the only true policy left for the United States.

SOVIET TYRANNY

We can observe by way of contrast that when we took seriously the Soviet talk of "peace," we turned people after people and nation after nation over to Soviet tyranny. It was in the name of "peace" that we agreed to Soviet conquest of every one of the countries now behind the Iron Curtain.

We must be aware also that all of the appeasement sentiment and jargon, instigated by the Communists and carried out by many non-Communists, has been strong enough to persuade our Government to grant financial aid to the Communists Tito and Gomulka. Only recently the latter by his royal and subservient welcome to Khrushchev, assured us that he is Moscow's servant and no friend of the United States.

Soviet communism nevertheless considers Americans to be so stupid that as it proceeds with the farce of Geneva, it continues to raise throughout the world this cry of "peace." This is the main feature of the June issue of the World Marxist Review, the great directive giver to the comrades of the world.

CALLED HYPOCRISY

Its first and leading article is entitled "Peace Is Our Policy," and that slogan culminates the whole number.

The hypocrisy of this renewed battle cry of peace can be gleaned from his text, when measured against the Soviet blockade of any real peace at Geneva.

The comrades of the world are instructed to go out and spread ideas such as contained in the following thought: "The tireless efforts of the peace forces to ease tensions have led to a thaw in the international climate. The fact that the East and West have agreed to sit around the table is an important result of recent world developments."

Now, the peace forces, in the eyes of the Kremlin are always those groups and agencies which are susceptible to the Communist line and which recommended free world retreat before Soviet demands. So we soon learn from this directive article that it is the Western leaders who are blocking peace.

RED SURRENDER

Let these Western leaders, the Red argument goes, thrust aside the prejudices of the past and respect the popular will, and the result will be constructive solutions that will strengthen peace. Reading on, we find that these constructive solutions are the surrender to Soviet demands which mean that West Berlin shall become a Red satellite, leading the way to the completely Red Germany. In a word, we are to be persuaded over and over again that it is only the Socialist countries which stand for peace and the comrades are even given a fundamental argument to advance that view among the unthinking. This thought is that a new society has risen to which war is utterly alien, namely, Soviet Russia and the other Soviet-controlled regimes.

KREMLIN PLAN

The obvious plan that the Kremlin has is to mount one demand for concessions after another until the world is in their grasp.

If we Americans once and for all understand this, and let it be known among our associates, we will begin to prevent making the serious errors we made in the past. We will begin to halt the blackmail of this peace talk of the Communists.

It is to our credit as a nation that we did come to such an understanding in refusing to budge on Quemoy and Matsu, at the time that the Communists and their friends were filling the air with the predictions of the war calamities that would come down upon our heads if we did not give up these islands—and even betray Formosa itself—into the hands of Red China.

ABUSE HURLED

We are supposed to swallow that nonsense despite the Kremlin's war upon Finland, the attack upon Korea, and the threats of war which frequently come from the lips of Dictator Khrushchev. But in each instance, when we hear the Communist message through, we learn from the Soviet sources that it is the nation attacked which was the aggressor.

Likewise that abusive term is also hurled at any force that Soviet power intends to bring to its knees.

Thus in the June issue of the World Marxist Review, we learn that Adenauer's Germany is accused of militarism and pro-nazism. Echoes of that even filter into the United States, the appeasers seeking to weaken our will by trying to divide us from our West German ally.

[From the Boston Daily Record, Aug. 4, 1959]

REDS AIM TO GAIN WORLD CONTROL

(In today's installment of his series on Soviet propaganda in America, Richard Cardinal Cushing explains to Daily Record readers what a Red propaganda agent means when he speaks of democracy.)

(By Richard Cardinal Cushing)

If there was more understanding in America of the true definition of that Soviet word "peace," there would be less speculation in public statements and articles as to whether Khrushchev wants peace. There would be fewer assertions, publicly made in many instances, that the Soviet dictator does desire peace. Dictator Khrushchev, as the leader of world communism, desires one thing above all, and he is using the term "peace" to attain that objective.

That desired end from the Communist viewpoint is the continued spreading of Soviet control over additional nations until the whole world is under the dictatorship. Then, and then only, will it be prepared to yield to the perfect Communist society, where alone lasting peace is possible in Communist eyes.

RED DIRECTIVE

We are reminded of this in the No. 5 issue of International Affairs, the great directive giver that goes out from Moscow every month to the comrades of 83 different countries including the United States. On page 32 of that publication, there appears a carefully worked out article on the 21st Congress of the Communist Party of Soviet Russia and the other Socialist countries. The article begins:

"The Soviet Union's historic successes in the building of communism, in the victory of socialism in China and many other countries of Europe and Asia, and the formation and consolidation of the world Socialist system, have opened a new stage in the joint fight of these peoples for socialism and communism."

TIME IS NOW

The directive then goes on by means of extensive quotations from Nikita Khrushchev's report to that 21st congress, to indicate that the time has now arrived for all the Socialist countries to move into communism together.

Do you know what that entails, from the Communist viewpoint? It is nothing more nor less than a clear-cut signal to the comrades of the world that Soviet Russia is intent on world conquest. While the beginning of the Communist society can be made, the Reds contend, before the entire world comes under the Soviet dictatorship, it cannot be fully attained until the dictatorship is worldwide.

There is not a man or woman who cannot grasp the fraud involved in the Soviet definition of "peace." There is no one, no matter how preoccupied with other things, who cannot inform his family, neighbors, and representatives of this fraud, and show in consequence the urgency of a firm stand by the United States against any more concessions to Soviet Russia.

BACK FRIENDS

Our representatives, being patriotic men, will be encouraged by hearing that an enlightened American public wants us to stand firmly for our Nation and those countries which are our friends.

We can tell the same story about the word "democracy," which on Soviet lips is nothing other than the synonym for dictatorship. Every American man and woman can grasp that, and act upon this knowledge. This fact has again been emphasized by No. 18 on the New Times for 1959, coming here every week from Moscow.

On page 3 of that issue, there is an important article for the comrades entitled "The Working Class in Power." The whole theme of that contribution is to the effect that the United States is a dictatorship while Soviet Russia is the perfect democracy.

STRIKE DENIED

We read specifically that proletarian dictatorship—everywhere and in every form—is incomparably more democratic than the most democratic of bourgeois states. The United States is thus interpreted to be a dictatorship against the working class. And all of this nonsense is told the comrades. Here in the United States unions exist freely.

It is not the case in Soviet Russia. Here the workers have the right to strike. This is denied them by the Kremlin dictatorship.

FREE EXPRESSION

Here they have the right to free expression. That exists nowhere under the sickle and hammer.

When the Communists, therefore, speak of democracy they mean the extension of the Soviet dictatorship, and when they refer to democratic rights, within any free country, they have in mind the free right of the Communists to carry on their conspiracy for the destruction of all liberty.

REDS ARE SLY

And yet we, in our American eagerness to find something democratic in Moscow and its seditious followers, have been induced by sly Communist propaganda to throw down all our internal defenses. We have reached a point, by reason of those Supreme Court decisions, which have been criticized by the American Bar Association, whereby there is nothing that State or Nation can do effectively at present to safeguard its own security.

Surely every man and woman can popularize the idea that Congress should give favorable consideration to the several proposals in the American Bar Association report.

STATES RIGHTS

Among other things would be included the right of the States to defend themselves against subversion, now denied them; the limitation on the right to travel on conspiratorial purposes by members of the Communist fifth column and their close friends; and strengthening of the Federal Smith Act so that the Communist conspiracy can be treated for what it is under the law—a conspiracy against our Nation.

[From the Boston Daily Record, Aug. 5, 1959]

SOVIET CENSORSHIP BARS SPREAD OF U.S. MESSAGES

(This is the fourth and final installment of an article by Richard Cardinal Cushing, explaining the most common forms which Soviet propaganda has assumed in the United States, and how we may best guard against it.)

(By Richard Cardinal Cushing)

It is the sneaking hope that there is some democracy in the Soviet dictatorship that leads us today to enter into the alleged competition with Soviet Power that expresses itself in cultural exchanges, business exchanges, exhibitions, and the like.

This whole idea was originated by Dictator Khrushchev in February 1956, at the famous 20th Congress of the Communist Party of the Soviet Union. He knew full well that there could be no genuine competition in such arrangements, as the Soviet people would never be permitted to receive the American message, whereas our country would be flooded with Soviet agents, including industrial, military, and political espionage agents.

We can behold the fallacy of this whole line of thinking from America's viewpoint, when we take note that at the American exposition in Moscow, Soviet censorship is imposed on American books attempting to reveal our culture. Book after book has been denied its place on the American exposition shelves, for fear the Soviet subjects might read one of them.

This is of course what could be expected from Khrushchev and company when we consider the punishment they gave to Boris Pasternak for his reflection on the desirability of communism. It is to be observed that the books shut out from the Soviet public included those of the mildest of writers, many of them proven friends of Soviet Russia in their own country. The truly anti-Communist books, which could have enlightened the people in Russia, were not even sent from the United States to the exhibition.

The latest word to enter the Communist dictionary for our confusion is "spirituality." This word we find emphasized at length in the May issue of the World Marxist Review. There the comrades of the world are advised to make full use of this term, and to understand thereby that dialectical materialism, that is, militant atheism, is more spiritual than Christianity or any other religion.

It takes little thought to see what is the intent of this torturing of definitions. Many critics of communism in the free world, led off by Pope Pius XI, 22 years ago, have pointed to the basically atheistic character of Marxism-Leninism. The Communists are now trying to move in to short circuit this criticism by coining their own definition of "spiritual."

In this article of directives in the World Marxist Review, they bring out at some length the claim that they are about to create "a new man" in the coming Communist society, where there will be "no war," "no taxes," and no headaches of any sort.

Thus, the comrades will now use the word "spiritual" in an entirely different background than religious people understand it. Their hope is to persuade many Christians and Jews in the free world that there is hope of bringing about a change in the atheism of communism, and that, therefore, these persons can become indifferent toward the fate of their brethren behind the Iron Curtain.

ABANDON HOPE

In addition, the Kremlin overlords plainly hope to induce certain other Christians and Jews to abandon all hope in the truly spiritual life by embracing the alleged spirituality of militant atheism.

There might be some reason in the past why Americans of good faith and sterling integrity have been fooled by Red usage of the words "peace" and "democracy."

Those are goals we all highly desire, but today surely we have learned that they cannot be attained by any appeasement of Soviet power. To the contrary, by yielding again to them we are preparing the way for a war waged by the United States at a great disadvantage and for the possible Red ending of all democratic rights.

Surely none of us is so naive (particularly out of our experience) to believe that spirituality can reside in any way in atheistic communism. And each one of us can dedicate ourselves to warning our fellow citizens of this new-coined term designed for our disintegration.

There are other simple steps in these beginnings for the defense of our homes and our Nation that can easily be made and which I will discuss in the future. For the moment, if we could move every American man and woman, to a true understanding of how we have been hoaxed by the upside-down, fraudulent language of Moscow and its agents, we would make great progress in protecting the American mind from Soviet domination.

Flood Control and Navigation

EXTENSION OF REMARKS OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. CANNON. Mr. Speaker, under leave to extend remarks in the CONGRESSIONAL RECORD, I include an editorial from the Franklin County Tribune, one of the oldest and most widely distributed county papers in the State, published at Union, the county seat of Franklin County, Mo., as follows:

ANYTHING FOR RECREATION?

This past week the metropolitan papers of St. Louis have started a crusade for development of the Meramec River Valley to provide recreation for the St. Louis area and, at the same time, an adequate water supply for industry which might be induced to move to St. Louis.

So now we have another reason for building dams on the Meramec River, Big River, and Bourbeuse River. The Army Engineers were just going to provide water for navigating the Mississippi River, flood control, and a recreation pool. These high three-level dams never did seem practical for any of the three purposes. And now we add a fourth—to supply water for industry.

Maybe there'll have to be a dam built below Moselle which would combine the waters of both the Meramec and Bourbeuse. Or maybe still closer to St. Louis. Of course, Meramec State Park and Meramec Caverns

will be flooded, to say nothing of most of the bottom farms in the county. At the time this location was urged by the engineers, it was estimated that water would back up as far as the termination of East Main Street in Union.

We know that floods along these rivers can be controlled. The results of the Muskingum Conservancy District in Ohio prove this beyond any doubt. Why does the situation have to be clouded by vague promises of recreation and navigation pools?

If any concerted effort is made for controlling floods in the Meramec River Basin, we are sure it will receive the support of a vast majority of Franklin County citizens. And we know that we can expect the strong support of Congressman CANNON.

Mr. Speaker, also in this connection I include the daily column by one of Missouri's most gifted writers, as it appears in the July 30, 1959, issue of the *St. Louis Review*, as follows:

REVIEWING THE SPORTS

(By Glen Goellner)

The new Missouri legislation authorizing soil and water conservancy districts has been misinterpreted, it seems, as a green light to go ahead with the building of three high dams in the Meramec Valley.

Actually, conservancy districts and big dam projects are diametrically opposed. Much of the confusion in the Meramec Valley controversy results from belief that the two can be dovetailed to attain the same end.

The person who speaks in favor of the conservancy district plan for improvement of the Meramec Valley and against the big dam reservoirs is suspected of attempting to paddle against the current. But it is entirely possible that a conservancy district would eliminate the need of the costly dams on the Meramec, Bourbeuse, and Big Rivers.

The theory behind a conservancy district is to reduce the flow of floodwater by use of correct land measures. This involves reforestation, balanced farming, controlled grazing, and supplemental projects such as small lakes and check dams. These projects would serve to hold much of the rainwater on the sheds where it falls and prevent most floods before they occur.

The advantages of the conservancy district are numerous. They include:

1. The cost would be only a fraction of the approximately hundred million dollars needed to build the dams and reservoirs.
2. Floods would be checked throughout the valley, while the reservoirs would be helpful only in those areas below the dams.
3. Land would be kept in production and its fertility would be improved, whereas the reservoirs would take land out of production, and do nothing to improve the remaining land.
4. Improved game and fish habitat would result from the fertile soil and clean streams, while mudflats and mudcats would be created by the fluctuating reservoirs.
5. Local control and management would be retained under the conservancy district plan, with the project tailored to meet the requirements of the region, while the big reservoirs would be "engineered" from Washington.

If all of this is true, why are the big reservoirs being considered? Primarily because they are intended as an aid to navigation on the larger streams, and secondly, because the large expenditures would give the valley an economic shot in the arm.

The earthen dams proposed for the three streams would be 172 feet in height. The first 60 feet of water in the reservoirs would be for conservation. The next 32 feet would be auxiliary water to be let out without notice to raise the level of the Missouri and

Mississippi Rivers for navigation. The final 36 feet would serve as a reservoir to impound floodwater.

This means that the reservoirs ("lakes" is a kindly name for these artificial bodies of water) will be subjected to a fluctuation of 68 feet, from the crest of the conservation pool to the crest of the flood pool.

It can easily be imagined what a drop or rise of 68 feet in the reservoir level would do to adjacent resorts, swimming beaches, fish spawn, duck blinds, and some of the other sundry "advantages" that are used to promote the multimillion-dollar project.

River navigation probably is important, although there is reason to doubt that it should be achieved at the expense of the general public. And high dams and large reservoirs cannot logically be opposed if their construction can be justified.

The danger here is that the old custom of putting the cart before the horse may again be perpetrated. The conservancy district plan should be put into operation first, and the big dams should be constructed only if their need then becomes apparent.

A lush, green valley, rich with crops and wildlife and floodproof industrial and residential sites, would be much more valuable in the long run than three lakes good for little else than navigation and motorboating.

Mr. Speaker, in conclusion, I include a letter which is self-explanatory:

CHARLESTON, Mo., July 24, 1959.

DEAR CONGRESSMAN CANNON: Just read your letter in today's *Globe-Democrat* regarding the Army Engineers and the Meramec.

I have owned a farm on the St. Francis River, below Wappapella Dam, before and after its construction. I can tell you some hair-raising stories of its stupid operation. It has ruined the river land. It has not been a flood-control dam in any sense.

If anyone should want high dams, we in the lower Mississippi Valley should. We in this delta area are used to the Army Engineers swarming all over the place figuring where they can spend out their annual appropriation. We in Mississippi County are still smarting under the stupid application of the so-called Jadwin plan, which cost over \$26 million, ruined our natural drainage and might have cut a whole 6 inches off the disastrous 1937 flood on the Mississippi at Cairo.

If you ever need help at a hearing on the Meramec Dam, let me know. I'll gladly donate my time in coming up.

Keep up your good work.

Yours truly,

J. M. WALLACE.

P.S.—If we are going to spend public moneys on flood control, let's build small dams high in the hills—keep the water where it is needed, and where it won't overflow the rich valleys. Since the waters won't be "navigable," the Army Engineers can't barge in on the deal.

Posthumous Medal for Dr. Ames Ends Gus Lambert's Long Campaign

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article

appearing in the *New Orleans States and Item* of July 31, 1959:

POSTHUMOUS MEDAL FOR DR. AMES ENDS GUS LAMBERT'S LONG CAMPAIGN

(By Pie Dufour)

More than 7 years ago—it was in May, 1952—an old Spanish-American War veteran named Gustav Lambert sat at my desk and insisted that the forgotten man in the conquest of yellow fever was Dr. Roger Post Ames of New Orleans.

For years, Gus Lambert, who lived in Chicago, had been campaigning for credit for Dr. Ames as an important participant in Walter Reed's experiments in Cuba, which ultimately demonstrated that yellow fever was carried by the *Stegomyia* mosquito.

Mr. Lambert, who was an Army nurse and the righthand man of Dr. Ames in Cuba, told me with tears in his eyes that nonrecognition by the U.S. Government of Dr. Ames was "the most damnable injustice that has ever been done a man."

But Gus Lambert's long fight to gain recognition for Dr. Ames ended successfully. Last August, a bill introduced by Representative HALE BOGGS for recognition for Dr. Ames' work and the posthumous awarding of a medal to him. In 1929, Walter Reed and other Army personnel who participated in the Cuban experiments were honored by Congress. But not Dr. Ames. And so Gus Lambert's campaign was launched. It ended in the office of Treasury Secretary Robert B. Anderson on Wednesday when that official bestowed the medal on Dr. Ames' widow.

Dr. Ames, a New Orleans physician—for years his brother kept the Ames Pharmacy on Hurst and Webster—was a contract physician with Maj. Walter Reed's unit in Cuba and it was he, aided by Lambert, who was the attending doctor to the "human" guinea pigs who had volunteered for the test.

But no recognition came to Ames, whose work Major Reed himself characterized as "invaluable . . . in all . . . things that pertained to the success of the investigation."

The first voice raised to secure justice for Dr. Ames' memory—he had died in Guatemala in 1914 while on a yellow fever mission—was that of a classmate in the Tulane medical class of 1889, Dr. W. M. Brumby, of Houston. He spent years compiling an impressive record of Dr. Ames' yellow fever work in the Walter Reed experiments and declared:

"Dr. Ames . . . was recognized as an expert in diagnosis and treatment of yellow fever. . . . His lifework was consecrated to serving humanity at the beck and call of pestilence and death. He was the first and the only one the Army thought of in time of need, and the last one thought of in tribute or praise after death. He had no friend at court. His friend, Major Reed, was dead."

I had a chance, on the occasion of Gus Lambert's visit to New Orleans in May 1952, to look at the photostatic record Dr. Brumby had gathered on behalf of Dr. Ames. He flatly stated that Dr. Ames was the only doctor who was in contact with the 14 men who contracted yellow fever in the epochal experiment: "There is no record of any other doctor at any time having charge of the actual handling of the 14 patients that were sick with the yellow fever."

Spurred on by Dr. Brumby's evidence, Gus Lambert, then 78 years old and partially crippled, continued the campaigning for Dr. Ames that he had been doing for years. And this campaign brought him to my desk.

"Dr. Ames was a great man and a great doctor," he said. "Without him, the yellow fever experiment would not have been a success. I know. I was there. And Walter Reed knew it, too. Had he lived, Dr. Ames would have been given the credit he so justly deserved. But Walter Reed died a couple of years after the discovery."

Despite this, Lambert said, that he wasn't going to give us until he died to get Dr. Ames credit for participation—and important participation—in the conquest of yellow fever. He showed me a letter he had received from J. L. Hanberry, of Orangeburg, S.C., the remaining surviving guinea pig in the experiment, and another from still another in the experiment, the late John H. Andrus.

"I will always believe," wrote Hanberry, "that if Major Reed had lived that Dr. Ames and yourself would have been given the credit you so richly deserve."

Andrus wrote: "I consider it a very grave injustice that—during his lifetime—Dr. Ames received no recognition for having played one of the most important parts in ridding the world of yellow fever."

Despite this sort of evidence from the men who were there and a letter from Walter Reed to Dr. Ames on completion of the experiment, Gus Lambert and Dr. Brumby couldn't get Government action.

But finally, Representative Boggs got the story and his bill was passed. The happy ending came when Mrs. Roger Post Ames received the medal Congress finally got around to bestowing on her husband.

Further Difficulties in Hasty Tombstone Promotion Action: Few Reserve Officers Know Whether They Are Qualified or Not

EXTENSION OF REMARKS OF

HON. SAMUEL S. STRATTON
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. STRATTON. Mr. Speaker, the hasty action of Congress in eliminating the 34-year-old legislation which authorized so-called tombstone promotions in the Navy, the Marine Corps, and the Coast Guard has created many problems. One of these, which was never considered by this body or the other body, is the problem of knowing whether individual Reserve officers, who are also affected by this legislation, are or are not eligible for promotions of this type, so that these officers can have a reasonable opportunity to make their decision for retirement prior to November 1 of this year. This serious situation is discussed in detail in the August 8, 1958, issue of the Army, Navy, Air Force Journal in two different articles. I desire to bring this material to the attention of my colleagues, as one other justification for their support of the Stratton-Huddleston bill, H.R. 8549, which would extend the deadline for terminating these promotions from November 1, 1959, to July 2, 1960, in the interest of fairness to all concerned.

I also desire to include with my remarks an editorial from the Navy Times of August 8. The various articles follow:

[From the Army, Navy, Air Force Journal, Aug. 8, 1959]

QUANDARY CONFRONTS SEA SERVICE OFFICERS ON "TOMBSTONES" WHAT'S "COMBAT" NOT CLEAR

Can a Navy or Marine Corps officer who elects voluntary retirement be assured that his "combat" decoration entitles him to a "tombstone" promotion? The answer is no.

In response to a Journal query, the Navy said this week that it has received a number of phone calls from officers asking if a medal they have earned permits them to be advanced if they submit retirement applications in time to meet the cutoff date established in the new hump bill.

These officers are being informed that a decision regarding the possibility of their receiving a grade increase on the retired list can not be made until the Navy has in hand a formal retirement request.

The Navy makes determinations concerning "tombstone" advancements only after an official retirement application is received, with the Secretary of the Navy having final word on the post retirement promotion.

Each case is individually reviewed by the Navy's Board of Decorations and Medals.

The law states that "tombstone" advancements will be awarded to officers "who have been specially commended for actual combat duty." The law does not state that award of a specific medal makes an officer eligible for "tombstone" promotion.

In making determinations concerning those eligible for promotion to the next higher rank on the retired list, the Board, as a general rule of thumb, interprets the word "actual" to mean "under fire."

Since the Navy does not make decisions before an officer asks to be retired, each individual is well advised to recall the circumstances surrounding his citation. Many citations made during World War II while technically "combat" awards, were not issued for service "under fire."

Some awards, in fact, are deemed by the Board to be "combat connected," and were issued for heroism following actual combat.

An example of the aftermath-of-combat citation would be a situation in which a rescue was made following the destruction of a naval vessel. An individual might have placed his life in jeopardy to save survivors after the actual combat exchange with the enemy.

Although, in this case, the individual acted heroically in a combat area, he might not be deemed to have been under enemy fire at the time he performed his valorous action.

AWARDS PROCEDURE

The awards that could be instrumental in advancement on the retired list are, in order of precedence: Medical of Honor, Navy Cross, DSM, Silver Star, Legion of Merit, DFC, Bronze Star, Air Medal, and Navy Commendation Ribbon with metal pendant.

As a general rule, the higher the award the greater the chance an officer has of receiving a retirement promotion.

Officers who have earned either of the two top decorations for extraordinary heroism have almost a 100-percent chance of being awarded postretirement advancement. There may be a few cases, however, of officers who have won the Navy Cross who may not be entitled to "tombstone" rank.

These officers may have received the medal for performance in a situation described above.

The majority of officers who have earned the third highest award—the Distinguished Service Medal—probably are not eligible for increased rank on the retired list, since this honor is given, in most cases, for meritorious service, not necessarily in a combat situation.

The fourth highest Navy medal—the Silver Star—like the first two on the list, gives an individual an almost automatic postretirement promotion.

DFC'S MAY DIFFER

Like the Distinguished Service Medal, the DFC may or may not entitle an officer for increased rank, since it is frequently given for noncombat achievement.

The Bronze Star also was awarded for both combat and noncombat duty and calls for a reading of the accompanying citation by the Board of Decorations and Medals.

The Air Medal, next lower in rank to the Bronze Star, seldom will entitle an officer to a "tombstone" advancement. The vast majority of Air Medals were issued automatically during World War II for each five missions flown by a pilot. The Navy does not hold, as a general rule, that the Air Medal fits the "specially commended" category.

The Navy Commendation Ribbon with metal pendant—the lowest award in the ladder of medals that may entitle an individual for advancement—is judged by the accompanying citation.

The Navy-Marine Corps Medal, which stands in rank between the DFC and the Bronze Star, has no bearing on "tombstone" rank. It is not given for combat heroism.

Award of a Purple Heart Medal is used as evidence that an officer has been in combat. It would clinch an officer's being eligible for a "tombstone" advancement, if he were the recipient of any other combat decoration.

[From the Army, Navy, Air Force Journal, Aug. 8, 1959]

The Navy may find itself under heavy fire from Capitol Hill if it doesn't take action to set up a procedure whereby an officer can be told in advance of his formal application for retirement whether or not he is entitled to the tombstone promotions that end November 1. As it now stands a decorated officer could very well apply for early retirement in order to attain the increased rank and then learn—too late—that he is not eligible.

Army and Air Force manpower officials resent the allegations which are being made in some naval quarters that these two services helped trigger the end of tombstone ranks for Navy, Marine Corps, and Coast Guard officers. This, of course, is no new matter at the Pentagon. For more than 8 years, the Army and Air Force have taken the position that they didn't want tombstone advancements, and that it was up to the Department of Defense and Congress to decide if any changes in the law were desired. The Army and Air Force make the point that it was the Navy alone which went to Congress with the request for enactment of the "hump" legislation that resulted in the tombstone decision.

The Navy's surprise at the sudden turn of legislative events which resulted in the loss of a privilege that has been on the statute books since 1925 is evident in the fact that there was no opportunity to argue the case for extending the deadline beyond November 1. Although there is certain to be continued protest for weeks to come from many Sea Service officers, this will be tempered by the recognition among thousands of officers below the rank of commander and lieutenant colonel that without the passage of the "hump" bill, their chances for promotion would have been greatly reduced.

That's the way it always is with force out legislation or policy decisions to accelerate attrition. The older officers in senior ranks who must leave active duty are disgruntled over what they believe to be discriminatory action. On the other hand, the junior officers who must compete for a restricted number of vacancies in higher ranks generally take the attitude that, indeed, it's too bad some had to retire ahead of schedule, but without such retirements the good of the Service would be adversely affected.

A Presidential veto is out of the question on the Navy-Marine Corps "hump" legislation, which resulted from a Pentagon request. However, it will not be surprising if the Chief Executive decides to make some comment regarding the proposal to extend the effective date of the tombstone promotion repeal from November 1, 1959, to July 2, 1960.

No person in the administration knows better than the President the adverse morale impact in the Services when career people feel that the rules have been changed in the

middle of the game, a point that was stressed by Representative STRATTON in urging the July 1960 extension. Incidentally, one of the President's top legislative assistants is a Naval Reserve captain, Earle Chesney.

Representative STRATTON brought out a point that largely was overlooked in the quick Capitol repeal of tombstone advancements. This concerns the prospect of stepped-up retirements among Reserve officers on active duty, even though they are not directly affected by the "hump" selection features of the legislation. That's why it is significant that Congressman STRATTON gained in advance the support of Representative RIVERS, Democrat, of South Carolina. He is chairman of the House Armed Services Subcommittee on Reserves.

Unless the Sea Services decide to fix specific deadlines for processing of retirement applications in time for November 1 retirements, there will be considerable consternation and confusion in officer ranks. As the situation stood at the time the Journal went to press, the Navy and Marine Corps were advising officers to submit applications as quickly as possible, but declined to set deadlines. Possible explanation is the Navy's hope that the tombstone death date of November 1 will be extended. If it isn't, the Navy and Marine Corps seemingly would be well advised to fix specific deadlines.

[From the Navy Times, Aug. 8, 1959]

SHAMEFUL

Well, the hump bill is through Congress. We do want to express our appreciation to the Senate Armed Services Committee for keeping a readjustment pay provision in the bill despite the numerous pressures to drop it. The \$2,000, plus payment for unearned leave, will be of some help to the officers forced from the active list on short notice.

But the committee did something else to the bill we don't like at all. We refer to the denial of advanced rank on the retired list to officers who retire after November 1—3 short months away.

Now there are arguments on both sides about these so-called tombstone promotions.

In favor of them is the fact that they didn't bring any extra pay, and that they were honors promised to those who by gallantry in actual combat helped the country they serve to a great victory. Also, such promotions were eventually going to disappear since no combat action after 1947—to all practical purposes, after 1945—could result in such a promotion.

On the other side are the facts that rank is somewhat cheapened and recalls to duty are in a grade never served in. There is also the fact that the Army and Air Force don't have them. (Though, on this latter point, we recall those release-from-duty promotions the Army and Air Force handed out to thousands of reservists—promotions which were worth money to those who remained in the Reserve programs.)

Personally, we think the tombstone promotions could have been allowed the originally slated natural death. But let's say, for the sake of this argument, that the advancements should have been abolished.

The questions then are what would have been the proper method and the proper time.

As to the method, the committee should have held hearings on the proposals, should have given those affected by the move and their representatives an opportunity to present their case. The right to be heard on pending legislation is one of the keystones of our form of Government.

Instead of this, the committee reported out the bill with the repealer on July 23; the Senate passed it July 27. The House accepted the amendments, and closed the case, the next day, July 28. Four working days.

As for timing, look what's been done.

Let's group officers into six classes:

1. The valley behind the hump.
2. The hump.

3 and 4. Captains and colonels above the hump with 5 years in grade.

5 and 6. Commanders and light colonels above the hump, twice passed over.

The valley isn't affected. They'll get normal OPA attrition at selection points; few have combat citations.

The hump is definitely hit. Not only do these majors and lieutenant commanders who earned citations as junior officers face double attrition rates in forthcoming selections, but those twice-passed over and, eventually forced out will lose the tombstone promotions they had been promised.

The four groups above the hump will be forced out in large numbers. But Congress, instead of sending them home with the thanks of the Republic for service in two wars, is giving them an extra kick in the pants.

Fine thing.

Of the groups, perhaps the twice-passed-over lieutenant colonels are the luckiest in that, at least, they know they've all got to go, and they can choose between \$2,000 and tombstone promotion.

The other three groups can't even make that choice intelligently. After all, two in three captains, one in five colonels, one in three commanders is going to stay. But if they wait to find that out, the deadline for a tombstone will have passed.

Also at issue, in addition to the \$2,000, are such things as (a) another 2½ percent of active duty pay for some, (b) maybe even the 22- or 26-year foggy, (c) adequate time for physical processing, (d) time to line up a new career. High prices indeed to take the tombstone they've earned.

What a dilemma. What a few uncertainty to be forced needlessly on top of the uncertainties created by the basic hump bill.

If tombstone promotions had to be abolished, then the date could have been geared to the expiration of the hump bill, 5 years hence.

Forcing these men who've fought two wars for their Congress and their country to rush out without waiting to know whether they are to be continued or not, or to rush out as soon as they hear the news (giving up the get-ready time promised them)—that, or lose a promotion which also had been promised them.

Well, the shameful deed has been done.

We can only hope that the Navy and Marine Corps heads—who had no part in this body blow—will bend every effort to minimize the deed as much as they can.

They can try to make retirement processing as fast and as thorough as possible, to insure that those who go can get out as close to the dates they wish as possible and with adequate physical processing.

And they can send them home with the thanks of the Navy and the corps, to offset a bit the ingratitude of Congress.

Mary T. Norton

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. McCORMACK. Mr. Speaker, in my extension of remarks, I include a richly deserved editorial on our late friend and former colleague, Hon. Mary T. Norton, appearing in the Washington Star of August 7, 1959:

MARY T. NORTON

Mrs. Mary T. Norton, dead at 84, will be long remembered in Washington for her good works in behalf of a better National Capital.

Although the interests of the former New Jersey Representative were varied, she devoted much of her long career in Congress to matters related to public welfare—always giving them the human interest touch. As first woman head of a House committee, she used her chairmanship of the District Committee to demand elimination of the city's slums, to seek suffrage for the District's "second-class citizens," to obtain the Glenn Dale Hospital for tuberculosis victims and otherwise to improve the lot of those who live here. A skilled politician and legislator, she fought hard and often successfully for the things in which she believed. Washington has lost a good friend with her passing.

The Reds Are Guilty of Genocide in Tibet

EXTENSION OF REMARKS OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. McCORMACK. Mr. Speaker, in the Saturday Evening Post of August 8, 1959, appears an editorial entitled "The Reds Are Guilty of Genocide in Tibet," relating to Communist atrocities, in this case Red China, in Tibet, which editorial I include in my remarks:

THE REDS ARE GUILTY OF GENOCIDE IN TIBET

People in the comfortable countries, including the United States, have grown so used to reading about mass murders in far-away places that it is hard for them nowadays to feel these things as real. Atrocities have become commonplace. Have Red China's army and secret police been killing Tibetans in large numbers? Of course. But murder by Communists is such an old story that most of us merely turn the page to murders by juvenile delinquents.

The Chinese Reds are not simply suppressing a rebellion by taking the lives of the rebels. More than that, they seem to be killing Tibetans because they are Tibetans; thus they commit the crime of genocide, which means the slaughter of a people.

The matter has been investigated by the International Commission of Jurists, an alliance of lawyers with headquarters in Geneva, Switzerland. Its record is one of sharp struggle against tyranny. After the Tibetan uprising in early spring this legal group called on its branch in India to search out the facts.

Experts were appointed by the Indian Commission of Jurists to interview witnesses and collect and study documents. After 2 months of investigation, a report has been rendered by the general secretary, Purshotam Trikamdas, who was once secretary to Mohandas K. Gandhi.

The Indian commission has found "a prima facie case that . . . there has been an attempt to destroy the national, ethnic, racial, and religious group of Tibetans by killing members of the group and by causing serious bodily and mental harm. These acts constitute the crime of genocide under the Genocide Convention of the United Nations of 1948." Prime Minister Nehru, however, has said that, because of the absence of Red China from the United Nations, he doubted that the U.N. could take up the Tibetan case.

However, the charge of genocide was soon made officially by the legal head of the Tibetan Government, the Dalai Lama, speaking from his place of refuge in India. "Complete absorption and extinction of the Tibetan race is being undertaken," he declared. There is "terrible deportation and execution of innocent men."

A former delegate from India to the United Nations, B. S. Ghani, says that Red China has an "ultimate aim. It wants to colonize Tibet."

Hitler similarly wanted to colonize Poland and other countries of Eastern Europe. To that end he murdered vast numbers of their inhabitants. Stalin committed genocide repeatedly, long before that term was coined to give the crime a particular name. In two continents, from the Baltic to Central Asia and farther north in Siberia, he exterminated, he deported, he colonized. Men and women and children who escaped immediate death were shipped around like low-grade cattle. There are places like Kazakhstan, in Asia, where colonists from other parts of the Kremlin's empire have become the majority; those natives who remain are outnumbered in their own country.

Now Mao Tse-tung and his fellow slave-masters in Peking are apparently committing the same wholesale crime in Tibet. In view of the charges by the Dalai Lama and the Indian Commission of Jurists, the United Nations should make a thorough investigation, even if the guilty nation is not a U.N. member. Otherwise, what good is the U.N.'s Genocide Convention of 1948?

The Control of Inflation by Making Price Stability an Explicit Goal of National Economic Policy

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. SCHWENGEL. Mr. Speaker, my studies on the causes of inflation and its impact upon the various segments of our economy, have led me to suggest several areas where the Government could take specific steps to curb the disastrous effects of inflation.

One of the most elemental of these is the statement of policy which the Federal Government should make to insure that reasonable price stability is an explicit goal of our economic policy.

To do this, I have today introduced a bill which would amend the Employment Act of 1946 so that price stability can be included as an integral part of the economic policy of the country.

In addition to promoting maximum employment, production, and purchasing power under the act, my bill would add the simple but all-important statement, "at reasonably stable prices." This would become the new declaration of policy under the Employment Act of 1946.

In that section of the Employment Act dealing with the Economic Report of the President, my bill would call for the report to set forth also "current and foreseeable trends in prices levels prevailing in the economy, and other steps, if any, which have been taken to counter inflationary and deflationary pressures arising within the economy."

The legislation which I am introducing would also call upon the Council of Economic Advisers to include among its duties the recommendation of policies on purchasing power and maintenance of a reasonably stable level of prices.

The President has recommended in his state of the Union message this year that the Employment Act of 1946 be amended to include reasonable price stability as an explicit goal of the Federal economic policy.

The interim report of the Cabinet Committee on Price Stability and Economic Growth recommended that Congress give highest priority to the proposal outlined by the President.

My friends, this is one of the elementary things which Congress can do: speak out clearly on price stability and thus assure the people that it is our goal to fight inflation at this level by every means.

I do not recommend forced price controls. In many respects, they would be worse than our present situation. Price controls always lead to wage controls and the freedom of the individual and our economy both suffer. Such controls have been in force in war time, but certainly they should not be justified in time of peace. Peace stability can be implemented with the same force and direction that we give to maintaining as full employment as possible; or full production; or full purchasing power. The policy needs the direction which a specific national goal, backed by the administration and the Congress, can give it.

There comes a time in the implementation of our economic policy when we should give the consumer a break. I agree with my colleague, Congressman WALTER JUDD who helped draft the original Employment Act of 1946, and who also sees the wisdom of amending that act now so that price stability is covered.

Congressman JUDD feels that when the combined forces of industry and labor increase productivity, which usually results in an increase in wages and profits, there should also be some thought given to price reductions. I concur that one of the rounds in the wage-price spiral should veer off to benefit the consumer. Whenever possible, give him a reduced price to lower the cost of living and help improve his purchasing power. You can see how much we would broaden the base of purchasing power if we were to think in terms of reduced prices for the consumer once in a while.

At the present time one of America's largest industries is in the throes of a costly strike. Wages in the steel industry are high. Profits have been high also. There is no doubt in my mind that steel prices can be reduced and the normal workload carried on with a reasonable cost-of-living increase in wages, or comparable fringe benefits, and still give a tremendous boost to the average consumer who is seeing his purchasing power dwindle more each time there is a strike which increases wages and inevitably increases prices. What a great thing it would be to give the consumer a seat at the bargaining table and to consider his stake. We would really be combating inflation then.

I am also disturbed by the announcement that one of the major oil companies might increase the price of gasoline; only a cent a gallon to be sure, but, nevertheless, another increase. Nothing I have read or heard to date convinces me that

there is any solid justification for an increase. We all know that it would spread to the other companies and the consumer would be nicked again.

This is the time to hold the line; to use every voluntary means of holding down prices. When we do this we halt the spiral; we improve the purchasing power of the average individual and we make a solid blow against the cruelest tax of all—inflation.

Congress has the power to act in seeing that price stability is forthrightly enunciated as one of the goals of our economic policy. This would be the opportune time to make the simple, but important, changes which we need to put the Federal Government on the side of those taking earnest steps to control inflation. Whether it is my bill, or one of similar intent, is not important. The important thing is to write this language on price stability into law so that our future programs will be governed by it.

Blackmail Picketing in a Velvet Glove

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. SMITH of Kansas. Mr. Speaker, tomorrow we are supposed to start debate on the so-called labor bill. I am sure every Member of this body is well aware of the deep issues involved. Every segment of our society has a vital interest in this proposed legislation because it affects all the elements of our complex economic life. It has much emotional appeal to the general public—because it affects every man who labors within or outside the unions.

Perhaps no one has a greater interest than the man who wants to labor and earn his wages free from the demands of coercive, racketeering, power hungry labor bosses—whose sole interest seems to be to get more money in the boss-controlled union treasury, so that he can get more power over his own members and the public at large by spending this money on controlling to a greater extent the political affairs of his community, State, and Nation.

Too many people are of the opinion that whenever a State adopts a so-called right-to-work law that this would solve all so-called labor problems. Such is not the case.

I trust that my colleagues will read the following letter written by a labor boss in Wichita, Kans. This is the new modern Teamsters approach for unionization of all employees. Read it carefully because this method and technique can be applied to any employer in America. The approach, as indicated in this letter, is clever and diabolical—another example of Hoffaism run wild. The letter shows the draftsmanship of a skiller operator who is sure of himself after being carefully advised by a sharp legal practitioner.

The form of this letter was initiated in Chicago and was used there on Chicago employers where it was highly successful.

Here is the letter as delivered to six trucking firms in Wichita, Kans. These firms are now being picketed as of this date—yet there is no strike, no contract negotiation, no nothing except blackmail of the rankest, foulest odor:

CHAUFFEURS, TEAMSTERS, AND HELPERS,
LOCAL UNION NO. 795,
Wichita, Kans., July 22, 1959.

DEAR SIR: Local 795, IBT, has decided to embark upon a campaign to organize your office and clerical employees. To induce your employees to join this union, we shall begin to picket your establishment on or about the 27th of July 1959. We assure you that the picketing will be entirely peaceful. We have instructed our pickets not to threaten, intimidate, or coerce anyone. If there is any violation of those instructions, please advise us and we shall see to it that corrective action is taken immediately.

We wish to make it clear to you that local 795 does not at this time represent, and of course we do not claim to represent, a majority of your office and clerical employees. Local 795 does not ask you to recognize it as exclusive bargaining representative for your employees, or indeed, ask you to recognize it for any purpose at this time. The purpose of our picketing is solely to call to the attention of union members and supporters of organized labor that your office and clerical employees are not members of local 795.

We hope that the demonstration of support of local 795 in its efforts to organize, which this picketing will produce, will persuade your employees to become members of our local union. When they do, they will join the thousands of other employees who are affiliated with the great International Brotherhood of Teamsters. In engaging in this picketing campaign, we are speaking for the members of our organization who are employed in businesses like yours and who feel the brunt of the unfair competition of your unorganized employees.

This point we must emphasize. We are not making any demand upon your company at this time to agree to or execute any contract with our union covering any of your employees. Under the law your company is permitted to recognize and bargain with our local union only after a majority of your employees have authorized the union to represent them. Therefore, even if your company should now or hereafter offer to recognize our union or enter into collective bargaining with us our union would refuse such an offer and we would continue to refuse until your employees lawfully authorize us to represent them. Should your employees desire to join our union, they may apply for membership at the office of local 795, 417 East English, Wichita, Kans., or ask one of the pickets for a membership application card which they can fill out and return to him. When we have received applications from a majority of your employees, we will contact your company further.

You should also understand that it is your right under the Constitution of the United States and under the National Labor Relations Act to advise your employees of the economic detriment which you and they will sustain as a result of the withholding of patronage from your concern by union members and sympathizers as long as they remain nonmembers of our union.

You may, in the exercise of your lawful rights, explain these detriments to your employees and urge them to apply for membership in the union and thereby acquire for themselves and for your company the good will of our union and its friends. You may not, and we are sure that you will not, threaten to take economic reprisal against your

employees, or grant them benefits, to coerce their choice in this matter. However, we feel sure that if your employees, who have been carefully taught to look to you for leadership on matters affecting their employment, are convinced that it is your sincere desire that they join the union, they will quickly realize that acquisition of union membership at the earliest opportunity is in their best interest.

Yours very truly,

S. E. SMITH,
President and Business Representative.

Mr. Speaker, now that you have read this blackmail letter—do you believe there are very many small businessmen in your district who can survive this sort of blackmail?

Briefly this is what the letter says:

"We know the law, and the law says we can picket you as an exercise of free speech so long as we do it peacefully.

"We know, also, that our picket at your door will put you out of business because you will not be able to move goods so long as our picket is there.

"We are under no necessity to sell the union to your employees because you will compel them to join our membership as quickly as the picketing shoe starts to pinch.

"There is no occasion for us to use force and violence and risk possible injunction proceedings against us because you, Mr. Employer, will do our job for us. You'll have to—or go out of business.

"We don't care about what your employees think or want. They will join our union or they won't work for you.

"We don't care, either, for the supposed constitutional or moral rights of your employees. They lost their rights when the lawmakers and the courts ceased to protect them and delivered their economic destiny into our hands."

This is the question every Member must answer: "Shall Congress submit to these blackmail evils?" Can a \$2-a-day man, carrying a placard, close up a business—under the guise of "It's legal because it is peaceful." We hear much about Iron Curtains—the Bamboo Curtain—the great free world society—but what about a curtain set up by a \$2-a-day picket?

The Speaker's Rebuke

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following editorial appearing in *Business Week*, August 1, 1959:

THE SPEAKER'S REBUKE

Speaker SAM RAYBURN has a sharp tongue, but there was considerable justice as well as sharpness in the rebuke he administered last week to some of the more vocal supporters of the Federal Reserve Board.

"I have been forced to the conclusion," RAYBURN declared, "that the Federal Reserve authorities have reached a point in

their thinking where they consider themselves immune to any direction or suggestion by the Congress, let alone a simple expression of the sense of Congress."

Speaker RAYBURN's voice is a powerful one in Washington, and when he says something like this, it is worth listening to. In fairness, though, his rebuke should apply not to the Fed itself but to some of its more ardent champions who have rushed to attack the proposed "sense of Congress" amendment to the bill raising the ceiling on the interest rate the Federal Government can pay.

The merits of the amendment itself may be arguable—though it can be remarked in passing that the language is moderate and the principle has been supported by some highly qualified students of central banking (*Business Week*, July 18, 1959, p. 123).

But whether the amendment is wise or foolish, the right of Congress to give these or any other instructions to the Fed should be beyond question. The Fed itself has always acknowledged this. But some of its partisans with their charges of a "political foray" seems to have forgotten it.

It is a basic principle of our Government—and an excellent principle—that the expert administrator operates not by divine authority but by virtue of his ability to persuade duly elected representatives of the laity that he knows what he is doing.

Regardless of what happens to the "sense of Congress" amendment, it will be a sad day for the country—and for the Federal Reserve System—if we ever try to operate on any other basis.

Washington Evening Star Supports Stratton-Huddleston Bills for More Orderly Termination of "Tombstone" Promotion Procedure in the Navy

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. STRATTON. Mr. Speaker, the other day the gentleman from Alabama [Mr. HUDDLESTON] and I introduced legislation, H.R. 8549, to provide for a more orderly implementation of the decision of the Congress to bring to an end the so-called tombstone promotion procedure in effect in the Navy, the Marine Corps, and the Coast Guard. I am delighted that the widely read and influential *Washington Evening Star* has come out editorially in support of our legislation. I commend to the attention of every Member of this body and of the other body the thoughtful editorial published in the *Star* on August 8, 1959. I hope as a result of the consideration so ably presented in this editorial that Congress will soon support our legislation to bring about a fairer and more orderly elimination of the "tombstone" arrangement.

The editorial follows:

ONE-TWO PUNCH

Representative RIVERS of South Carolina, a member of the House Armed Services Committee, has given an apt description of the abrupt action of Congress in eliminating the so-called tombstone promotions of Navy, Marine, and Coast Guard Officers upon re-

tirement. He said the ban on honorary stepups in rank, on top of "hump" legislation forcing early retirement of many combat veterans, constitutes a one-two punch to officers who have served their Nation well. It is not surprising that turmoil among officers immediately affected has resulted, with potentially serious effects on morale of the sea services.

The "tombstone" promotion ban was not an economy measure, since the one-grade elevations in rank on retirement of decorated Regular and Reserve officers do not cost the Government a penny. They are purely honorary promotions, not increasing retirement pay. They do have value to the officers involved, however, in their quest for jobs in civilian life. It is true that the Army and the Air Force have been discriminated against in this system, which for 34 years has applied only to Navy and Marine officers. It was because of this discrimination, apparently, that the Senate amended the "hump" legislation to ban the retirement promotions.

But to end the 34-year-old practice by November 1 of this year, without advance notice to the many officers concerned and without giving them adequate opportunity to revise their retirement plans, is to deliver a low blow to men who deserve, instead, a pat on the back, at least. It takes time to process retirement applications, and some officers who may wish to retire before the November 1 deadline on "tombstone" stepups are at sea or abroad and will have little or no time to consult their families on their future course of action.

Since both houses of Congress have approved the sudden ban—with too little consideration of its far-reaching implications—there are only two ways in which the blow can be softened. One is by presidential veto, which is unlikely because of the urgency of the "hump" legislation to which the ban amendment is attached. This legislation is desired by the Pentagon to smooth out the so-called hump of officers awaiting promotion—a hump resulting from the vast increase in officer personnel during World War II. The other way is one proposed by Representatives STRATTON, of New York, and HUDDLESTON, of Alabama. They have introduced a bill to postpone the cutoff deadline on retirement promotions until July 2, 1960. That would give the affected officers more time in which to consider their retirement problems and to make decisions.

The delay plan makes more sense than terminating "almost overnight" (as Mr. STRATTON put it) a 34-year-old procedure for giving retired officers a bit more prestige and a higher rank to be inscribed on their tombstones.

A Bipartisan Commission To Study the Nonmineral Public Land Laws of the United States

EXTENSION OF REMARKS
OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 21, 1959

Mr. RHODES of Arizona. Mr. Speaker, today I have introduced legislation to establish a Bipartisan Commission To Study the Nonmineral Public Land Laws of the United States. The Commission will be charged with the responsibility of recommending to the next Congress a more effective, simplified, and adequate system of laws governing the transfer of title to public lands. I am convinced

that the alternative to a new and modern system of land laws is chaos.

Every Member of Congress from our public land States knows that there is something drastically wrong with present methods of transferring title to our public lands to individuals, associations, corporations, and to States and local governments. With ever-increasing frequency we receive letters from our constituents complaining about the delay, redtape, and injustices they have experienced after applying for a tract of the public domain under our existing laws. These complaints are duly relayed by us to the Bureau of Land Management, which administers the laws. I know of no more frustrating experience than that of being advised by the Bureau that the application from my constituent will be taken up in its turn, but because of the present workload action should not be expected for at least a year.

Modernization of our nonmineral public land laws is long overdue. As this Nation expanded it was to the interest of our Government to get the public domain into private hands as rapidly as possible. The Nation needed revenue, our land needed developing, and the country needed the crops such development produced.

Laws to facilitate the transfer of the public domain into private ownership were enacted to meet the needs of the times. Altogether, some 5,000 private and public laws have been passed by Congress for this purpose. Many of those laws are still on the books and as a result our Government and its citizens are confronted with a patchwork of conflicts and contradictions.

The multiplicity of these laws governing disposal of the public domain has created intolerable administrative difficulties.

For example, a single tract of unreserved, vacant public domain can be covered simultaneously by applications under the Desert Entry, Small Tract, Homestead, Private Exchange, Soldier's Script Rights, Public Sale, Recreation, and Public Purposes, or State School Selection Acts. The cost to the Government of resolving these conflicts, of deciding under which act the tract should be disposed of and to whom, vastly exceeds the value of the land itself.

Compounding the confusion created by this hodgepodge of law is the ever-increasing pressure from our citizens, local governments, and industry for acquisition or use of the public domain. Under present laws, each application must be considered separately. The land involved must be examined and classified. Protests must be heard. Appeals must be decided. Conflicts must be resolved. In 1954, the Bureau started the year with a backlog of 25,013 cases to be adjudicated. By 1958, despite generous increases in appropriations to expedite these cases, the backlog had increased to 54,725.

A large number of these cases are traceable to the operations of land locators. Taking advantage of the present complexities of our public land laws, they have led thousands of our citizens to believe that the public domain is

theirs for the asking. Their clients are not told that before they can obtain title under the Desert Land Act, the land must be irrigated and put into agricultural production. Assuming that water is available—which in most cases is not—this requires an outlay of over \$25,000. Yet these land locators continue to bilk the general public out of millions of dollars per year by filing applications which they know are doomed to rejection. The administrative burden this imposes upon the Government is tying up effective management or transfer of the public domain.

The study commission proposed in my bill would limit its consideration to nonmineral public land laws. I do not mean to imply that there are not conflicts in other public land use statutes. It is, however, in the field of public land disposition where administrative burdens imposed by conflicting laws are penalizing the individual seeking land, the Government, and the taxpayer.

The commission would be bipartisan, three members to be appointed by the Speaker of the House, three by the President of the Senate, and three by the President. A thoroughgoing study of our nonmineral land laws has been needed for years. The redrafting of these laws to meet present-day needs of our people is a must. Until this is done, effective and efficient administration of the public domain is impossible.

Saucer Groups' Family Quarrels

EXTENSION OF REMARKS
OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 15, 1959

Mr. HIESTAND. Mr. Speaker, under leave to extend my remarks in the Record, I include the second of a series of articles about flying saucers by Mr. George Todt, of the North Hollywood (Calif.) Valley Times.

In this article Mr. Todt reports on flying saucer devotees, the organized and unorganized people who seem dedicated to their cause, some merely as a hobby, others for serious scientific purposes:

SAUCER GROUPS' FAMILY QUARRELS

Are the flying saucer devotees just one big happy family?

No, they are not. Quite the contrary, in fact. Some of the aficionados are hardly on speaking terms with one another.

There is a valid reason for all of this, of course. The story behind the story is a fascinating one. Let's take a backstage look-see for ourselves.

The greatest schism among flying saucer fans—at least here in the United States, certainly—actually stems from the manner of approach to the interesting subject, itself.

Generally speaking, there are two main groups to be considered in the overall picture. They differ from each other almost as much as night from day. Actually poles apart, no less.

Just what is the realistic measure of difference, then?

One group prefers to be identified as "UFOlogists"—taken from the name "UFO," which stands for "unidentified flying objects." As a rule, these people are found to be the serious, scientific students of the exciting phenomenon now taking place in our heavens. Their eyes are turned expectantly up to the sky, but their feet are also very definitely upon the ground. Solid citizens, if you ask me.

They collect data, keep files of UFO sightings for future reference, make evaluations therefrom, and are of the considered opinion that the elusive celestial objects may at least be classified as the most stimulating scientific mystery of our times.

Among such intellectually curious students are numbered today many outstanding aviators, space scientists, engineers, radar experts, college professors, ministers, high-ranking officers of the armed services, and others.

Some of them have been demanding that the U.S. Congress should investigate the UFO's in an effective manner, holding open hearings on the subject—and then making the findings or conclusions available to the public.

Many Congressmen have lately been indicating sympathy for such a project—and it just might come off one day soon.

The second self-contained segment inside the un-integrated flying saucer fraternity, which represents the other side of the coin in this instance, is the so-called contactee group, or saucerians.

As the word "contactee" indicates, many of these people purport to have made contact with those whom they call the space people—either by physical means or utilization of mysterious and mystical techniques which are never subject to objective scientific analysis or other kinds of demonstrable proof.

Some of the contactees claim to have been whisked away by the space people to other planets where they say they were allowed to see the workings of advanced races on their their home grounds.

Others tell us that they have managed to achieve mind-to-mind contact with "etherians" on another planet of existence beyond this mortal sphere. Some explain that they have had visions in which supernatural beings explained to them that the saucers were merely the advance guard of the Lord's host en route to Armageddon.

And, of course, the ancient lore of Tibet and its hidden mysteries can also be counted to crop up in the astounding tales we are told.

All of which may be interesting enough to those who like to hear a good story upon occasion, but there is at least one glaring deficiency among these folks—some of whom manage to give us the impression of being quite sincere in their personal beliefs, incidentally.

Their fault lies in the fact that they are seldom concerned very much, if indeed they ever are, to back up their astonishing claims with anything resembling scientific proof of any type whatsoever.

Can we be blamed for wondering about them under circumstances such as have been described?

Khrushchev Would Feel at Home at TVA

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the

Appendix of the RECORD, I include excerpts from a newsletter of August 9 by Mr. Thurman Sensing, executive vice president of the Southern States Industrial Council, of Nashville, Tenn., as follows:

As more or less of a postscript, we notice a Senator has written the President a letter urging him by all means to have Mr. Khrushchev include a survey of the TVA in his tour of the United States. Well, if the thought is to make him feel at home, we should say that is a pretty good idea—because he will certainly find no free enterprise there. But what is Mr. Khrushchev himself to think, when we parade the TVA before him with pride, than that we are already aping his philosophy of state ownership and state control—and that we are already on our way toward making his prophecy about our grandchildren come true? We all want peace, yes, but must we obtain it at the expense of consorting with Communists and by the loss of our self-respect?

Mr. Speaker, it is noteworthy, but not surprising, since the organization which Mr. Sensing represents is located in the heart of the Tennessee Valley Authority, that he would dare make such a statement; but the facts are, Mr. Sensing, like most every patriotic, deep-thinking American who lives close to the scene, knows full well that the final effect of that socialistic, autocratic empire within our free Republic will bring nothing but dictatorship and misery to the good people of that vast area who are at this very minute dominated by a board of three men not elected by the people.

One of the most important duties of Congress, now and in the near future, is to keep the Socialists from organizing the other great river valleys in the United States of America and prevent the same fate as has befallen the people in the Tennessee River Valley—for if that should be accomplished then 27 men not elected by the people would be in complete control of the lives and property of every American.

I hope every reader of this statement will write me requesting a copy of my speech of May 4 on this all-important subject.

We Celebrate Freedom on Grave of Patriotism

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. ROGERS of Florida. Mr. Speaker, on July 5 the Palm Beach Post Times of West Palm Beach, Fla., printed a fine editorial entitled "We Celebrate Freedom on Grave of Patriotism." In the belief that these comments will be of inspiration to all Members, I have requested that it be printed here in the CONGRESSIONAL RECORD, as follows:

WE CELEBRATE FREEDOM ON GRAVE OF PATRIOTISM

Yesterday, the people of the United States of America observed the 183d anniversary

of a historic document—the Declaration of Independence.

Sadly, it was a perfunctory observance—a far cry from what was once referred to as "the great and glorious Fourth."

A few desultory firecrackers broke the general calm; the usual dutiful parades and unlistened-to speeches went off on schedule. But for the most part it was just another weekend holiday devoted to rest and pleasure seeking.

Engrossed in their own personal enjoyment of the rights of "life, liberty, and the pursuit of happiness," few gave thought to the valiant men who pledged "our lives, our fortunes, and our sacred honor" to the preservation of those rights.

Fewer still, perhaps, pondered the contemporary meaning of the declaration "That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

Actually, those words, in the precarious times of 1776, were little more than a pious hope for better times—a challenge to a despot. It was not until this yearning for freedom had been incorporated into written law, in the Constitution of the United States of America, that these unalienable rights became realities.

It was this Constitution which established a Government dedicated to securing those rights; a Government deriving its just powers from the consent of the governed. Freedom took therefrom form, substance, and meaning.

Our ancestors deemed this an event worth celebrating. For a century and a half, the light of patriotism burned brightly on the Fourth of July. No one was ashamed to be openly patriotic.

But of recent years it seems that patriotism has become old fashioned. Some are beginning to preach that independence is no longer an adequate word to describe the great event we celebrate on July 4.

One writer of recent vintage asked point blank the question: "Who is independent today and what are they independent of? . . . Just how many of us would want to be independent today if we could—Independent of strong central Government, allies, taxes, and all the services that taxes pay for?"

The implication here is plain, but the writer made it even plainer with the assertion that years of isolationism have made foreign entanglements inevitable, if not vitally necessary to the preservation of our Nation.

And he went on to redefine the meaning of freedom in the broader context of a decent life for all, achieved through national and international cooperation, even though it may limit a certain kind of rugged individualism.

That is the philosophy of socialism and of one worldism. And that is what has dimmed the luster of the glorious Fourth.

The founders of our freedom sought to prevent the establishment of a too strong central Government, knowing that such Government inevitably evolve into tyrannies.

They sought to avoid foreign entanglements, knowing that their freedoms could thereby be compromised.

They condemned taxation without representation and sought to put safeguards in the Constitution against unjust or confiscatory taxes.

They set up a government to be supported by the people, never intending a government to support the people.

They laid the foundation for an economy in which equality of opportunity gave birth to the free enterprise system—the most successful in the history of the world.

But now we are being told that these principles of freedom are out of style. The new freedom, it seems, depends on an all-powerful central Government which dis-

penses its blessings through a gigantic bureaucracy.

Free enterprise is an anachronism called "rugged individualism," a vestige of the Stone Age. In its place we are being offered the "freedom" of socialism.

And, naturally, the larger modern freedom encompasses the whole world. It is implied that none of us can be really free unless we rid ourselves of the nationalism which was once considered the keystone of our freedom.

Under the pressures of this "broader context" it is little wonder that the basic principles of freedom as laid down in the Declaration of Independence have been obscured.

"Government by consent of the governed" has in effect been held unconstitutional in recent Supreme Court decisions, and the small voices raised in protest have been drowned in the rantings of proponents of the new freedom.

Yes; we still celebrate freedom on the Fourth of July. But it was not secured to us by the men of '76. It is something that each generation must earn and preserve for itself.

History may record that our generation has failed.

The next generation may celebrate its "freedom" by rattling its shackles.

General Executive Board of Amalgamated Clothing Workers of America Recognize the Serious Threat of Low Wage Foreign Competition

EXTENSION OF REMARKS OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. STRATTON. Mr. Speaker, the problem of foreign competition, in goods manufactured abroad in low wage areas where workers are not protected by American labor standards is one of our most serious economic problems of our day. We in the 32d Congressional District of New York, which is the center of the glove-manufacturing industry in America, are particularly conscious of this problem and of the heavy distress in terms of the unemployment of loyal American workers which it has created.

I was tremendously impressed the other day to have brought to my attention a statement adopted recently by the general executive board of the Amalgamated Clothing Workers of America dealing with this important problem. I believe the statement of the general board will be of interest to every Member of this House, and I commend the Amalgamated Clothing Workers of America for their leadership once again in an important national issue. The statement follows:

STATEMENT ON IMPORTS OF MEN'S AND BOYS' APPAREL ADOPTED BY THE GENERAL EXECUTIVE BOARD OF THE AMALGAMATED CLOTHING WORKERS OF AMERICA, JULY 6, 1959

Unfair competition from imports represents a serious threat to the workers of the men's and boys' apparel industry in the United States and Canada. The volume of imports of apparel, particularly from Japan and Hong Kong, has increased enormously.

From 1954 to 1958, U.S. shirt imports, for example, have expanded over 800 percent. The knit-glove industry of the United States is well on the road to destruction; knit glove imports are about 250 percent of U.S. production. Imports of pajamas, robes, underwear, pants, raincoats, outerwear, gloves, sporting apparel, and equipment are increasing rapidly. Tailored clothing is arriving from abroad in ever larger quantities. Hong Kong's mail-order business in tailored clothing with customers in the United States and Canada continues to expand, and for the first time in Japan's history a ready-to-wear tailored clothing industry is being developed to export to the United States and Canada.

Unless effectively countered, the flow of men's and boys' apparel imports will continue to increase, with disastrous consequences for many segments of the industry and the destruction of many thousands of jobs. Producers in Japan and Hong Kong are being encouraged and assisted by large mail-order houses, chain stores and department stores which are apparently more interested in a quick profit on cheap labor than in a healthy domestic industry.

The apparel industry is particularly vulnerable to the kind of cutthroat competition represented by imports. Ever since World War II the proportion of the consumer dollar spent on apparel has been declining. The industry is intensely competitive, with a large number of small firms struggling for the declining share of consumer expenditures. As a result, profits are low, business mortality is high, and many firms are on the margin of existence. The struggle to survive in the industry's highly competitive environment generates powerful incentives to cut labor costs. Before the advent of the Amalgamated, the workers in the men's and boys' apparel industry bore the major brunt of this competitive pressure through starvation wages, and sweatshop conditions. The successful struggle to eliminate these evils in the men's and boys' apparel industry is a well-known part of the history of the Amalgamated Clothing Workers of America.

We now find that the hard-won labor standards of our members, and ultimately, their jobs, are threatened by these very same evils imported from abroad. The competitive advantage of imported wearing apparel is rooted in substandard wages—the equivalent of 10 cents per hour—and degrading working conditions. It is based on long hours of work—60 hours a week for women and children—under shocking conditions of health and sanitation. It is often the product of homework, with its shameful exploitation of the labor of the young, the aged, and the infirm. No apparel manufacturer in the United States and Canada can hope to meet this kind of competition, and no one should be expected to meet it, whether it is from Japan, Hong Kong, or any other country. It is completely destructive.

The Amalgamated Clothing Workers has long favored improved trade relations among the countries of the world. It has been a staunch supporter of the reciprocal trade program ever since the early days of the New Deal. But reciprocal trade was conceived as a middle-of-the-road approach to liberalizing international trade without injuring the domestic industries of any nation. It was never intended to be an instrument for destroying an important American industry by unfair competition from sweated labor abroad.

We shall not default on our responsibilities. We must mobilize our resources in an all-out effort to defend our labor standards and our jobs. We must be sure that not only the many millions of members of the AFL-CIO and the CLC, but all fairminded consumers, are fully informed about the human misery and exploitation behind these imports, and about the shocking conditions of health and sanitation under which they

are produced. We must see that they understand that purchasing these garments helps to destroy hard-won labor standards and millions of jobs. We must publicly expose the large chain stores, mail-order houses, and department stores which encourage these imports, and other retailers who carry them. We must direct our political energies toward legislation that will insure strict control over imports that are produced under substandard wage and working conditions. We must make certain that evils against which we so successfully struggled at home do not destroy us from abroad. We must leave nothing undone within our rightful power that will protect our security, our jobs, and our future.

Cardinal Speaks Out Against Visit by Khrushchev

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 5, 1959

Mr. LANE. Mr. Speaker, His Eminence Richard Cardinal Cushing, of Boston, recognized long ago the insidious nature of communism.

He knows how it alternates brute force with ingratiating duplicity that confuses the wishful thinkers and induces them to grasp at straws.

When it puts on the mask of peace it disarms the naive, and takes away their capacity to think clearly.

Cardinal Cushing is never taken in by this bland but deadly form of infiltration.

And so he has spoken out against the tragic blunder of our Government in opening the gates to the Trojan-horse visit of the "hangman of the Ukraine," the "betrayer of Hungarian independence," and "the tyrant of the captive nations" as he is known by those who are aware of his crimes against humanity.

Cardinal Cushing puts his finger right on the danger when he says:

His [Khrushchev's] only purpose of accepting an invitation to any country is to propagate communism. The Scandinavian countries knew that and their people protested with such vigor that Mr. Khrushchev canceled his visit.

Khrushchev may be welcomed by our Government, but he is persona non grata to the American people.

I ask you to read and remember the following article, titled "Cardinal Explains Opposition to Invitation For Khrushchev," that was published in the August 8 edition of the Pilot, official organ of the archdiocese of Boston:

CONSPIRATOR—CARDINAL EXPLAINS OPPOSITION TO INVITATION TO KHRUSHCHEV

(In the following statement, written especially for the Pilot, Cardinal Cushing explains some of the background against which Mr. Khrushchev's planned visit must be judged.)

In the light of my addresses and writings concerning atheistic communism, I could not favor an official invitation to the leader of that international conspiracy to visit the United States.

It can be said that communism is a fruit of the materialism of the world and a judgment thereon.

Like all of us, the Communist leaders fear another war. They say that it is possible to live together peacefully. But actually their ideologic war, a third world war, has already started, and their intention is to bring it to victory.

Khrushchev is a dedicated man. Therein lies his strength. But he is dedicated to a godless ideology, leading to slavery. That is what makes him so dangerous. Men like him have been won to nobler beliefs and have become their greatest champions. But whoever thinks that we can influence Khrushchev merely by showing him how our democracy functions and how well off we are, has no conception of the passionate, hate-filled contempt for our way of living which possesses Khrushchev and company. We cannot change him. Day and night, in thought and in deed, he is working with cunning determination together with his associates for the worldwide victory of communism. Every problem or situation—Berlin, Geneva, friendly visits, cultural exchanges—used to further one primary purpose—world revolution. Are we ourselves so completely without passionate faith in our ideals that we cannot believe others capable thereof?

I recall Mikoyan's visit. It was pitiable to see with what supreme cleverness he made use of the whole gamut of emotions—Idealism, love of peace, sentiment, simple-mindedness, vanity, business acumen, mammon. If we were taken in by him, what can we expect from Khrushchev's visit?

Ideologically disarmed, we lay open our country, through an invitation to Khrushchev, to the planned offensive of an ideologic elite force. That is like opening our frontiers to the enemy in a military war. It is unwise. What is more: If the United States opens her doors to the Communist world-revolution dictator, we fall the struggling people of the countries behind the Iron Curtain. But, if we refused to open our doors, we shall strengthen their courage; and the young nations of Asia and Africa, who are standing at the crossroads, anxious to learn about us, will see in the path of democracy a new and clearer light. Having invited Khrushchev how can we fail to invite the other dictators—the head of Red China et al.

But there is a more important aspect. The Soviet Union is an ideologic power arsenal. In a short space of time it has revolutionized 900 million people. We seem to be ideologically impoverished, possessing only little of the love of God and country that characterized our forebears. We have fallen for the idol of materialism. When we get into contact with the Russian thought power arsenal, the current runs toward us, not the other way.

But the current can be turned. The United States can become a moral ideologic power arsenal of such potency that the current will pass from us. Too long have we been content with pleasure, luxury, wealth, and lukewarm Christianity. Every Christian prays: "Thy will be done, on earth as it is in heaven." It is nonsense to pray like that without seriously desiring what we are praying for. If I really want it, then I must stand up for it, in my own life and in the life of others, in the life of the Nation and in the life of the whole world, with all that I am and have, led by God, in community with others who feel the same obligation. Then indeed the miracle will be achieved and other nations and peoples will be impressed. They will follow genuine moral leadership, not material progress.

That is Ideology. That is Christianity. That is moral strength. If we do not choose this way and live it, as individuals and as nations, we choose communism, as Khrushchev wants us. His only purpose of accepting an invitation to any country is to propagate communism. The Scandinavian

countries knew that and their people protested with such vigor that Mr. Khrushchev canceled his visit.

World Poverty and American Policy

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. ROOSEVELT. Mr. Speaker, Mr. Peter B. Kenen, a young economist with an outstanding academic and professional record, has written an excellent article, "World Poverty and American Policy," which appears in the spring 1959 issue of the Columbia University Forum. This publication is a quarterly journal of fact and opinion.

The author's qualifications to write about foreign economic aid, in its many aspects, are well set forth by his background and training. A 1954 Columbia College graduate, Peter Kenen has studied at Harvard and the London School of Economics. Presently, he is assistant professor of economics and of U.S. foreign economic policy at Columbia. A contributor to various professional journals, he is the author of a forthcoming book on British monetary policy which, as a dissertation, received Harvard's Wells Prize this year for works on economic subjects.

Mr. Kenen's thought-provoking article can well be studied, I believe, by all who are interested in a sound American foreign policy and a way to convince the great multitudes of people in other lands that our interest in humanity is direct and sincere.

I heartily commend to my colleagues a careful perusal of this article, which follows:

WORLD POVERTY AND AMERICAN POLICY

(By Peter B. Kenen)

Since the Second World War, the peoples of Asia, Africa, and Latin America have grown restless. From Caracas, Leopoldville, Cairo, Beirut, and Djakarta comes evidence of their discontent, which the facts of economic life alone cannot explain. But neither can their foreign policies nor their bitter civil strife be understood without an appreciation of their economic circumstances.

The underdeveloped countries contain more than half the world's population, but produce less than a fifth of the world's output. Living standards in Asia, Africa, and Latin America are therefore far below those prevailing in Europe and North America. The gap, moreover, is widening. Population growth in the poorer countries has exceeded the increase in their income, while production has outstripped population growth in wealthier countries.

The peoples and governments of the underdeveloped countries have come to appreciate the possibilities of economic growth and to regard such growth as an inalienable right. They look to their more fortunate friends for assistance. Back in 1949, a group of economists reporting to the United Nations suggested that the underdeveloped countries ought to sustain at least a 2-percent annual increase in income per person. Such an increase, they pointed out, would barely suffice to keep the gap between underdeveloped

and developed countries from widening. The economists then argued that the underdeveloped countries cannot furnish even half of the capital required to achieve that minimum of 2 percent. A very large part of the necessary money has to come from abroad.

These circumstances pose three questions for American economic foreign policy. First, have we an obligation to assist the underdeveloped countries? Second, is our present foreign aid program adequate to the needs of those countries? And third, do our trade and tariff policies help or hinder them?

In meetings of the United Nations, Asian, African, and Latin American representatives insist that the wealthy nations, especially the United States, which enjoys the world's highest standard of living, should help the poorer ones to finance development projects. For many years, our representatives have been reluctant to acknowledge any moral imperative to do so. Indeed, our spokesmen repeatedly warned that economic aid would soon be discontinued, that we could not program foreign aid on a continuing long-term basis. The United States urged instead that the underdeveloped countries attract private American investment.

During the last 2 years or so our Government has begun to change its position. Washington has come to recognize that private capital will not come forward in quantities adequate to finance the minimum programs of underdeveloped countries, and that some of the projects which must be undertaken in those countries—such things as transport and irrigation programs—can never yield a profit sufficient to justify private investment. We have also come to understand that trade is no substitute for aid, that aid supplements the resources of underdeveloped countries, while trade does not. And while we are still reluctant to acknowledge that we have a moral obligation toward the poorer countries, we have learned that this doctrine is deeply rooted abroad and influences other countries' attitudes and policies. It does us no good to deny that we have an obligation to other countries, for they believe we have, and act accordingly.

Unfortunately, America's response to the needs of the underdeveloped countries remains inadequate. U.S. economic aid in fiscal 1959 totaled \$1,476 million. But \$773 million of that sum was allocated to defense support and was spent in Korea, Formosa, Vietnam, Turkey, Spain, and other countries armed by the West. Another \$150 million was used for technical assistance—to supply directly and through the United Nations the services of specialists in problems of agriculture, industrial planning, health, and in related fields. And \$60 million more was spent for refugee relief and other emergency programs, in the Middle East and elsewhere. The remainder, a bit under \$500 million, was supplied as grants and loans for economic development. The loans were furnished by a new Government agency—the Development Loan Fund—established by Congress in 1957.

The Development Loan Fund makes long-term loans at low interest rates, repayable in local currencies rather than in dollars. At first the Development Loan Fund was authorized to lend just \$300 million. In 1958 Congress increased its resources to \$700 million. But by the end of September 1958 the Development Loan Fund had committed itself to loans totaling \$456 million and had in hand loan applications for another \$2,100 million. By the beginning of 1959, President Eisenhower informs us, the Development Loan Fund had committed all of its resources. The President has, therefore, asked Congress to supply the fund with an additional \$925 million. This is a great deal of money, but it falls far short of the total of applications already received, let alone those which are likely to arrive from underdeveloped countries during the coming year.

To make matters worse, the President's 1960 budget asks for only \$668 million for direct economic aid, for technical assistance, and for the emergency relief programs to which we are committed. And if Congress runs true to form, it will cut back this modest request. The Development Loan Fund then emerges as the frail mainstay of our aid program for underdeveloped countries. It is frail not only because it is poorly endowed, but also because its operations have all the disadvantages of grants and many of the disadvantages of loans. Because Development Loan Fund loans are repayable in inconvertible currencies, the agency's funds will not "revolve." Congress will have repeatedly to enlarge its total capital. The underdeveloped countries must, nevertheless, find funds with which to repay us, and there are bound to be difficulties when that obligation falls due. The United States will find itself holding vast sums in currencies for which it has little use. We have, in fact, already accumulated large amounts of Indian, Pakistani, and other foreign currencies by selling surplus agricultural commodities under Public Law 480, and have had difficulty managing these balances so as not to disturb the monetary system in underdeveloped countries.

Surely the program to which we are committed—centered as it is on an inadequate loan system—is unsatisfactory in relation to the needs of the underdeveloped countries and Lilliputian in relation to our resources.

And it does not sufficiently exceed Soviet assistance. England's Alec Nove, in *Lloyds Bank Review*, estimates that Soviet bloc credits and grants now available to the underdeveloped countries total \$1,270 million; Soviet credits and grants to Asia, Africa, and Latin America have reached \$1,970 million, and the underdeveloped countries have already used \$700 million. Some of this assistance has, of course, been provided in armaments, and much of it is short-term credit. And we may insist—with pride—that free world assistance to the countries receiving Soviet loans greatly exceeds that furnished by Moscow. The United States, through the Development Loan Fund, the Export-Import Bank, and under other programs, has alone provided many times the sum ostentatiously proffered by the Russians. But the underdeveloped countries may be greatly flattered by invitations to Moscow's debut as an international lender. Moreover, the fact that the Soviet economy has advanced to a level at which it can spare resources to assist others is itself of profound political significance, and the Russians' generosity to neutrals in the distribution of credits is still more embarrassing to the West. They have pledged about \$925 million to Nasser's United Arab Republic, \$320 million to India, and \$250 million to Indonesia. Moscow has concentrated upon the most susceptible of the underdeveloped countries.

We certainly ought not to outbid the Russians project by project, country by country. Were we committed to do so, the Soviets could dictate the distribution of our foreign-aid program, merely by making irresponsible offers they had no intention of honoring. As this country has chosen to make foreign aid scarce, we must disburse it carefully, financing those projects which promise the greatest gains in income to the poorer countries. We cannot afford to spend just as Moscow desires.

To offset Russian political gains on account of foreign aid and to show the world how very much more generous our own efforts are, we should instead sponsor an International Development Association to make loans or grants to the underdeveloped countries. The United States and other free countries would furnish the Association's capital and would call upon the Russians to contribute. The creation of such an association has been proposed by Senator Mike

MONROE, and has been promised sympathetic study by the administration's able Under Secretary of State for Economic Affairs, C. Douglas Dillon. Were such an international agency established and were it to be directed jointly by donors and recipients, the allocation of assistance for economic development would be removed by one step from cold war maneuvering. At the same time, the contributions of free nations would dwarf those of the Soviet bloc, putting Moscow on the defensive. Such an arrangement, moreover, would probably enlarge the total of funds available for economic development; it would encourage contributions by other free countries, especially in Western Europe. With few exceptions, these countries cannot furnish enough assistance separately to justify establishing their own foreign aid programs.

An increase in U.S. foreign aid and the creation of an International Development Association to allocate that aid are not enough. The United States must help to solve one of the most pressing and complicated problems besetting the poorer countries:

Many of them produce only one or two commodities for export. These are generally raw materials or foodstuffs, and their prices are notoriously unstable. In fact, the prices of these basic commodities fell precipitously in 1957-58. Meanwhile, the prices of machinery and other manufacturers, the goods which underdeveloped countries import, have been rising. A group of prominent economists consequently estimated that the terms of trade—the ratio of export to import prices—of underdeveloped countries declined by some 10 percent during the 12 months ending March 1958. Since then, they have fallen further. As the underdeveloped countries' terms of trade deteriorate, their development programs must be cut back, for they cannot purchase the machinery and industrial materials they require. In the past year or so, one such country after another has therefore sought special assistance from the International Monetary Fund, straining the resources of the International Monetary Fund. For this reason, among others, President Eisenhower has proposed that the United States increase by 50 percent its subscription to the International Monetary Fund. Other countries will do the same.

But the foreign exchange supplied by the International Monetary Fund must be repaid. It therefore postpones, but does not eliminate, the need for a comprehensive price stabilization program. Unfortunately, only sporadic international efforts have been made since the war to stabilize commodity prices. Agreements are in force for wheat, sugar, and tin. Other important commodities have been neglected. And the arrangements which have been negotiated are not entirely successful. Commodity agreements which seek to stabilize prices at high levels generally resolve the shortrun problem of instability by creating a longrun problem of surplus disposal. When prices are stabilized at artificially high levels, supply exceeds demand and surpluses accumulate.

This difficulty is, of course, identical to that posed by the United States' own price support program. The solution which has been proposed for our farm problem may therefore be appropriate for world markets. Some years ago, the Secretary of Agriculture, Charles Brannan, urged that we stop supporting farm prices, that we let supply and demand determine prices in the open market. He urged that we subsidize the farmer directly, instead of maintaining high prices. This proposal would have lowered prices to the consumer and eliminated the problems of surplus storage and disposal.

The Brannan plan was never adopted in the United States but it could be revived to stabilize the income from foreign trade of underdeveloped countries. Instead of sup-

porting food, fiber, and minerals prices, we might agree to indemnify in whole or in part the country producing these products were prices to fall below an agreed-upon level. Conversely, the producing countries could agree to indemnify consumers were market prices to rise above that level. There are admittedly great practical difficulties in the way of such agreements. The consumers will seek to set the reference price low; producers will try to jack it up. These difficulties, however, ought not to deter us from entering into preliminary negotiations with some of the underdeveloped countries involved.

The problem requires immediate solution because the long-range development programs of the poorer countries are jeopardized by price fluctuations, and because the Soviet Union has emerged upon this field, too, as champion of these same countries.

To illustrate: in recent years the Russians and their satellites have purchased large quantities of cotton from Egypt, Afghanistan, and Iran, of rice from Egypt and Burma, and of rubber from Indonesia. These purchases have removed from the market surplus commodities which would otherwise have depressed market prices. In effect the Russians have engaged in a price support program of their own, concentrating as usual upon those countries which are most susceptible to economic and political penetration. To be sure, the Russians require these commodities for their own use. Their motives are economic as well as political, and they have sometimes driven a hard bargain. But the contrast between their posture and ours is striking. They have been buying cotton and rice. We have been selling them.

During fiscal 1957, the United States exported \$1,115 million worth of cotton. These exports were subsidized by our Government and have provoked bitter protests from countries relying heavily upon agricultural exports for foreign exchange. Our cotton program has sown anger in Peru, Brazil, the Sudan and other places, while American shipments of wheat have exacerbated already strained relations between the United States and Canada. To placate our allies the United States tries to insure that our sales of surplus agricultural commodities do not displace the exports of other countries. We have not been remarkably successful.

The most obnoxious and perverse American policies, however, are our import restrictions. This country has systematically limited its purchases of several commodities important to other free countries. During 1958 the President imposed quotas on imports of lead and zinc, to the consternation of Canada and certain Latin American countries. In 1957 the Government curbed petroleum imports, alleging that those imports were discouraging the exploration and expansion of our petroleum reserves. Petroleum is admittedly vital to the national defense. But that fact argues that we ought to conserve our own supply and encourage exploration and development in nearby countries, especially in Venezuela and Canada. Prudence does dictate that the West reduce its dependence on Middle East oil, as political developments short of war could deny us access to that region's rich fields. Only one circumstance, however, could cut us off from the Canadian and Venezuelan fields—a nuclear war. And if such a war were to break out, we would have to fight with the oil on hand, not that which we might bring out of the ground. The great destruction which would be visited upon us in the first days of total war could render our own oil industry inoperative.

Finally, an overhauling of our trade policies is all the more necessary because of recent developments in Western Europe. At the beginning of this year, six European countries—France, Italy, West Germany, Belgium, Luxembourg, and the Netherlands—set out upon the road to economic union. At

the end of 15 years, they will have dismantled all barriers to trade among themselves. As a first step they have reduced their tariffs on each others' goods by 10 percent. The European Common Market will ultimately bring great benefit to its six members and, therefore, to the community of free nations. In the process, however, American exporters may be materially injured. The present plan for tariff reductions in Western Europe itself implies discrimination against America. And the Common Market countries may intensify their restrictions on goods coming from the outside world. As the tempo of economic growth has slackened in Western Europe and as a species of stagnation may prevail for some time, there is real danger that the Common Market countries will use tariffs to export unemployment. Protectionism is the evil twin of recession, abroad as in the United States.

In order to defend its exporters against recrudescence of protectionism in Europe, the United States will have to enter into aggressive tariff bargaining with members of the European Economic Community. At present, however, this country is incapable of such negotiations. The reciprocal trade agreements program, reenacted by Congress last year, gives the President new authority to swap tariff concessions with other countries. That authority, however, is so narrowly circumscribed that the President cannot offer to other countries the concessions that will be necessary to preserve American export markets. The peril point provision in our Trade Agreements Act virtually forbids concessions which would injure an American industry. And a producer who finds the market for his product shrinking on account of a change in consumer tastes or technology may resort to escape clause proceedings to recover his losses by cutting imports.

In point of fact, very few tariffs have been raised on account of escape-clause action, but the threat of such action has doubtless discouraged many foreign producers from entering the American market. The President, moreover, has been unable to trade important new concessions with foreign countries because it is almost certain that these concessions would be nullified by escape-clause proceedings.

Let it be quite clear that no responsible official or economist wants a portion of American industry exposed to dreadful injury so that other firms may maintain their overseas markets. What is often and properly urged is the gradual reduction of our tariffs, and such financial and technical assistance to injured producers as they require to enter upon other lines of business. This twin proposal is intended not only to benefit our export industries, but also to benefit the American consumer. It would grant him access to inexpensive foreign products, in those instances in which foreign producers can supply goods more cheaply than American producers, and would most efficiently employ our own resources.

To return to the three questions I posed at the beginning of this survey: It is clear that the United States cannot ignore the demand for economic development abroad and that we have not yet begun to satisfy that demand. At the very least, we must enlarge our foreign aid program. Better still, we should enthusiastically sponsor an international program of economic assistance—an International Development Association. Finally, we must overhaul our trade and tariff policies and our system of farm price supports, to assist other countries in need of American markets and to raise the standard of living at home.

These proposals are no substitute for effective diplomacy. But diplomacy is impotent without them.

Labor Bosses Ride High

EXTENSION OF REMARKS

OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. VAN PELT. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD I include an editorial which was carried in the New Holstein Reporter on July 30, 1959. To me it discloses forthrightly the views of not only the individual members of labor unions but also the views of the general public.

The editorial follows:

LABOR BOSSES RIDE HIGH

After more than 2 years of investigations and hearings, during which his U.S. Senate committee uncovered graft, corruption, racketeering, and unbridled economic and political power in the hands of arrogant labor bosses, Senator JOHN L. MCCLELLAN has soberly declared: "We now know that labor cannot clean its own house." This is a challenge to the American people. Our only recourse is through legislation in our Federal and State Governments.

Speaking to the freedom forum which our national education program conducted in Los Angeles and to a luncheon audience of 800 Pacific coast leaders, Senator MCCLELLAN said the situation exposed by his committee constituted a threat to the freedom and economic welfare of every citizen in America. "At no time in our generation has our country faced more intricate and perplexing problems or graver dangers than those that now confront us," he said. "They represent a compelling challenge. On how effectively and successfully we face up to our responsibilities within the next few years and meet that challenge may well depend the destiny of our Nation and the fate of the entire free world."

Senator MCCLELLAN said the unwholesome conditions in labor unions "cannot be condoned by a decent society nor tolerated or permitted to exist by a government of law and order. Too many unions," he said, have "fallen into the hands of parasitically brutal, cynical men, to whom unionism means only a royal road to personal riches and power; men of beastly instinct who regard union members not as human beings but as mere chattels to be subjugated and manipulated to serve the malicious greed and avarice of their labor boss masters, or to be destroyed if they dare to protest or resist."

"Those who are perpetrators of this criminal exploitation have become brazenly arrogant and defiant. Some of them are threatening to go so far as to challenge the very supremacy of the Government."

Senator MCCLELLAN said flatly: "The AFL-CIO's code of ethics is ineffective" to deal with the menacing situation. It has not stopped corruption or improper activities, he said. "The truth is," he said, "the code is flouted at will with reckless abandon and contemptuous disregard by the Hoffas, the Brennans, the Cohens, the Becks, the Dioguardias, and others who neither respect nor observe it. Effective legislative remedies will have to be applied. That is now the only course we can pursue." He said the Kennedy bill now before Congress, with its watered-down version of Senator MCCLELLAN's bill of rights for the rank and file union members, is inadequate.

One of the best informed and wisest students of labor affairs and constitutional

Government in the Nation is Judge William G. Davisson, an Oklahoma friend of mine. He speaks bluntly about the need for legislative curbs on labor abuses. He notes that the power of labor bosses has been created by political demagogues, and that these demagogues in Congress today "refuse to enact legislation to curb the dangerous activities." They should be condemned by their fellow citizens, he says.

"If we are to believe the boasts of some of the outstanding union leaders, as quoted in the press of the Nation," Judge Davisson said, "they now control a sufficient number of votes in that great body to bring about the enactment of such legislation as they want, or to prevent the enactment of legislation looking to their proper regulation and control, and it is being demonstrated as the days go by that this is no idle boast. If this claim is true, and if we are to judge from such past legislation as the unsavory Wagner Labor Relations Act and from the present refusal to enact any real controls notwithstanding the pressing necessity thereof developed by the McClellan committee, then indeed are we far on the way to the fate predicted for us by McCauley."

"Lord McCauley, the great English Historian, said in effect that the American Republic could not endure and that it would fall as the result of the insatiable demands of selfish, self-seeking groups aided and abetted by political demagogues."

Uncontrolled power in the hands of arrogant labor bosses is a problem which every citizen must act upon—today. Our future prosperity and freedom are at stake. Senator MCCLELLAN's committee, and his legislation, merit the backing of all the "folks back home." That's you, too.

Some Observations on the Exchange of Visits With Khrushchev and Its Expected Impact on Our Foreign Policy

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. STRATTON. Mr. Speaker, I know that many Members have given a good deal of thought to the exchange of visits between President Eisenhower and Soviet Premier Khrushchev, which will take place later this fall, and the implication which these visits may have on our foreign policy. In that connection, I ask unanimous consent to include in the RECORD my current newsletter to the people of the 32d Congressional District of New York, in which I outline my views on this important subject in some detail. The newsletter follows:

While the House of Representatives waited last week for the all-important debate on labor legislation which is scheduled to begin on Tuesday, the second most important topic of conversation here has been the impending September visit of Prime Minister Khrushchev to the United States, and President Eisenhower's visits to the NATO countries later this month and to the Soviet Union in the fall.

In general, comment here in Congress on President Eisenhower's decision has been favorable although it has also been cautious. We recognize, of course, that the Geneva

talks have ended in failure, with the Russians refusing to back down from their earlier demands that we get out of Berlin. We recognize too that this is the kind of visit which Mr. Khrushchev has always wanted to make, and which, until now, President Eisenhower has steadfastly opposed in the absence of any area of agreement at the lower foreign ministers level. To this extent Khrushchev seems to have won.

On the other hand, there has now been an exchange of visits by the Soviet Deputy Premiers Mikoyan and Kozlov in one direction and Vice President Nixon in the other. Most people on Capitol Hill, regardless of party, would agree, I think, that Mr. Nixon's visit to Russia and Poland has been an outstanding success. He conducted himself with great dignity and ability, and by defending American principles in open face to face no-holds-barred debate with Khrushchev he has succeeded in breaking through some of the formal diplomatic barriers that have surrounded so much of our dealings with the Russians.

Vice President Nixon is convinced himself that the invitation to Khrushchev has been a wise move. I'm inclined to agree simply because this visit will make it possible for Mr. Khrushchev, who has never been to this country before, to see for himself that the American people are solidly behind our Government in opposing communism and all communism stands for and that we have the determination and will to fight for what we believe in if need be.

One of the real dangers in the cold war, as most experts have recognized, is that the Soviets might make the same kind of fatal miscalculation about us and our intentions as the Japanese did when they struck at Pearl Harbor. A trip to the United States by Mr. Khrushchev ought to convince him we are not softies, as the Japanese leaders so foolishly thought. If we can convince him of this we may prevent any similar miscalculation by the Russians, with regard to Berlin or Formosa, or any other critical trouble spot.

If the Khrushchev visit does nothing more than this, it will certainly have contributed to our national security.

On the other hand, most people down here also recognize very realistically that the Khrushchev visit is not likely to alter the general situation in the cold war. Mr. Khrushchev is still the same brutal dictator he has always been. Showing him politely around Washington, New York, or other parts of our country does not by any means indicate that we subscribe to his actions in making prisoners of the captive peoples behind the Iron Curtain in countries like Poland, Lithuania, Czechoslovakia, and Hungary. Or just because Mr. Khrushchev may make a few bad jokes at a party in this country doesn't mean that we would be wise in backing down on our policy of firmness in Berlin. Even the face-to-face discussions between the Soviet dictator and President Eisenhower are not going to change the basic objectives and designs of Soviet policy, which are to spread communism over the world and bury capitalism, as Khrushchev has so often threatened to do. This is still their basic intention.

Nevertheless, these forthcoming trips by President Eisenhower are significant because they mean that the President is playing an increasingly more direct and personal role in the conduct of our foreign policy. Because of his wartime experience, and his admitted ability at dealing with people personally, I can't help but feel that these visits may help at least to clear the air, and give us the chance to look at the exact area of our differences from a slightly new angle. This in itself will be worthwhile, because, with the tremendous destructiveness of modern nuclear weapons, all of us must do our best to try to find a formula for peace.

I'm particularly pleased that President Eisenhower will be going aboard first to visit our NATO allies. This trip will underscore, before the Eisenhower-Khrushchev talks begin, our determination to keep our NATO alliance together, which seems to be the one thing which Mr. Khrushchev objects to most strenuously. I have just one suggestion for the President, and that is that he include in his visit a personal appearance in West Berlin. Berlin and the whole German question are still a major point of difference between us and the Communists, as Khrushchev has just recently made clear again. By making a personal visit to West Berlin, Mr. Eisenhower will underline in the clearest possible terms that Khrushchev's visit to Washington in no way reflects any change in our determination to stand behind the people of Berlin against the threat of Communist aggression. I hope Mr. Eisenhower will add this extra stop to his itinerary, because I am sure it will relieve the minds of many people who otherwise are seriously troubled over the Khrushchev visit.

Congress and Silver Spring Drive

EXTENSION OF REMARKS

OF

HON. WILLIAM K. VAN PELT

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. VAN PELT. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include an editorial which was carried in the Milwaukee Journal, Wednesday, August 5, 1959.

Too many times local as well as State administrative officers seek office on the premise that the Federal Government should furnish the funds to carry out local responsibilities, instead of facing up to the issues that if improvements are needed taxes are going to have to be assessed.

The editorial follows:

CONGRESS AND SILVER SPRING DRIVE

The incredible mess we have allowed highway financing to get into in this country was never more apparent than it is right now.

Because a committee of Congress—not Congress itself—votes to cut back the gigantic Federal spending program, the reconstruction of Silver Spring Drive in Milwaukee is likely to grind to a halt. By no stretch of the imagination can this street be said to serve the national interest. It is a local thoroughfare, purely and simply.

Yet because this project, like thousands of others in this and other States, is so dependent upon Federal aid, bids will not be taken as scheduled this month for paving the divided roadway and constructing three overpasses. One section has been churned up for the laying of sewer, water, and gas mains. With postponement of paving, it will probably have to be given some temporary treatment to make it usable. The much needed rebuilding of Silver Spring Drive will wait some more.

The root of the trouble is that we have allowed ourselves to be kidded into thinking that streets and highways are easier to build with Federal aid—and that this is free money which flows from Washington at no expense to the local taxpayer.

The truth, of course, is that everyone who pays Federal taxes helps pay for the Silver Spring Drives and all the other Federal aid projects. What we have done, in large

measure, is simply to shift to Washington the right to collect and the power to control our money for local use.

We laugh when we read that no village lamplighter in Spain can be hired without authority from Madrid. Yet we don't even think it strange when a Milwaukee street goes unpaved because of what a congressional committee does in Washington, almost a thousand miles away.

Worthy of His Hire

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. CANNON. Mr. Speaker, the condition of the farmer is today more desperate than it has been since the administration of President Hoover.

Although the farmer works longer and harder and under greater weather handicaps than any other class in America, the price of his products steadily decline and the price of everything entering into his cost of production steadily increases.

Caught between the upper and nether millstones of dropping income and rising expenses, those who he feeds and clothes and who live sumptuously at his expense, instead of showing appreciation and endeavoring to assure him a fair wage for his labor and an adequate return on his investment are kicking the underdog and urging Congress to take from him even the little he has left.

Under leave to extend remarks, I am including a timely editorial on the subject from the August issue of the Missouri Farmer by one of the devoted farm leaders of the Nation, as follows:

U.S. CHAMBER RECOMMENDS FARM DISASTER?
(By Fred V. Keinkel, president, Missouri Farmers Association)

Do away with all price support and storage programs and let agricultural prices fall to free market levels? This is the recommendation which the U.S. Chamber of Commerce—a national organization of businessmen—has made to the House Committee of Agriculture. The committee, in apparent frustration over its thwarted attempts to pass much-needed legislation to halt the decline of farm prices, is holding hearings seeking to find a long-range solution to the farm problem.

Now it isn't difficult to understand why confusion and uncertainty surround the issue of national farm policy.

Even before an ear is harvested, it's widely recognized that the new corn program is a flop.

With acreage up by 25 percent (3 million acres), cotton is no doubt headed for trouble.

Hog prices have fallen to break-even levels or lower and the worst is yet to come.

Cattle numbers are building up at record rates.

"Disastrous," is an apt word to describe the poultry and egg situation.

And the President has turned thumbs down on what seemed a sincere attempt by Congress to improve the wheat program.

No, conditions are not improving in agriculture. If any other part of our economy of such importance were in such a position, the Nation would consider it a depression and call for immediate action.

Yet this suggestion to pull away from agriculture the only protection that it has, and without any other to take its place, is made by an organization supposedly speaking for the Nation's businessmen.

I wonder how many downtown merchants could remain open 6 months if they engaged in the type of free market practices which the national organization is proposing for farmers?

Suppose that all of those in business, from the steel manufacturers on down to the local dealer, were producing and marketing without restraint and that the price of the product was then determined strictly by the amount on hand?

What would be the price of steel, and subsequently of hog feeders, stock tanks, barbed wire, and farm machinery, without industry's production controls?

Would the U.S. Chamber of Commerce also ask Congress to do away with the tariff laws which support the price of manufactured commodities in this country? Would they favor legislation to outlaw the fair trade, suggested retail, cost plus, and the other forms of administered pricing which are interwoven into the business economy?

Farmers aren't asking Congress to break up the pricing patterns of industry, nor have they asked that tariff laws be repealed.

What farmers do desire is a national farm program that will give them the same measure of protection of price and purchasing power now provided industry and labor.

The farm is a business, too.

The average farmer has an investment in land and machinery of more than \$39,000, according to Government figures.

The farmer must bear risks comparable, if not greater, than those of the average merchant.

From his income he must pay interest, taxes, insurance, and keep his machinery and equipment in repair.

Mr. Speaker, in furtherance of the efforts to reduce the farmer to a condition of serfdom and peonage, self-seeking lobbyists are demanding that Congress deprive the farmer even of the right to organize and cooperate, the right freely accorded and utilized by every other branch of American industry.

Members of Congress have received many letters from people who have been propagandized and victimized by the National Tax Equality Association and I am enclosing a come-on letter written by J. T. Chase, of National Tax Equality Association, in which he makes the usual solicitation of a contribution from Mr. Poe, treasurer of Anchor Serum Co., St. Joseph, Mo. It would be interesting to know how much their take is a year from the unsuspecting victims on their sucker lists. But here is the letter:

NATIONAL TAX EQUALITY ASSOCIATION,
June 26, 1959.

Mr. E. A. Poe,
Treasurer, Anchor Serum Co.,
St. Joseph, Mo.

DEAR MR. POE: In our recent telephone conversation, I discussed the prospects for legislation by the 86th Congress that will effectively tax cooperatives.

Representative WILBUR D. MILLS, chairman of the House Ways and Means Committee, has stated that farm cooperatives will be taxed in 1959. His position is supported by recommendations of the U.S. Treasury.

We must back the efforts of our friends in Congress and in the Treasury; therefore I urge your full support, as previously suggested, in the amount of \$250.

It is now that your help will count most. Please let us hear from you while time is still on our side.

Sincerely,

J. T. CHASE.

Mr. Speaker, and here is the answer which Mr. Davis mailed to Mr. Chase in response:

ANCHOR SERUM CO.,
July 2, 1959.

Mr. T. J. CHASE,
National Tax Equality Association,
Washington, D.C.

DEAR MR. CHASE: Mr. Poe reported to me of your telephone conversation with him, and further referred your letter to me for answer.

Very likely there are certain cooperatives operating in the United States that are violating the original principle, purposes and intent of the Capper-Volstead Act. However, when you refer to farm cooperatives I must take exception with you and your organization's viewpoint. The Nation's farm cooperatives have done more to upgrade the standard of living of the U.S. farmer than any group in America. This in turn has provided additional revenue for the farm family to purchase many necessities and luxury items, which has naturally assisted in aiding the overall economy of this country.

Sincerely I feel that the many members and contributors to your association are not fully apprised of all of the facts, and would recommend that you become better acquainted with the operations of the true farmer cooperatives.

Needless to say we cannot honor your request for a contribution to be used in the manner you have indicated.

Sincerely yours,

TRUE DAVIS,
President.

Mr. Speaker, also included is the list of the board of directors of the National Tax Equality Association as it appears on the back of their letterhead:

BOARD OF DIRECTORS

Attorneys: B. E. Godfrey, McGown, Godfrey, Logan & Decker, Fort Worth, Tex.; John Mason, Mason, Knudsen, Dickeson & Berkheimer, Lincoln, Neb.

Banking: George S. Eccles, president, First Security Corp., Salt Lake City, Utah; R. E. Gormley, vice president, Georgia Savings Bank & Trust Co., Atlanta, Ga.; Irvin Reid, president, Citizens Marine Jefferson Bank, Newport News, Va.; John R. Thompson, vice president, United Savings Bank, Tecumseh, Mich.; Harold V. Gleason, vice president, Franklin National Bank, Franklin Square, N.Y.

Builders supply: R. R. Witt, president, Builders Supply Co., San Antonio, Tex.

Clothing stores: F. S. Porter, Jr., president, H. Porter Co., Phoenix, Ariz.

Coal: Philip P. Bash, president, C. E. Bash & Co., Inc., Huntington, Ind.; Charles P. Thompson, president, Calumet Coal Co., Chicago, Ill.

Cotton ginners: Frank C. Brooks, assistant counsel, Southwestern Cotton Compress (a warehouse association), Dallas, Tex.; Garner M. Lester, president, G. M. Lester & Co., Jackson, Miss.; W. H. Lovett, Dublin, Ga.

Cotton shippers: Charles W. Shepard, Jr., Charles W. Shepard & Co., Gadsden, Ala.

Dairy: David Pabst, president, Pabst Farms, Oconomowoc, Wis.; R. J. Splers, vice president, Abbotts Dairies, Inc., Philadelphia, Pa.

Farm implements: L. H. Fleming, Jump Hardware & Implement Co., Queen Anne, Md.

Farming: J. B. McWethy, Fargo, N. Dak.

Fertilizer: R. B. Douglass, chairman of the board, Smith-Douglass Co., Inc., Norfolk, Va.; Howard A. Parker, president, Sylacauga Fertilizer Co., Sylacauga, Ala.

Grain: Oscar L. Malo, president, Intermountain Elevator Co., Denver, Colo.; George Potgeter, Steamboat Rock, Iowa; F. P. Heffelfinger, Jr., general manager, Omaha Elevator Co., Omaha, Neb.

Grocers wholesale: C. S. Ragland, president, C. B. Ragland Co., Nashville, Tenn.

Hardware, wholesale: Wallace Campbell, president, Campbell Industrial Supply Co., Seattle, Wash.; L. L. Flemming, comptroller, Herr & Co., Lancaster, Pa.; George D. Krause III, president, George Krause Hardware Co., Lebanon, Pa.; Seth Marshall, Alworth Building, Duluth, Minn.; L. D. Nuchols, president, American Hardware & Equipment Co., Charlotte, N.C.; W. H. Terstegge, president, Stratton & Terstegge Co., Louisville, Ky.; H. L. Thompson, Jr., president, the Bostwick-Braun Co., Toledo, Ohio.

Insurance: O. D. Evans, president, Standard Underwriters, St. Louis, Mo.

Lumber: Robert G. Rote, president, the Alvin F. Rote Co., Monroe, Wis.

Milling: R. E. Barinowski, president, Feed-right Milling Co., Augusta, Ga.

Oil distributors: Elbert J. Townsend, Townsend Oil Co., Le Roy, N.Y.

Oil production: E. C. Moriarty, Wichita, Kans.

Paint: J. F. Kurfees, president, Kurfees Paint Co., Louisville, Ky.

Petroleum refining: J. N. Champlin, Champlin Refining Co., Enid, Okla.; F. E. Mundell, Mundell Petroleum Co., Watertown, S. Dak.

Petroleum, wholesale: W. G. Baskerville, treasurer, Western Oil & Fuel Co., Minneapolis, Minn.; R. J. Coughlin, president, Westland Oil Co., Minot, N. Dak.

Pharmaceuticals: Arthur H. Einbeck, druggist, West New York, N.J.

Seed: Howard S. Abbott, Abbott Supply Co., Georgetown, Del.; J. H. Epting, president, Epting Distributing Co., Leesville, S.C.

Telephone companies: William C. Henry, president, Northern Ohio Telephone Co., Bellevue, Ohio; W. J. Holladay, general manager, Alabama Telephone Co., Fayette, Ala.

Mr. Speaker, every nationwide business, profession trade and industry in the country maintains its union, association, organization, and cooperation. Why should the farmer alone be denied that right—and especially when he is barely able to keep his head above water and of all the workers of the Nation is poorest paid and is permitted less voice in the control and management of his profession and his prices?

Cultivate Creative Citizenship

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. ROGERS of Florida. Mr. Speaker, under laws to extend by remarks in the RECORD, I would like to include the following speech, entitled "Cultivate Creative Citizenships," by C. David Sadleir, president of Key Club International. I think this is a fine example of what these young men have to offer our country.

CULTIVATE CREATIVE CITIZENSHIP

(Address by C. David Sadleir, president, Key Club International, as presented to the 12th annual Ontario-Quebec-Maritime District of Key Clubs Convention, Sarnia, Ontario, March 31, 1959)

Mr. Chairman, district officers, International Trustee John, Kiwanians, Key Clubbers, and guests, it is an extreme pleasure for me to once again have the opportunity of speaking to the service-minded youth of the O-Q-M district. I bring greetings to all

of you from the Key Club International Board and the 45,000 young men we represent.

Twice now, within the past 2 years, I have shared the great experience of developing the theme and objectives of Key Club International. It is a distinct challenge and a real privilege for anyone to have a hand in formulating the policy and program that are the guiding lights of 45,000 young men. Each year the theme and objectives are developed as the result of many steps involving individual and group research on the part of the committee on resolutions at the international convention and, finally, the executive committee of the international board. It is unfortunate that such a small percentage of our membership really has the chance to concern themselves with the development of their program. Perhaps, this statement is misleading, because the chance is there; too many fail to take advantage of it by writing in their personal suggestions.

However, for the credit of those 10 or 15 individuals who are closest to the problem, it is necessary for me to point out that they are doing some original, creative thinking.

"Key Club International, believing that responsibility is the great educator; that imagination is the difference between creative and routine living; aware of the fact that its membership is privileged to love and serve two great nations, and realizing that our citizenship was bought with a great price, proposes to cultivate creative citizenship, so that we may be worthy of our heritage."

The February Keynote carried this introduction to our program for activity emphasis in 1959. Seven objectives have been developed along with suggestions for implementing each. The objectives, which I'm sure all of you are familiar with, by now, when analyzed are found to encompass the following: Spiritual values, juvenile decency, public apathy, full academic achievement, youth-adult cooperation, health and safety, creative thought and activity, which to me is the binding thread of our entire goal.

I do not intend to discuss the ways and means of carrying out this program. I have enough faith in the individual Key Clubber to believe that he can assimilate the suggestions which appeared with the original release of these objectives and, by so doing, bring this program to life. As a matter of fact, in my travels that have occurred since this program was released, I have already seen many evidences of the implementation of it.

Further, I am confident that the young men of Key Club International will continue to achieve the objectives with which they have been challenged. Instead, I want to illustrate the need and importance of each segment of this program. In short, I do not want to answer "How?" I want to answer "Why?" There is the question that too few of us bother to ask, even once in a while.

This year, I have come to realize that there are two big reasons for the growth of our organization. First, the attitude of our sponsor, Kiwanis International—the attitude of let us counsel, let us advise, let us be a good friend—but, let the boys solve, let the boy do. Now, I'm not sure of the psychology behind this, but I do know the "let's get the heck out there and do our job" effect that it has on you and on me. Second, the fact that in Key Clubbing the answer to "how?" is never the same. What might be a sound approach in Sarnia, could be a disastrous one in Savannah. In other words, our ultimate goal of unselfish service can be attained in many different ways. We have a flexible plan that can be easily adapted to different local conditions. Thus, before we could begin to discuss "how?" we would have to ask, "Where do you live?"

With God's guidance, promote high moral and spiritual values through good example. This is our No. 1 objective as we set out to cultivate creative citizenship. Ralph

Waldo Emerson said, "Great men are they who see that the spiritual is stronger than any material force; that thoughts rule the world." Just the other day, I read this phrase on a calendar, "Fear knocked on the door; faith answered; no one was there." Key clubbers, we have our challenge, our individual ability, our youth and, I hope, our enthusiasm. But, these are not enough to insure success. We must continually seek and heed God's advice. Key Clubbing teaches us to serve others and often this appears to be hard work. "But God's high wisdom knows a way—and this is sure, let come what may—who does God's work will get God's pay." I wonder how many of us could put into words the connection between spiritual values, civilization, and citizenship. Dr. Laurence M. Gould in This Week magazine said, "If America is to grow great, we must stop gagging at the word 'spiritual'. Our task is to rediscover and reassert our faith in the spiritual, nonutilitarian values on which American life has really rested from its beginning."

We have chosen to recognize juvenile decency. There was a time (according to our fathers), when the kid across the street (definitely, not Dad) could push over the neighbor's outhouse and be considered nothing but a mischievous boy. Now, thanks to the facilities of the press, radio, and TV, this mischievous boy with his juvenile prank has become a criminal at large. This is a bit exaggerated, but the point is that the majority of young people today are slandered and criticized for the wrongdoings of a few. I am not attempting to convince you that juvenile crime is not a growing problem, or that we should ignore these happenings. However, it would be nice to read about the activities of the local Scout troop on the 2d page instead of the 22d page, and it would be a change to unfold the newspaper and read through the first page without finding the activity of some unfortunate, but rarely downright malicious teenager, glamorized to the point of ridiculousness. The great majority of teenagers today, just as in the good old days, are friendly, high-thinking, God-fearing individuals who do deserve to be recognized.

Perhaps, the adults forget or just overlook this fact; which brings up another field for our activity emphasis—active public interest in all phases of community, national, and international life. Here we must use those indirect words, those polite, evasive ones with the meanings that can be interpreted in many ways; urge, encourage, because here we are dealing with adults, those people who are old enough to vote. But, we can, also, listen and watch and absorb. Arnold Toynbee has pointed out that "19 of 21 notable civilizations died from within and not by conquest from without. There were no hands playing and no flags waving when these civilizations decayed; it happened slowly, in the quiet and the dark when no one was aware." Let us be aware, Key Clubbers, and let us encourage this in others.

Full academic achievement—what a wealth of thought and worth is encased in this statement. In a previous speech this year, I suggested that knowledge is the first of three keys to a proud future. Selwyn Lloyd, British Foreign Secretary, who has also earned distinction as a lawyer and soldier, in an article entitled, "How To Live With the Russians," listed the things without which nations cannot make lasting political decisions. First on his list was education. Senator LYNDON B. JOHNSON, majority leader, U.S. Senate, commenting under the title "What I Believe—And Why," had this to say: "All nations are possessed of certain resources * * * of nature, of position, and of the human mind. Whatever we are to be, we must build from those things at our disposal, and to content ourselves with less than the ultimate potential is to deny our heritage and our duty." We have proposed to

cultivate creative citizenship so that we may be worthy of our heritage. Let us strive to gain our foundation of knowledge now.

"Take kindly the counsel of the years, gracefully surrendering the things of youth." These are the words of advice from the writing of Max Ehrmann. This is the friendliest and, certainly, the most tactful way I have ever heard an adult say that we should "be seen and not heard." It is true that we have still much to learn, but it is also true that we must acquire a good deal of our knowledge by working along with experienced people. Isn't this the case when one starts out on a new job? Almost invariably, the management assigns an old experienced hand to help the new recruit adjust to the job. But is it not also true that not all of the good suggestions in the suggestion box come from these old, experienced workers. There are many things in the community that can be accomplished by youths and adults working in cooperation and sharing the load. Thus, our objective to "stimulate more active cooperation between youths and adults." There is a special relationship for Key Clubbers and Kiwanians. To the Key Clubbers I say this: "Be ever aware of your individual debt to the men of Kiwanis for providing the rich opportunity of Key Clubbing." And, to the Kiwanians let me express the sincere hope that you realize the potential and scope of this youth organization you have chosen to sponsor. Let Key Clubbers share in your projects, but not just as errand boys. These are young men who dig deep, think tall, and dream true.

Did you ever stop to think that there is a connection between your personal health, your citizenship, and ultimately your freedom. Again, quoting Selwyn Lloyd: "Every legal or economic inequality because of creed, color, or race, every social injustice that sets apart 'a second-class citizenry' is as good as an enemy salient in our front line." Mr. Lloyd is referring here to the social caste system, but I wanted to incorporate his phrase "second-class citizenry." A healthy nation of good citizens, that is, a nation of citizens healthy in mind and body, and soul, is necessary for freedom. One of the great responsibilities of free people is to strengthen ourselves through good health and safety programs. We of Key Club International realize this and have incorporated these ideas in our sixth objective: "Inspire safety consciousness and realization of the need for mental and physical fitness."

Behind the Speaker's desk, high on the wall of the U.S. House of Representatives, inscribed for all to see and all to ponder, are these words of the great statesman, Daniel Webster: "Let us develop the resources of our land, call forth its power, build up its institutions, promote all its great interest, and see whether we, also, in our day and generation may not perform something worthy to be remembered."

Surely, this is the secret wish of every thinking teenager. All of us, somewhere in our long, long thoughts have wondered what our individual purpose is. On the other hand, all of us, as we sweat out a set of examinations, as we rack our brain for the solution to the algebra problem, as we crawl out of bed for school on Monday morning, have asked ourselves the question, "Is it worth the effort?"

Have you ever stood at the end of a long school corridor, after classes have been dismissed, after the corridor is empty and the only light is that provided by the late afternoon sun? If you have, and most of us have, then I know that your answer to "Is it worth the effort?" must be "Yes." To say "No" would be to deny the thrill of that basketball game, the wonderful companionship of our fellow students, the dedication of our teachers, and the love and encouragement of our parents. To say "No" is to fail in our duty and forsake our heritage.

Going. Building. Creating. That's fun, that's living. Arriving is the end. We have chosen to cultivate creative citizenship. We must, therefore, go, build, and create. This is our program—our challenge for 1959. To meet this challenge successfully we must strive through creative thought and creative activity. It is not enough to just keep the ball rolling. Some morning we will wake up and find that the choices of buying or selling, of voting, of striking or not striking, of building a new school, of giving foreign aid, of war or peace, is now ours. God help us then if we have failed our duty or forsaken our heritage.

Ours is a noble cause based on high ideals. Let us use our minds and be creative.

Doing, even if what is done turns out to be unsuccessful, is the way of the creative man. The man who sees a dozen possibilities, but who has not the initiative to act on any one of them, is not creative. We are not equally creative, but that should not be an excuse to wait for a push or pull. We have been provided with a rich opportunity by the men of Kiwanis International. The program is there challenging each of us. Now is the time to answer it with our interest, our youthful enthusiasm, and the ultimate that we have in creativeness.

Fellows, I know we can do it; we are doing it right now. This is but one inning in the game of life and I guess we're still on the bench, or carrying water and peeling the oranges. But, our turn at bat is coming soon and I know 45,000 young men that will be ready. Get all you can out of key clubbing and be humbly proud that you are a Key Clubber.

Is it worth the effort to cultivate creative citizenship?

"Two roads diverged in a yellow wood
And sorry I could not travel both
And be one traveler; long I stood
And looked down one as far as I could
To where it bent in the undergrowth;

"Then took the other, as just as fair,
And having perhaps the better claim
Because it was grassy and wanted wear.
Though as for that the passing there
Had worn them really about the same.

"And both that morning equally lay
In leaves no step had trodden black.
Oh, I kept the first for another day.
Yet, knowing how way leads on to way
I doubted if I should ever come back.

"I shall be telling this with a sigh
Somewhere ages and ages hence
Two roads diverged in a wood and I—
I took the one less traveled by
And that has made all the difference."

—From "The Road Not Taken," by
Robert Frost.

Submarines and Our Island Continent

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an article by the distinguished writer for the Charleston News and Courier, Anthony Harrigan, appearing in the magazine U.S.A., under date of July 17, 1959, entitled "Submarines and Our Island Continent."

Mr. Speaker, I commend this to the House of Representatives:

SUBMARINES AND OUR ISLAND CONTINENT

(By Anthony Harrigan)

"Antisubmarine warfare is as big a problem as air defense."

Rear Adm. John S. Thach, USN, commander of task force ALFA, makes this assertion and pauses.

Overhead, on the flight deck of the *Valley Forge*, flagship of the ASW force, Grumman S2F tracking aircraft are landing. The noise drowns out talk in the admiral's mess. We wait for quiet, so we can resume our talk of antisubmarine tactics and equipment. Present are Admiral Thach's staff officers and engineers from General Dynamics and Thompson-Ramo-Woodridge and Convair. An editor of *Fortune* magazine came aboard this afternoon.

The conversation in the admiral's mess has ranged far. We have heard suggestions for collapsible sonar buoys as big as a house. A civilian pointed out what we all are well aware of—that the Department of Defense has spent comparatively little funds on antisubmarine warfare. Task force ALFA was the creation of the Office of Chief of Naval Operations.

Several of the officers at table have stressed the need for an electric fence—an undersea DEW line to protect the United States against Soviet submarine attack.

Admiral Thach points out that as soon as the American people understood the capability of long-range bombers, they demanded an adequate Air Force. He is convinced they will do what is necessary once they grasp the threat posed by the 450 submarines of the Red fleet. The admiral hammers home the theme of American vulnerability to missile attack from Soviet submarines.

"Chicago," he says, "is easier to hit than this ship."

After coffee we go to flag plot, the nerve center of task force ALFA. The ports are sealed in this cabin high in the *Valley Forge*. But the radar shows us at the center of the dark viewer, with 5 destroyers moving around us in a protective circle screen at a range of 10,000 yards. Somewhere under the seas nearby are two hunter-killer submarines, *Sea Leopard* and *Cubera*, which belong to this task force.

This small group of warships—and a companion force of similar makeup which operates out of Quonset, R.I.—are the only ready antisubmarine units in the Atlantic Fleet. To protect the shores of this country against Soviet undersea aggression, the Department of Defense has authorized the use of 2 aircraft carriers built and paid for in World War II, and 10 destroyers of the same vintage. Such is the material with which Admiral Thach and the officers and men of his command prepare a defense against an enemy undersea fleet bigger than all the submarine forces of the free world nations combined.

But there is no grumbling or off-the-record anger at the skimpy forces assigned. "We need high motivation," says Admiral Thach, "and I think we have it. Every person in this outfit is trying his level best to get the last bit of detection out of every piece of equipment."

Both the zeal of the men in ALFA and the inadequacies of their equipment are evident in flag plot. Commander R. A. Ryzow, operations officer for ALFA, is plotting the results of a Whisky 2 Uniform exercise on a large plexiglass board. The marks he makes on the board with a grease pencil represent reported sonar contacts. The S2F tracking planes have dropped sonar buoys—listening devices—and are employing a type of echo ranging in their search for the target submarine. If nothing results, they will follow a rectangular search pattern

over an ocean area of several hundred square miles.

Killing is not the problem of ASW. For the kill, the Navy has atomic depth bombs. "But," says Admiral Thach, "We must find a sub before we can kill it."

The nature of the ocean depths makes this an enormously difficult job. The depths are dark but not in the least silent. Whole mountain ranges lie below the surface of the Atlantic. Vast troughs and canyons and strange cavities are to be found under the seas. Temperature layers provide protective barriers for submarines. Sonar cannot penetrate these layers. Differences in salinity affect acoustical conditions. Most confusing of all is the noise of marine life. Hissing electric eels, moaning whales, and booming drumfish persuade sonar operators that what they hear is a submarine.

Finding a submarine says Admiral Thach, is not even as simple as finding a needle in a haystack for the haystack itself is against us. The sonarman, who may be a 19-year-old boy aboard a helicopter, destroyer or killer sub has to figure out, says the Admiral, what is a whale, a school of fish, a bottom pinnacle, a figment of imagination, or really a submarine.

Tremendously important for the sonarman is the amount of pinging tune he gets in during a fleet exercise. This is actual listening time. And much depends on the sonarman's inherent ability, whether he has an ear for this music of the seas.

The difficulties involved in submarine detection and the classification of underwater sounds indicates the vastness of the tasks that lie ahead. And, of course, the Nation has not begun to comprehend the outline of the problem.

The task of public information confronting the Navy's ASW forces is similar to that which would exist if the Government did not believe that the Strategic Air Command needed either the latest radar or an efficient early warning system.

The Soviets have not yet begun to employ their submarine fleet in international black-mail maneuvers. Admiral Thach points out, however, that this fleet is a "versatile instrument for diplomatic pressure." When the Soviets commit this fleet, the United States must be prepared. It must have an effective undersea deterrent. There must also be surveillance of ocean areas.

"We must," says the commander of task force ALFA, "have detection measured in miles instead of yards. We must have instant assurance that what we detect is really a submarine. We must be able to keep close tabs on millions of square miles of oceans, to a depth of nearly 1,000 feet, round the clock. 7 days a week, in every area of the world where submarines could secretly position themselves for a surprise attack upon us or on our allies. In short, we must be able to show a consistent ability to place our weapons over every potentially hostile submarine, as the surest deterrent to hostility.

The admiral tersely concludes, "We can't do that today."

Some progress has been made in shore-based surveillance of ocean areas. The Navy will not discuss what it has in this respect. But it is known that some detection information is passed to the fleet from shore stations.

The Navy's real successes lie in the equipment and techniques developed for its mobile forces at sea. These will always be necessary, Admiral Thach declares. His argument is, "No burglar alarm ever caught a burglar."

Among the search devices are the airborne anomaly detector, which reports disturbances produced in the earth's magnetic field by the presence of large metallic objects such as submarines. The Navy calls this MAD hunting; echo ranging with bombs dropped from search aircraft; and the "sniffer gear," equip-

ment which chemically analyzes a submarine's exhaust.

The need for scientific contributions to ASW is enormous. Every field of science can contribute. For example, the MAD gear was developed by industrial firms searching for oil off the Gulf coast. One of the immediate technical needs is for an explosive charge, to be used in echo-ranging, that sends precisely the right frequency for sonar buoys.

Often, aboard the *Valley Forge*, it seems that dinner time in the officer's mess is merely a time for a brainstorming session—with scientists and engineers tossing around far-fetched ideas, or what the layman might so regard if he were ignorant of the need for radical new devices.

The conversations at Admiral Thach's table and in flag plot remind one how markedly naval warfare has changed in less than a generation. The basic ingredients are the same: Human courage, as in the case of the helicopter pilots who hover over a stormy sea as their dipping sonar on a cable probes the depths; and good judgment, as in the case of the operations officers who must take the clues furnished by combat intelligence and decide when to pursue and when to abandon a search.

Added to these ancient ingredients of successful naval warfare is the need for ability to grasp the technology of electronics and for evaluating ideas and theories. It is a tribute to the Navy that it has within its ranks men who combine the qualities of seamen and fighters and, yes, intellectuals (in the best sense of the word).

Sub hunting is like playing a kind of electronic chess. The master chess player is the task force's commanding officer, Admiral Thach. As a young fighter pilot in the 1920's, he flew with a demonstration squadron in which the wing tips of each plane were tied by a manila line to the next plane in formation. He was a Navy test pilot and an expert in gunnery techniques. As a lieutenant commander aboard the carrier *Lexington*, he developed fighter tactics that helped smash the Japanese at Midway and in other engagements in the Pacific theater in World War II. He planned and directed the final offensive air blows against the Japanese homeland.

During the Korean war, Admiral Thach commanded the aircraft carrier *Sicily* that provided close air support for the Inchon landing and the fight to the sea from Chosin Reservoir. Later came tours of duty in the Pentagon and in the scientific sections of the Navy. Admiral Thach has brought to his current assignment a passionate interest in the application of science to weaponry.

Unfortunately, the intelligence and enthusiasm of Admiral Thach and his team of officers in Task Force ALFA cannot make up for the tragic lag in U.S. oceanographic research. The nation that wins the undersea battle may well be the nation that best understands the secrets of the sea. To pry these secrets from nature the Soviets have 18 large, modern oceanographic research vessels at sea; the United States has 3 small vessels.

The most grave statement which I heard Admiral Thach make regarding the Soviet undersea menace is this: "I believe the Russians have made a greater contribution to the International Geophysical Year in oceanographic research than they have in space."

When one ponders on the significance of that declaration, the gravity of the ASW problem comes home with tremendous impact. If the Russians master the secrets of the sea—as, for example, the layers of temperature in the sea in which sonar efficiency is seriously reduced, then American advances in weaponry could be completely negated.

The United States cannot afford to be ignorant of the sea. In addition to basic research, a system must be set up whereby the fleet has an efficient undersea conditions reporting service—an undersea weather bureau, so to speak. Effective use of sonar requires that commands to know the salinity, density and other special conditions of waters in which they are operating. This means—to cite only a single need—regular sampling and analysis of sea water in all operating areas of U.S. naval forces. Knowledge of the weather beneath the seas is the key to successful ASW.

If lack of basic scientific research is a major liability under which the Navy's ASW forces operate, it is by no means the only one. Outmoded or inadequate equipment is another handicap to those who are desperately seeking ways and means of dealing with the Soviet submarine menace.

One need look no further than flag plot aboard the *Valley Forge* to see that the genius of America has not been lavished on ASW. The task of the staff officers in flag plot is to evaluate the information coming from combat intelligence and to decide what must be done about it. One finds in flag plot some very intelligently conceived status boards on which are listed ship dispositions and the progress of hunter-killer operations. These are valuable aids to understanding the overall work of the formation during war games or actual combat. But they are far short of what American science and industry should be able to supply. Reports are made to the flag bridge either verbally or on printed forms. Obviously, this is too slow a procedure in an era of push-button electronic warfare. Task force ALFA and other naval units committed to the defense of our country deserve the best in data processing and data presentation equipment. It is utterly fantastic that hundreds of non-essential American businesses should be equipped with electronic computers while the defenders of our shores should be without them.

This deprived condition of the fleet indicates another victory of the antimilitary propagandists over the defense need of the United States.

Nor is the electronic computer field the only area in which inadequacies of equipment exist. There is need for bigger and better search planes with more electronic equipment and improved data presentation for pilots. Today's helicopter, the Sikorsky HSS-1, is a fine piece of machinery. But search missions, which may last many hours, even days, require helicopters with longer range and greater endurance. Existing sonar can't be dipped into the sea to a sufficient depth. The weight and size of the cable necessitates a helicopter with greater weight-lifting capability and more room. Noise in the HSS-1 imposes too great a strain on the crew. The fact that the model now in service is not an amphibian makes hovering dangerous, creating a strain in the minds of the pilots and rendering night operations impossible. A turbine-powered amphibian helicopter has been developed, but it will not be introduced into the fleet until late 1961. Yet the need for such a helicopter is right now.

Even more serious is the general condition of warships in the Atlantic Fleet. Rear Adm. John C. Daniel, USN, commandant of the 6th Naval District, pointed out recently that of the more than 200 ships in the Atlantic Fleet, only 22 are less than 13 years old. The *Valley Forge* was built and paid for during World War II. So were the destroyers assigned to task force ALFA.

The *Valley Forge* lacks an angled deck. No surface-to-air missiles or modern rapid-

firing antiaircraft guns have been fitted in the flagship. The ship is without a forced ventilation system on the hangar deck. Similar inadequacies characterize destroyers in the fleet. Nor can they be overcome by piecemeal additions of equipment or patchwork repairs.

Too many ships in the fleet are too old; years of hard steaming have taken the life out of them. Furthermore, the needs of today's operations call for wholly new ships. Vastly increased speed, bigger sonar, improved communications, and defensive and offensive missiles and rockets are the requirements that must be met if the U.S. Navy is to fulfill its mission.

If our Government has been slow to furnish funds to the U.S. Navy for essential equipment, the Soviet Government has not treated their navy accordingly. Admiral Thach points out that the Soviet Union has devoted a large measure of its industrial productivity to the build-up of its submarine fleet. The Soviet undersea competition is serious, for many of the Red fleet's subs are the modern *Zebra* type that has ample cruising range for operations aimed at our Atlantic coast. In addition to the conventionally powered Red subs, some of which are equipped with air-breathing guided missiles similar to the U.S. Navy's *Regulus* missile, the Soviets are reportedly at work on five nuclear-powered submarines. These are said to be under construction at Severodvinsk, a port near Archangel. Furthermore, Soviet-type submarines are being built in Communist China.

The size, newness, and capability of the Soviet undersea fleet, coupled with the smallness of our ASW forces and their deficiencies in modern equipment, indicate that the national defense situation has a dimension of seriousness not recognized by the public. Further economizing at the expense of the military in favor of vastly increased foreign economic aid and other inflationary national and international subsidies will reduce our chances of gaining clear technical superiority over the Soviet undersea fleet.

Sagely, Admiral Thach says, "We cannot pack up our whole economy and go off chasing submarines." He notes, however, that "On the other hand, we can no longer shrug off the submarine threat."

The irreducible minimum for defense of American coastal waters and major submarine transit areas is four antisubmarine task forces. These are the essential mobile forces needed to provide any sort of effective deterrent to undersea aggression.

Beyond the immediate creation of such forces, however, must be prompt action to modernize the fleet. Replacements must be built for ships designed in the 1930's and built in the early 1940's—ships that more than paid for themselves in victorious action during World War II.

We must modernize our fleet and create the best possible task forces for antisubmarine warfare. Such action is absolutely necessary unless we are prepared to surrender control of the ocean depths to the Soviet Union and abandon our supremacy on and under the seas surrounding this island continent of North America.

¹ Editor's Note.—The fact that the Soviet military threat to our country is far greater today than the Soviet economic threat was shown conclusively by H. W. Balgooyen, executive vice president of American & Foreign Power Co., chairman, Inter-American Council, in his brilliant article "Soviet Offensives: Real and Illusory" for U.S.A. magazine, vol. VI, No. 10, May 22, 1959.

Lest We Forget

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. MADDEN. Mr. Speaker, I hereby submit for the information of the Members some thoughts on the steel management lockout that reveals some forgotten facts. It includes a letter and resolution from Local 1011, United Steelworkers of America, AFL-CIO, East Chicago, Ind.:

UNITED STEELWORKERS OF AMERICA,
LOCAL 1011.

Indiana Harbor Ind., August 7, 1959.
Representative RAY J. MADDEN,
House of Representatives,
Washington, D.C.:

Enclosed please find copy of resolution adopted by local union 1011, United Steelworkers of America, AFL-CIO, East Chicago, Ind.

We definitely are of the opinion that action as stated in the resolution is needed if we are to achieve stability of employment in the steel industry.

Sincerely yours,

RENO MUSSATT,
President.

JACK WHITESIDE,
Recording Secretary.

STEEL INDUSTRY REGULATORY RESOLUTION

The steel industry's arrogant and selfish attitude which has forced its employees to strike for the fifth time since World War II only reflects their past disregard and contempt for their employees.

In 1892, at Homestead, Pa., their hired thugs and goons smashed the employees' attempt to gain union recognition. In 1919, they again resorted to force and violence plus the blackballing of hundreds of their employees to smash the employees' attempt to gain union recognition. They further demonstrated their disregard for their employees by being the last of the major industries to adopt the 8-hour day.

In 1937, they again resorted to force and violence to smash their employees' attempt to gain union recognition. They further showed their contempt by discharging hundreds of employees for merely belonging to a labor union, a right guaranteed by our Constitution and restated, by now, by the National Labor Relations Act of 1935.

Steelworkers have been forced to strike to gain social and economic benefits which other industries have granted their employees through the medium of peaceful collective bargaining; namely, pensions, insurance, wage increases, shift differentials, weekend premiums, vacation, etc.

The history of the steel industry is one of crisis after crisis, instability in employment and utter disregard for the welfare of the employee.

Their present attitude only sustains the late President Philip Murray's theory that the steel industry is only tolerating us, not accepting us, and is only biding its time to revert back to the laws of the jungle.

Their spokesmen have publicly stated that without government intervention the steelworkers would not have been granted the gains they presently enjoy.

It is no secret that government intervention has played a major role in the settlement of every strike since 1937. It is the responsibility of government to protect the welfare of its citizens.

The enactment of the Railway Labor Act, by the U.S. Congress in 1926, has done much toward stabilizing good management-labor relationship in an industry which was in constant turmoil.

Steel is basic to our economy and the welfare of our Nation depends upon its continued peaceful and fruitful operation. The control of such a vital industry must not be left entirely in the hands of people whose very history and records show contempt and disregard for their employees: So, therefore, be it

Resolved, That Local Union 1011, United Steelworkers of America, AFL-CIO, call upon the President of the United States, Dwight D. Eisenhower, and Secretary of Labor James Mitchell to immediately explore the possibility of proposing regulatory legislation to bring to an end the ever reoccurring crises in the steel industry; and be it further

Resolved, That copies of this resolution be sent to President David J. McDonald, Director Joseph Germano, Senators Estes Kefauver, Paul Douglas, Vance Hartke, Homer Capehart, Congressman Ray Madden, the Hammond Times, and the Gary Post-Tribune; be it further

Resolved, That President David J. McDonald distribute copies of this resolution to all striking local unions of the United Steelworkers of America, AFL-CIO.

Last Chance for a Test

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. ROGERS of Florida. Mr. Speaker, congressional control of Federal spending has never been needed more than at present, when we end a fiscal year with the largest peacetime deficit in our history, and we see requests for raising the debt limit presented to the Congress, and at a time when we must continue tax measures intended for wartime to prevent even greater deficits.

During the last Congress H.R. 8002 was adopted and become Public Law 85-759. This measure would put into effect the Hoover Commission's plan for accounting in the Federal Government, if it is implemented by the President and the Congress. Unfortunately very little has been accomplished thus far. The following editorial appeared in the Washington Evening Star of Friday, June 26, 1959. I hope that this editorial will point up to all Members the need to implement this law, to return fiscal control to the Congress:

LAST CHANCE FOR A TEST

Congress has one more chance at this session to test an important budget reform it approved less than a year ago but so far seems to have almost forgotten. This is the Hoover Commission's plan for annual accounting by Federal departments and agencies of all appropriations carried over from previous years.

Senator KUCHEL, of California, reminded the Senate this week that nothing has been done as yet to comply with President Eisenhower's request that the so-called accrual-accounting system be tried out in six departments and agencies. Efforts of supporters of governmental economy to include in

several appropriation bills a provision for such accounting have met with rebuffs either in committee or on the floor.

However, Congress has a last chance to give the plan a test, although in a rather small way. The Senate has voted to provide for such a tryout in the Panama Canal Zone. The authority was included in the Department of Commerce appropriation bill, now pending before a conference committee. We hope the conferees will approve the provision.

Why Congress has been so reluctant to adopt the new accounting method as a general policy is a mystery. Usually Congress is quick to seize any opportunity to exercise better control of Federal spending. And the Hoover proposal would give Congress a firmer grip on the pursestrings of the Federal establishment. As Senator KUCHEL succinctly put it, Congress then could tell the executive branch: "So much you may spend next year and not 1 cent more."

This Is a Modern Army

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an address made by the distinguished Secretary of the Army at the annual meeting of the Association of the U.S. Army held here in Washington on August 5, 1959. The Secretary spoke on the subject "This Is a Modern Army." No American has worked harder to keep our gallant men and women of the Army capable of meeting the problems of modern warfare. His efforts are more and more being realized by Americans. The American Army is a modern Army, the American Army stands between communism, which is slavery, and freedom. In this fight for liberty, Wilber Brucker deserves the appreciation of our Nation and of the world.

The address follows:

THIS IS A MODERN ARMY

(Remarks by the Honorable Wilber M. Brucker, Secretary of the Army, Association of the U.S. Army, Sheraton-Park Hotel, August 5, 1959)

Sgt. Donald H. Knigge (Ki-näg'-ē), tonight's soldier of the future, is presented by the U.S. Army Combat Development Experimentation Center, Fort Ord, Calif. He was selected to attend the AUSA meeting because of his outstanding bearing, soldierly qualities, and high performance of duty.

He is a squad leader of a combat engineer platoon, First Battle Group, 10th Infantry Combat Development Experimentation Center.

Sergeant Knigge was made a sergeant after only 19 months in the Army, during which he served in the Far East. He is 22, single, and entered the service at Wauconda, Ill. On two occasions he was named soldier of the month, and also was named driver of the month at Combat Development Experimentation Center. He has recently reenlisted for a 6-year period, having selected the U.S. Army for his career.

This is the new soldier of 1965.

Please take off your helmet, Sergeant Knigge.

You have seen this outfit many times during the last 3 days. I just wanted to prove there really is a man inside all that paraphernalia—a man with a heart and a mind, with the courage, initiative, aggressiveness, and discipline I spoke of earlier—a soldier.

Remember that whatever the soldier may wear, with whatever weapons he may be armed, he is still the eternal man who goes into battle alone, and holds in his two hands the security of the Nation.

Nothing is more important to the future of the Army, and the future of our beloved country, than a proper understanding of that fact. The Army is a living, progressive, indispensable part of American life, the embodiment and defender of American principles.

The contribution which this association is making throughout the country toward a better understanding of the high importance of our Army to the national defense is unique and highly significant.

When we compare the first annual meeting of this association in October 1955 with this meeting, we can readily see that the progress of the Association of the U.S. Army has been nothing short of remarkable.

Moreover, the program we have witnessed during the last 3 days, together with the tremendously impressive military and industrial exhibits, illustrates just how important these meetings have become. They provide us with the best possible forum for disseminating information and for obtaining the views and ideas of some of the best minds in our country.

Our Army has a truly global mission. This Nation is associated with 45 other nations in the most powerful system of collective security ever created. Army personnel are serving in more than 70 foreign countries and areas. It can be truly said that the sun never sets on the U.S. Army. It stands shoulder to shoulder with the troops of our allied friends around the world as a potent reminder that we are ready to honor our international agreements promptly, and to oppose any aggression with the full force of American military might if need be. Nearly half the strength of our Army is stationed overseas.

In the past few days you have participated in discussion with the experts on what is required to make a modern army capable of meeting such vast responsibilities. At a time when there is no letup in international tensions, when the responsibilities of the Army seem to increase, there is a tendency to dwell on our shortcomings and to overlook our great strengths. While the presentations and your discussions have quite properly centered on the more concrete requirements of a modern Army, I feel that our great, underlying strength is derived from such intangibles as morale and esprit de corps.

The Army today has one attribute which ranks in importance far above any new weapon, item of equipment, or concept—and that is the new, restless, and revolutionary mental outlook among its officers and men—an outlook which is constantly searching for something better and always looking for something more suitable to the requirements of the age. After all, a modern army is one which is equipped to perform its functions in a modern world, and one which stays modern. In my opinion, the greatest single asset we have today is this new attitude and habit of thinking—and I have seen it everywhere—which is ready to cast away any outmoded ideas while seeking with a high degree of originality and imagination to stay ahead in an age when technological advancements occur with breathtaking speed. Implicit in this kind

of thinking is the realization that we must not lose sight of today's task—that we must be ready at all times to fight with what we have, that we dare not let our present battlefield capabilities decline while dreaming up new ideas for the future.

That is the kind of thinking we have today. We have an Army that, first of all, is proud of its traditions and its 145 campaign streamers. While the Army is capable of waging war today with the weapons now in its hands, it is constantly thinking of new ways to use the information that science and technology are giving it. It is a proud army with its feet on the ground and its eyes on tomorrow.

As Secretary of the Army, I speak as the head of the Army family.

Proud to have such a large and enthusiastic family.

Illustration of Fisher family—father and seven sons.

When one was scratched all bled.
Honor to one was felt by all.

I want it to be like that with this Army family.

I want you to bleed with me and with each other when things go wrong for the Army. Feel pride with me and share your pride with each other about the Army's achievements.

ARMY-MINDED

Develop a loyalty to the Army which is personal and real.

This has been a splendid annual meeting, but to look back upon it merely as a pleasant occasion would be the gravest mistake you could make.

What you have received here, take with you and spread it throughout your individual spheres of influence.

In this audience are representatives of virtually every element in American life—active Army, Reserve components, ROTC, business and industry, the scientific community, Government, the press, and the civic leadership of the Nation.

Each has a vital and inescapable responsibility to make a dynamic effort to get the truth as we know it across to the American people as a whole, to make it our own individual guideline, and contribute in every way possible to the on-going of the Army.

You have heard a lot about the modern Army, and the new weapons and equipment which have been developed to bring it to a high level of technological superiority.

Without in any way discounting the immeasurable value of modernization along all lines, I would remind you not to forget that there are many old-fashioned things which will never lose their value—are as indispensable to the capability of the Army today as they ever were.

One of these is courage—good, old-fashioned American courage.

Foch's comment to Pershing: "Trouble with the American soldier, he has never learned to retreat."

He still has never learned to retreat, and I know he never will.

Initiative: Always a characteristic of the American soldier.

Aggressiveness: Has earned victory on countless battlefields.

Discipline: The invariable hallmark of quality and capability in any military organization from the legions of Rome to the Pentomic U.S. Army.

Requirements of modern warfare: Great mobility, wide dispersion of troops, small units self-sufficiency and initiative—all place far greater emphasis than ever before on the importance of these old-fashioned Army virtues. Never sell them short.

Good seeds from the past, planted in fertile ground, will produce a bountiful harvest. That is one reason we brought the Army flag into being. From the heritage of the Army's past, reaching across the years from Ticonderoga to Korea, comes the most potent and

enduring inspiration for new and even greater accomplishments.

When we examine some of the Army's elements of strength, we cannot help but think of personnel. The individual soldier will always be the ultimate weapon. In a sense, the individual soldier must also be modernized. Our manpower modernization can be accomplished in a variety of ways, greater emphasis upon our personnel policies, upon acquisition of skills, upon early recognition and selection of leaders, and upon recognizing psychological stability.

We have today the finest officers and enlisted men in the active Army, and by that I mean the National Guard and the Army Reserve, that we have ever had. The recent elimination of 72,000 ineffective and the authority to reject substandard individuals prior to induction, have contributed materially to the improvement of our enlisted personnel. Equally important is our success in retaining qualified and trained individuals in the Army. More adequate pay, prestige, and the opportunity for advancement are now provided, primarily by implementation of a comprehensive enlisted personnel management program, which includes educational development of interested and qualified soldiers, not only in our service schools, but also in our units and civilian training institutions.

Through the general educational development program, over 45,000 enlisted men during fiscal year 1959 achieved the equivalent of high school completion; 6,000 passed the four-part college level test which is widely accepted as equivalent to a year in college. Sixty thousand were enrolled through Army centers for study on a correspondence basis. College level enrollment alone totaled 50,000. In all levels of education, ranging from elementary instruction through advanced college work, a total of 360,000 individual courses were completed by 125,000 participants.

These measures are contributing successfully to the production of an elite corps of highly trained, responsible non-commissioned officers and specialists, which is so necessary for operation of our active units and for immediate expansion in the event of mobilization.

As one significant index of the Army's success in improving the quality level of its personnel, the number of prisoners in Army disciplinary barracks has dropped in 4 years from just over 7,000 to 1,188, and we have been able to close four disciplinary barracks. In the same period the number of soldiers confined in post stockades for relatively minor infractions has been reduced by more than 50 percent.

In the last 3 years while the strength of the Army was decreasing by 17 percent, the number of Army prisoners in disciplinary barracks declined more than 74 percent in the same period. This has permitted the closing of four of the five disciplinary barracks. Overall court martial rates in the Army have dropped 22 percent, while its general courts martial rate has declined by 67 percent. Significantly, AWOL rates have declined 38 percent.

More than ever the Army needs intelligent and resolute soldiers whose sense of duty and esprit is of the highest order.

Similar programs for educational advancement are offered for our officers. Also, foreign linguistic skills are being developed. Outstanding officers are being considered for accelerated promotion. Ineffectives are being eliminated, and the best qualified method of selection is now in effect for promotion to all grades above captain.

In line with the events of recent years and the expectations for tomorrow, the curricula, facilities, and policies of our service schools have been greatly improved. Army schools and colleges will continue to em-

phasize instruction which trains leaders to cope with the drastic reduction in battlefield reaction and decision time resulting from the new tactics of nuclear warfare. Today's tactical doctrine imposes more responsibility on the junior commander than was borne by many senior commanders in World War II. Decisions which, in the past, might have waited upon a staff conference, in any future war will have to be made within minutes, and on the spot.

You have seen here in the various displays and exhibits some of the new weapons and materiel we are developing for the modern Army. To mention only a few, the Sergeant and the Pershing missiles to replace the Corporal and Redstone now deployed with our forces overseas. The LaCrosse became operational in July with the issuance of equipment to the two battalions which were activated in June. The Little John, successor to Honest John, though not yet operational, is making excellent progress in development. The new Redeye shoulder-fired missile, which, in the hands of individual soldiers will greatly improve the low-altitude air defense of our combat forces, fills a need which has been felt since the beginning of World War II.

Do not think that we are being carried away by "glamour" weapons. On the contrary, we recognize that the ground soldier and the nonatomic weapons are still basic to the Army. We have just put into production the M-14 rifle and all the all-purpose M-60 machinegun, equipped to fire the NATO 7.62 cartridge. These will be made available to troops as rapidly as budgetary considerations permit.

Our new main battle tank, the M-60, which will be produced during the coming year, is greatly improved over the present M-48 series. The M-60 will incorporate a 105-mm. gun and a diesel engine. It will defeat any existing tank, and will enjoy a widely increased operating range. We are starting production of a new armored personnel carrier and are developing a new command and reconnaissance vehicle. Both of these are highly maneuverable, flexible in use, air transportable, and capable of swimming inland waters.

Diesel-powered trucks, also capable of crossing inland waters, are being standardized. These new vehicles will greatly increase the cross-country mobility of our combat forces and reduce the heavy requirements for ferrying and bridging equipment in river crossing operations.

The Army is doing the major portion of research and development in the fields of toxicological agents for national defense. Recently, a great deal of public interest has been shown in the possible military use of chemical agents which do not cause death or permanent injury, but only produce temporary physical or mental incapacitation. Although these agents have limitations, they suggest the ultimate possibility of a new concept of warfare for which we must develop adequate defense.

Our progressive, forward-looking Army has not concentrated solely on its men and weapons. It has conducted vast research and has developed a new military structure to employ both men and materiel effectively under conditions of either nuclear or conventional warfare. The first major change was the adoption of the Pentomic division in 1957, which has since been fully implemented. From it we have gained a great deal of experience. The first major improvements will be made shortly. The most significant of these is the increase in firepower brought about by reorganizing its artillery and providing an increase in the number of 155-millimeter howitzer. Now, harder hitting and more versatile organizations are under study. These will take full advantage of our increased firepower and improved air and ground mobility.

Of equal importance to firepower is the commander's ability to locate and identify enemy targets quickly, so that he can use the new and powerful weapons which have been put in his hands. Combat surveillance equipment now or soon to be in the hands of troops includes short- and medium-range radar sets for detecting moving targets in fog, smoke, or darkness. Drones carrying infrared, photographic, and other sensory devices have been flight tested. These drones will soon be in production for distribution to combat troops. Aerial cameras using infrared and other special film, and utilizing quick film-delivery and processing techniques, will be in the hands of troops during the coming year. This is all solid achievement.

Although some of the developments you are seeing at this meeting are not in quantity production as yet, I do not want to leave the impression that the combat readiness of the U.S. Army is dependent upon full issue of new weapons and materiel to every last troop unit. I must emphasize, that while the full production of this equipment will materially enhance our capabilities, our forces are combat-ready today. They are prepared for any type of aggression the Communists might initiate. The ability of our Army units to move on short notice to defend any part of the globe was amply demonstrated during the Lebanon crisis. In particular, the formation of STRAC—the Army's Strategic Army Corps—has added immensely to our Nation's deterrent capability. This ready force, poised to move out by plane or ship at an hour's notice if necessary to cope with Communist armed aggression anywhere in the world, is an indispensable element of our military strength in a period of tension. A year ago, you will remember, a large STRAC combat element from the 101st Airborne Division was deployed a distance of 1,740 miles overseas in only 16 hours and 40 minutes from first alert to final landing.

The progressive contributions to the ongoing of the Army made by each of the technical services have been remarkable. The Ordnance Corps, the Transportation Corps, the Corps of Engineers, the Quartermaster Corps, the Signal Corps, the Medical Corps, and the Chemical Corps, have done and are continuing to do a magnificent job within their specialized fields. Essential to the continuing evolution of a tough and aggressive ground combat force is our Army aviation. Developments are taking place in this area which are adding immeasurably to the Army's combat capability. The Women's Army Corps occupies a position of growing importance in the Army today. The past history of the Corps has demonstrated that in many essential Army assignments, women are both capable and willing to carry a man's load.

The relative proportion and makeup of land, sea, and air forces in the U.S. military structure is a dynamic thing and is, of course, constantly reevaluated with changing technology and a changing threat. To say that U.S. military power is today adequate to meet threats to U.S. security does not mean that this same structure will be adequate 3 years from today. The U.S. monopoly in atomic weapons ended some time ago, and the shift has been toward parity, a condition of mutual equilibrium. Even during that period when the United States had a monopoly on atomic weapons, Soviet leaders showed boldness. Today we face increasing risks. We have seen many indications of Soviet truculence in recent events such as at the time of the Syrian crisis last year, the Lebanon situation, the Taiwan Strait incidents, and the challenge at Berlin. All of these have been accompanied by blatant Soviet threats of nuclear devastation, such as Mr. Khrushchev's remarks in Albania in the midst of the Geneva negotia-

tions, and his recent so-called tough talk to U.S. citizens visiting the Kremlin.

We have considerable evidence in the reception recently accorded Vice President Nixon by the people of Poland and even the Soviet Union itself, that the man on the street behind the iron curtain does not share the belligerence of the Communist leadership toward America. We may hope that the success of the Vice President's mission, which he carried out with such outstanding success, is an indication that a day of better understanding between the free world and the Communist world will dawn in our time. However, no amount of optimism on this score should lead us into the folly of letting down our formidable guard in any respect.

If the United States keeps its own long-range nuclear attack forces protected, out of reach, continually modernized and at adequate strength—as we must do—we may be able to deter the Soviet Union from using their ICBM missiles against the United States. But in the era of this "balance of terror" the U.S. ability for massive retaliation must be accompanied by the balanced ability to deter limited war—the piecemeal aggression which, if not prevented, could ultimately leave the United States an island in the hostile world—a new kind of "Fortress America." The final decision may rest upon the basis of military capabilities for limited war. Hence, land forces have become increasingly important.

These are plain ideas, yet sometimes difficult to have accepted. When faced with any job, it is characteristic that our people try to find some way to do the entire job with machines. The modern equipment on display at this meeting demonstrates the Army's use of machines to help do the job. But the Army knows that there is no substitute for the heart, the nerve, the muscle, and the brain of men. Similarly, in the tough competition of power politics, while all forms of military power are essential, there can be no substitute for adequate land power, as the United States has learned time and time again. The inexorable logic of our times makes the Army more important today than it was yesterday, and more important 3 years from today than it is today.

A major responsibility assigned the Army, as part of the triservice air defense command, is that of organizing, training, and equipping air defense units for defense not only of the United States but also for the defense of overseas commands and our military forces in the field. This is the Army's time-honored role, since we have operated air defense weapons from their very inception. In this respect the immediate problem is to provide an effective defense against enemy bombers and air-supported missiles. In the near future we must also be able to defend against enemy ballistic missiles, both ICBM's and submarine-launched IRBM's. We must be ready to detect and defeat a sneak attack by any combination of missiles or bombers at any time or place it might strike. This defense must provide protection to our deterrent forces, vital industries, and large population complexes, so that we are able to retaliate immediately, and to mount an effective offensive with our own forces. Our air defense deployments are therefore our first line of battle, an integral part of our fighting capability. They constitute a shield fashioned to fit the requirements of our world position, the precise threat we face, and our mission to prevent war if possible, or to win it quickly if it should be thrust upon us. Without these defenses the United States would have only a "one-strike" strategic force.

The U.S. Army contributes very greatly to the Nation's air defense position. In the development of weapons systems for air defense, we have recognized from the outset

the changing nature of the threat and have had weapons systems operationally ready in time to meet the threat. As you know, the original Nike-Ajax was put in operation in 1953, and can destroy any enemy bomber existing today. Hercules, the second generation of the Nike family, became operational in 1958. It can destroy even more advanced enemy bombers and also destroy cruise-type missiles. Its actual presence—on site—here and now—in the air defense of the Nation at this critical juncture makes it a major factor in our Nation's security. The third generation of the Nike family, the Nike-Zeus, is the only U.S. guided missile under development to counter the intercontinental ballistic missile threat. Progress in all phases of the Nike-Zeus development is proceeding on schedule, reflecting the Army's stated confidence in the feasibility of providing an effective anti-ballistic missile defense. Like its now-proved predecessors, Nike-Zeus has reached a high state of development. At present we are convinced that because of the difficulty, if not the impossibility, of destroying enemy ballistic missiles prior to launching, the Nation must have a capability for anti-missile defense of vital areas. We are firmly convinced that the Nike-Zeus system can be placed in the field to provide this defense.

Since World War II, the threat to America has become more direct, and every man, woman, and child is in the danger zone. There is continued need for young men and women from all over the Nation to serve in the Army and it is becoming a more familiar element in every community, school, and home. For the first time in our history, for instance, Army air defense units are stationed—on a wartime footing—right in the midst of several of our most heavily populated areas. These units are not, as in the past, defending solely military installations or units from air attack. They are defending our homes and loved ones.

Heavy emphasis has been placed upon increasing the quality and combat effectiveness of our National Guard and Army Reserve units, and as a result, their level of readiness for active duty as full-fledged elements of "one fighting Army" is at an all-time high.

The state of training of individuals in the Reserve Components has been improved tremendously in the past 2 years through the provisions of the Reserve Forces Act of 1955. All non-prior service personnel enlisting in either the Army Reserve or Army National Guard now are required to undergo a minimum of 6 months active duty in the training establishment of the active Army. Thus the training status of our 400,000 National Guardsmen and 300,000 Army Reserves is the best in our history.

The Reserve Officers Training Corps is pouring a continuous stream of capable, young officers into the Army each year. I have seen these young men on many of my inspection trips, and I have nothing but highest praise for them. In the week just passed, the ROTC completed one of the most successful summer encampments in its history. Staff and college presidents who are invited to these camps have reported that they had never before witnessed such keenness as they saw among these 14,000 collegians who will one day serve in the ranks of our active and reserve components. Their alertness, fitness, and training progress was indeed gratifying.

This is all very heartening, because we must bear in mind that the important matters which have been brought up at this conference—that the Army's future—will one day fall into the hands of these young men who make up the major annual source of new talent for our officer corps. Some 800 of these men—distinguished military graduates—will be commissioned in the Regular Army. The remainder will be com-

missioned in the Army Reserve, about 4,000 of whom will serve on active duty for two years or more.

This Nation was indeed fortunate in having the splendid backlog of officers trained in the ROTC at the outset of both World War II and Korea. Without them, we would have been faced with an almost insurmountable obstacle to mobilization and training. We have not forgotten the lesson of those two wars, and our future course will be planned so that the Army can continue to make use of the best collegiate manpower available.

Wherever in the world a critical situation may develop—as in Berlin at the present moment—it is never something remote from the home towns of America, for it is our local Reservists, ready for duty if the call comes, who constitute the visible, deterrent evidence of our military organization-in-depth, the foundation of our staying power in the event of a war emergency. Our strength in Reserve, recognized by any potential aggressor, contributes immeasurably to the ability of the United States to stand firm in any crisis.

It is our golden opportunity to make the Army something truly fine and truly American. As the Nation's need for us grows, its understanding of our mission increases, and the people will appreciate more and more the grave and numerous problems involved in maintaining an adequate defense. This will be our opportunity for "telling the Army story" and for getting the support we need to build a fighting force of the highest possible quality. The people of America will be in the front lines of any future conflict, and you and I can take no greater step toward "modernization" than that of alerting the people to the contribution of the Army.

We have a similar task to handle within the Army—the achievement of a new spirit of unity throughout our various components, arms, and services. It is time for all of us—Regulars and Reserves, civilian and military, infantryman and engineer, active duty and retired—to close ranks and strive in fact as well as in theory for a unity of effort, purpose and identity which will galvanize the countless categories of units, components, and elements into one army.

We recognize the splendid traditions of each arm, service, and component. The infantry is just proud of its front-line role in every war. Paratroopers, tankers, and artillerymen find inspiration in their magnificent combat exploits in the battles of other years. The long and distinguished records of the various services furnish strong incentive for further and greater accomplishment. Many of our National Guard and Army Reserve units are heirs to a gallant tradition of service to the Nation which goes back in some cases to the War of Independence, and even before. We would preserve these invaluable traditions. We would do nothing to weaken or destroy these intangible sources of pride and esprit. Nevertheless, in order to keep pace with the increasingly grave requirements placed upon us, it is imperative that we bring about a true amalgamation of all arms, services, and components into one army with a slogan of "One for all, and all for one."

What does all of this mean?

Today we have the opportunity to reshape the Army into something more unified in spirit and in being because an evident threat and danger stalks among us, binding us together in the fellowship of common peril. In the past, this unity was achieved only during the actual months of battle when men shared the rigors, dangers, and accomplishments of war together. . . .

We shall continue to build along these lines, using the organizational material we now have at hand. We have only the neces-

sity to increase confidence and mutual trust among all components and branches of the Army and thus be able to replace the images of the regular and guardsman or the infantryman and artilleryman with the single image of the soldier. You shall hear more about our effort to achieve this. Next October, I intend to call a conference of the leaders of all Army components and branches to ascertain what can and will be done.

The ultimate product will be a stronger, integrated Army team, serving with professional and spirited efficiency within our larger triservice force, dedicated more than ever to the preservation of peace and the attainment of national objectives.

During the course of this inspiring annual meeting, you have seen a great many outstanding displays, heard expert discussion of the Army and its problems and progress, acquired countless items of information.

What you have gotten here should not be taken home and put in cold storage.

Spread the message everywhere and to everyone you meet. Be an active, full-time and enthusiastic advocate of the Army—a super salesman.

There is a rising tide of public opinion recognizing the need for ground forces. Give every ounce of added impetus you can to this tide.

Help to build up a momentum for the Army.

Object is not to sell the Army to the believers, but to convert the unbelievers, otherwise there is a great danger of becoming too "inbred."

AUSA chapters now number two. This is only a beginning. There should be a chapter in every good-sized city throughout the length and breadth of the land.

Old image of the Army as made up of foot soldiers slogging slowly along with rifles still held by countless people. It is up to you to see that the people get the image of the Army as it is today.

Since 1953, the era of the new look has been evolving which, in 1959, finds us in a new atmosphere. By the time we meet in 1960, we will be on the threshold of a new strategic concept for the defense of America.

Job Development Aid Legislation Needed

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of Friday, July 31, 1959, commenting on Pennsylvania Gov. David L. Lawrence's remarks at a meeting of the Pennsylvania congressional delegation held last week in Washington on area redevelopment legislation:

JOB DEVELOPMENT AID

Properly enough Governor Lawrence, in an address before the Pennsylvania congressional delegation on Wednesday, in Washington, appealed for support of job development legislation. He stressed it as of paramount importance. In supporting his plea, he said that the State suffered severely during the recent recession and continues to suffer. He pictured unemployment in Pennsylvania as a chronic condition. In listing reasons, he said: "They bear on the shift of

textiles to the South; the depletion of our forests; the mechanization of our coal mines and coal's competition from other fuels; the automation process in many industries, notably steel; and the dieselization of our railroads."

The Governor did not minimize the problem. He placed unemployment as of May, the last month for which complete figures are available, at 364,000. The Governor volunteered that the State and its communities have done "a magnificent job" through local industrial authorities. This is borne out by the successful bidding for new industries in Luzerne County. It is also supported by the Pennsylvania Department of Commerce report released for publication yesterday.

A total of 136 new and expanded plant facilities was credited to efforts made during the first 6 months of this year with the total including 52 new manufacturing plants. Seventy-five of them reported that at full normal operations they will create 6,300 new industrial jobs with the remaining 61 accounting for a possible additional 3,000.

This is far from offsetting the estimated unemployment, but it shows that Pennsylvania and its communities are bent on helping themselves while asking for Government aid, Federal and State.

Trip Boosts Prestige of Nixon

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. CEDERBERG. Mr. Speaker, under leave to extend my remarks in the Record, I include the following Trendex poll:

TRIP BOOSTS PRESTIGE OF NIXON

(By Jack Boyle)

New York.—RICHARD NIXON's presidential prospects have been increased tremendously by his Russian visit, a Trendex poll made this week shows.

The poll was similar to Trendex polls made in November, 1958, and in February of this year.

They show Nixon's popularity almost doubled in the last 9 months.

He is now the favored Republican candidate of 71.5 percent of the people, the latest poll shows.

Here is a comparison of the three polls:

(In percent)

	November 1958	February 1959	July 1959
Nixon	37.4	51.8	71.5
Rockefeller	45.9	27.9	21.2
No choice	16.5	20.3	7.3

In all three polls, the question asked of a scientifically selected cross section of Americans was identical. It was: "As of right now, do you think RICHARD NIXON or NELSON ROCKEFELLER would get the most votes for presidency as the nominee of the Republican Party?"

All interviewed were invited to explain their answers.

It was in these explanations that the effect of Nixon's current visit to Russia became apparent.

HE STOOD UP TO KHRUSHCHEV

Phrases such as "He stood up to Khrushchev," "He's shown his ability in inter-

national affairs," "Proven diplomat," "Good appearance on television," "Experience in world affairs," "Now better known," and "More publicized than ever" recurred frequently in the reasons offered.

Here is a sampling of typical responses with party affiliations given:

An eastern truck driver, Democrat: "Nixon is doing a good job in Russia and winning nationwide good will at home."

A western factory inspector, Democrat: "He seems to be getting on well with the Russians, which impresses the voters."

A midwestern auditor, Republican: "He knows how to deal with the Communists."

An eastern chemist, independent: "He has a salesman's 'hep'. He has handled himself admirably."

A southern maintenance engineer, Democrat: "Rockefeller has slowed down."

An eastern engraver, politics declined: "Nixon stood up to Khrushchev."

VICE PRESIDENT LOSES GROUND IN SOUTH

Those favoring Rockefeller were no less pointed in their remarks, as this sampling shows:

A western Federal Government employee, Democrat: "Nixon is too much of a disturber."

A western trucker, Democrat: "All California hates Nixon."

A midwestern painter, politics declined: "We are due for a change."

A southern embalmer, Democrat: "His success proves what kind of a man he is."

A southern nurse, Democrat: "Rockefeller has money so he wouldn't have to be President just to get more."

A breakdown of the poll by regions shows that Nixon has lost some ground in the South. Here is a recapitulation of the three polls, by regions:

	East	West and Midwest	South	Total
Rockefeller:				
November 1958	54.5	36.2	48.6	45.9
February 1959	23.1	33.4	27.8	27.9
This week	16.7	25.9	44.4	21.2
Nixon:				
November 1958	30.3	44.0	37.1	37.6
February 1959	60.4	38.3	66.4	51.8
This week	73.5	70.4	55.6	71.5
No choice:				
November 1958	15.2	19.8	14.3	16.5
February 1959	16.5	28.3	5.8	20.3
This week	9.8	3.7	(1)	7.3

(1) Less than 1/2 of 1 percent.

Nixon Leads in Local Poll

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the San Diego Independent:

NIXON LEADS IN LOCAL POLL

Vice President RICHARD NIXON proved the strongest candidate for the 1960 presidential election, according to the results of the San Diego Independent's poll.

San Diegans, chose him by a wide margin over the next leading Republican Nelson Rockefeller.

Senator JOHN KENNEDY was the choice of the Democrats as their candidate but Nixon outpolled any Democrat.

Gov. Edmund (Pat) Brown who has been showing strength on California polls, was not listed as a possible candidate because most of his strength is, so far, in this State.

The San Diego Independent's poll is made on a scientific sampling basis by professional interviewers. Each major area of Metropolitan San Diego is properly represented in the total sample. Half of the interviews are made with men, half with women. Only one interview per dwelling unit is permitted. Followup checks are made in a limited number of cases to insure that the personal interviews were accurately recorded.

The results were:

"National polls show Nixon, Rockefeller, Lodge, and Stassen to be the leading candidates for the Republican nomination for President in 1960 at the present time. Which one of these men would you like to see nominated?"

Total

	Percent
(1) Nixon	48
(2) Rockefeller	20
(3) Lodge	6
(4) Stassen	4

Notice of Hearings on Proposed Legislation Which Would Provide an Exemption From the Antitrust Laws To Authorize Cooperative Associations of Milk Producers To Bargain With Purchasers Singly or in Groups, and for Other Purposes

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. CELLER. Mr. Speaker, as chairman of the Committee on the Judiciary, and as chairman of its Antitrust Subcommittee, I wish to announce the commencement of hearings on S. 753 and H.R. 7191, to authorize cooperative associations of milk producers to bargain with purchasers singly or in groups, and for other purposes.

It is the Antitrust Subcommittee's intention to hold hearings on these bills August 20 and August 21, 1959. All persons who wish to appear and testify at hearings on these bills are requested to notify Mr. Herbert N. Maletz, chief counsel, Antitrust Subcommittee, room 230, Old House Office Building, telephone Capitol 4-3121, extension 4853, as soon as possible.

Tight Money

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, August 10, 1959

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to call to the attention of my colleagues a letter from a farmer and director of a small bank in New Jersey, as follows:

WHY DOESN'T THE FED DO SOMETHING ABOUT GOVERNMENT BOND PRICES?

A LETTER FROM A FARMER AND DIRECTOR OF SMALL BANK IN NEW JERSEY

FEDERAL RESERVE BANK, Philadelphia, Pa.

GENTLEMEN: As a layman, I was discussing the Government bond situation this morning. I was told that 1 year ago certificates of indebtedness were issued at 1½ percent to come due on May 15, 1959. Now these same certificates are to be exchanged for ones due May 15, 1960, at 4 percent and priced at 99.95.

It would seem to me that the Government bond situation has become quite disorganized. In the past it was my understanding that the Open Market Committee of the Federal Reserve was set up to stabilize the Government bond market.

It would seem also that it is no wonder that it has become somewhat difficult for the Treasury to arrange its financing. The bonds have become a risk asset and not riskless as they have been in the past.

I am not an expert but I have been very much concerned for some time. It becomes very difficult for banks to handle their Government bond portfolio and more so for individuals.

What does the future hold in your opinion?

Very truly yours,

And a copy of the response:

DEAR MR. —: Your letter asks some vital questions which are of real concern to many investors like yourself, to public officials who are responsible for answering them, and to just plain citizens. We think they are so important that we are responding at some length. A better public understanding of the issues can give reassurance which in itself can help to solve the problems.

But before tackling your questions we hasten to make one point clear: This is an area of concern to the Treasury as well as to the Federal Reserve, and we cannot speak for the Treasury.

Your letter in essence raises four questions:

1. What's behind the decline in prices of Government securities?

2. Why doesn't the Open Market Committee support the Government bond market?

3. Have Government securities become "a risk asset and not riskless as they have been in the past"?

4. How can banks and other investors "handle their Government bond portfolio"? Let us look at each in turn.

What's behind the decline in prices of Government securities?

Your illustration provides a striking example of the change in the Government securities market in one year. It is true that the certificates issued in May 1959 at a yield of 4.05 percent refunded similar securities issued a year earlier (June 1958) at 1½ percent. It is also true that a similar issue was put out still a year earlier (May 1957) at 3½ percent.

These were rates that the Treasury judged necessary to attract sufficient buyers under the prevailing conditions. Why did the rates change so sharply? For a number of reasons:

First is the change in business conditions. In the spring of 1957 we were nearing the peak of a 3-year boom. In the spring of 1958 we were at the bottom of our sharpest postwar recession. And by now our economy has recovered just about all that was lost during the recession and has moved into new territory.

Second, these changing conditions brought about changes in the overall demand for and supply of credit—and, as a natural consequence, changes in interest rates, the price of credit. In the 1957 boom demands for credit were strong, the Federal Reserve was restraining the supply, so interest rates rose. The Treasury, one of the demanders, paid higher rates along with almost everyone else. Last year, in the recession, demands were not so strong and the Federal Reserve was liberally supplying funds; so interest rates fell. Now, once again, demands are rising, the Fed has not made possible an equal expansion on the supply side, and rates are higher.

Third, along with these developments affecting overall demand and supply conditions have been special factors which have influenced the supply of and demand for funds in the Government securities market. The Treasury's demands have depended largely on the budget situation. In fiscal 1957 the Government had a cash surplus of \$2 billion. But in fiscal 1958 it ran a cash deficit of \$1½ billion, and in fiscal 1959 ended up with a deficit of around \$12½ billion. This means that the Treasury has had to go to the market, in the past year especially, for large amounts of funds. In 1958 it was able to raise a substantial proportion by selling longer term issues. But more recently it has had to confine itself almost entirely to short terms. Consequently, the Treasury has been in the market almost continuously, either to get new money or to refund maturing issues.

At the same time, the supply of funds going into Government securities has undergone changes. Two years ago, in the 1957 boom, investors had ample investment opportunities. They looked at the rates available on other types of investments, such as mortgages, municipals, corporate stocks and bonds, business and consumer loans, etc., along with Governments. For the Treasury to compete successfully for these limited funds, it had to pay higher rates. Then came the 1957-58 recession. Investors had more funds available and turned more to Government securities, even buying a substantial amount of longer terms. Some of their purchases—we can never know how much—were motivated by speculative interests; many investors expected that as the recession proceeded, interest rates would fall (prices rise). Some bought to beat the expected price rise and their actions helped to bring about this very thing. But they made the market vulnerable to a turn-around in business conditions. As soon as the recession gave evidence of ending, speculators wanted to unload before rates rose (prices fell) again. Part of the rapid rise in rates last summer can be attributed to anticipatory and speculative activities. Since then, as business has recovered, investors have again looked at Governments carefully in relation to other investments as desirable outlets for their funds. And, in addition, some have been influenced by still another consideration—again, no one knows how much—namely, the fear of inflation.

¹ This whole period is under detailed study by the Federal Reserve and the Treasury. When the results are made public, you will be able to get a much more complete account of the developments.

tion and the desire to hedge against it by buying common stocks instead of bonds. Whatever weight you want to give these various forces, the result has been higher interest rates.

Well, this, in brief, is a rundown of the circumstances that produced rising rates 2 years ago, relatively low rates last year, and higher rates again recently. Now for the second question.

Why doesn't the Open Market Committee support the Government bond market?

Desirable as a healthy Government securities market may be, we all would lose much more than we might gain by having a pegged market. Many things about monetary policy are uncertain, but this isn't. We know with certainty what would happen because we have had specific experience that tells us. It may be helpful to review our experience in maintaining fixed prices and yields of Government securities.

During World War II, as part of the program of facilitating war financing, the Fed had an announced policy of keeping rates on governments from rising above certain levels and prices from falling below certain levels. This policy was continued until 1951 when the Federal Reserve and the Treasury reached an accord which restored flexible interest rates.

The consequences of that policy were, in one way, the same consequences that flow from a policy of pegging the price of, say, wheat. Just as the Government had ended up holding all the wheat no one else wants at the fixed price, the Fed ended up with the Government securities no one else wanted at the support price. The tremendous volume of Governments which financial institutions bought to help finance World War II looked too big to them when other opportunities opened up after the war. So lenders began to make mortgage, consumer, and business loans and to buy corporate and municipal securities. To get the funds, they sold Governments. To keep these sales from depressing the prices of Governments, the Federal Reserve bought the securities.

But this support policy had much greater repercussions, for when the Federal Reserve buys securities it pays for them with newly created money. Every time the Fed bought Governments to keep their price from falling, it injected new reserves into the banking system, permitting banks to expand credit and the money supply by several times the amount of new reserves. All this at a time when the supply of goods was still limited. As the Chairman of the Board of Governors put it, the Federal Reserve had become "an engine of inflation."

Moral: we cannot peg prices and yields of Government securities and at the same time combat inflation.
